phal) records the names of three farms or *fundi* in the territory of Ferentinum, two of which, called *Bojanum* and *Caponianum*, still retain the appellations of *Roma* and *Cipollara*. (Westphal, *Römische Kampagne*, p. 85; Dionigi, *Viaggio ad alcune Città del Lazio*, pp. 4—18.) [E. H. B.]

FERENTINAE LUCUS, a sacred grove with a fountain and shrine of the deity of the same name, celebrated as the place where the cities composing the Latin League used to hold their general assemblies. It is mentioned by Livy on occasion of the attempt of Tullus Hostilius to overthrow the power of Tarquinius Superbus (i. 50, 52), and again on several subsequent occasions (ii. 38, vii. 25); and we learn from a remarkable passage of Cincius (*ap. Fest. s. v. Praetor*, p. 241) that these assemblies continued to be held regularly till a. c. 340. The name is indeed corrupted in the passage in question; but there is no doubt that we should read "ad caput Ferentinae," which corresponds to the expressions employed by Livy, "ad caput aquae Ferentinae" and "ad caput Ferentinum." From these modes of expression it is evident that there was both a sacred grove, and a fountain forming the head or source of the stream called *Aqua Ferentina*. Dionysius, on the contrary, calls the place of assembly *Ferentinum* (*ἑρρινιον*, iv. 45, v. 50), and appears to have regarded it as a town, though we need not suppose that he confounded it with the Hernican city of the name, as has been done by some modern writers. The only clue to its position is the passage above cited from Cincius, who places it "sub monte Albano;" but even without this testimony we could hardly hesitate to seek it in the neighbourhood of *Alba Longa*, and there can be little doubt that its site is correctly fixed by Gell and Nibby in the deep valley or ravine near *Martino*, where there is a copious fountain (supposed by some to be a subterranean outlet of the *Lacus Albanus*), which gives rise to the small stream now known as the *Marrone del Pantano*. The valley in which this source is found is now called the *Parco di Colonna*, and is still shaded with deep woods, which give it a picturesque and solitary aspect. (Gell, *Top. of Rome*, pp. 90—92; Nibby, *Dizionario*, vol. ii. p. 319.) [E. H. B.]

FERENTUM or **FORENTUM** (*ἑρριον*, Diod.: *ἑρριον*, Strabo), a town of Apulia, about 10 miles S. of Venusia. The name is written *Ferentum* in most editions of Horace, though Orelli has substituted *Forentum*, which is the form found in Livy and Pliny; but the first form is supported by Diomedes. It is still called *Forenza*; but from the expressions of Horace ("arvum pingue humilis Ferenti," *Carm.* iii. 4, 16), to whom it was familiar from its proximity to Venusia, the ancient town appears to have been situated in a valley, while the modern one stands on the summit of a hill; and according to local writers, some remains of the ancient *Ferentum* may be found in a small plain 2 miles nearer *Venosa*. (Romanelli, vol. ii. p. 236.) Livy terms it a strong town, so that it was one of the few places in Apulia which offered any considerable resistance to the Roman arms, and was one of the last subdued. (Livy. ix. 16, 20, but in the former of these passages it is probable that the true reading is "Frentani," not "Forentani;" Diod. xix. 65.) The *Forentani* are mentioned by Pliny (iii. 11. s. 16) among the municipal towns of Apulia; but we meet with no subsequent mention of it in any ancient author. [E. H. B.]

FERESNE, in Gallia, is placed by the Table on

the road from *Atreba* (that is, *Atrebatum*, or *Tongers*) to *Novionemagus* (*Nijmegen*), and is called *langres* from *Tongers*. The next place to *Feresne* on the road is *Catusium* (*CATULLIUM*), and *Catusium* comes *Blaricum* (*BLARICUM*). *Feresne* may be a corrupted name. The *acta* is uncertain. [G. L.]

FERONIA or **LUCUS FERONIAE** (*ἑρριον*, Strab.; *Antonia*, *ἑρριον*, Plin.). I. A town of Southern Etruria, at the foot of Mount Soracte, viz. the territory of Capena, with a celebrated temple and shrine of the goddess from whom it derived its name and a sacred grove, attached to it. Strabo, indeed, the only author who mentions a town of the name which he calls *Feronia* (v. p. 236); other writers speaking of "Lucus Feroniae" and "Feronia inum": but it is natural that in process of time a town should have grown up around a site of such sanctity, and which was annually visited by great concourse of persons. *Feronia* appears to have been a Sabine goddess (Varr. *L. L.* v. 74), and hence festivals at her shrine seem to have been celebrated especially by the Sabines, though the sanctuary was in the Etruscan territory, and dependent on the neighbouring city of Capena (Livy. i. 31. 4). The first mention of these annual festivals occurs as early as the reign of Tullus Hostilius, when we find them already frequented by great numbers of people, not only for religious objects, but as a sort of fair for the purposes of trade, a custom which seems to have prevailed at all similar occasions (Livy. i. 30; Dionys. iii. 52). Great wealth and the course of ages, being accumulated at the site of *Feronia*, and this tempted Hannibal to make a digression from his march during his retreat from Rome, in a. c. 211, for the purpose of plundering the temple. On this occasion he despoiled it of its gold and silver, amounting to a large sum; besides which there was a large quantity of silver uncoined brass, a sufficient proof of the sanctity of the sanctuary. (Livy. xxi. 11; Gell. *l. l.* vi. 90.) The only other notices of the spot which occur in history are some casual mentions of prodigies which occurred there (Livy. xvi. 4, xxviii. 26); but Strabo tells that it was still much frequented in his time, and that many persons came thither to see the oracle of the priests and votaries of the goddess passing unharmed through a fire and over burning cinders (Strab. v. p. 236). This superstition is noticed by other writers to the temple of Apollo at the foot of Mt. Soracte (Plin. vii. 2; Virg. *Aen.* vi. 790): it was probably transferred from thence to the more celebrated sanctuary at its foot. (Soranus.)

The general position of the *Lucus Feroniae* is sufficiently fixed by the statements that it was "near Capena," and at the foot of Mt. Soracte. It is situated at the foot of the hill of *S. Oreste*, near the extremity of the mountain, is still called *Falena*, and as such fountains were generally connected with sacred groves, there is every probability that this is the site of the grove and sanctuary of the goddess. The village of *S. Oreste*, which stands on the hill above (a shoulder or off-shoot of Soracte), still shows some traces of having been an ancient site, as pointed out by Nibby and Dennis to occupy the position of an ancient town of Feronia. (Nibby, *Dizionario*, vol. i. p. 108; Dennis, *Etruria*, vol. i. p. 180.)

Pliny mentions a *Lucus Feroniae* among the groves of the interior of Etruria; and from the name which he describes the towns of that province, it can be little doubt that he means the celebrated

ty of the name in Southern Etruria. But it is singular that Ptolemy, who also notices a Lucus oniae, to which he gives the title of a colonia, as it in the NW. extremity of Etruria, between Arnus and the Macra. (Ptol. iii. 1. § 47; Plin. 5. s. 8.) No other notice occurs of any such place his part of Etruria; and the Liber Coloniarum, 12th unusually copious in its description of the rine of Tuscia, mentions no such colony at all inscription, on the other hand, in which we find name of "Colonia Julia Felix Lucoferonensis" ill. 4099), refers probably to the Southern Etrus-town; and on the whole it is more probable that name should have been altogether misplaced by any, than that there should have existed a second of the name, of which we know nothing. *Ant. de Colon. p. 347.*)

A place near Tarracina, on the border of the line Marabes, where there existed also a shrine or-tuary of the goddess Feronia, with a fountain and d grove. The latter is alluded to by Virgil *iridi gaudens Feronia loco*, *Aen. vii. 800* in-ction with Circelli and Anxur (Tarracina), and ountain is mentioned by Horace, on his journey rundusium, as adjoining the place where the-liers quitted the canal through the Pontine-ches, and from whence they had a long ascent of- miles to Anxur. (*Hor. Sat. i. 5. 23.*) Diony-relates (ii. 49) a legend of the temple having-founded by some Lacedaemonian exiles, who-wards settled among the Sabines; a tale which-probably derived from the fact of Feronia being-sine divinity. We learn from Servius that there-a stone seat in her temple here, on which if any-s took their seat they obtained their liberty-ia, indeed, appears to have been especially wor-ed by freed men and women. (*Serv. ad Aen. 564; Liv. xxii. 1.*) Vibius Sequester erro-ly speaks of a lake of Feronia: whether he-t the fountain of that name, or substituted-us" for "Lucus," is uncertain. (*Vib. Seq. p. 3berlin, ad loc.*)

e site of this sanctuary is clearly marked at a-now called *Torre di Tarracina*, where there-autiful and abundant source of limpid waters,-ing out just at the foot of the hills which here- the Pontine Marabes, and some remains of the-e are still visible. The spot is just 58 miles-Home, by the line of the Appian Way. (*Champy, in J. Horace, vol. iii. p. 453.*) [*E. H. B.*]

FERRARIA PROM. [*DIANUM.*]

FERRATUS M. (*Jebel Surjura*), a mountain-of Mauretania Sitifensis, running SW. from-ighbourhood of Tubasuptua. (*Ammian. Marc. 5.*) [*P. S.*]

FESCENNIUM (*Φαυκένιον*, Dionys.: *Εἰς. Fe-nus*), an ancient town of Etruria, situated not-ar from Falerii, with which it always appears-e connection. Dionysius, indeed, expressly-s that the Falisci had two cities, Falerii and-inium; and other authors confirm this by-ng the same Argive or Pelasgic origin to both-*ra. i. 21; Solin. 2. § 7.*) It is very probable-at the "Falicum" of Strabo, which he speaks-a town distinct from Falerii (*v. p. 266*), was-er than Fescennium. Virgil mentions the-enninae acies" among the Etruscan forces-ollowed Turnus to the war against Aeneas-*vii. 695*); but no independent notice of Fescen-occurs in history, and it appears certain that-merely a dependency of Falerii, and followed

the fortunes of that city, during the period of its-greatness and power. Pliny, however, speaks of-Fescennia (as he writes the name) as in his time an-independent municipal town (*iii. 5. s. 8*), but this is-the only notice we find of it under the Roman Em-pire; and we have no clue to its position beyond that-of its proximity to Falerii. Hence the determination-of its site has been involved in the confusion which-has arisen with regard to that of the more important-city; and both Gell and Müller have placed Fescen-nium at *Civita Castellana*. It may, however, be-regarded as certain that that city occupies the site-of the ancient or Etruscan Falerii [*FALERII*]; and-we must therefore seek for Fescennium elsewhere. A local antiquarian (Antonio Massa), whose opinion-has been followed by Cluver and several other writers,would place it at *Gallesse*, a village about 9 miles to-the N. of *Civita Castellana*, where some Etruscan-remains have been found. Mr. Dennis has pointed-out another site, a short distance from *Borghetto* on-the Tiber, between that village and *Corchiano*, where-there are unquestionable remains of an Etruscan city-(part of the walls, &c. being still visible), which-appear to have the best claim to be regarded as those-of Fescennium. They are distant about 6 miles-from *Civita Castellana*, and indicate the site of a-city of considerable magnitude. The spot is marked-only by a ruined church, named *S. Silvestro*. (*Dennis, Etruria, vol. i. pp. 152—162*; Cluver, *Ital. p. 551*; Nibby, *Dismori, vol. ii. p. 28*.)

It is singular that a place which seems to have-been of so little importance as Fescennium, should-apparently have given name to a particular branch-of literature, — the "Fescennini versus," which ap-pear to have been originally a kind of rude dramatic-entertainment, or rustic dialogue in verse: though,when these were superseded by more polished dra-matic productions, the name of Fescennini was re-tained, principally, if not exclusively, for verses sung-at nuptial festivities, when great licentiousness of-language was permitted, as had been the case in the-older Fescennine dialogues. (*Liv. vii. 2; Hor. Ep. ii. 1. 145; Catull. lxi. 127; Claudian, Fescennina, xi.—xiv.; Senec. Med. 113.*) The only authors-who expressly derive these dialogues from Fescen-nium are Servius (*ad Aen. vii. 695*) and Festus (*v. Fescennini, p. 85*); and the former, strangely enough, calls it a town of *Campania*, probably by a confusion-between the Fescennini and Attellanae [*ATELLA*];-but the name is in itself strong evidence in favour-of their derivation from thence. And though we are-unable to account for the application of such a local-epithet to a class of compositions which must have-been to a great extent the spontaneous effusions of-rustic character, the same remark applies in a great-degree to the "fabulae Attellanae," which could-hardly have been confined to the one city of Cam-pania to which they owe their name. Hence, it ap-pears unreasonable to reject the obvious derivation-from Fescennium (as Klotz and Bernhardt have-done), merely because we cannot explain the origin-of the appellation. (See on this subject Müller, *Etrusker, vol. ii. pp. 284—286*; Klotz, *Römische Literat. Geschichte, vol. I. p. 293*; Bernhardt, *Röm. Literatur, note 118.*) [*E. H. B.*]

FIBRE'NUS, a small river of Latium, in the-country of the Volsci, which falls into the Liris on-its left bank, about 4 miles below Sora and less-than 3 from Arpinum. It is still called the *Fibreus*, though more commonly known in the country as-the *Fiume della Posta* from the village of *La Posta*

beneath which it has its source. Its whole course does not exceed 7 or 8 miles in length: but, like many rivers in a limestone country, it rises all at once with a considerable volume of water, which forms, in the first instance, a deep and clear pool, or little lake, from whence its waters flow in a channel of 10 or 12 yards in breadth, but of great depth and remarkable clearness. This insignificant but beautiful stream derives a high degree of interest from the description of it by Cicero, whose paternal villa was situated on its immediate banks, or even as it would appear on an island surrounded by its waters. Great doubts have, however, been raised as to the exact locality of this villa. The opinion commonly adopted places its site in an island formed by two arms of the Fibreno, just above its confluence with the Liris, where there now stands a convent called *S. Domenico*, and considerable remains of ancient buildings are certainly visible. Others, however, have transferred it to a smaller island, now called *La Carmella*, about a mile higher up the stream. This islet seems to agree perfectly with the description given at the beginning of the second book *De Legibus* of the spot, "insula quæ est in Fibreno," where that dialogue was held; but this is clearly represented as at some distance from the villa itself, and approached by following the shady banks of the river. Hence it seems probable that the villa may have been at *S. Domenico*, while the "palæstra," or planted grove for exercise, which Cicero compares with the Amalthea of his friend Atticus, was in the little island of *Carmella*. This appears to be the same which he elsewhere (*ad Att. lib. 12*) calls "insula Arpinæ." The Fibreno is also remarkable for its extreme coldness, a quality common to many rivers which rise under similar circumstances. (*Cic. de Leg. lib. 1. 3, Theoc. v. 26, and ad Phil. lib. 1. ad Att. lib. 16; Romanelli, vol. iii. pp. 366-371; Keckell, Excursion in Arpinæ, pp. 208-210; Harro, Classical Tour, vol. i. p. 293.*)

The villa of Cicero passed, at a later period, into the hands of the poet *Silius Italicus*, who is the author of the *Eclogæ* Cicero that mentions the name of the Fibreno. (*Sil. Ital. viii. 401; Martial, lib. 6. 44.*)

FICANA, an ancient city of Latium, which figures in Roman history only on the occasion of its capture by *ANNUS MARCIUS*, who is said to have transferred the inhabitants to Rome, and destroyed the city itself. (*Liv. i. 33; Dionys. iii. 38*, where the name is given *Ficulanæ*, but there is little doubt that the event referred to is the same related by Livy.) It is certain that it was never repopled: its name is found in *Pliny's* list of the extinct cities of Latium (*lib. 3. 10*), and is noticed also by Festus (*verba sibi*) as a place no longer in existence. The latter passage, however, alludes to a clue to its position, according to *ANNIUS* Labo there existed a villa called *la Fica* (the *Fica* in *Saxa*). A rocky hill, called *la Fica*, is to be seen on the left of the *Via Campana*, the ancient road from Rome, now known by the name of *Propaganda*, and therefore by according to be the site of Ficana, though no remains remain. (*Urb. Top. of Rome, p. 243; Nibby, Dictionari, vol. ii. p. 46.*)

FICULÆ, a city of Latium, situated on the

Via Nomentana, between Rome and Nomentum. It is mentioned repeatedly in the early Roman history, both by *Livy* and *Dionysius*. The latter tells us that it was founded by the *Aberigines*, together with *Antesone* and *Tellene* (*l. 16*). Its name appears also among the cities of the *Prisci Latini* aborigines by the elder *Tarquinius* (*Liv. i. 38*): and as it is longer found in the list of the thirty Latin cities that composed the League in *a. c. 493* (*Dionys. i. 61*), we may probably conclude that it continued subject to, or at least dependent on, Rome. So does it again figure in any of the ordinary history of Rome; but *Varro* has preserved to us a notice (*de L. L. vi. 18*) which represents the *Ficulæ*, *Fidenates*, and other neighbouring "populi" as valiantly taking up arms against Rome, shortly after the departure of the Gauls, and producing first a panic terror in the city, the memory of which was recorded by a festival called the *Poplifugia*.

No subsequent notice of Ficulæ itself occurs in the Roman history: and the change of name of the town which led thither from *Via Ficulensis* to *Nomentana* (*Liv. iii. 52*) may probably be regarded as a proof of its declining importance. But the "ager Ficulensis" is mentioned by *Cicero* (*ad Att. lib. 34*), as well as in the *Liber Coloniarum* (p. 258, where it is slightly corrupted into *Ficilensis*); and *Pliny* mentions the *Ficulenses* among the existing towns of Latium (*lib. 5. a. 9*). These indications are confirmed by inscriptions, which prove that it still subsisted as a municipal town in the reign of *M. Aurelius*, though there seem reasons for supposing that it fell in decay soon after, and all trace of it disappears in the middle ages. (*Nibby, Dictionari, vol. ii. pp. 46.*)

The inscriptions just mentioned, one of which is interesting, as recording the institution by *M. Aurelius* of a college or charitable institution for boys and girls, who were called "*Pueri et Puellæ Alimentarii Ficulensium*" (*Orelli, Inscrip. 3364*); we found in the neighbourhood of a farm-house called *Cosarini*, on the left of the *Via Nomentana*, about six miles from Rome. They, therefore, leave no doubt that the *Ficulæ* of Imperial times, at least, was situated in that neighbourhood. But the epithet of "*Ficulæ veteres*," applied by *Livy* to the ancient Latin city (*l. 24*), would seem to indicate that it was distinct from the town which bore that name in his day. *Martial* also speaks of "*Ficulæ veteres*" (*vi. 27*), as if they were in the immediate neighbourhood of *Nomentum*; and it is not improbable that the words used by *Dionysius*,—"Ficulæ, which adjoins the *Caracianæ* mountains" (*l. 16*),—were added for the same purpose of distinction. Hence it is probable that the Roman *Ficulæ* was situated somewhere within the confines of the *territorium* or domain of *Cosarini*, but that the ancient Latin city occupied a site more distant from Rome, and nearer to *Nomentum*, either at the hill called *Monte Gombi*, or more probably at that now marked by a lofty tower called *Torre Lapara*. This site, which is 11 miles from Rome, and on the *Via Nomentana*, is described as "screwed with vines and pottery, perhaps one of the surest indications of an ancient city." (*Gell, Top. of Rome, p. 241.*)

One of the inscriptions above mentioned (*Urb. 1112*) gives us the names of two *Fagi* in the vicinity of Ficulæ, called the *Pagus Uluacensis* and *Transulensis*; hence we may presume that the track which now flows by *Cosarini*, and crosses the *Via Nomentana* near the *Contra dei Pisci*, bore in ancient times the name of *Uluacis*. (*E. H. B.*)

FIDENAE (Φιδναί, Strab., Ptol., but Φιδναί Dionysius, and the singular form FIDENNA is used Virgil, *Aen.* vi. 773, and by Tacitus, *Aen.* iv. 62: Fidenas, -atis; Φιδναίος, Dionys.: *Castel Gius*), an ancient city of Latium, situated on the left bank of the Tiber, and on the Via Salaria, five miles from Rome. There appears no doubt that it was originally and properly a Latin city. Virgil mentions it as the colonies founded by the kings of Alba; and accordingly with the same view, Dionysius relates Fidenas, Crustumerium, and Nomentum were led by colonists from Alba led by three brothers, eldest of whom was the founder of Fidenas. *g. Aen.* vi. 773; Dionys. ii. 53; Steph. B. s. v.)

more decisive is it that its name is found in the list of the towns that were accustomed to be in the sacrifices on the Alban Mount. (Plin. i. s. 9. § 69.) On the other hand, Livy expressly as it was of Etruscan origin ("Nam Fidenatesque Etrusci fuerunt," i. 15); and not only gives as a reason for the close connection between the cities and Fidenates, but even notices that the king of Fidenas had only learnt the Latin language through intercourse with the Roman colonists (i. 15).

The last statement is evidently a mere touch added by the historian himself, and only serves to confirm his conviction of their Etruscan descent. No writer alludes to this extension of the Tuscan race; and though Fidenas frequently appears in connection with Veii (for which their relative position sufficiently account), we find no trace of its having any relations with the other Etruscan cities. Its close proximity to Rome would naturally bring it early into collision with the rising city, and accordingly we find that hardly any other plays so important a part in the earliest history of Rome. All authors agree in representing it as engaged in war with Romulus: according to Plutarch (i. 17) it took part with Caenina and Antemnae in a war which arose out of the rape of the women; either Livy nor Dionysius mentions it on that occasion, and both refer the first hostilities to the period of the death of Tatius. According to their ordinary fabulous account the city itself was taken by the Romans, who occupied it with a garrison or colony of men; a number exaggerated by Plutarch to the amount of 2500 colonists, of whom he represents 2000 as shortly after cut off by the Etruscans. (i. 14, 15; Dionys. ii. 53; Plut. *Rom.* 23, 25.) Naturally happens in the early history of Rome, all of this Roman colony subsequently disappears. It is noticed during the reign of Numa as an important city, maintaining friendly relations with the peaceful king, while under his successor Tullus Hostilius it again united with the neighbouring Veii to the growing power of Rome. (Dionys. ii. i. 6; Liv. i. 27.) Their combined forces were defeated under the walls of Fidenas, and according to the story the city itself was soon after besieged and taken, and compelled to surrender. Yet after we find Fidenas again engaging in successive wars with Ancus Marcius and Tarquinius Priscus, so we may believe the Roman historians, successfully captured by both monarchs, the latter of whom is represented as having again established there a Roman colony. (Dionys. iii. 39, 40, 50, 57.) It is evident that no reliance can be placed upon these as historical; but the inference that Fidenas was really (as described by the Roman historians) a strong and powerful city, almost on a par with Veii, fairly be admitted. It is remarkable also that

it appears to have held a very independent position, and appears sometimes in league with the Latins, at others with the Sabines, but most frequently with the Veientes. After the expulsion of the Tarquins from Rome, Fidenas is represented as taking an active part in attempting their restoration, and for this purpose entered into a league first with the Sabines, and afterwards with the Latins; but both attempts proved abortive, and in B. C. 496 the Fidenates, abandoned by their allies, were compelled to surrender to the Roman arms. (Liv. ii. 19; Dionys. v. 40, 43, 53, 60.) Hence the name of Fidenas does not appear in the list given by Dionysius immediately afterwards of the confederate cities of Latium, and it is probable that it did not at this time form part of the Latin League. From this time the Fidenates appear to have continued tranquil for a considerable period, till in B. C. 438 they were again induced to unite with their old allies the Veientes, and by the murder of the Roman ambassadors produced an irreparable breach with the republic. Their combined forces were, however, again defeated by Cornelius Cosus under the very walls of Fidenas (Liv. iv. 17—19), and a few years after Fidenas itself was again taken (Id. 22). Yet in B. C. 426 we find both the Veientes and Fidenates once more in arms, and the latter city was once more captured by the dictator Quinctius Pennus. (Id. iv. 31—34.) On this occasion we are told that it was plundered, and the inhabitants sold as slaves; and though it does not appear that the city itself was destroyed, — the expression of Florus, "*Cremati suo igne Fidenates*" (i. 12. § 4), being evidently a mere rhetorical flourish derived from Livy's language, — its humiliation must have been complete; for, with the exception of an obscure notice in Varro (*L.L.* vi. 18) of a sudden outbreak of the people of Fidenas, Ficulea, and the neighbouring towns just after the capture of Rome by the Gauls, we hear no more of Fidenas as an independent city. (For the history of these wars, see Niebuhr, vol. ii., and Bormann, *Alt.-Latinsche Chorographie*, pp. 241—245.)

Though we have no account of the destruction of Fidenas, which according to Varro was certainly in existence after the Gallic War, B. C. 389, it seems to have rapidly sunk into a state of complete decay, and before the close of the republic had dwindled into an insignificant village. Cicero speaks of it as a very poor and decayed place; and Strabo terms it (like Collatia and Antemnae) a mere village, the exclusive property of one individual. Horace also refers to Fidenas and Gabii as almost proverbial instances of deserted villages ("*Gabii desertior atque Fidenis vicus*," Hor. *Ep.* i. 11. 7); and Juvenal more than once refers to the same places as poor and rustic country towns (Cic. *de Leg. Agr.* ii. 35; Strab. v. p. 230; Juv. vi. 57, x. 100). Yet it is evident that Fidenas never lost its municipal rank; Cicero, in the passage already cited, mentions it among the "*oppida*" of the neighbourhood of Rome, which he contrasts with the flourishing cities of Campania; and Juvenal notices it as retaining its local magistrates ("*Fidenarum — potestas*," z. 100), which are mentioned also in inscriptions. It is therefore a complete error on the part of Pliny to reckon Fidenas among the "*populi*" of Latium, which had become utterly extinct (iii. 5. s. 9); and, by a singular inadvertency, he himself afterwards mentions the Fidenates among the Sabines in the fourth region of Augustus (iii. 12. s. 17). The Anio being taken as the limit of that region, Fidenas, as well as

Nomentanum, came to be considered as belonging to the Sabine territory, though originally included in Latium.

In the reign of Tiberius Fidenas was the scene of a fearful catastrophe, arising from the fall of a temporary wooden amphitheatre during a show of gladiators, that had drawn together vast crowds from Rome and the neighbouring towns. By this accident not less than 50,000 persons, according to Tacitus, were killed or seriously hurt. (Tac. Ann. iv. 62, 63; Suet. Tib. 40.) From this time we hear no more of Fidenas; but its name is still found in the Tabula as the first station on the Salarian Way, and its continued existence may be traced by inscriptions and ecclesiastical records down to the seventh century of the Christian era, when all trace of it disappears. (Ptol. iii. 1. § 62; Tab. Peut.; Marat. Inscr. p. 316, no. 4; Nibby, *Dintorni*, vol. ii. p. 57.)

Though no ruins exist on the site of Fidenas, its position may be identified with unusual certainty. Ancient authors concur in placing it at the distance of 5 miles or 40 stadia from Rome, on the Via Salaria; and we gather from the accounts in Livy and Dionysius that it was situated on a hill with steep or precipitous banks, and immediately above the Tiber. All these conditions are fully answered by the site at *Castel Gimbleo*, which is well adapted for that of an ancient city. The hill next the Tiber, on which stand the ruins of the castle, was probably the ancient *ars* or citadel; while the more extensive plateau on the E. of the Via Salaria was occupied by the city itself. The sides of the hill appear to have been in many places cut down or scarped artificially, and these perpendicular faces contain hollows which were probably in their origin sepulchral. Other excavations indicate quarries; and we know from Vitruvius that the tufo of Fidenas was one of those extensively worked in ancient times. (Vitruv. ii. 7. § 1.) The hill of *Castel Gimbleo* is a conspicuous object in the view of the *Campagna* from the hills above Rome; hence we find Martial noticing "the ancient Fidenas," in describing the same view. (Mart. iv. 64. 15.) A plan, as well as description of the site, is given by Gell (*Top. of Rome*, pp. 250—253; Nibby, *Dintorni*, vol. ii. pp. 51—61; Dennis, *Etruria*, vol. i. pp. 68—72; Bornmann, *Alt.-Lat. Antiqu. Chronographie*, p. 239). [E. H. B.]

FIDENTIA (*Aberris*: *Eth.* Fidentinus; *Borgo S. Donnino*), a town of Gallia Cispadana, situated on the Via Aemilia, between Parma and Placentia, and distant 15 miles from the former city. (Plin. iii. 15. a. 20; Ptol. iii. 1. § 46; *Itin. Ant.* p. 288.) Its name is only mentioned in history during the civil wars between Marius and Sulla, when M. Lucullus, one of the generals of Sulla, was besieged within its walls by the lieutenants of Carbo, but by a sudden sally defeated them with great loss. (Plut. *Sull.* 27; Veil. Pat. ii. 28; Liv. *Epit.* lxxxviii.) It seems to have been at this time a place of consideration; but though noticed by Pliny and Ptolemy as a municipal town, it appears to have subsequently declined, and is called in the Itineraries in more than one passage "Fidentiola vicus," while still later the Jerusalem Itinerary terms it merely a "mansio." (*Itin. Ant.* pp. 99, 127; *Itin. Hier.* p. 616.) The modern *Borgo S. Donnino* derives its name from St. Dumninus, who, according to ecclesiastical traditions, suffered martyrdom at a place called Julia, in the territory of Parma. Its distance from the latter city proves that it occupied the actual site of the ancient Fidentia,

which has sometimes been erroneously transferred to *Fiorenzuola* (Florentia). [E. H. B.]

FIGLINAE, in Gallia, only appears in the *Tab.*, which places it on a road from Viennas (*Viennas*) to Valentia (*Valence*), on the east side of the Rhodanus. Figlinas was about half-way between Viennas and Tegna (*Toin*). The site is unknown, makes it be *Félines*, as Walckenaer makes it. [G. L.]

FILOMUSIACUM, a place in Gallia, only known from the *Table*, which places it on the road between Vesontio (*Besançon*) and Abielica (*Ariège, Paderbier*). D'Anville (*Notice*, &c.) has conjectured the position of this place, which is uncertain. [G. L.]

FINES, in Gallia. D'Anville observes (*Notice*, &c., Art. *Fines*), that there would be an infinite number of places with this name, if, in addition to those which appear in the records of the Roman period, we were to enumerate all the instances in which this name occurs, and which the Roman records do not mention. It is on the old roads between the towns that the Itineraries mark the place called Fines. D'Anville enumerates these that are marked, proceeding in his enumeration from south to north.

1. **FINES** is marked by the Antonine Itin. on the *Table* between Cabello (*Cavallio*), and Apta Julia (*Apt*). Cabello belonged to the *Cavari*. Apta Julia to the *Vulgentes*, and Fines marked the limits of the two peoples. In this and in other instances, owing to discrepancies in the Itin., we want of any name corresponding to Fines, it is not possible to fix positions accurately; and it would be mere waste of time to give conjectures.

2. The Jerusalem Itin. places Fines between Davianum [*DAVIANUM*] and Vapincum (*Vap*), but it does not appear what territories this separated.

3. The *Table* places Fines on a road between Tolosa (*Toulouse*) and Narbo (*Narbonne*); and we may consider it, perhaps, as indicating the boundary between the dependencies of these two great cities. The place cannot be found with certainty; but the *Table* makes it 15 from Toulouse to Badera, and 3 from Badera to Fines.

4. The *Table* places Fines on a road from Toulouse to Dibona, that is, Divona (*Cabors*). Fines is 28 from Toulouse. This place may be marked the limit of the territory of Tolosa on the road to Cabors. The next station to Fines is called M. P. from it is Cosa (*Cos*). Thus we get 28 near to the site of Fines. Walckenaer fixes the place called *Le Faus*, that is, the limit.

5. The Antonine Itin. and the *Table* place Fines on a road from Burdigala (*Bordeaux*) to Agineta (*Agen*). The determination of the position is very doubtful. We must suppose that the place marked the limit of the territory of Agineta, and is the next place to Agineta.

6. The *Table* places Fines half way between Limona (*Perpignan*) and Augustonemetum (*Limoges*), and we may conclude that it marked the limit of the territory of these two cities. The place is uncertain. Walckenaer fixes it at *Thiviers*.

7. The *Table* marks Fines on the road from Augustonemetum (*Limoges*) to Augustonemetum (*Limoges*) and we may conclude that it marked the limit of the territory of these two cities. The place is uncertain. Walckenaer fixes it at *Thiviers*.

8. The Antonine Itin. and the *Table* place Fines

reen Limonum (*Poitiers*) and Argentomagus (*yonen en Barri*); and half way between the towns. D'Anville supposes that Fines may be meant by *Heins*, which is situated at the end of the territory of the Pictones or Pictavi, which Limonum belonged, and at the commencement of the territory of the Bituriges. He adds, it seems probable, that *Heins* may be a corrupted of Fines.

. The Anton. Itin. places Fines between Condate num (*Remes*) and Alauna [*ALAUNA*], and M. P. from *Remes*. There can be no doubt that it marks the limits of the territory of the Remes on the road to Alauna; and D'Anville supposes it marks the boundary between the Redones the Abrincati. [*ABRINCATUL*] D'Anville here also a place called *Wines* or *Huines* near Remes, which he supposes to represent Fines; but argument is more ingenious than satisfactory. Walckenaer fixes Fines at *Austrais*, which is in or near to a straight line joining *Remes* and *anches*.

3. Fines occurs in the Table between Subdin- (*Le Mans*), the capital of the Cenomani, and arodunum (*Tours*), as Walckenaer has it *de Gaulles*, &c. vol. iii. p. 60). D'Anville a different account of the matter, which is too are to be worth discussing. Walckenaer iden- Fines with *Château du Loir*.

1. The Table marks Fines between Genabum (*Gen*) and Agedincum (*Sens*). The distance of s from *Orléans* is 15 M. P. The place seems at the boundary between the dioceses of *Orléans* *Sens*, for as a general rule the limits of the old dioceses indicate the territory of the Gallic s. Walckenaer places Fines in the Forest of *ans*. The next place to Fines is *Aquæ Segeste* [*SAEGESTÆ*], and the next is *Sens*.

1. The Antonine Itin. places Fines between Au- s Suessionum (*Soissons*) and Durocortorum (*Reims*). The inscription of *Tongern* places halfway between the two cities, the interval en which it makes 24 Gallic leagues. There x no doubt that a place named *Fimes* repre- Fines, for the distances agree as well as we can see that they should, when we do not know pre- the points in the two towns from which they measured; and *Fimes* is on the common bound- of the dioceses of *Soissons* and *Reims*.

1. The Antonine Itin. places Fines between Vi- sum (*Verdun*) and Ibiiodurum. The next n to Ibiiodurum is Divodurum (*Metz*). The ace from *Verdun* to Fines is 9 Gallic leagues, from Fines to Ibiiodurum it is 6. Ibiiodurum, e name shows, is on a river; and it is supposed *Hammouville*, at the passage of the *Iron*. The bers in the Itin. fix Fines at a place called *cheville*, between *Verdun* and the passage of *ron*; and the word *Marcheville* contains the onic element *March* or *Mark*, which means a dary or frontier. It is probable that Fines ted the limits of the Virodunnenses and the Me- atrici, whose chief place was Divodurum.

1. The Table places Ad Fines next to a place d Nasium (*Nair*), on the river *Ornes*, above *le-Duc*. Nasium is one of the towns which my assigns to the Leuci, who were south of the atrici. Walckenaer places this Fines, ac- ing to his exposition (*Géog.* vol. iii. p. 87), be- a Nasium and Tullum (*Toul*), and at a place

called *Foug*. D'Anville finds a place called *Feins*, on the same side of the *Ornes*; but its distance from *Nair* does not agree with the 14 Gallic leagues of the Table.

15. Both the Antonine Itin. and the Table place Fines between Vermania (*Immetstadt*) and Vindonissa (*Windisch*). The stations are in this order:— Vermania, Brigantia (*Bregenz*), Arbor Felix (*Arbon*), Fines (*Pfen*), Vitodurum (*Winterthur*), and Vindonissa. The two Itins. agree pretty nearly in the distance from Arbor to Fines. Arbor (*Arbon*) is on the west side of the Lake of *Constans*, and *Pfen* or *Pfen* is on the river *Thur*, in the *Thurgau*. D'Anville observes that the position of this place (Fines) indicates the boundary which the Romans had fixed between Maxima Sequanorum and Rhaetia; for it appears by the Notitia of the Empire, that a post which was established at Arbor (*Arbon*), between Fines and Brigantia, was under the orders of the general who commanded in Rhaetia. [G. L.]

FINIS BITHYNIAE, a station on the road which led from Claudiopolis to Gordium or Juliopolis, in Galatia. (*Itin. Hierosol.*) In the Peutinger Table it appears under the form of Finis Cilicis, with which it must not be confounded. [E. B. J.]

FIRMUM (*ἑρμιον*: *Etā*, Firmasus; *Fermo*), an important city of Picenum, situated about 6 miles from the Adriatic, and 25 from Asculum. We have no account of it previous to the Roman conquest of Picenum, but it was doubtless one of the cities of that people, and after their subjugation was selected by the Romans for the establishment of a colony, which was settled there at the beginning of the First Punic War. (Vell. Pat. i. 14.) Hence Firmum is mentioned by Livy among the thirty Latin colonies during the Second Punic War: it was one of the 18 which continued steadfast to Rome under the most trying circumstances. (Liv. xxvii. 10.) During the Social War (B. C. 90) it again appears as a strong fortress, in which Pompeius took refuge after his defeat by the Italian generals Judacilius and Afranius, and in which he was able to defy the arms of the latter, whom he eventually defeated in a second battle under the walls of Firmum. (Appian, B. C. i. 47.) It is again mentioned during the Civil War of Caesar and Pompey, when it was occupied by the former without resistance. (Cic. ad Att. viii. 12. B.) Under Augustus it received a fresh colony, and we find it in consequence bearing in inscriptions the colonial title, though Pliny does not mention it as such, but the name of Firmum appears to be accidentally omitted from his text. (Plin. iii. 13. s. 18, Lib. Colon. p. 226; Orell. Inscr. 2223, 3118, 3406; Zumpt. de Colon. p. 335.) After the fall of the Roman Empire Firmum again appears as a strong fortress, which was taken and retaken by Belisarius and Totila. (Procop. B. G. ii. 16, 20, iii. 11, 12.) It seems to have been then one of the principal towns of Picenum, as it continued under the exarchs of Ravenna, and has retained the same consideration ever since. It is still the see of an archbishop, and capital of a province called the *Mare di Fermo*. It is frequently distinguished by the epithet Picenum (*ἑρμιον Πικρινόν*, Strab.; Firmum Picenum, Val. Max. ix. 15. 1; Orell. Inscr. 3406), as if for the purpose of avoiding confusion with some other town of the name, but no such is known.

About 5 miles from Firmum, at the mouth of the little river *Leta*, was the port or emporium of the city, called Castellum or Castrum Firmanum, which is confounded by Mala with Firmum itself. It is

still called *Porto di Formo*. (Plin. l. c.; Mel. ii. 4. § 6; Strab. v. p. 241.) This town, which was on the line of the coast-road that united the Via Salaria with the Flaminia, is placed by the Itineraries 24 M. P. from the mouth of the Truentus, and 32 from Potentia. (*Itin. Ant.* pp. 101, 313; *Tab. Peut.*) Firmum itself, being situated in the interior on a lofty hill, could never have been on a great line of high road, but the itineraries give a cross line passing from Septempeda (*S. Sessorino*) through Urbs Salvia, Firmum, and Asculum to Castrum Truentinum. (*Itin. Ant.* p. 316.) [PISCNUM.] [E. H. B.]

FISCELLUS MONS, a lofty mountain forming part of the central and most elevated chain of the Apennines. Pliny tells us that it contained the sources of the river Nar; and this statement would lead us to identify it with the group now known as the *Monti della Sibilla*, one of the loftiest and most rugged portions of the central Apennines [APENNINUS], rising on the confines of the Sabines and Picenum. Silius Italicus, on the contrary, appears to connect it with the Vestini, which would indicate a situation somewhat further south. (Plin. iii. 12. s. 17; Sil. Ital. viii. 517.) The statement of Pliny would deserve the most credit, but that the passage is confused, and in all probability corrupt (see Sillig, *ad loc.*); and it would almost seem as if he confounded the Nar with the Velinus, which in fact rises in the lofty mountain group immediately on the confines of the Vestini. [NAR.] Varro speaks of the Mons Fiacellus and Tetrica (in the same neighbourhood) as abounding in wild goats; meaning probably the Ibex or Boquetin of naturalists, an animal long since extinct in the Apennines. (Varr. *R. R.* ii. l. § 5, 3. § 3.) [E. H. B.]

FIXTUNUM. The Table has a road from Agedincum (*Sens*) to Fixtunum, passing through Riobe and Calagum (*Chailly*). D'Anville supposes it to be the Istinum of Ptolemy, the chief town of the Meldi. [LATINUM.] [G. L.]

FLANATICUS SINUS (Plin. iii. 19), or FLANONICUS (Φλανωνικός ἰσμός, Steph. B. s. v.), the gulf on the N.W. coast of Liburnia, which derived its name from a people called the FLANATES (Plin. iii. 21). There was a town called FLANONA (Plin. l. c.; Ptol. ii. 16. § 2, *Fianone*), between Alvona and Tarasica. It is now called *Canal del Quarnero*, well known for its dangerous navigation. (Wilkinson, *Dalmatia and Montenegro*, vol. i. p. 48; Neigebaur, *Die Süd-Slaven*, p. 249.) [E. H. J.]

FLAVIA CAESARIENSIS, mentioned in the *Notitia* as being a division of Britain under the superintendence of a *praeses*; the notice being as follows:—

Sub dispositione viri spectabilis, vicarii Britanniarum.

Consulares
Maximas Caesariciensis;
Valentiae.

Praesides
Britannias Primas;
Britannias Secundas;
Flaviae Caesariciensis.

The other notice (for there are only two) is in Rufus Festus (*Breviarium*, c. 3): "Sunt in Gallia cum Aquitania et Britannia decem et octo provinciae . . . in Britannia, Maxima Caesariciensis, Flavia, Britannia Prima, Britannia Secunda."

In the Map of the *Monumenta Britannica*, the province of Flavia Caesariciensis is bounded by the (a) Thames, (b) Wales, (c) the Mersey, Don, and

Humber, (d) the German Ocean; so that it comprises the midland and eastern counties and Lincolnshire.

The authority for these lines of demarcation is unsatisfactory. It is only probable, first, that the name was taken from the conquests made by Flavius Vespasianus; and secondly, that the area thus named was as aforesaid. [R. G. L.]

FLAVINUM or FLAVINA, a small town of Etruria, known only from Virgil, who speaks of the "Flavinia arva," and Silius Italicus, who calls the name of the town Flavinia,—though Servius tells us it was Flavinium. We may probably infer from the names with which it is associated by Virgil, that it was somewhere in the neighbourhood of the Faliscans and Soracae; and it has been placed, with some plausibility, at *Fiesole*, between the foot of the Tiber, about 25 miles from Rome (Virg. *Aen.* vii. 696, and Serv. *ad loc.*; Sil. Ital. viii. 492; Gell. *Top. of Rome*, p. 244.) [E. H. B.]

FLAVIOBRIGIA (Φλαυιοβριγία; prob. *Flavia galea*), a sea-port town on the N. coast of Sicily, Terraconensis, and on the W. side of the strait: the Nerva (*Narion*). From the notice of it in Pliny, we may infer that it received its name at its rank as a colony, under Vespasian or Trajan, having formerly been called *Ammianus portus*. (Plin. iv. 20. s. 34.) Pliny assigns it to the *Varchia* of Ptolemy to the *Antigraeus*. (Flores, *Exp. Sic.* p. 10; Mariana, *Hist. Hip.* iv. 4.) [R. N.]

FLAVIOBRIGANTUM [BRIGANTIA].
FLAVIONAVIA. [ASTURES.]

FLAVIOPOLIS (Φλαυιόπολις or Φλαυιόπολις), a town of Cilicia, to the west of Tarsus. From its position at *Unak*, it is manifest that this place occupies the site of the ancient Flaviopolis. Respect to its history scarcely anything is known, and it cannot be ascertained whether it owed its name to the emperor Vespasian, or to some member of the family of Constantine. In later times it was the seat of a Christian bishop. (Ptol. v. 8. § 6; *Armeniac. Des. Minor*, vol. i. p. 116.) [L. S.]

FLAVIOPOLIS. [CRATEIA].
FLAVIUM SOLVENSE, a town in Euxine, probably situated in the neighbourhood of Varna. (Plin. *H. N.* iii. 27.) In inscriptions (*Orelli*, 1254. foll.) it is called *Flavia Solva*. According to the modern *Solfeld* has derived its name from Solvens; but comp. Linhard, *Geogr. von Krain*, i. p. 326. [L. S.]

FLENIO, a place which the Table finds on a road from Noviomagus (*Nymegen*) to Lugdunum (*Leuven*). The next station to Lugdunum is *Farm Halcum* (*Voorburg*); and the next station to *Farm Halcum* is Flenio. The distance between *Farm Halcum* and Flenio is 12 M. P. D'Anville finds *Flenio* at *Vlaardingen* on the *Mosa*. This place was probably the chief town on the river in the Roman times; it was certainly for a long time after, and before the rise of Rotterdam, which is not mentioned until the 14th century. D'Anville establishes the fact of Flenio being the centre of some road by the existence of a milestone which was dug up at a place called *Monster* near *s'Gravenzande*, with the inscription upon it, a distance which fits no place except *Flaardingen*. The distances in this part of Gallia are Roman miles. [G. L.]

FLETIO, is placed in the Table on a road along the Rhine from Lugdunum Batavorum (*Leiden*) to Noviomagus (*Nymegen*). The position of *Alphen* (*Alphen*) between Leiden and Flenio is—

ablihed; and the distance between Albanianae
Fletio is 19 M. P. Fletio is *Vleten*, accord-
; to D'Anville and others who have followed his
nion. [G. L.]

FLEVO LACUS, and FLEVUM OSTIUM. Dru-
t, the son of Livia, and the brother of Tiberius, when
held a command on the Rhine, employed his men
making a canal to join the *Rhine* and the *Yssel*.
is canal, called the *Fossa Drusiana* or *Fossae*
usinae, commences below the separation of the
ise and *Waal*, and joins the *Yssel* near *Donsburg*.
ic. *Ann.* ii. 8; *Suet. Claud.* 1.) Germanicus,
son of Drusus, passed with his ships from the
ise, through this canal, into the lakes and the
an, and as far as the mouth of the *Aminia* (*Eme*).
e water of the *Rhine* being thus partly diverted
o the *Yssel* made a new outlet for that river,
ich outlet Pliny (iv. 15) calls *Flevum*. He says
hat *Helium* and *Flevum* are the names of the two
utns into which the Rhine is divided, on the
th flowing into lakes, on the west into the river
se; it preserves by an outlet intermediate between
two a moderate channel for its own name." The
ium Ostium is the outlet of the *Maas*, which
r receives the *Vahalis* (*Waal*). The outlet of
Flevum Ostium was into a lake, which *Mela*
2) thus describes: "The Rhine not far from the
is distributed in various directions, but to the
the *Rhenus* is a river even then and until it
ers the sea; on the right it is at first narrow and
o into itself, afterwards the banks recede from
another far and wide; and now, no longer a river
a large lake, it is called *Flevo* where it has
id the plains; and surrounding an island of the
e name it becomes again more contracted, and
rs out again in the form of a river." *Mela* here
tions only two mouths, but *Ptolemy* (iv. 9), be-
s the outlet which he calls the *Mosa* [*Mosa*],
merates a western outlet of the Rhine, a middle
let, and an eastern outlet; the last ought to corre-
nd to the *Flevum*. The lake which *Mela* describes
sponds to the *Zwider Zee*. *Ukert* (*Gallien*,
31) observes that *Mela* does not say that the
run enters the sea; and he translates the last
de, "iterumque fluvius emittitur," "and comes
river out of the lake." He admits, however,
Mela assumed that the *Flevum* entered the
and nobody can doubt that, when *Mela* says it
s out again in the form of a river, he means to
that it enters the sea in a form like the other
ch, though its course had been made different
assing through a great lake. Geographers have
mpted to determine *Mela's* island, which is a
ess attempt, for the lake has undergone great
ges since *Mela's* time; and, besides that, his
ription may not be exact. It is certain that
s were large lakes, or a large lake, near the
its of the *Rhine*; for, besides the passage of
as already mentioned, he says that Germanicus,
a previous occasion (*Ann.* i. 60), after sending
ina through the country of the *Bructeri* to the
sia, and appointing *Fedo*, who had the charge
he *Frisian* country, to command the cavalry,
arked four legions and took them through the
s. Infantry, cavalry, and fleet all met at the
sia. These lakes then were navigable in the
an period; and it is an erroneous, though com-
statement, that the *Zwider Zee* did not exist
he enlargement that the *Zwider Zee* has received
he encroachment of the sea has probably been

chiefly on the west side, where the coast is flat and
the water is shallow. Along the east side there is
deeper water. In 1219 the sea is said to have
broken in and to have carried away the dikes; and
another invasion, in 1282, which did great damage,
is also recorded. It seems probable that the outlet
of the *Zwider Zee* is the part that has been chiefly
enlarged, the part that lies north of the channel
between *Stavoren* and *Medemblik*, for it is said that
old *Stavoren* was swallowed up by the sea.

It is conjectured by *Walckenaer* that the *Nabalio* of
Tacitus (*Hist.* v. 26) is the *Yssel*, and that the *Fossa*
of *Drusus*, from *Arabeis* to the *Yssel* at *Donsburg*,
formed, with the course of the *Yssel* into the lake
or lakes, the north-eastern limit of Gaul. He further
conjectures that the name *Flevum* was given to the
stream which flowed out of the lake into the North
sea. Accordingly, he supposes that the *Castellum*
Flevum (*Tacit. Ann.* iv. 72) may have been at the
outlet of the *Flevum*, which channel completed the
north-eastern limit of Gallia. He farther supposes
that the island of *Vlieland*, one of the four which
lie in front of the *Zwider Zee*, and form a barrier
against the ocean, may represent the *Flevum* *Castellum*.
(*Walckenaer, Géog. des Gaules*, vol. ii. p. 294.)

Thus the *Vlie-Stroom*, between the islands of
Vlieland and *Schelling*, may represent the old mouth
of the *Flevum*, as it subsisted before the great
flood of the 13th century enlarged the lake *Flevo*,
detached the islands of *Schelling* and *Ameland*
from the main, and buried in its waters the nume-
rous villages of the district of *Stavoren*. (*Walckenaer*,
vol. ii. p. 201.) [G. L.]

FLEVUM, a fortress mentioned by *Tacitus* (*Ann.*
iv. 72), of which the probable position is given in
the preceding article. [L. S.]

FLEXUM (Φλάξω), a town of some importance
in Pannonia, in the south of *Carmentum*. Accord-
ing to *Ptolemy* (ii. 15. § 3) it was the head-quarters
of the 14th legion, while the *Notitia Imperii* de-
scribes it only as the station of a division of cavalry.
(*Comp. Itin. Ant.* pp. 247, 267.) [L. S.]

FLORENTIA. 1. (*Φλωρεντία*, *Ptol.*; *Etia.* *Flo-*
rentinus; *Florence*; in Italian, *Firenze*, but in old
writers *Fiorenza*), a city of Etruria, situated on the
river *Arnus*, about 3 miles S. of *Faesulae*. Though
celebrated in modern times as the capital of Tuscany,
and in the middle ages as an independent republic,
it was not a place of much note in antiquity. No
trace of its existence is found in Etruscan times; and
it is probable that it derived its first origin as a
town from the Roman colony. The date of the esta-
blishment of this is not quite clear. We learn from
the *Liber Coloniarum* that a colony was settled
there by the triumvirs after the death of *Caesar*
(*Lib. Colon.* p. 213); but there seems some reason
to believe that one had previously been established
there by *Sulla*. There is indeed no direct authority
for this fact, any more than for that of the new town
having been peopled by emigrants who descended
from the rocky heights of *Faesulae* to the fertile
banks of the *Arnus*; but both circumstances are in
themselves probable enough, and have a kind of tra-
ditionary authority which has been generally received
by the Florentine historians. (*Niebuhr*, vol. i. p.
135.) A passage of *Florus* also (iii. 21. § 27), in
which he enumerates *Florentia* (or, as some MSS.
give the name, *Fluentia*) among the towns sold by
auction by order of *Sulla*, is only intelligible on the
supposition that its lands were divided among new

colonists. (Zumpt, *de Colon.* p. 253.) But he is certainly in error in reckoning Florentia at this time among the "municipia Italiae splendidissima;" it could not have been a municipal town at all; and from the absence of all notice of it during the campaign of the consul Antonius against Catiline, in the immediate neighbourhood of Faesulae, it is evident that it was not even then a place of any importance. But from the period of the colony of the triumvirs it seems to have rapidly become a considerable and flourishing town, though not retaining the title of a colony. The Florentini are mentioned by Tacitus in the reign of Tiberius among the municipia which sent deputies to Rome to remonstrate against the project of diverting the course of the Clanis from the Tiber into the Arnus; a proceeding which they apprehended, probably not without reason, would have the effect of flooding their town and territory. (Tac. *Ann.* i. 79.) We subsequently find the Florentini noticed by Pliny among the municipal towns of Etruria; and the name of Florentia is found in Ptolemy, as well as in the Itineraries. (Plin. iii. 5. s. 8; Ptol. iii. 2. § 48; *Itin. Ant.* pp. 284, 285; *Tab. Pent.*) These scanty notices are all that we hear of it previous to the fall of the Western empire; but its municipal consideration during this period is further attested by inscriptions (Orell. 686, 3711, 3713; Gori, *Inscr. Etrur.* vol. i.), as well as by the remains of an amphitheatre still visible near the church of *S. Croce*. It is probable that its favourable position in the centre of a beautiful and fertile plain on the banks of the Arnus, and on the line of the great high road through the N. of Tuscany, became the source of its prosperity; and it is clear that it rapidly came to surpass its more ancient neighbour of Faesulae. In the Gothic Wars Florentia already figures as a strong fortress, and one of the most important places in Tuscany. (Procop. *B. G.* iii. 5, 6.)

The remains of the amphitheatre already noticed, which are in themselves of little importance, are the only vestiges of Roman buildings remaining in the city of *Florentia*.

2. A town of Cispadane Gaul, noticed only in the Itineraries, which place it on the Via Aemilia between Placentia and Parma, at the distance of 15 miles from the former city, and 10 from Fidentia (*Borgo S. Donino*). It still retains its ancient appellation, converted into the diminutive form *Florenzuela* for the purpose of distinction from the more celebrated city of the name. (*Itin. Ant.* p. 288; *Tab. Pent.*) [E. H. B.]

FLORENTIANA (Φλωρεντιανη, Florentia), a town in Moesia, of which the site is unknown. (Procop. *de Aedif.* iv. 4. p. 285; *Notit. Imp.*, where it is called *Florentia*.) [L. S.]

FLORIA'NA, a town of uncertain site, in Lower Pannonia. It was connected by a road with Aquincum, 30 miles to the east of it, and was the residence of the praefectus classis Istriae. (*Itin. Ant.* p. 365; *Notit. Imp.*) [L. S.]

FLO'RIUS, a small river of Hispania Tarraconensis, in the territory of the Astures, near the N. extremity of the W. coast of Spain: probably the *Rio de Castro*. (Plin. iv. 30. s. 34; Ukert, vol. ii. pt. 1. p. 399.) [P. S.]

FLUMEN BIBALORUM. [GALLAECIA.]

FLUMEN OBLIVIONIS. [GALLAECIA.]

FLUMEN SALSUM. [SALSUM FLUMEN.]

FOENICULARIUS CAMPUS (τὸ Μαράθωνα πεδῖον), a large plain in the neighbourhood of Tar-

raeo, in Spain, so called from the quantity of fennel (*adjugolpos*, Dor. and Att. *adjugos*, Lat. *feniculus*) which grew there. The plain was traversed by the great Roman road from the Pyrenees to Tarraco. (Strab. iii. p. 160: Cic. *ad Att.* xii. 8.) [P. S.]

FONS TUNGROBUM. Pliny says (xxx. 2. that "Tungri, a city of Gallia, has a famous fountain, sparkling with many bubbles; and it has a smack of iron, which is not perceived until stirred: it is drunk; it purges the body, drives away cold fevers, and disperses calculi. The same water becomes turbid if fire is applied to it, and finally covered." Civitas is the whole territory of the Tungri, whence the modern town of *Tongers*, in Belgium, and it is generally supposed that this "famous fountain" is the springs of *Spa*, which are south-east of *Liège*. This would give to the territory of the Tungri a considerable extension; perhaps, however, not more than it had. No place suits the description of *Fons* so well as the waters of *Spa*. [G. L.]

FONTES AMARI (αἱ ὕδατοι ἄλφιων, *Scholia* iii. p. 804; Diod. iii. 39; Plin. vi. 29. § 33), the Bitter Pools, the modern *Schab*, derived their name from the saline flavour and depuration of their waters. These were strongly impregnated with alkaline salts and with muriate of lime, washed from the rocks which separate the Delta from the Red Sea. As salt entered largely into the culinary art of the Egyptians who preserved in it fish and fowl, as well as the meat of cattle, and as it was required also in their manufactures of earthenware and glass, and in the composition of dyes and pigments, these pools, as well as the Natron Lakes on the western side of the Nile, were of great value, and were probably, on that account, regarded as the property of the kings. The Bitter Pools began a little to the S. of *Araucopia*, lat. 30° 4' N., and extended nearly as far as *Arsoe* at the head of the Heroöpolite bay. Thersites passed the great canal which connected the Nile with the Red Sea. The canal had been planned and begun by Pharaoh Necho II., a monarch of the 26th dynasty; was carried by Darius Hystaspes from *Phthium*, or *Thinis*, as far as the Bitter Pools (*Strab.* ii. 158); and was subsequently continued by Ptolemaeus Philadelphus to *Araucopia*. [W. E. D.]

FORATH (Plin. vi. 28. s. 32), a small town in Southern Babylonia, stated by Pliny to have been on the banks of the *Pasitigra*, and subject to the rule of Characene. Sillig, in his new edition of *Ptolemy's* *Fora*. It is said to have been 12 miles from *Charax-Spaënu*. Mannert has supposed that it is represented by the present *Basrah*, and that its name has been preserved in *Feresht Moesia*, a name sometimes applied to that town: but this conjecture seems to be very doubtful. [V.]

FORENTUM. [FERENTUM.]

FORMIAE (Φορμιαί: *Ἑθ. Formiense*: *Nisibis* a *Gaza*), a city of Latium on the coast of the *Stes*, Caietanum, and situated on the Via Appia, between Fundi and Minturnae, 13 miles from the former and 9 from the latter city. (*Itin. Ant.* p. 121.) That included in Latium, in the later and more exact sense of the term, it certainly was not an *ancient* Latin city; but whether this and the neighbouring Fundi were Volscian, or, as is perhaps more probable, Ansonian, cities we have no information: unless mention occurs of either in history until they came into municipal relations with Rome. But a *city*

* There can be little doubt that the name of this far more celebrated Marathon had the same origin.

ted by late writers ascribed the foundation of it to a Greek colony, which was derived from daemon, and connected with the origin of the neighbouring Amyclae. In accordance with this tradition its name was said to have been originally Hormiae, was derived from the excellent anchorage or road for shipping (*Spus*) which its bay afforded (ib. v. p. 233; Plin. iii. 5. s. 9; Fest. s.v. *Formiae*; *ad Aen.* x. 584.) Another legend, still more generally received both by Greek and Roman writers, told Formiae as the site of the fable of the Laestrymoe in the Odyssey; and the Roman family of the *Formiae*, in the days of Augustus, even asserted direct descent from Laestus, the king of the trygones. (Cic. *ad Att.* ii. 13; Hor. *Carmin.* iii. Plin. l. c.; Sil. Ital. vii. 410; Solin. 2. § 23.) The first historical mention of Formiae occurs immediately after the great Latin War, in B.C. 338, appears that on that occasion the two cities of Formiae and Minturnae took no part in the war, had thus kept the passes through their territory the highest importance in a military point of view, always open to the Roman armies. For this reason they were rewarded with the gift of the Roman citizenship, but at first without the right of suffrage, which was not granted them till B.C. 190: they were then included in the Aemilian tribe. (Liv. xiv. 27; Val. Pat. i. 14; Cic. *ad Att.* ii. 14.) From henceforth Formiae appears to have been a flourishing Roman municipal town, to which its situation on the Appian Way doubtless added; but it was probably still more indebted to the extreme beauty of its situation, which rendered it a favourite place of resort with the wealthy nobles in the latter days of the Republic, as we find under the Empire. The charm of its beautiful climate and tranquil bay, the

"Temperatae dulces Formiae litus,"

celebrated by Martial in one of his most elegant lines; and all modern travellers concur in extolling *Mola di Gaeta* as one of the most lovely spots in Italy. Among the villas with which Formiae became adorned, by far the most celebrated is that of Cicero, which appears to have become a favourite residence of the great orator, from whence many of his letters to Atticus are dated, and which led him a welcome retirement during the most troubled periods of the civil wars. It was here that, on his flight from Rome, he landed for the time, and spent the night in his Formian villa, whence he was attempting to escape when he was overtaken by the murderers and put to death. (Cic. *ad Att.* ii. 13, 14, iv. 2, vii. 8, &c., Fam. xvi. 10, 12, &c.; Plut. Cic. 47, 48; Sen. *B. C.* iv. 39, 20; Val. Max. i. 4. § 5; *de Vir. Illust.* 81.) Several ancient writers, including Plutarch, represent Caieta as the scene of catastrophe; but this evidently arises from a confusion of the two: Caieta, indeed, at this time appears to have been in a municipal sense a dependency of Formiae, of which it served as a port; and it is certainly not necessary to suppose, as Middleton has done, that Cicero had a villa at Caieta itself as well as at Formiae. (See this fully discussed by Chaupy, *Maison d'Horace*, pp. 232—236.) Several other Romans had villas at Formiae in the days of the great orator, as we find in those of Horace; but the wealthy family of the *Mamurrae*, who was himself a native of Formiae, at the latter period engrossed so great a part

of the locality, that Horace calls it the "city of the Mamurrae." (Hor. *Sat.* i. 5. 37, and Schol. *ad loc.*; Plin. xxxvi. 6. s. 7.) Martial bears testimony that, at a later period, the charms of Baiæ and the other places on the Bay of Naples had not caused Formiae to be neglected. (Mart. x. 30.) The hills at the back of it, and which bound the Sinus Caietanus, are also celebrated by Horace for the excellence of their wine. (Hor. *Carmin.* i. 20. 19, iii. 16. 34.) We learn that Formiae received a colony under the Second Triumvirate, and it bears the title of a colonia in several inscriptions of imperial date. (*Lit. Colon.* p. 234; Orell. *Inscr.* 3782, 3884.) It appears to have continued a tolerably flourishing place till the close of the Roman Empire, and retained its episcopal see till the 9th century, when it was taken and destroyed by the Saracens, in 856. The remaining inhabitants took refuge at Gaeta, which succeeded to the episcopal dignity; and the modern town of Mola, which has grown up on the ruins of Formiae, is, as its appellation of *Mola di Gaeta* implies, a sort of dependency of the neighbouring city. The remains of antiquity still visible at Formiae are extensive; they appear to have all belonged to different Roman villas, of which there remain extensive substructions, with the ruins of terraces, vaulted passages, baths, grottoes, &c., lining the whole coast from *Mola di Gaeta* to the neighbouring village of *Castellone*. These ruins may be traced to have formed part of three ancient villas, of which the one next to Mola is commonly known as that of Cicero; but the Abbé Chaupy would assign to the great orator the more important remains in the garden of the modern *Villa Morosani*, the furthest of the three from Mola. The point is scarcely susceptible of precise determination; but a monument on the hill above is regarded as that of Cicero, and the discovery near it of an inscription bearing the names of some freedmen of the Tullian family, certainly affords some countenance to the attribution. Several other ancient inscriptions have been discovered at Formiae, and numerous sepulchres and ruins of ancient edifices are scattered along the coast for some miles eastward of Mola along the Appian Way. Among these the names of the *Torre di Scarsi*, and a spot called *Mamurra*, evidently indicate the site of villas of Aemilius Scaurus, and of the wealthy Mamurra. (Chaupy, *Maison d'Horace*, vol. i. pp. 181—231; Romanelli, vol. iii. pp. 422, 423; Hoare, *Class. Tour*, vol. i. pp. 118—129.) [E. H. B.]

FORMIO (*Populion*, Plin. iii. 1. § 27), a small river, now called the *Risano*, falling into the Adriatic Sea between Tergeste (*Trieste*) and Aegida (*Capo d'Istria*), which formed the limit between Venetia and Istria, and consequently at one time the eastern limit of Italy, until Augustus included Istria also under that denomination, in consequence of which the Arsia became the boundary of Italy. (Plin. iii. 18. s. 22.) Ptolemy, however, reckons both the river Formio and the colony of Tergeste as included in Istria; but Pliny's statement is probably correct with regard to the limit as fixed in the time of Augustus, previous to the annexation of Istria to Italy. [ITALIA.] Pliny places the river Formio 6 miles S. of Trieste, which agrees very well with the *Risano*; and this river has accordingly been identified with the Formio both by Cluver and D'Anville. Walckenaer fixes on a smaller stream flowing into the sea near *Maja Vecchia*; but this seems too near Trieste, as well as too inconsiderable a stream. [E. H. B.]

FORO AUGUSTANA. [LIBRIGOSIA.]

FORTUNATAE INSULAE (*al rās Maḥdūp* *ḥāwa*, *the Islands of the Blessed*), one of those geographical names whose origin is lost in mythic darkness, but which afterwards came to have a specific application, so closely resembling the old mythical notion, as to make it almost impossible to doubt that that notion was based, in part at least, on some vague knowledge of the regions afterwards discovered. In the present case, the opinion embodied in the name will be more fitly discussed under OCEANUS: it is enough to say here that the earliest Greek poetry places the abode of the happy departed spirits far beyond the entrance of the Mediterranean, at the extremity of the earth, and upon the shores of the river Oceanus, or in islands in its midst; and that Homer's poetical description of the place may be applied almost word for word to those islands in the Atlantic, off the W. coast of Africa, to which the name was given in the historical period (*Od.* iv. 563, foll.):—"There the life of mortals is most easy; there is no snow, nor winter, nor much rain, but Ocean is ever sending up the shrilly breathing breezes of Zephyrus, to refresh men" (*Comp. Pind. *Od.* ii. 128.*). Their delicious climate, and their supposed identity of situation, marked out the *Canary Islands*, the *Madeira* group, and the *Azores*, as worthy to represent the islands of the Blest. In the more specific sense, however, the name was applied to the two former groups; while, in its widest application, it may even have included the *C. de Verde* islands; its extension being, in fact, adapted to that of maritime discovery.

The Romans first became acquainted with these islands at the close of the civil wars of Marius and Sulla. Plutarch relates that, when Sertorius was at or near Gades (*Cádiz*), about B.C. 82, he found certain sailors lately returned from the Atlantic islands, which were also called the islands of the Blest; who described them as two in number, separated by a very narrow strait, and distant from Africa 10,000 stadia (1000 geographical miles, an enormous exaggeration, if the *Canaries* are meant). Watered moderately by rare showers, and refreshed by gentle and moist breezes, chiefly from the west, they not only rendered an abundant return to the cultivator, but produced spontaneously food enough for their indolent inhabitants. The climate was temperate at all seasons of the year; and, in short, such were their natural advantages, that even the barbarians identified them with that Elysian Plain and those Abodes of the Happy which had been sung by Homer, and the fame of which had reached to them. Enchanted by these accounts, Sertorius was seized with the desire of fixing his abode in the islands, and living there in peace; but, as the Cilician pirates of his fleet preferred the plunder of better known countries, he was compelled to abandon the design. (*Plut. Sertor.* 8; *Flor.* iii. 22.) However, the discovery must have been speedily followed up, if at least the writer *Strabo*, whom *Pliny* quotes in his account of the islands (*vi.* 32. s. 37), be the same who is mentioned by *Cicero* (*ad Att.* ii. 14). *Strabo* speaks of them in a very cursory way; and the later geographers differ somewhat as to their number and names. The following table exhibits their statements, as compared with one another, and with the modern names, the order (after the first) being from E. to W.

From this table it will be seen that, besides *Antolala*, which he expressly distinguishes from the *Fortunatae*, *Pliny* only reckons six islands as

belonging to the group, instead of seven, which is the actual number. *Pliny* also gives the number as

SEBOSUS sp. Plin. l.c.	JUBA, sp. Plin. l.c.	PTOLEMAEUS, iv. 6. §§ 33, 34.	MODERUS NAMES.
Jubonia	Parapara- riae Jubonia Minor Jubonia	Ἰβωνία [Ibōnia], Ἰβωνία Ἀδριακάδα Ἀσπερροί	Madeira, &c.
Planaria	Canaria	Ἰβωνία	Fuerteventura.
Corvallis	Nivaria	Ἰβωνία Ἰβωνία	Gran Canaria. Tenerife.
Capraria	Capraria	Ἰβωνία	Canaria.
Fluvialis	Umbria	Ἰβωνία	Palma. Ferro.

(iv. 21. s. 36, "Deorum sex, quae aliqui Fortunatae appellaverunt.") Instead of accounting for the difference, as above, by supposing him to have counted *Palma*, some modern writers identify this island with his *Ἀσπερροί νήσοι*, and with the *Jubonia* *Minor* *Juba*; making the *Ἀδριακάδα* of *Pliny*, and the *paraparae* of *Juba*, *Lanzarote*, with the smaller islands of *Alegres* and *Graciosa*, and so excluding *Palma*. Those who desire to pursue the subject should compare the longitudes and latitudes. *Ptolemy* with the distances preserved by *Pliny* *Juba* and *Sebosus*. Of these, respecting the identification of which there is no dispute, *Canaria* is still so called, is said to have obtained its name from the multitude of dogs which ran wild on the lofty snow-clad peak of *Tenerife* above the origin of the name of *Nivaria*; while *Fuerteventura* the place of the chief meridian from which latitudes were reckoned before the introduction of the practice of computing them from national observatories: old practice dates from the time of *Ptolemy*. The first meridian, however, is drawn through *Tenerife* without specifying the exact island. (*Plin.* i. §§ 11, 12, *ad alib.*) [P. 5]

FORULI (*Φορῶλι*), a town of the *Samnites*, situated, as we learn from *Livy* (*xviii.* 11), on a road from *Amiternum* to *Interamna*. It is mentioned by *Virgil* among the ancient cities of the *Sabines* (*Aen.* vii. 714), as well as by *Strabo* (*Silii Italici* (viii. 417); but in later times it appears to have been a mere village or independent upon *Amiternum*. (*Liv.* l.c.; *Isa. Forulensi*, *Inscr.* sp. *Romanelli*, vol. ii. p. 250. *Orell. Inscr.* 3794.) *Strabo* describes it as built on a rock, in a position between a band of outlaws than for possible habitation. Its site may be fixed with certainty at *Castellum*, about 5 miles from *Amiternum*, where are numerous ancient remains, and the inscriptions above cited were discovered. The *Strabo* *Andronicus* also agrees with that of *Pliny* in signed by the *Tah. Praet.* from *Interamna* in which name is evidently a corruption of *Foruli*. The precise situation of *Foruli* *Tomeus* corresponds with the expressions of *Strabo* of a general wild character of the neighbourhood sufficient to justify them. (*Romanelli*, l.c.; *Boncompagni*, *Ann. dell' Inst.* vol. vi. p. 109; *Chapuy*, *Ann. d'Harv.* vol. iii. pp. 124-126.) [P. 2]

FORUM ALIENI, a city of *Gallia Cisalpinis*, mentioned only by *Tacitus* (*Hist.* iii. 6) during the civil wars of *Vitellius* and *Vespasian*, A.D. 69.

nanner that affords little clue to its position, & that it was situated on some river, the passage of which it was important to defend. Cluver inclined to place it at Ferrara, on the Po; & have fixed on Legnago, on the Adige, between us and Padua, which is certainly the more probable site, and agrees better with the movements of the campaign. (Cluver, *Ital.* p. 155; Orell. ad l.c.) [E. H. B.]

FORUM APPII (*ἄστυς Ἀππίου*: *Etā. Foropap-ia*), a town on the Appian Way, distant 43 miles Rome. We learn from Horace that it was the resting-place for travellers at the end of the day's journey from Rome, though he himself is companion thought fit to divide the distance. i. 5. 3—6.) It was here, also, that it was customary for travellers on the Appian Way to embark canal that extended from thence parallel with line of road to the immediate neighbourhood of Ardea. (Hor. l. c.; Strab. v. p. 258.) Hence came, as Horace describes it, a town of boatmen unkeepers,—

Differtum nautis cauponibus atque malignis."

mentioned also by Cicero (*ad Att.* ii. 10), as in the journey of St. Paul to Rome (*Act.* xlviii. 15), as one of the usual halting-places on the Appian Way; on both occasions in conjunction with Tree Tabernae, which was the next stage going to Rome, ten miles nearer the city (*Itin.* p. 107; *Itin. Hier.* p. 611). Its situation, in midst of the marshes, sufficiently accounts for the madness of the water complained of by Horace.

is probable from its name that Forum Appii founded by Appius Claudius Cæcilius, who first constructed the celebrated road which so long bore name; and the place appears to have always owed under the patronage of his family. (Suet.

2.) It seems to have grown up into a considerable town, which, under the Roman empire, enjoyed municipal privileges, and is mentioned by Pliny among the municipal towns of Latium. (*Plin.* i. c. 9.; Orell. *Inscr.* 780.) There are now no remains on the spot; but the site is clearly indicated by considerable ruins on each side of the Appian Way, as well as by the 43rd milestone, which still preserved, at a spot distant four miles from place still called *Treponi*, the ancient Tripontium or Tripuntium. (Chaupey, *Maisons d'Horace*, iii. pp. 387—452; Pratilli, *Via Appia*, pp. 100.) [VIA APPIA.] [E. H. B.]

FORUM AURELII, a town or village on the Appian Way of Etruria, situated on the Via Aurelia, and distant by the Itinerary 24 miles from Centumcellas or Centocellæ. (*Itin. Ant.* p. 291.) The exact number is doubtful (those in the Tab. Pent. altogether confused); but, on the whole, it is probable that Forum Aurelii was placed at or near Ostia, on the river Tiber, at the place where the stream was crossed by the Via Aurelia. There is little doubt from its name that the Forum Aurelii was founded at the same time with the construction of the high road of the same name; but of date of this we have no account. [VIA AURELIA.] We only know that both the road and the town existed in the time of Cicero, who mentions the *Forum Aurelium* (sic) in connection with the proceedings of Catiline. (*Cic. de Cat.* i. 9.) It seems probable to have been a place of any importance, and from this incidental mention, its name is found only in the Itineraries. [E. H. B.]

FORUM BIBALORUM. [GALLABACIA.]

FORUM CASSII, a town of Etruria, situated on the Via Cassia, with the formation of which, from its name, it was certainly connected. It is known to us only from the Itineraries, which place it 11 M.P. beyond Sutrium, between that place and Volturni, and 44 miles from Rome. (*Itin. Ant.* p. 286; *Tab. Pent.*) The distinct traces of the Via Cassia enable us to place it with certainty about a mile N.E. of Vetralla, where an ancient church still retains the name of *S. Maria in Forcassi*, and some portions of Roman buildings are still extant. The inhabitants migrated during the middle ages to the neighbouring village of Vetralla. (Dennis, *Etruria*, vol. i. p. 245.) [E. H. B.]

FORUM CIGURRORUM, EGURRORUM, or GIGURRORUM. [ASTURIA.]

FORUM CLAUDII. Ptolemy (iii. 1) mentions two towns in the country of the Centrones [CENTRONES], Forum Claudii and Axima (*Axieme*). As there is a place called *Centron* in the valley of *Axieme*, it is probable that *Centron* marks the site of a place called Centrones, for under the Empire it was usual in Gallia for the name of a people to be substituted for that of their chief place. If this be so, we may assume that *Centron* represents Forum Claudii. Guichenon (cited by D'Anville) gives two inscriptions which, he says, were found at *Axieme*; and in one of them, which is in honour of Nerva, the names Forum Claudii and Centrones occur thus—*FOROCL. CENTRON*. This might be used as an argument, that Forum Claudii is another name for Axima. [G. L.]

FORUM CLAUDII VALLENSIUM OCTODURENSIUM. [OCTODURUS.]

FORUM CLODII, a town of Etruria, situated (as might be inferred from its name) upon the Via Clodia, known to us chiefly from the Itineraries, but mentioned also by Ptolemy (iii. 1. § 50) among the towns of Southern Etruria. The Antonine Itinerary reckons it 32 M.P. from Rome, and the Tab. Pent. places it between Sabate and Blera; but the distances given in the Tabula are confused or corrupt. Hence its position has not been clearly ascertained; it is commonly placed at *Orivolo*, about five miles N. of *Bracciano* (Sabate); but, according to Mr. Dennis, there are no ancient remains at that place, and the point is still doubtful. (*Itin. Ant.* p. 286; *Tab. Pent.*; Dennis, *Etruria*, vol. i. p. 273.) [E. H. B.]

FORUM CORNELII (*ἄστυς Κορνέλιου*, Strab.; *ἄστυς Κορνέλιου*, Ptol.; *Κορνέλιον ἄστυς*, Dion Cass.; *Etā. Forocorneliensis*; *Insula*), a considerable town of Gallia Cispadana, situated on the Via Aemilia, and distant 23 miles from Bononia and 10 from Faventia. It stood on the W. bank of the river Varenna, now called the *Santerno*. (Strab. v. p. 216; *Plin.* iii. 15. a. 20; *Ptol.* iii. 1. § 46; *Itin. Ant.* pp. 100, 127, 287; *Itin. Hier.* p. 616.) It is said to have derived its name from its foundation by the dictator Sulla (Prudent. *Peristeph.* 9. init.), and appears to have been already a place of some importance at the death of Caesar; as, in the civil war which followed, it was occupied by Octavian, who established his winter-quarters there. (*Cic. ad Fam.* xii. 5; *Dion Cass.* xlv. 35.) It is afterwards noticed by Martial, who appears to have composed the third book of his epigrams during a residence in this town (iii. 1. 4), and continued under the Roman empire to be a flourishing municipal town. (Gruter, *Inscr.* p. 518. 4, &c.) Its name is again men-

tioned during the Gothic Wars, and as late as the seventh century P. Diaconus ranks it among the "locupletiores urbes" of the province of Aemilia. He tells us that it had a citadel (castrum), which was called Imolas, from whence the modern town has derived the name of *Imola*. (Procop. *B. G.* ii. 19; P. Diac. ii. 18.) [E. H. B.]

FORUM DECII, a town of the Sabines, mentioned only by Pliny (iii. 12. s. 17), the site of which is wholly unknown. It has been identified by Claver with the "Foroceri" of the Tabula; but there is no authority for this, and the latter name is probably corrupted from Forocera or Forocria, analogous to Interocrea. (Claver, *Ital.* p. 690; Holsten. *Not. ad Clav.* p. 118.) It is more probable that Forum Decii was situated much further S., in the neighbourhood of Forum Novum (Vescovio). [E. H. B.]

FORUM DIUGUNTORUM or JUGUNTORUM (Φόρος Διουγυντόρων ἢ Ιουγυντόρων, Ptol. iii. 1. § 31), a town of Transpadane Gaul, known only from Ptolemy, who places it in the territory of the Cenomani, SW. of Bergomum; but its site is otherwise wholly unknown. [E. H. B.]

FORUM DOMITII, is placed by the Itine. on the great Roman road from Nemausus (*Nîmes*) to Narbo (*Narbonne*). The distance from Cessero (St. Tibers) on the *Hérault* to Forum Domitii is 18 M. P.; and the Antonine Itin. makes it 17 M. P. from Forum Domitii to Sextantio (*Soustantion*), which is a few miles west of *Montpellier*. Though Forum Domitii lies between two well-known places, its position is not known. We may conclude that it was on the Via Domitia, so called from Cn. Domitius Ahenobarbus, who defeated the Allobroges (Liv. *Epid.* 61). This road is mentioned by Cicero (*pro Font.* 4) as repaired by the legati of M. Fonteius. [G. L.]

FORUM FLAMINII (Φόρος Φλαμίνιος, Strab.; Φόρος Φλαμίνιος, Ptol.; *Eth. Foroflaminienensis*), a town of Umbria, situated on the Flaminian Way, where it first entered the Apennines, 3 miles from Fulginium. It is evident from the name that it was founded by the censor C. Flaminius, at the time that he constructed the celebrated highway on which it was situated, A. C. 220; but its name is not mentioned in history. Strabo speaks of it as deriving its chief importance from the traffic along the road; but we learn from Pliny, and from inscriptions, that it was a municipal town of some consideration. (Strab. v. p. 227; Plin. iii. 14. s. 19; Ptol. iii. 1. § 54; Gruter, *Inscr.* p. 347. 1; Orell. *Inscr.* 98.) It was here that the emperors Gallus and Volusianus were defeated and slain by the pretender Aemilianus in A. D. 256. (Hieron. *Chron. ad ann.*; Claver, *Ital.* p. 631.) Forum Flaminii is still termed a "civitas" in the Jerusalem Itinerary, and continued the see of a bishop till the eighth century, when it was destroyed by the Lombards, and the remaining inhabitants established themselves at Fulginium. The itineraries place it 3 miles from Fulginium, and 12 from Nuceria; but the ruins which, according to Holstenius, still mark its site at a place called *S. Giovanni pro Fiamma* (or in *Forifiamma*), are hardly 2 miles from the former city. (Itin. *Ant.* p. 125; Itin. *Hier.* p. 614; Tab. *Peut.*; Holsten. *Not. ad Clav.* p. 92.) [E. H. B.]

FORUM FULVII (*Valencia*), a town of the interior of Liguria, mentioned by Pliny among the "nobilis oppida" of that province, between the Apennines and the Padus. He adds the distinctive appellation of "Valentinum" ("Forum Fulvii, quod

Valentinum"), though no other place of the name is known. It is also mentioned in the Tabula in a manner that would afford but little clue to its position; but the distance of 22 M. P. from Aca (corruptly written *Basia*) accords with the position of the modern *Valencia*, a considerable town on the right bank of the *Po*, about 16 miles below the name of which is evidently connected with the epithet of Valentinum given to the ancient city in the Notitia (where it is called Forum Fulvium). We find it mentioned as the station of a body of troops probably to defend the passage of the Padus at this point. (Plin. iii. 5. s. 7; Not. *Dign.* ii. p. 121. *Tab. Peut.*) [E. H. B.]

FORUM GALLOREM (*Ἀγορὰ Γαλρίας* Latinian), a village on the Via Aemilia, between Mutina and Bononia. It is remarkable only as the scene of the first battle between M. Antonius and the consuls Hirtius and Pansa, when they attempted to raise the siege of Mutina. The forces of Pansa, which were first engaged with those of Antonius, were worsted in the encounter, though not defeated, and the consul himself mortally wounded. Hirtius, having unexpectedly fallen upon the rear of Antonius, when he was withdrawing to retreat, Forum Gallorum, completely routed his forces, and compelled him to retreat to his camp before Mutina. This battle (which was fought on the 15th of April, A. C. 43, twelve days before the more decisive battle of Mutina) is described in detail by Suet. Suet. Galba, in a letter to Cicerone: from his account we learn that the place called Forum Gallorum was a mere village (vicus) and that it was situated on the Aemilian Way, which here, as through the part of its course, was a raised causeway, with marshy ground on each side. (Cic. *ad Fam.* 13; Appian, *B. C.* iii. 66—70; Dion Cass. *Ant.* 54. 7; Frontin. *Strat.* ii. 5. § 39.) Nor did it ever reach the dignity of a town; and though its name is found in the Tabula Peutingeriana, it is absent from all the other Itineraries, which shows that it was only a village. The distances there given from Mutina and 17 from Bononia show that it must have occupied nearly the site of the present *Castel Franco*. [E. H. B.]

FORUM GALLOREM (*Ἰλαργίαις*), a town of Gallia Narbonensis on the coast between Telo Martius (Tolom) and the Varus (Var). Strabo (p. 184) calls it Φόρος Γαλίας, and a naval station of Caesar Augustus, situated between Olbia and Antipax, at a distance from Massilia about 600 stadia. But the name Forum Julii existed before the time of Caesar Augustus, for it is mentioned in a letter of Pater to Cicero, A. C. 43 (*ad Fam.* 2. 15); and he calls it 24 M. P. from Forum Vocionii to Forum Julii (p. 17). We may infer that it took its name from Julius Caesar, though there is no evidence as to what he did to the place, and that Augustus improved it. Pliny (iii. 5) names it "Forum Julii (Cesaris)

Colonia quæ Pacensis appellatur et Classica." river Argenteus was within its limits. (Ptol. 2.) The name Octavanorum, mentioned also by (ii. 5), is supposed to show that a detachment of the eighth legion was settled here. The name Classica is probably derived from the fleet being stationed here by Augustus. The place has the various names of Oppidum Foro-Julienae (Tacit. Ann. i.); Forum Julium Narbonensis Galliae Colonia n. ii. 63); Colonia Foro-Julienae (Tacit. Hist. 4).

Forum Julii was a naval station in the time of Julius, and ships of war were kept there, which Augustus took at the battle of Actium, and used the defence of this part of the Gallic coast (Tacit. i. iv. 63); and it is again mentioned as an important naval station in the time of Vitellius (Tacit. i. ii. 43). It was the birthplace of Cn. Agricola, conqueror of Britain (Tacit. Agric. 4); and an ancient and distinguished Colonia, as Tacitus calls it. Saucæ called "garum" was made here. (Plin. i. 7, 8.)

The port of Forum Julii was at the bottom of a small bay, but the entrance has been filled up by the silt brought down by the Argenteus, which river is a little to the west of Forum Julii. The traces of two moles which formed the entrance of the port, remain; but the entrance is now about 3000 feet from the sea. The width of the Roman port is dated at about 1500 feet, and its depth from the entrance between the moles at 1680 feet. These dimensions show that the port of Forum Julium was compared with those made by Trajan at the mouth of the Tiber and at Centum Cellæ, and with the port of Antium. There is no water now in the bay of Fréjus, except a small lagoon, near a quay of Roman construction, which forms an angle with the mole on the right to one who enters the port. The traces of the walls show that the old town was much larger than the modern.

There is a triumphal arch, which is supposed to have formed one of the four gates of the town. The site of the amphitheatre is about 650 feet. The site, which is buried under rubbish, is probably the same. A road has been formed through the two entrances right through it, as in the amphitheatre at Trèves. Near the amphitheatre is one of the old gates, which is at the bottom of a concave circle, formed of thick walls and defended by a rampart at each extremity. The aqueduct brought the town the waters of the Siagne from a distance of more than 20 miles. The channel for the water in some parts was under ground, in others it was supported on arches. At the gate of Fréjus it divided into two branches, one of which entered the town and the other went to the port. Parts of this aqueduct are well preserved.

The Roman Via Aurelia passed by Forum Julii; there were roads from Forum Julii to Aquæ Ise, Massilia, and Arelate. (D'Anville, Notice, Walckenaer, Géog. gc. vol. ii. p. 9; Ukert, Denkm., p. 429; Richard et Hoquet, Guide du voyageur, p. 797.) [G. L.]

FORUM JULII OF JULIUM. 1. (ἑὸς Ἰούλιος, Eth. Foro-Julienae: Cividade di Friuli), a town of Venetia, situated about 25 miles N. of Aquila and nearly at the foot of the Julian Alps. Ptolemy reckons it in the country of the Carni, and there is no doubt that this is correct, though it is not possible to separate the territory of that people from the west of Venetia. [CARNI.] Paulus Diaconus

ascribes its foundation to Julius Cæsar (P. Diacon. Hist. Lang. ii. 14); and it is probable that this is correct, though we have no earlier authority for the fact. It appears that it was at first merely a sort of central place of meeting for the neighbouring Carni, and where probably the Roman magistrates held intercourse with the mountaineers. In Pliny's time it seems to have been still but an inconspicuous place, as he enumerates the "Foro-Julienae cognomine Transpadani" among the unimportant towns of Venetia, which were unworthy of fuller notice. But Ptolemy calls it a Roman colony, and it appears to have risen in importance during the latter ages of the Roman empire. It was not, however, till after the fall of the neighbouring Aquileia, A. D. 453, that it attained the dignity, which it continued to hold under the Gothic and Lombard rulers of Italy, of the capital of Venetia. (Plin. iii. 19. s. 23; Ptol. iii. 1. s. 29; Cassiod. Varr. xii. 26; P. Diacon. ii. 14, iv. 28, 38.)

Forum Julii became under the Lombards the seat of a separate duchy, and has imparted to the whole province in which it is situated the name, by which it is still known, of the *Friuli*: the modern town being called *Cividale* or *Cividale*, obviously a corruption of "Civitas."

The period of the destruction of Forum Julii is unknown; but recent excavations on the site have brought to light numerous remains of antiquity, including the foundations of temples and other public buildings, scattered over a considerable extent of ground around and in the neighbourhood of the modern *Cividale*. The monuments discovered belong, however, for the most part to a very late period, and confirm the inference which we should draw from the few historical notices we possess, that Forum Julii did not rise to any great importance till near the close of the Western Empire. Very exaggerated ideas of its greatness, and of the value of the discoveries made on the spot, were spread abroad by the Canonico della Torre, who carried on the excavations. (*Annali dell' Inst. Arch.* 1835, pp. 213—220; *Bullett. d. Inst.* 1834, p. 5, 1835, p. 134.)

2. We learn from an inscription that the town of Iria in Liguria bore also the name of "Forum Julii Iriensium" (Orell. *Inscr.* 73), but no other notice of it occurs under this name. [IRIA.]

3. Pliny mentions among the municipal towns of Umbria, in the sixth region of Italy, the "Foro-Julienae cognomine Concienses;" but these, as well as the "Forobrentani," who immediately follow them, are wholly unknown. [E. H. B.]

FORUM JULIUM. [ILLITURGIÆ.]

FORUM LEPIDI. [REGIUM LEPIDUM.]

FORUM LIGINII, a town of Transpadane Gaul, mentioned only by Pliny (iii. 17. s. 21), who writes the name Licinitum, and, strangely enough, tells us that it was a city of the Orobi, a people mentioned by Cato; though it is evident from its name that it was a Roman foundation, or at least settlement. From the same passage it would appear to have been in the neighbourhood of Comum and Bergomum, and has been fixed, plausibly enough, though only conjecturally, at a place called *Iacino*, near the small town of *Erba*, on the road from *Como* to *Lecco*, and about 7 miles from the former city, where some inscriptions and other antiquities have been found. (Annoni, *Memoria intorno il Piano d'Erba*, Como, 1831.) [E. H. B.]

FORUM LIGNEUM, is placed by the Antonine Itin. on the road from Cæsar Augusta (*Saragosa*)

in Spain, to Bemberrum, in Gallia. [BENEVENTANUM.] The distance from SUMMUS PYRRAEUS to Forum Ligonum is marked 5, and from Forum Ligonum to Aspalena (Post Lagoni), 7. Walckenaer takes these distances to be Gallic leagues, though one would suppose that they are Roman miles. However, distances measured in a mountain pass are very loose; and there is no certainty about the exact position of Forum Ligonum. [G. L.]

FORUM LIMICORUM. [GALLACIA.]

FORUM LIVII (Forki), a town of Gallia Cispadana, situated on the Via Aemilia, between Faventia and Caesena. Its foundation is commonly ascribed by local historians to Livius Salinator, but there is no authority for this. Its name is not found either in Strabo or Ptolemy, but is mentioned by Pliny among the municipal towns of the region; and by the Itineraries, which place it 13 M. P. from Caesena and 10 from Faventia. It therefore occupied the same site as the modern city of *Forki*, on the right bank of the *Montone*, the Vitis of Pliny. (Plin. ii. 13. s. 20; *Itin. Ant.* p. 287; *Itin. Hier.* p. 616; *Tak. Post.*) In A.D. 412 it was the scene of the nuptials of Placidia, the sister of Honorius, with the Gothic king Athaulfus (Jornand. *Get.* 31), but notwithstanding its selection for this purpose it seems to have never been a town of importance in ancient times. The modern city of *Forki*, on the contrary, is a populous and flourishing place. [E. H. B.]

FORUM NERONIS. [CAPIENTORACTE.]

FORUM NOVUM. 1. (*Eth.* *Foronovano* : *Vesuvio*), a town in the territory of the Sabines, mentioned among the municipal towns of that region by Pliny, and in the Liber Coloniarum. (Plin. iii. 12. s. 17; *Lik. Colon.* p. 255.) From its name we may infer that it was of Roman foundation, and not an ancient Sabine town. Its position is clearly fixed at a place called *Vesuvio* (no longer inhabited, but retaining an ancient church), about 3 miles W. of *Aprus* (Casperia) and 12 NW. of *Corress* (Cures). Here there are considerable ruins, which were mistaken by Cæsar for those of Cures, but are clearly identified as the remains of Forum Novum by inscriptions found among them with the name of the *Foronovani*. From these we learn that it was a municipal town in the reign of Gordian; it subsequently became the see of a bishop, and, after the death of Cures, appears to have claimed to be the metropolitan see of the Sabines, whence it came to be commonly known as *Il Vesuvio di Sabina*. The ancient church that marks the site still bears the title of "Ecclesia Cathedralis Sabimorum." (Claver, *Jal.* p. 675; Holsten. *Not.* p. 107; Chaupy, *Maisons d. l'Évêque*, vol. iii. p. 127.)

The name of Forum Novum was probably given to it for the purpose of distinguishing it from Forum Devii, which is also placed by Pliny in the Sabine territory, but is otherwise wholly unknown, and there is no clue to its situation.

2. A town of Gallia Cispadana, known only from an inscription in which we find it mentioned as a municipal town ("Municipium Foronovorum," Gruter, *Inscr.* p. 492. 5); but as this inscription was found at Parma, there can be no doubt that the Forum Novum there meant is the place still called *Fornovo*, in the valley of the *Taro*, 15 miles SW. of Parma. It is evidently the same place called by P. Diaconus "Forovanum," and mentioned by him among the "castra Aemiliae." (P. Diacon. *Hist. Lang.* vi. 49.)

3. A town of Samnium, mentioned only in the Itineraries, which place it 10 miles from Beneventum

on the road to Equus Tuticus; this distance is at *Buonabergo*, a spot where numerous coins and other antiquities have been found. (*Tak. Post. Itin. Hier.* p. 610; Mommsen, in *Bull. d. l'Inst.* 1848, p. 7.) [E. H. B.]

FORUM NARBABOREM. [GALLACIA.]

FORUM POPILII 1. (*Forinpopoli*), a town on the Via Aemilia about half-way between Forum Livii and Caesena, noticed by Pliny (l. i. s. 20) among the municipal towns of Gallia Cispadana, as well as in the Tabula and the *Itinerarium*, in both of which the name is written "Foro Populi." The latter calls it a "civitas," but the total omission of its name in the *Itinerarium* given in the Antonine *Itinerarium* proves that it was (in ancient as well as modern times) but a small town. (*Itin. Hier.* p. 616; *Tak. Post.*)

2. A town of Campania, mentioned by Pliny as situated in the Falernian district ("Foropopoli ex Palerno," Plin. iii. 5. s. 9); it is also mentioned by Ptolemy, who writes the name *Φορπολη* (Ptol. iii. 1. § 68), and incidentally by Diodorus (i. 21), who tells us that near it were the remains of a very ancient city, which had been long called *Larissa* and of Pelagic origin. The names which he refers are unknown, but it appears from expressions that they, as well as *Foro Populi* (*Φορπολη*), must have been situated in the hilly district in the N. of Campania; Pliny appears to place the latter town between Capua and Teanum, but its exact site has not been determined. We learn from the Liber Coloniarum (p. 223) that the name is written *Forum Populi*, that it received a body of colonists under Augustus, to which a settlement seems to have been added by Vespasian.

3. A town of Lucania, mentioned only in the Tabula, where the name occurs in a name which would afford scarcely any clue to its position, neighbouring lines of route being altogether confused. But a remarkable inscription found at a place called *Polla* in the *Valle di Diamante* scarcely any doubt that that place is the site of Forum Popilii. This inscription records the construction by a Roman magistrate (whose name is unfortunately lost) of a high road from *Arundinethum*, giving the intermediate distances to principal places; and a comparison of these with those given in the Tabula leaves little doubt that the modern village of *Polla* is the Forum Popilii, and that the magistrate's name which has disappeared at the beginning of the inscription, erroneously supplied by some writers as that of M. Aquilius, is in reality that of P. Popilius Laenas, who was consul in A.D. 134. (Mannert, *Geogr. von Italien*, vol. 146; Mommsen, *Inscr. R. N.* No. 6276; *Epigr.* Mommsen, *Epigr.* pp. 11, 12.) From this inscription we learn that Forum Popilii was distant 51 M. P. from Nuceria and 74 from Miranum. [E. H. B.]

FORUM SEGUSIANORUM, a town of the Segusiani (Ptol. ii. 8), who were on the west bank of the Rhone, in the latitude of Lugdunum. The name seems to indicate the chief town of the Segusiani, a place where a *Conventus* was held; and the place is the usual mark of a capital or chief town in the Tabula. A place called *Fesara*, or more properly *Fesara*, of *Lyon*, represents the Forum Segusianorum. An inscription was found at *Fesara*, as it seems to be the effect:—"Fabri Tigni qui Foro Segusianorum et La Mure, in his *Histoires de France* (1671), mentions four milestones found at *Fesara* with the inscriptions I, II, III, IV, each preceding

which means *leuga* or *leagua*. Thus, it appears a road was measured from this Forum. It is stated that the inscription c. ixl. p. xxi. occurs on these stones, or on some of them. In this place appears to have been made a *statio*, with the title of *Liberi*, which Pliny (iv. 10) gives to the *Segusiani*. "The historian of the *Forest* mentions a Roman copper weight, on which were marked in characters of silver *DEAE F.*, a circumstance which shows that the Forum of *Segusiani* was deified, and accordingly had an altar which we know to have been conferred on all other towns in Gaul." (D'Anville.)

The Table mentions Forum *Segustavarum*, on a road from *Segodum* (*Rhodes*) to *Lugdunum* (*Lyon*), it is the next place to *Lugdunum*. Part of the name is this:—*Icidmago* (*Jesengeau*), *Aquis Segustariis*, *Segustavarum*, *Lugdunum*. Another in the Table, between *Augustonemetum* (*Clermont*) and *Lugdunum*, stands thus in the last part: *odamna* (*Rouanne*), *Mediolanum* (*Meylieux*), *Segustavarum*, *Lugdunum*. D'Anville (*Notice, Mediolanum*) supposes that *Mediolanum* is wrongly placed in the Table, and he inserts it between *Segusianorum* and *Lugdunum*. Walckenaer adds that the Table and its distances are right, Forum *Segustavarum* is a different place from *Segusianorum*, and he places it in the neighbourhood of *Farnay*. The measures, he says, are exact, as we may convince ourselves by seeing he has applied them to our modern maps. But we have no confidence to these assertions. *Segustariis* and *Segusianorum* are evidently the same, and the difference in a few letters is easily explained by their close resemblance, and the liability being put for the other.

The district of *Fores* or *Foreste* is supposed to its name from *Pagus Forensis*, the canton Forum. Parts of the aqueduct which brought to Forum *Segusianorum* still remain. In one place the aqueduct is about 10 feet high to the top of the arch, and about 3 feet wide. The wall is formed of small red stones, and the part of fragments of the same stone embedded in the wall. A very remarkable mosaic was discovered at *Fours* a few years ago, under the entrance of a house. There are also in the courts of the house some Corinthian columns, which support a staircase. The church of *Fours* appears to have been built with the materials of Roman edifices. There are also remains of ancient baths near a part of the town called the *Palais*. Near this *Palais* is a mound, under the ground, the four milestones found above. They are now placed in a part of the town, according to a recent authority, where they were exposed to damage. (D'Anville, *Notice, Segustavarum*, *Géog. Gé. vol. i. p. 332*; Ukert, *Atlas*; Richard et Hocquet, *Guide*, &c.) [G. L.]

FORUM SEMPRONII (ἑποικιστῶν Σεμπρωνίων, Strab.; Σεμπρωνίου, Ptol.; *Æth. Forosempronienais: Sebromone*), a town of Umbria, situated on the Arno, in the valley of the Metaurus, 16 miles from *Fanum Fortunæ* (*Fano*), on the Adriatic. (Strab. p. 227; *Itin. Ant. p. 125*.) We have no knowledge of its foundation, or the origin of its name: it was the only town in the valley of the Metaurus between its mouth and the central range of the Apennines; and from this circumstance, and its position on so frequented a highroad, it seems to have been raised into a place of some importance, and was designated municipal town under the Roman em-

pire. (Strab. l. c.; Plin. iii. 14. s. 19; Ptol. iii. 1. s. 53; Orell. *Inscr.* 3774, 4039, 4063.) The site of the ancient city is marked by the vestiges of a theatre, and other ruins of Roman date, which are visible about 2 miles from the modern city of *Fossombrone*: this last retains the ancient episcopal see, and its name is evidently a mere corruption of Forum *Sempronii*. (Calindri, *Statiistica del Pontif. Stato*, p. 121.) The latter was 8 miles distant from the celebrated pass of *Interacia*, or the *Furlo*. [INTERACIA.] The great battle in which *Hasdrubal* was defeated by the Roman consuls *Livius* and *Nero*, in B. C. 207, was probably fought in the neighbourhood of Forum *Sempronii*, but the exact site is uncertain. [METAVRUS.] [E. H. B.]

FORUM TIBERII, is placed by Ptolemy (ii. 9) among the *Helvetii*. It is unknown where it is. D'Anville guesses *Kaiserstuhl* on the Rhine, chiefly because of the meaning of the German name; which is very unsatisfactory. Haller guesses *Zornach* on the Rhine, where there are Roman walls. Another guesses *Stechborn* on the Lake of *Constance*. (Ukert, *Gallien*.) [G. L.]

FORUM TRAJANI, a town in the interior of Sardinia, known only from the Itineraries, which place it on the road from *Tibula*, through the interior of the island, to *Othoca*. (*Itin. Ant. p. 82*.) Its site is fixed at a place called *Fordongianus*, on the left bank of the river *Tirai* (*Thyras*), about 16 miles from *Ostiana*, where there are considerable Roman remains, including those of a bridge, and of *Thermae* on a scale of great magnificence. These doubtless owe their origin to the emperor *Trajan*. (Valéry, *Voy. en Sardaigne*, vol. ii. c. 35.) [E. H. B.]

FORUM TRUENTINORUM or DRUENTINORUM, a town of Gallia Cispadana, mentioned by Pliny among the municipal towns of that region (iii. 15. s. 30). His authority is confirmed by inscriptions, in which we find "*Municipium Fordruentum*," for *Fordruentum*. As the name is not mentioned in the Itineraries it seems clear that it was not situated on the *Via Aemilia*, and it has been supposed to occupy the site of *Bertinoro*, a small episcopal town about 3 miles S. of *Forlimpopoli*; this however is a mere conjecture. (Gruter, *Inscr.* pp. 492. 5, 1094. 2; Orell. *Inscr.* 80; Cluver, *Ital. p. 295*.) [E. H. B.]

FORUM VIBII (*Vibi Forum*, Plin. iii. 17. s. 21; *Æth. Forovibienais*, Id. 16. s. 20), a small town of Liguria, near the sources of the *Padus*, and in the territory of the *Vagienni*. Pliny tells us that the *Padus* had its source in the *Mons Vesulus* (*Monte Viso*), and, after flowing a short distance, plunged under the ground, and again emerged "in *Forovibienum agro*." (Plin. iii. 16. s. 20; Solin. 2. § 25.) As there is no truth in this account of the subterraneous course of the *Padus*, it affords us no assistance in determining the real position of Forum *Vibii*, which must have been situated somewhere in the upper valley of that river, in the neighbourhood of *Saluzzo*, but on the N. bank of the *Po*, as Pliny (iii. 17. s. 21) reckons it in the *Begio Transpadana*. [E. H. B.]

FORUM VOCONII, a place in Gallia Narbonensis, distant from Forum *Julii* [FORUM JULII; *ARONETRUS*] 24 M. P., as it appears from the letter of *Plancus* to *Cicero*. The *Antonine Itin.* also makes the distance the same. D'Anville fixes Forum *Voconii* at a place called *Gonfaron*, which he supposes to be a corruption of such a word as *Vocon-foron*, which he invents for the occasion. *Papon*, who is followed by *Walckenaer*, fixes it at *Le Camet*; and

others fix it at *Volcanban*, east of *La Camel*. Pliny (iii. 5) calls Forum Voconii a Latin town, that is, it had the Latinitas. [G. L.]

FORUM VULCANI. [PUTEOLI.]

FOSSI, a small German tribe, of which nothing is known beyond what Tacitus (*German.* 36) relates of them, viz., that they were subject to the Cherusci, and became involved with them in their ruin. The banks of the stream *Fosse*, in *Brunswick*, are generally looked upon as the country once inhabited by them, and the little town of *Foesenbrock* may have derived its name from them. In the time of Ptolemy their country was already occupied by the Langobardi. [L. S.]

FOSSA CORBULO'NIS. When Corbulo commanded in the parts about the mouths of the Rhine, he employed his men in making a cut, 23 M. P. long, between the Mosæ and the Rhenus, "qua incerta Oceani retarentur." (*Tac. Ann.* xi. 20.) Some critics have proposed to change "retarentur" into "vitarentur," but probably the text is right. Dion Cassius (*lx.* 30), who speaks of this canal, says that it was about 170 stadia long. If we take the usual estimate of the Roman mile, which is 8 stadia, the distance of Dion is somewhat too small, if the text of Tacitus is right. The reason for making the canal which the Greek historian gives, was, "that the rivers might not flood the country, by having their waters driven back by the high tides;" an explanation which seems to agree with "retarentur" in Tacitus, and to be a probable explanation of Corbulo's design. There seems little doubt about the position of this canal, though there has been great difference of opinion. It is the channel which runs from *Leiden*, past *Delft*, to *Maasland-sluis* near *Vlaardingen* (*Flenium*). The distance agrees very well, and the position agrees with the purpose for which the canal was made. The old Rhine, or the Rhine proper, runs past *Leiden*, and was a more considerable stream in the Roman period than it is now. [G. L.]

FOSSA DRUSIA'NA. [FLEVO LACUS.]

FOSSA MARIA'NA or FOSSAE MARIA'NAE. Plutarch (*Marinus*, c. 15) gives a sufficiently clear account of this canal. When C. Marinus, a. c. 102, crossed the Alps to oppose the Teutones and their barbaric allies, he fixed his camp near the Rhone. The entrance to the river was choked with mud, sand, and clay, and "was thus made difficult and laborious, and shallow for the vessels that brought supplies. As the army had nothing to do, Marinus brought the soldiers here and commenced a great cut, into which he diverted a large part of the river; and by making the new channel terminate at a convenient point on the coast, he gave it a deep outlet, which had water enough for large vessels, and was smooth and safe against wind and wave. This cut still bears the name of Marinus." Plutarch supposed that the canal was on the east side of the outlets of the Rhone. Strabo (p. 183)—after quoting Polybius, who says that the Rhone had two outlets, and Artemidorus, who says that it had three—adds: "but Marinus, afterwards seeing that the channel was becoming obstructed by the alluvium and difficult of access, cut a new channel, in which having received the greater part of the river, he gave it to the Massaliots, as a reward for their services in the war against the Ambrones and Teygemi; from which channel the Massaliots acquired great wealth, by exacting tolls from those who sailed up and down. However, the difficulties of the navigation continue,

owing to the violence of the stream and the alluvium, and the lowness of the coast, which cannot be seen even when a vessel is near, in foggy weather; wherefore the Massaliots set up towers as beacons, marking the country their own in every way; and especially they built there also a temple of the Ephesian Artemis, having taken possession of the part that was made an island by the mouths of the river. And there lies beyond the mouth of the Rhodanus, a lake, which they call Stomalime; some have named it one of the mouths of the Rhodanus, especially those who say that the river has five mouths (or five, as the text perhaps should have been right neither in one thing nor the other); there is a hill between, which separates the river from the river." Here Strabo finishes his description of the coast as far as Massalia, and he describes the coast as far as the Var. His description of this coast of Gallia shows that the canal of Marinus was on the east side of the outlets of the Rhone. Mela's description must be interpreted the same way (ii. 5). Pliny (iii. 4) calls one of the mouths of the Rhodanus the Massaliotic; and this is the eastern of the mouths. (*Polyb.* ii. 41.) Beyond, that is east of, the Massaliotic mouth are "the canals from the Rhodanus, the work of Marinus, which bears his name; a lake (called Mastramela; a town Maritima, of the Avens above it the stony plains (*campi lapidei*)). The stony plains are the *Cress*, an extensive tract which is covered with stones. Pliny's text is "Astrumela," which Harduin has changed to Mastramela, to make it agree with the name in Strabo. Byzantinus and Avienus; for which Waddington finds fault with him, without reason,—for a *stagnum*, that, as "stagnum" ends with "m," the next word if it began with "m," might easily be a transcription.

The Itineraries also place the Fossa Marinae on the east side of the Rhone. But Ptolemy (ii. 10) in the common text, has it on the west side. Proceeding from west to east he has: *Sotom*, *Fossae Marianae*; the west mouth of the Rhone and the east mouth. He correctly places *Mela* east of the east mouth of the Rhone. It is not to explain how Ptolemy made a mistake in a name which was known to every body. Waddington (*Géog. gr.* iii. p. 133) supposes that we should read *Marinae* for *Marianae* (*Maparial* *Marinae* in Ptolemy's text; and he adds, that the text of 1475 has "Fossae Marinae." There is still the reading "Fossae Marinae," in the Latin text of Pirckheimer (1524). The two words might easily be confounded. If we do not accept this correction we must either allow that Ptolemy has made a great mistake, or that the Fossae Marinae have been transposed in his text, without transposing the numbers. For it is hardly possible that he should place in his geography Fossae Marinae, a name otherwise unknown, and omit the Fossae Marinae the great work that was familiar to all geographers.

The best and most recent authority for the antiquities of this part of France (*Statistique des Bouches du Rhône*) states that the canal of Marinus ran in a straight line from east to west, the gulf of Stomalime, now the *Etang de l'Est*, to the Rhone, which it joined about a mile from its mouth. The length was 16 miles. There are many proofs of the existence of the canal in the place here assigned to it. The village of *St. Malo*, which retains the name of this canal, stands

the place where the canal entered the gulf, is still visible on one of the sides a long g made in the rock at the base of the hill, is probable that the sluice was here. West is a large marsh, called *Le Marais de Fos*, the canal crossed. This marsh ends in an of the same name, which joins the *étang de* where was the outlet of the Massaliot of the Rhone in the time of Marius. The of Fos, along the whole line, where the canal pressed to have run, still presents a hollow, which d with water in the rainy season.

Maritime Itinerary makes it xvi M. P. the Fossae (Fos) to "Ad Gradum Massili- m," which was on the Rhone; and the Itine- which gives the land routes, places Fossae n Massilia and Arclate (*Arles*). The order es is: Massilia, Calcaria [CALCARIA], Fossae ue (Fos), Arclate: the direct distance from r Mariannes to Arclate is 13 M. P., which is all. In another place the Itineraries make it hich is too much. However, there is no that Fossae is Fos, or Fos-les-Martigues. irect road from Fossae to Arclate ran through au, the Campi Lapidei. The "Ad Gradum" to have been at or near the place where the of Marius joined the Rhone. The distance "Ad Gradum" along the river up to Arclate ked 30 M. P. in the Maritime Itinerary.

"Statistique, &c." supposes that the canal of s was continued due north about twelve miles, ing from Ad Gradum to the *étang* of the ates, which comprised the marshes of *Arles*, *de-Majous*, and of *Sauz*: this *étang* received it least, of the water of the Louëron, a canal runs from the *Durance* (Druentia) near

It is further stated that the Louëron fed osse Mariannes; and that Marius also made r canal, which has since been replaced by that *apronne*. Some of these assertions are very ul; but the canal to the Rhone from the Sto- ne (*étang de l'Estouma*, or *Estruma*, as it is ill written) seems to be the work of Marius. place called *Pont-du-Roi*, in front of the bar e, there are the remains of the foundations of ; and this agrees with the Table, which the Fossae Mariannes, by a semicircular ng open to the sea, as a haven and station. ill mentioned by Strabo, as separating the linne from the Rhone, is supposed to be a hill n Fos and Istres. Whether Marius made than one cut, and whether Fossae or Fossa is e name, we cannot tell. It is likely enough here was more than a single cut; or, at least, small cuts, besides the large cut. This great of the Roman soldier was a monument of his and his perseverance, as glorious as the es by which he saved Italy from a barbaric (D'Anville, *Notice*; Mela, ed. J. Voss, who good note on the Fossae; Ukert, *Gallien*, &c., which contains the references to the a authorities.) [G. L.]

ANCI, the name of a confederation of Ger- ribes to which belonged the Sigambri (the pal people), Chamavi, Ampsiarii, Bructeri, i, Marai, Tubantes, Attuarii, Dulgibini, and . This confederation, which had stepped into lace of that of the Cherusci on the Lower , is mentioned for the first time by Vopiscus (l. 7), about A. D. 240. The name Franci gra- absorbed the names of the separate tribes

forming the confederation, which, however, is some- times designated by the name of the leading people, the Sigambri (e. g. Claudian, *de IV. Con. Hon.* 446). These Franci, or Franks, as they are commonly called, conquered the northern parts of Gaul; and, having amalgamated with the Romanised Celts of that country, they adopted the civilisation of the conquered people, and soon acquired such power that, under their great king Clovis, A. D. 496, they re- turned and subdued their own kinsmen in the north and south of Germany, and thus established the great Frankish empire. But their history belongs to the middle ages. [L. S.]

FRATUERTIUM or FRATUENTUM, a town of Calabria, mentioned by Pliny (iii. 11. s. 16), in conjunction with Soletum and Lupiae. Its municipal existence is confirmed by an inscription on which the Fratuertini are associated with the citizens of Neritum, a town in the same neighbourhood (Lupii, *Iter. Venus*, p. 108; Orell. *Inscr.* 3108); but its site is unknown. It seems, however, probable that the ruins of an ancient city, described by Galateo (*de Situ Targyias*, p. 96) as existing at *Muro*, may be those of Fratuertium.* The name is written in the inscription just cited Fratuentum, which is probably the correct form. [E. H. B.]

FRAXINUS. [LUBISTANIA.]

FREGELLAE (*Φρεγγίλλαι*, Strab.; *Φρέγελλαι*, Steph. B.; *Ἐθ. Φρεγγελλανός*, Fregellanus), a city of Latium, in the more extended sense of the term, but properly a city of the Volscians, situated on the left bank of the Liris, nearly opposite to its confluence with the Trerus, and a short distance on the left of the Via Latina. (Strab. v. p. 237.) According to Livy it was originally occupied by the Sidicini, and afterwards by the Volscians, from whom it was again wrested by the Samnites. The latter are said to have destroyed the city; but in B. C. 328, the Romans, having made themselves masters of this part of the valley of the Liris, restored Fregellae, and established there a colony of Roman citizens, an act which was so strongly resented by the Samnites, that it became the immediate occasion of the outbreak of the Second Samnite War. (Liv. viii. 22, 23; Appian, *Samn.* iv. 1.) During the course of that war Fregellae was more than once surprised by the Samnites, but on every occasion recovered by the Romans. (Liv. ix. 12, 28.) During the advance of Pyrrhus upon Rome, in B. C. 279, he is said to have ravaged Fregellae ("Fregellae populatus," Flor. i. 18. § 24); but whether he actually took the town, or only laid waste its territory, is uncertain. At a later period (A. C. 211), we know that it was able to defy the arms of Hannibal, and its citizens had the courage to break down the bridge over the Liris, for the purpose of retarding his march upon Rome, while they sent in all haste to the city, to give warning of his approach. (Liv. xxvi. 9.) As a punishment for this offence their territory was ravaged by him with peculiar severity, but, notwithstanding this, the Fregellans were two years afterwards (B. C. 209) found among the eighteen colonies faithful to Rome (Liv. xxvii. 10), and a body of their cavalry is mentioned with peculiar distinction in the action in which Marcellus perished (Id. xxvii. 26, 27; Plut. *Marc.* 29). It is singular that Fregellae, which was at this time distinguished

* These are assigned by Romanelli to Sarmadum, a name found in the old editions of Pliny, but for which there is no authority.

for its fidelity to Rome, should have subsequently taken the lead in an insurrection against that city, when at the height of its power. The circumstances of this revolt are very imperfectly known to us, but it is evident that it was only a symptom of the discontent then beginning to prevail among many of the Italian cities. The outbreak was, however, premature: Fregellae alone had to bear the brunt of the unequal contest, and was quickly reduced by the praetor L. Opimius, B.C. 125. The city was utterly destroyed, as a punishment for its rebellion, and appears never to have again arisen to prosperity: the establishment of a new colony at Fabrateria, in its immediate neighbourhood, in the following year, was evidently designed to prevent Fregellae from recovering its former position. (Liv. *Epit.* lx.; Vell. Pat. ii. 6; Val. Max. ii. 8. § 4; Jul. Obsequ. 90; Cic. *de Fin.* v. 22; Auct. Rhet. ad Herenn. iv. 9, 15.) In the time of Strabo it was a mere village, which was, however, still resorted to by the people of the surrounding towns, for sacrificial and other purposes. (Strab. v. p. 237.) Hence, its name is not found in Pliny among the towns of Latium: the Fregelhanum mentioned in the Itineraries (*Itin. Ant.* pp. 303, 305) was apparently a station distinct from the town of the name.

Both Strabo and the rhetorical writer above cited affirm that Fregellae was previous to its destruction one of the most flourishing and important cities of Italy: but its ruin appears to have been complete, and hence considerable difficulty has arisen in determining its exact site. Ruins of a city of considerable extent having been found on the right bank of the Liris, just opposite a spot called *Isoletta*, and below the village of *S. Giovanni in Carico*, these have been regarded by local antiquarians as those of Fregellae, but the inscriptions found there, as well as the character of the remains themselves, which are wholly of Roman date, and for the most part not earlier than the time of the empire, seem to prove these to be the ruins of Fabrateria Nova, the Roman colony of that name. [FABRATERIA.] The true site of Fregellae appears to be that indicated by the Abbé Chaupy, on the left bank of the Liris, nearly opposite the modern town of *Cepresano*, where there is a plain of considerable extent, filled throughout with foundations and substructions of ancient buildings, including among others the foundations of the city walls, built in a very massive style. No part of these ruins however rises above ground; and as they have served for ages as a quarry for the supply of building materials to *Cepresano* and the other neighbouring villages, even the substructions have much disappeared. The quarter still retains the name of *Opi* or *Opio*, probably a corruption of "Oppidum" (Chaupy, *Mémoires d'Hercule*, vol. iii. p. 475.) This position of Fregellae would account for its importance in a military point of view, as commanding the passage of the Liris. The modern town of *Cepresano*, which has grown up on the right bank of the river, is supposed by the Abbé Chaupy to occupy the site of the Fregelhanum of the Itineraries; but it is not easy to understand how the *Via Latina* should have proceeded so far as that point, and then turned south to Fabrateria Nova before it crossed the Liris. The remains of two ancient bridges of Roman imperial times at the latter place clearly prove that it was there the *Via Latina* of later days crossed the river, though it is evident from Livy's narrative (xxvi. 9) that in the time of Hannibal the bridges were close to Fregellae itself. The whole neighbourhood certainly requires, and

would reward, a more careful inspection of its localities, especially of the remains of the ancient walls (Chaupy, *l. c.* p. 476; Boncompagni, vol. ii. p. 27-331). [E. H. B.]

FREGENAE (*Φρηγναι*, Strab.), a maritime town of Etruria, situated between Alisum and the mouth of the Tiber. (Strab. v. p. 236; Plin. iii. 5. § 4; *Itin. Ant.* p. 300.) It is mentioned by Livy among the "coloniae maritimae" (xxvi. 3); and there is every reason to suppose that it was established at the same time with Alisum, in B.C. 245, and that we should read *Fregenses* for *Fregellae* in Varro's *Antiquities* (i. 14), where he speaks of the location of these two colonies. This is confirmed by the Epitome of the 19th book of Livy, where *Alisum* is not mentioned, the foundation of *Freges* is coupled with that of *Brundisium*, which Livy refers to the following year. (Vell. Pat. *l. c.* *Epit.* xix., where the reading *Freges* is supported by the best MSS., though the old editors have *Fregellae*.) No subsequent notice of it occurs in history: its marshy and unhealthy situation (as is to be seen by Silius Italicus, viii. 475) probably prevented its rising to prosperity; and after the conquest of the *Portus Augusti* on the right bank of the Tiber, it seems to have gradually sunk of importance. Hence, though its name is found in Strabo, Pliny, and the Itineraries, it is not mentioned by Rutilius in his description of the coast of Italy, and no ruins now mark the site. But the place given in the Itinerary of 9 M.P. from Alisum is the same from *Portus Augusti* at the mouth of the Tiber, enable us to fix its position with great accuracy at a spot now called the *Torre di Maccarese*, midway between *Pesole* and *Pesaro*, and at the mouth of the river *Arona*. (Cluver, *Ital. p. 499*; *Nit. Diastormi di Roma*, vol. ii. p. 280.) [E. H. B.]

FRENTANI (*Φρεντανί*, Strab., Plin., Ptolemy, Pol., Dionys.), a people of Central Italy, occupying the tract on the E. coast of the peninsula from the Apennines to the Adriatic, and from the foot of Apulia to those of the *Marcia*. They were bounded on the W. by the *Sannites*, with whom they were closely connected, and from whom they were originally descended: hence, Strabo speaks of the whole of this line of coast, from the foot of Apulia to those of Picenum, as the *Sannites*. (Strab. v. p. 15. § 5.) Their exact limits are less defined, and there is considerable discrepancy in the statements of ancient geographers: Livy fixes its territory (extending from the *Tifernus* to the *Frento*), being by some writers termed a *clivus* of Frentani (Ptol. iii. 1. § 65), while the more recent opinion included it in Apulia, and the *clivus* of the river *Tifernus* (*Bisferno*) the limit of the Frentani (Plin. iii. 12. § 17; Mel. ii. 4. § 61). The northern boundary of the Frentani is equally certain; both Strabo (v. p. 242) and Pliny (iii. § 19) concur in fixing it at the river *Silurnus*, while Pliny extends their limits as far as the *Aternus*, and, according to Mel. (ii. 4. § 61), the mouths both of that river and the *Volturnus*. The latter statement is certainly incorrect: Strabo distinctly tells us, that the *Marcia* is the right bank of the *Aternus* down to its mouth, while the *Vestini* possessed the left bank (v. p. 242); hence, the former people must have inhabited between the Frentani and the mouth of the *Aternus*. Pliny's account is, however, more near the truth than that of Strabo and Ptolemy: for it is evident that *Ortona* and *Anagninum*, both of which are

considerably to the N. of the Sagrus, were Frentanian cities. The latter is indeed assigned by himself to that people (iii. 1. § 65), while he also terms Ortona the port or naval station of Frentani (*ὁρτὸν ἑφρεντανῶν*, v. p. 242), but usually places it to the S. of the river Sagrus. If, therefore, their confines must have approached within a few miles of the Aterrus, though without actually touching upon that river. On the W. they were probably not separated from the Samnites by any marked natural boundary, but occupied the steep slopes of the Apennines as well as the hilly tracts extending from thence to the sea, while the lofty and central ridges of the mountains were held by the Samnites.

The Frentani are expressly termed by Strabo a distinct people, and he appears to distinguish them from the neighbouring tribes of the Maritimi, Peligni, and Vestini, with whom they had much in common. (Strab. v. p. 241). They, however, appear in history as a separate people, having their own national organisation; and though they may at one time (as suggested by Livy) have constituted one of the four nations of the Samnite confederacy, this seems to have been no longer the case when that power came into collision with Rome. Their conduct during the long struggle between the Samnites and the Romans renders this almost certain. In B.C. 343, indeed, when their name occurs for the first time in history, they appear in arms against Rome, were quickly defeated and reduced to submission. (Liv. ix. 16); and a few years afterwards (B.C. 304), at the close of the Second Samnite War, the Frentani are mentioned, together with the Maritimi, Peligni, and Vestini, as coming forward voluntarily to sue for a treaty of alliance with Rome (Id. v. 5), which they seem to have subsequently adhered to with steadfastness. Hence we find more than once express mention of the Frentanian auxiliaries in the war with Pyrrhus; and one of their leaders, the name of Obolacus, distinguished himself in the battle of Heracleia. (Dionys. Fr. Didot. i. 16; Plut. Pyrrh. 16; Flor. i. 18. § 7). They were a still more striking proof of fidelity during the Second Punic War, by adhering to the Roman cause after the battle of Cannae, when so many of the Italian allies, including the greater part of the Frentani, went over to Hannibal. (Liv. xxii. 61; Tac. viii. 521, xv. 567). Throughout this period they appear to have been much more closely united in their political relations with their neighbours, the Maritimi, Peligni, and Vestini, than with the Samnites; hence, probably, it is Polybius, in enumerating the forces of the Italian allies, classes the Frentani with the Maritimi, Maritimi, Peligni, and Vestini, while he reckons the Samnites separately. (Pol. ii. 24.) Notwithstanding their vaunted loyalty, the Frentani joined in the general outbreak of the Italian allies in the great Social War, B.C. 91. (Liv. B.C. i. 39; Strab. v. p. 241): they do, however, appear to have taken any prominent part, and we can only infer that they received the same franchise at the same time with the neighbouring tribes. Hence we find them mentioned by

Cicero, a few years later, as sending some of their chief men ("Frentani, homines nobilissimi," *pro Cluent. 69*) to support the cause of Cluentius, a native of Larinum. Their territory was traversed without resistance by Caesar at the outbreak of the Civil War, B.C. 49 (Caes. B. C. i. 23); and this is the last occasion on which their name appears in history. Their territory was comprised in the fourth region of Augustus, together with the Marrucini, Peligni, Maritimi, &c. (Plin. iii. 12. a. 17); but at a later period it appears to have been reunited to Samnium, and was placed under the authority of the governor of that province (Mommson, *ad Lib. Col.* p. 206). It is now included in the kingdom of Naples, and divided between the provinces of *Abruzzo Citeriore* and *Sannio*.

The territory of the Frentani is for the most part hilly, but fertile. It is traversed by numerous rivers which have their sources in the more lofty mountains of Samnium, and flow through the land of the Frentani to the Adriatic: the principal of these, besides the *Trifidus*, which (as already mentioned) constituted the southern limit of their country, are the *Trifidus* or *Trigno*, which, according to Pliny, had a good port at its mouth ("Flumen Trifidum portuosum," Plin. iii. 12. a. 17); and the *Sagrus* or *Sangro*, a very important stream, which enters the Adriatic about half way between Histonium and Ortona. The Tabula also gives the name of a river which it places between Ortona and Anxanum, and calls it "Clotris" (?). The name is probably corrupt; but the stream meant (if its position can be depended upon) can be no other than the *Moro*, which falls into the Adriatic a few miles S. of Ortona. The coast-line of this part of the Adriatic presents few remarkable features, and no good natural harbours. The mouths of the rivers, and the two projecting points of *Termoli* (Buca) and the *Punta della Penna*, afford the only places of anchorage.

The towns of the Frentani mentioned by ancient writers are few in number; but the topography of the district has been thrown into great confusion by the perverted zeal of certain local antiquarians, and by the reliance placed on inscriptions published by some early writers, which there is great reason to regard as forgeries. The *Antichità Frentane* (2 vols. 8vo., Naples, 1809) of the Abbate Romanelli, who was a native of this part of Italy, is a very uncritical performance; but the author was led astray principally by the inscriptions and other documents put forth by Polidoro, an Italian antiquary of the last century, who appears to have had no hesitation in forging, or at least corrupting and altering them in such a manner as to suit his purpose. (Mommson, *Inscr. Regni Neap., Appendix*, p. 30.) Romanelli, in his later and more extensive work (*Antica Topografia Storica del Regno di Napoli*, 3 vols. 4to., Naples, 1818), simply abridged the results of his former book; and Cramer, as usual, blindly follows Romanelli. Along the sea-coast (proceeding from N. to S.) were situated ORTONA, HISTONIUM, and BUCA. The two former may be clearly fixed, Ortona retaining its ancient name, and the ruins of Histonium being still extant at *Il Vasto d'Ammonio*; but there is considerable difficulty in determining the site of Buca, which may however be fixed with much probability at *Termoli* [BUCA]; the arguments that have led many writers to place it at *S. Maria della Penna* being based principally upon the spurious inscriptions just alluded to. The existence of a town called *Interamna*, supposed by Romanelli and Cramer to have

The old editions of Livy have "Ferentani," the conjecture of Sigonius that we should read "Frentani," is supported by some of the best MSS., and may be regarded as certainly correct. (See *Meuschen, ad loc.*; Niebuhr, vol. iii. p. 235.)

occupied the site of *Termoli*, is derived only from the same apocryphal source; and, even were the inscription itself authentic, the *Interamna* there meant is probably the well-known town of the *Præntii*. (Murat. *Inscr.* p. 1050, no. 7; Mommsen, *l. c.*) The only inland town of importance among the *Frentani* was *ANXANUM*, now *Lanciano*; but, besides this, Pliny mentions, in the interior of the country, the "*Carentini superates et inferates*," and the "*La-nuenses*;" both of which peoples are otherwise unknown, and the site of their towns cannot be fixed with any approach to certainty. On the other hand, the *Tabula* gives the name of a place called *PALLANUM*, of which no other mention occurs; but the site of which, according to Romanelli, is marked by extensive ruins at a place called *Monte di Pallano*, about 3 miles S.W. of *Alessa*. The previous station given by the same authority is called "*Annum*;" a name probably corrupt, but the true reading for which is unknown. (*Tab. Pent.*; *Geogr. Rav.* iv. 31.) *USCOSIUM*, a place given in the *Itinerary* of Antoninus, which reckons it 15 miles from *Histonium*, on the road into *Apulia* (*Itin. Ant.* p. 314), is fixed by this distance at a spot near the right bank of the little river *Sinarca*, about 5 miles S.W. of *Termoli*, but in the territory of *Guglionis*, where considerable remains of an ancient town are said to exist. (Romanelli, vol. iii. p. 24.)

There is considerable obscurity in regard to the Roman roads through the territory of the *Frentani*. The name of the "*Via Trajana Frentana*" rests only on the authority of a dubious inscription; nor is there any better evidence for the fact that the construction of the high road through this district was really owing to that emperor. But it is certain that an ancient road traversed the territory of the *Frentani*, in its whole length from *Aternum* to *Larinum*, keeping for the most part near the sea-coast, but diverging for the purpose of visiting *Anxanum*. The stations along it are thus given in the *Itinerary* of Antoninus:—

Ostia Aterni.	M.P.
Angelum (Angulus) -	x.
Ortona -	xi.
Anxano -	xiii.
Histonios -	xv.
Uscosio -	xv.
Arenio (Larinum?) -	xiv.

Of these, *Angulus* is certainly misplaced, and should have been inserted between *Hadria* and the *Aternus*. The distance from the mouths of the *Aternus* at *Pescara* to *Ortona* is considerably understated, and that from *Ortona* to *Anxanum* as much overrated; but still the line of the road may be tolerably well made out, and an ancient Roman bridge, over the *Sangro* between *Lanciano* and *Il Vasto*, supplies a fixed point in confirmation. The road given in the *Tabula*, on the contrary, strikes inland, from the mouth of the *Aternus* to *Teate*, and thence to *Ortona*, and again between *Anxanum* and *Histonium* makes a bend inland by *Annum* and *Pallanum*. The distances given are very confused, and in many instances probably corrupt. They stand thus:—

Ostia Aterni.	M.P.
Teano Marrucino -	xvi.
Ortona -	xi.
Anxana -	iii.
Annum -	iii.
Pallanum -	xii.
Istonium -	xxiii.
Larinum.	

There exist copper coins with the *Oscan* legend "*Frentei*," which may probably be referred to the *Frentani* rather than to the towns of *Frentania* and *Apulia*, to which they have been assigned by some writers. Others are of opinion that they indicate the existence of a city of the name of *Frentum* as the capital of the *Frentani*, which is supposed to be the one referred to by *Livy* (ix. 16) where he says—"*Frentanos vicit æqueque ipsam*—is debet accepti,"—without naming the city; but this seems to say the least, very dubious. (*Frædicius, Oskische Münzen*, p. 43; *Millingen, Numismatique de l'Italie*, p. 180.) [E.B.B.]

FRENTO (*Fortore*), a river of *Apulia* which rises in the *Apennines* near *Boeche*, and has a course of near 50 miles from thence to the *Adriatic*. In the lower part of its course it formed the boundary between the territory of *Larinum* and that of *Teannum* in *Apulia*, and, consequently, forms its northern limit if *Larinum* was not included in that country. *Pliny* tells us that at its mouth, whence he terms it "*fœtus portuosum Frento*," some remains of this are visible on its right bank, at a place called *Portus Frentore*. About 10 miles from its mouth it is crossed by an ancient bridge constructed on a scale of great magnificence, and still known as the *Fons di Civitate*, from the ruins of *Teannum*, now known as *Civitate*, which are situated at a short distance from it. It was traversed by the high road from *Larinum* to *Teannum*. (*Plin.* iii. 11. c. 12.) [*Tab. Pent.*; *Romanelli*, vol. iii. p. 11.] [E.B.B.]

FRETUM GADITANUM, *HECULETUM*, *TARTESSUM*, &c. [*GADITANUM FRETUM*].

FRETUM GALLICUM, is a name which *Strabo* (c. 25, ed. Steph.) gives to the straits which separate *Gallia* and *Britannia*. *Tacitus* (*Agrie* c. 40) calls it "*Fretum Oceani*." It is the *supplis* *Strabo* of *Strabo* (p. 128). Thus, in ancient times, the countries which it separates gave it no name; and it has no general name; but the English call it the *Straits of Dover*, and the French sometimes *Pas de Calais*. [G.L.]

FRIGIDUS FLUVIUS, a river of *Venetia*, in the country of the *Carni*, placed by the *Itinerary* on the road from *Aquileia* to *Aemona* across the *Julian Alps*. (*Itin. Ant.* p. 128; *Tab. Pent.*) It has no other than the stream now called the *Frigio* (in Italian, *Vipaco*), which falls into the *Adriatic* (*Sontius*), near *Corisica*. It was on the banks of this river that the usurper *Eugenius* was defeated and slain by *Theodosius*, A.D. 394. *Claudian*, alluding to this victory, notices the extreme cold of the waters from which the river derived its name. (*Claudian, de III. Cons. Honor.* 99; *Lactantius, Hist. Miscell.* xii. p. 530.) [E.B.B.]

FRISIABONÆ, are placed by *Pliny* (ii. 12) in *North Gallia*, between the *Sunici* and *Betasi* (*Strabo*). We cannot tell exactly where to fix them, unless they were near the *Betasi*; nor is it certain that the name is right, for the *Frisci* belong to another place. The "*Frisci*" appear in an inscription in *Gruter*, but this is a different name. *Forbiger*, who refers to his authorities, states that *Frisciabones* is only another way of writing the *Frisciabones* (*Gruter*, p. 523, 7, &c.). (*Forbiger, Handbuch*, &c. vol. iii. p. 254; *Ukert, Gallia*, p. 271.) [G.L.]

FRISI (*Frissies*, *Paul. Diac.* vi. 37; *Forbiger, Geogr. Rav.* iv. 23; and *Frisci*, *Frissii*, or *Frissiones*, in inscriptions; *Phlegræus*, *Ptol.* ii. 11. § 3.)

Isori, Dion Cass. liv. 32; *ϕρισιανοὺς*, Procop. B. G. 10), one of the great tribes of North-western Germany, belonging to the Ingvæones. They inhabited country about Lake Flevo and other lakes, between the *Rhine* and *Emse*, so as to be bounded on south by the Bructeri, and on the east by the *Ubi*. Tacitus (*Germ.* 34) distinguishes between *maiores* and *minores*, and it is supposed the latter dwelt on the west of the canal of *sa* in the north of *Holland*, and the former between the rivers *Flevis* and *Amisia*, that is, in the stry still bearing the name of *Friesland*. Pliny tions a tribe, under the name of *Frisiabones*, as ling in Northern Gallia between the *Sunici* and *sil*. They have been identified by many writers the lesser *Frisii*, but without sufficient reason. **ISLABONES.**]

he *Frisians* joined the Romans from the first, remained faithful to them after the undertak- of *Drusus*, until, in A. D. 28, irritated by the resion of the governor *Olennius*, they rose in, and expelled or massacred the Romans. (Tac. i. iv. 72, xi. 19; Dion Cass. liv. 32.) *Corbulo's* npt to reconquer them in A. D. 47, was unsuc- ul, as he was recalled. Under *Nero*, they in- d the Roman dominion on the *Rhine*, but were ed to retreat. On this occasion, their kings itus and *Malorix* went to Rome to negotiate, were honoured with the Roman franchise, though behaved with noble independence. (Tac. *Ann.* 54.) During the fourth and fifth centuries, *Frisians* were allied with the *Saxons*, with whom sailed across to Britain, and shared their con- ta. (Procop. B. G. iv. 20.) Their chief occu- on was agriculture and the breeding of cattle. *Ann.* iv. 72, xiii. 54; comp. *Latham* on Tac. n. p. 116.) [L. S.]

FRUDIS (Φρουδίας ἐκβολαί) is placed by *Pto-* (ii. 9) between the mouth of the *Soquana* ve) and the Promontory *Iltium*. The reading *ινου ἐκβολαί* in *Marcian* (p. 50) is conjectured [kert *Gallien*, p. 146] to be an error for *φου ἐκβολαί*. *D'Anville* supposes that *Ptolemy's* lie is the outlet of the *Samara* (*Somme*). [G. L.]

RUSINO (Φρουσίνιον or Φρουσίνιον: *Eth.* *Fru-* -ātis: *Frosinone*), a city of Latium, situated e *Via Latina*, 7 miles from *Ferentinum*, between city and *Fregellæ*. (*Itin. Ant.* pp. 303, 305.) sems to have been originally a *Volscian* city, gh entertaining close relations with its neigh- s the *Hernicans*: hence, on the first occasion in h its name appears in history, it is mentioned aving joined in exciting the *Hernicans* to revolt at *Rome*. For this offence the city was punished the loss of a third part of its territory. (*Liv.* x. *Diod.* xx. 80.)

rusino is next mentioned on the occasion of the h of *Hannibal* against *Rome*, B. C. 211 (*Liv.* . 9), and incidentally alluded to by *Plautus*, ther with some other towns in the same neigh- hood (*Plautus, Capt.* iv. 2. 103). *Silius Itali-* also notices its rocky situation and the hardy acter of its inhabitants (*viii.* 398, *xii.* 532). ro appears to have possessed a farm in its ter- y, to which he alludes more than once in his rs to *Atticus* (*ad Att.* xi. 4. 13). We learn the *Liber Coloniarum* (p. 233) that it received a y of veterans; but it remained a place of only icipal rank, and is mentioned, by *Strabo*, y, and *Ptolemy*, among the towns in this part of um. Its position on the *Via Latina* probably

caused it to retain some degree of prosperity, and *Juvenal* notices it as a respectable country town where houses were cheap. (*Juv.* iii. 224; *Strab.* v. p. 237; *Plin.* iii. 5. a. 9, *Ptol.* iii. 1. § 63.) Its ex- istence at a later period is attested by the *Itineraries*, and it appears to have retained its ancient site throughout the middle ages down to the present day. It is now an episcopal town with about 7000 inhabitants, standing on a hill which rises above the river *Cosa* (*Ródas*, *Strab.*) about 5 miles above its confluence with the *Sacco* (*Trerus*). Some remains of an amphitheatre are still visible in the plain beneath, but the town itself contains no relics of antiquity. [E. H. B.]

FUCINUS LACUS (ἡ Φουκίνα λίμνη, *Strab.*: *Lago Fucino* or *Lago di Celano*), a lake in the centre of Italy, in the country of the *Marsi*, remark- able as being the only one of any extent that is found in the central Apennines. *Strabo* calls it "in size like a sea" (μεγαλὴ τὸ μέγεθος, v. p. 240); but this expression would convey a very exaggerated notion of its magnitude: it is, however, the largest lake in Central Italy, though but little exceeding those of *Trasimene* and *Volturni*. Its circumference is variously estimated at 30, 40, or even 50 miles, but according to the best maps does not really exceed 25 Italian, or about 29 English miles. Its form is nearly oval; and it is situated in a basin, surrounded on all sides by mountains, without any visible natural outlet. In a geographical point of view the lake *Fucinus* is of importance as being situated almost exactly in the centre of the peninsula of Italy, being just about half way between the *Tyrrhæ- nian* sea and the *Adriatic*, and also at the middle point of a line drawn from the northern ridge of the Apennines to the gulf of *Tarentum*. It would there- fore have justly deserved the name of the "Umbili- cus Italiae," applied with much less reason to the insignificant pool of *Cutilia*. [**CUTILIAN LACUS.**] The basin of the lake *Fucinus* is itself at a consider- able elevation, the waters of the lake being not less than 2176 feet above the level of the sea; but the mountains rise on all sides of it to a much greater height, especially on the N., where the double- peaked *Monte Velino* attains the elevation of 8180 feet. On the E. and W. the basin of the lake is bounded by limestone ridges of much inferior ele- vation, but steep and rocky, which separate it from the valleys of the *Liris* and the *Gizio*. Towards the NW. its shores are gentle and sloping, and separated only by a very moderate acclivity from the waters of the *Imela* or *Salto*, which flow towards *Rieti* and the valley of the *Tiber*.

The lake *Fucinus* is almost always described as situated in the country of the *Marsi* (*Strab.* v. p. 240; *Vib. Seq.* pp. 16, 23; *Dion Cass.* lx. 11), and that people certainly occupied its shores for at least three- fourths of their extent; but *Alba* (surnamed *Fu- censis* from its proximity to the lake) appears to have been more properly an *Aequian* city. [**ALBA FUCENSIS.**] *Alba* stood on a hill about 3 miles from the NW. extremity of the lake; on its eastern shore, close to the water's edge, was situated *MARRU- BIUM*, the capital of the *Marsi*, of which the ruins are still visible at *S. Benedetto*. *CERFENNIA*, also a *Marsic* town, occupied the site of *Sta. Felicità*, about 2 miles N. of *Marrubium*, and at the foot of the steep mountain pass known as the *Mons Imeus* or *Forca Caruæ*, which afforded the only communi- cation from the basin of the *Fucinus* to that of the *Aternus* and the *Adriatic*. On the W. shore of the

lake stood the *LUCUS ANGITIAE*, a sanctuary and sacred grove of the goddess Angitia, who was in all probability a native Maric divinity, whose supposed connection with Circe and Medea was derived from the fact of her presiding over the magic herbs and incantations for which the Marai were always famous. [MAEST.] At a later period there grew up a town upon the spot, which is called in inscriptions *ANGITIA*, but must have also been currently known as *Lucus*; for we find the *Lucenses* mentioned by Pliny among the towns of the Marai, and the name is still retained by the modern village of *Leco* or *Lago*. [*LUCUS ANGITIAE*.] The beautiful lines of Virgil, in which he associates the grove of Angitia with the "glassy waters" of the Fucinus, are well known. (Virg. *Aen.* vii. 759; Sil. Ital. iv. 344.)

According to a tradition mentioned by Pliny and Solinus there had formerly existed on the shores of the Fucinus a town named *Archippe*, which had been swallowed up by the waters of the lake (Plin. iii. 12. s. 17; Solin. 2. § 6); and Holstenius tells us that the neighbouring inhabitants still preserved the tradition, and pretended that the remains of the lost city were visible, when the waters were low, at a spot between *Trasecco* and *Ortoecchio*, near the S. shore of the lake. (Holsten. *Not. ad Clav.* p. 154.) But the whole story has a very fabulous aspect. Another marvel related of the lake Fucinus was, that it was traversed by a river called the *Pitonius*, without their waters becoming mingled. (Vib. Seq. p. 16; Plin. ii. 103. s. 106, xxi. 3. s. 34.) The story (which is told of many other lakes) is the more singular in this case, because the Fucinus has no visible natural outlet, no stream flowing from it in any direction. But there can be no doubt that its surplus waters were originally carried off by a subterranean channel, the opening of which, at a spot a little to the N. of *Leco*, is distinctly visible, and is still called *La Pedogna*, a name evidently retaining that of the ancient *Pitonius*. On the other hand, the only stream of any magnitude that flows into the lake is that now called the *Giovesco*, which enters it close to *Marrubium*, and is a perennial stream of clear water, supposed by some local writers to be derived from the neighbouring *Lago di Soanen*: this, therefore, must be the *Pitonius* of the ancients. There can be little doubt that a part of the waters of the Fucinus sink into a chasm or natural cavity at *La Pedogna*, from which they emerge (as is often the case in limestone countries) at some distant point: and this is precisely the statement of *Lycophron*, whose expressions are unusually clear upon the subject of the *Pitonius*, though he has distorted the name of the Fucinus into that of *Μυρσὸς ὁ Πυτῶνις* (*Alex.* 1275). Later writers went further, and conceived that they could recognise the spot where these waters emerged again from their subterranean channel, which they identified with the sources of the *Aqua Marcia* in the valley of the *Anio*, though these are more than 20 miles distant from the lake Fucinus, and separated from it by the deep valley of the *Liris*. This belief appears to have had no better foundation than the great clearness of the water in both cases (which would apply equally to many other sources much nearer to the lake), but it was generally adopted in antiquity: *Strabo* states it as a well-known fact; and *Pliny*, combining both marvels in one, relates that the *Aqua Marcia*, which was called at its source *Pitonis*, took its rise in the mountains of the *Peligni*, flowed through the *Marsi* and the lake Fucinus, then sunk

into a cavern and ultimately emerged in the territory of *Tibur*, from whence it was carried by an aqueduct to *Rome*. *Statius* also speaks of the *Aqua Marcia* as derived from the snows of the *Monte Scaevola* (*Strab.* v. p. 240; *Plin.* xxi. 3. s. 34; *Sat. Sil.* i. 3.)

The subterranean outlets of the *Fucinus* were, however, often insufficient to carry off its surplus waters; and the lake was in consequence subject to sudden rises, when it overflowed the low ground at its banks, and caused much mischief. Since this us that it sometimes swelled so as to fill the whole basin to the foot of the mountain, it was would sink and leave dry a considerable tract, which then became susceptible of culture. (*Sat.* v. p. 240.) The project of obviating the evils arising from this cause, by the construction of an emissary or subterranean canal from the lake to the valley of the *Liris*, was among the great ones entertained by *Caesar*, but frustrated by his death. (*Suet. Caes.* 44.) Its execution was afterwards repeatedly urged upon *Augustus* by the *Senatus*, without effect, and it was reserved for *Claudius* to accomplish this great work. The main object consisted in the hardiness of the limestone rock through which the gallery had to be cut: the extent of this is stated by *Suetonius* at three Roman miles (an estimate somewhat below the truth*); *Strabo* tells us that 30,000 workmen were employed on it continuously for a period of 11 years. The extent of it was celebrated by *Claudius* with great pomp and circumstance, and a mock naval combat was exhibited on the lake upon the occasion; but owing to unreflective arrangements, a catastrophe ensued, in which many persons lost their lives, and the emperor himself narrowly escaped. (*Suet. Claud.* 20, 21, 22; *Tac. Ann.* xii. 56, 57; *Dion Cass.* li. 33.) The emissary, however, appears to have fully answered its purpose at the time; but *Nero*, through the influence of *Claudius*, suffered the works to fall into decay, and it became necessary for *Hadrian* to restore them, on which account his biographer gives him the rank of having constructed them. (*Plin.* xxvii. 13. s. 23; *Spartian. Hadr.* 22, who says briefly, "fuerunt emissa.") From this period we have no further account of it; but it appears to have fallen into decay in the middle ages, and became obstructed by falling in of stones and earth from above; and though many attempts have been made from the year 1540 to the present day to clear it out, and restore it to a servicable state, they have been hitherto without effect. It is, however, readily accessible at certain ends, and even in its present state sufficiently answers the justice of *Pliny's* admiration, who ranks it among the most memorable proofs of Roman greatness. (*Plin.* l. c.) The whole work was examined in detail and described, in 1833, by the Neapolitan engineer named *Rivera*: the results of his researches are given by *Kramer*, whose excellent monography of the lake Fucinus (*Der Fuciner See*, 4to. Berlin, 1839) and the surrounding country is one of the most valuable contributions to our knowledge of Italian geography. Its authority has been generally followed in the present article. [L.H.S.]

* The actual length, according to the measurements of *Rivera*, is 21,395 paces, or about 15,000 English feet. (*Kramer, Der Fuciner See*, p. 6.) The *Monte Scaevola*, through the solid limestone rock of which it was pierced, rises more than 100 feet above the level of the lake.

FULGINIUM (Φουλγίνιον, App.: *Ἔθ.* Fulginas, s: *Foligno*), a municipal town of Umbria, situated the Via Flaminia at the western foot of the Apennines. It was distant only 8 miles from Mevania, and 3 from Forum Flaminii. It appears to have been a place of no great importance, at least at a late period, as its name is wholly omitted by those who enumerate all the other towns on or near the Via Flaminia. But we learn from Cicero it was a municipal town, though in the subordinate condition of a *praefectura*. (*Municipium* *inas. Praefectura Fulginas, Cic. Fr. ap. Priest.* 14. § 70. The notion that it was a "foederata civitas" rests upon the false reading of "Fulgina-" for "Iguvinationum" in Cic. *pro Balb.* 20. See *li. ad loc.*) It is mentioned also during the Hannibalic War in B. C. 41, when it was occupied by Julius and Asinius, the generals of Antony. (*Plin. B. C. v. 35.*) Silius Italicus describes it situated in an open plain, without walls (*viii.*); the proximity of the more important towns of Mevania and Hispellum probably kept it from rising to consideration, though its position at the junction of the main line of the Via Flaminia with the same which led by Interamna and Spolegium has been favourable to its development; it is mentioned as a "civitas" in the Jerusalem Itinerary. (*Itin. Hier.* p. 613.) The modern of *Foligno* has risen to importance after the destruction of the neighbouring Forum Flaminii, is now the most populous and flourishing town in that part of Italy. An inscription discovered here preserved the name of a local nymph or divinity of Fulginia (Orell. *Inscr.* 2409); another describes the erection of a statue to a certain C. Betuus by 15 towns of Umbria, of which he was the patron. (Orell. *Inscr.* 98.) This has been usually interpreted as indicating the existence of a league or confederacy of these cities of which Fulginia was the head. (Cramer, *Anc. Italy*, vol. i. p. 1.)

[E. H. B.]

FUNDI (Φουνδίων: *Ἔθ.* Φουνδίωνες, Fundanus; *ἦ*), a city of Latium, in the more extended sense of the term, situated on the Appian Way between Formiae and Formiae, and about 5 miles from the coast. In the marshy plain between it and the sea a considerable lake or pool, known in ancient times as the *Lacus Fundanus* (Plin. *iii.* 5. a. 9), still called the *Lago di Fondi*. The city was probably at one time in the hands of the Volscians; in B. C. 340, during the great Latin War, it is said to have occupied a sort of neutral position between the Latins and Campanians, and, as its neighbour Formiae, continued faithful to the Romans during that trying period. For this act the inhabitants of both cities were rewarded by the Roman "civitas," but without the right of *secedere*. (*Liv.* *viii.* 14.) Shortly after this, however, some of the citizens of Fundi joined in the revolt of the neighbours of Privernum, under the lead of Marcus Vacca, who was himself a native of it. But the authorities of the city succeeded in saving themselves to the Roman senate, and escaped without punishment. (*Ib.* 19.) They did not however obtain the full Roman franchise with the right of *stipendium* till B. C. 190, when they were for the first enrolled in the Aemilian tribe. (*Liv.* *xxxviii.* Vell. Pat. *i.* 14.) Hence it is to this interval Pompeius Festus must refer when he speaks of it as well as Formiae as having been in the condition of *praefecturae*. (*Fest.* p. 233.) At a

subsequent period it received a colony of veterans under Augustus (*Liv. Colon.* p. 234), and appears to have continued under the Roman empire to be a flourishing municipal town (Strab. *v.* p. 234; Mel. *ii.* 4. § 9; Plin. *iii.* 5. a. 9; Ptol. *iii.* 1. § 63; Orell. *Inscr.* 821, 2951), for which it was probably indebted to its situation on the Appian Way, which is here compelled to deviate from the sea-coast, and make an angle inland from Terracina to Fundi, and thence again to Formiae, where it rejoins the coast. According to the Itineraries, Fundi was distant 13 miles from each of the above towns. (*Itin. Ant.* pp. 108, 121; *Itin. Hier.* p. 611.) The mention of its name by Horace on his journey to Brundisium, and the ridicule cast by him on the pompous airs assumed by its local magistrate or praetor, Anfidius Luscius, are familiar to all readers. (*Hor. Sat.* *i.* 5. 34.) It is incidentally mentioned also by Cicero and Suetonius, from whom we learn that the family of Livia, the wife of Augustus, came originally from Fundi: some writers also represented Tiberius himself as born there. (*Cic. ad Att.* *xiv.* 6; Suet. *Tib.* 5, *Cal.* 23, *Galb.* 8.) Silius Italicus seems to include Fundi as well as Caieta in Campania (*viii.* 524—530), but it is certain that they were both comprised within Latium, according to the bounds assigned to it under the Roman empire, or what was called Latium Novum. [LATIUM.]

The modern city of *Fondi* still retains the ancient site, and considerable remains of antiquity, of which the most important are an ancient gateway with a portion of the walls adjoining it, the lower part of which is of polygonal construction, and the upper part of later Roman style. An inscription over the gate (now called the *Portella*) records the construction of the walls and gates of the city by the local magistrates or aediles. (Hoare, *Class. Tour*, vol. i. p. 106.) The principal street of the town is still formed by the Via Appia, and retains great part of the ancient pavement: numerous fragments of ancient buildings are also scattered throughout the modern town, or have been employed in the middle ages in the construction of its castle, cathedral, &c.

Fundi was celebrated among the Romans for the excellence of its wines: the famous Caecuban wine was in fact produced within its territory (CAECUBUS AGER), but besides this the wine of Fundi itself (*Fundanum vinum*) seems to have enjoyed a high reputation, though inferior to that of the Caecuban and Falernian. (Martial, *xiii.* 113; Plin. *xiv.* 6. a. 8.) It was probably on this account that the "Fundanus ager" was one of those districts which the agrarian law of Servilius Rullus sought to apportion among the needy citizens of Rome. (*Cic. de Leg. Agr.* *ii.* 25.)

[E. H. B.]

FURCAE CAUDINAE. [CAUDINIUM.]
FURCONIUM. [VETULIUM.]

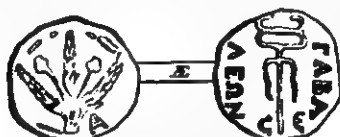

G.

GABAE (Γάβα). 1. A strongly fortified post in Sogdiana, mentioned in the invasion of that country by Alexander's army. (Arrian, *iv.* 17.) It is not possible to identify it with any known place, but it has been supposed not improbable that it may be the same as that mentioned by Arrian under the name of Gaza (*iv.* 2), and by Curtius under that of Gabaza (*viii.* 4. § 1). It is clear that the three places were occupied by a Scythian race sometimes called generally Massagetae, and sometimes by a more local

title, Sogdiani; but the identity of the three places is by no means certain.

2. One of the royal palaces of the kings of Persia, situated, according to Strabo (xv. p. 728), in the upper country of Persia. According to Ptolemy (vi. 4. § 7) it must have been situated at no great distance from the Pasargadae. The name is probably connected with the district Gabiene, which was in Susiana, and may not unlikely have comprehended a part of Persia. [V.]

GABALA (Γάβαλα, Γάβαλα), a place in Galilee fortified by Herod the Great (Joseph. B. J. xv. 9. § 5), supposed to be identical with Gamala. [GAMMALA.] [G. W.]

COIN OF GABALA.

GABALENE. [GEBALENE.]

GABALI or GABALES (Γαβαλῆς, Strab. p. 191). "The Ruteni and the Gabales," says Strabo, "border on the Narbonensis." In Caesar's time the Gabali were under the supremacy of the Arverni. (B. G. vii. 75.) In another passage, he speaks of the "Gabales proximosque pagos Arvernorum" (B. G. vii. 64). Their position is in a mountainous country between the Arverni and the Helvii. It corresponds to the *Gévaudan* of the ante-revolutionary history of France, a name derived from the middle-age term *Gavalanum*, and nearly to the present department of *Lozère*. There were silver mines in the country of the Ruteni and Gabali (Strabo). The cheese of this country was famed at Rome (Plin. xi. 42): it came from the "Lesora Gabalique pagi." The Lesora is the mountain *Lozère*. Sidonius Apollinaris (*Carm.* xiv. 27) says,

"Tum terram Gabalum satis niveosam."

A large part of it is a cold, mountainous country. The chief town of the Gabali, according to Ptolemy, is Anderitum. [ANDERITUM.] [G. L.]

GABAZA, a district of Sogdiana apparently from the description of Curtius, who states that Alexander's army suffered much there from the severity of the cold in the northern part of that province (viii. 4. § 1). [GABAE, No. 1.] It must have been between the 40th and 42nd parallels of N. lat., and near the furthest limit northward of Alexander's march. [V.]

GABIE'NE (Γαβιήνη, Strab. xvi. p. 745), one of the three eparchies into which Elymais was divided in ancient times: the other two were Mesabatica and Corbiana. It appears from the notice in Strabo that Gabiene was in the direction of Susa. It is mentioned in the wars of Alexander's successors, Antigonus having attempted to cut off Eumenes in that locality, and Eumenes having succeeded in wintering there in spite of the enemy. (Diod. xix. 26, 34; Plut. *Eumenes*. 15; Polyæn. *Strat.* iv. 6. § 13.) [V.]

GABII (Γάβιοι: *Etia*. Γάβιοι, Gabinius: *Castiglione*), an ancient city of Latium, situated between 12 and 13 miles from Rome on the road to Praeneste, and close to a small volcanic lake now called the *Lago di Castiglione*. All accounts represent it as a Latin city, and both Virgil and Dionysius expressly term it one of the colonies of Alba. (Virg. *Aen.* vi. 773; Serv. *ad loc.*; Dionys. iv. 53.) Solinus

alone ascribes to it a still earlier origin, and says it was founded by two Sicilian brothers, Gabius and Rino, from whose combined names that of the city was derived. (Solin. 2. § 10.) In the early history of Rome it figures as one of the most considerable of the Latin cities, and Dionysius expressly says (l. c.) that it was one of the largest and most populous of them all. According to a tradition preserved both by him and Plutarch, it was at that time that Romulus and Remus received their nurture, a proof that it was believed to have been a flourishing city at that early period. (Dionys. i. 84; Plut. *Rom.* 6.) Yet no subsequent mention occurs of it in history during the regal period of Rome, or in the reign of Tarquinius Superbus. At that time it appears as wholly independent of Rome, and occurred the hostility of Tarquinius by affording shelter to fugitives and exiles from Rome and the cities of Latium. But it was able successfully to withstand the arms of Tarquin, who only succeeded in making himself master of the city by stratagem and by the treachery of his son Sextus, who retired to be received at Gabii as a fugitive, and then made use of the influence he obtained there to betray the city into the hands of his father. (Liv. i. 53, 54; Dionys. iv. 53-58; Val. Max. i. 4. § 2; Ovid, *Fast.* ii. 690-710.) The exact conclusion on this occasion between Rome and Gabii was among the most ancient monuments preserved in the former city: it is evidently the same alluded to by Horace as the

"foedera regum"

Cum Gabiis aut cum rigidis aequata Salus

and was preserved on a wooden shield in the temple of Jupiter Fidius at Rome. (Hor. *Ep.* i. 1. 11; Dionys. iv. 58.) Its memory is also recorded in a remarkable coin of the Antistia gens, on which appears to have derived its origin from Gabii. (Eckhel, vol. v. p. 137.) Whatever were the relations thus established between the two states, they did not long subsist: Sextus Tarquinius took refuge at Gabii after his expulsion from Rome, and, according to Livy (i. 60) he was soon afterwards by his enemies there, we find the name of Gabians among the Latin cities which came against the Romans before the battle of Regillus (Dionys. v. 61.) We may hence conclude that they at this time really formed part of the Latin League, and were doubtless included in the treaty concluded by that body with Sp. Cassius in a. c. 493. (Niebohr, vol. ii. p. 17.)

From this time their name is but rarely mentioned; and, whenever they appear in history, as allies or dependents of Rome. Thus in a. c. 486 we are told that their territory was ravaged by the Volscians (Liv. iii. 8) in a predatory incursion against Rome; and in a. c. 381 they suffered in the manner from the incursions of their neighbours the Praenestines, who were at that time on hostile terms with the Republic (Id. vi. 21). Even in the great struggle of the Latins for independence, no mention occurs of Gabii, nor have we any record of the terms or conditions on which it was admitted to the position in which we subsequently find it as a Roman municipium. In a. c. 211 it is again mentioned on occasion of Hannibal's march against it (Liv. xxvi. 9); and an incidental notice of it occurs in a. c. 176 (Id. xli. 16); but, with these exceptions, we hear little more of it in history. In a. c. 146, however, we find it selected for a conference with

vian and L. Antonius, probably on account of position midway between Rome and Praeneste. (pian, *B. C.* v. 23.) But long before this period it ceased to be a place of importance and appears to have fallen into complete decay. We learn, indeed, that the dictator Sulla restored its walls, and led its territory among his veterans (*Liv. Colon.* 34); but this measure, if it did not accelerate its decline, at least did nothing to arrest it; and in 54 we find Cicero speaking of Gabii among towns of Latium which were so poor and decayed they could hardly take their accustomed part in sacrifices on the Alban Mount. (*Cic. pro Planc.* 9.) Orosius also attests its decayed condition at a somewhat later period, and tells us that in his time the greater part of the space enclosed within the ancient walls was no longer inhabited, though the traffic along the high road (the Via Praenestina) preserved adjacent parts of the town from depopulation (53). This distinct statement explains, at the same time that it confirms, the expressions of poets in Augustan age, which would otherwise give a exaggerated idea of its state of desolation. Thus Virgil calls it a "deserted village," and Propertius speaks of it as if it were almost devoid of inhabitants. (*Ep. i.* 11. 7; *Propert.* v. 1. 34.) The still stronger expressions of Lucan (*vii.* 392) are scarcely meant to be historical. Juvenal also repeatedly alludes to it as a poor country town, retaining much of rustic simplicity, and in imitation of Horace couples its name with that of Fidenas. (*Juv.* iii. 189, vi. 56, 101.) But we know from other sources, that it has been considerably revived at this period; it is improbable that its cold sulphureous waters, which are already noticed by Horace (*Ep. i.* 15. 9), become a source of attraction, but the monuments and inscriptions which have been recently discovered on the site, prove that it not only continued to exist as a municipal town, but recovered to a considerable extent from its previous decay. This revival, which appears to have commenced as early as the reign of Tiberius, was greatly accelerated by the Antonine, and continued under his immediate successors down to the commencement of the third century. From this time all trace of the town disappears; though it is probable that the bishops of Gabii, mentioned in early ecclesiastical documents down to the sixth century, belong to this city, rather than to the city of Alba, of which nothing else is known. (*Vie. Momum. Gabini*, pp. 7—14; Nibby, *Dintorni*, ii. pp. 76—78.)

The site of Gabii is clearly fixed by the statements of Dionysius and Strabo, that it was distant twenty stadia from Rome, on the Via Praenestina, which the Itineraries, that place it 12 M. P. from the city, closely accord. (*Dionys.* iv. 53; *v.* p. 238; *Itin. Ant.* p. 302; *Tab. Peut.*) It correctly adds that it was just about equidistant from Rome and Praeneste; and as the ruins of the ancient temple have always remained to mark the spot, it is strange that its site should have been forgotten by the earlier Italian topographers, who, as Cluverius transferred it to *Galiciano* or *La Scaia*. The temple just mentioned stands in a commanding position on a gentle eminence, a short distance on the left of the ancient road, the line of which is clearly marked by its still existing pavement; and the site of the ancient city may be readily traced, occupying the whole ridge of hill from thence to the eminence on the N. of the lake, which properly formed the ancient citadel, and is crowned

by the ruins of a mediæval fortress, now known as *Castiglione*. Some remains of the walls may be still observed near this castle: their extent, to which Dionysius appeals as proof of the former greatness of Gabii, is considerable, the circuit being about three miles, but the ridge nowhere exceeds half a mile in breadth. The only ancient edifice now visible in the temple already noticed, which has been supposed, with much probability, to be that of Juno, who, as we learn from Virgil and his constant imitator Silius Italicus, was the tutelary deity of Gabii. (*Virg. Aen.* vii. 682; *Sil. Ital.* xii. 537.) Livy, however, notices also a temple of Apollo in the ancient city (xli. 16), and the point is by no means clear. The existing edifice is of a simple style of construction, built wholly of Gabian stone, and with but little ornament. It much resembles the one still remaining at Aricia; and is probably, like that, a work of Roman times [*ARICIA*], though it has been often ascribed to a much earlier date. Nothing else now remains above ground; but excavations made in the year 1799 brought to light the seats of a theatre (or rather, perhaps, ranges of semicircular seats adapted to supply the place of one) just below the temple, facing the Via Praenestina,—and a short distance from it, immediately adjoining the high road, were found the remains of the Forum, the plan of which might be distinctly traced: it was evidently a work of Imperial times, surrounded with porticoes on three sides, and adorned with statues. The inscriptions discovered in the same excavations were of considerable interest, as illustrating the municipal condition of Gabii under the Roman Empire; and numerous works of art, statues, busts, &c., many of them of great merit, proved that Gabii must have risen, for a time at least, to a position of considerable splendour. Both the inscriptions and sculptures, which are now in the Museum of the Louvre, are fully described and illustrated by Visconti. (*Monumenti Gabini*, Roma, 1797, and Milan, 1835.)

Gabii was noted in ancient times for its stone, known as the "lapis Gabinus," a hard and compact variety of the volcanic tuff or *peperino* common throughout the Roman *Campagna*: it closely resembles the "lapis Albanus," but is of superior quality, and appears to have been extensively employed by the Romans as a building-stone from the earliest ages down to that of Augustus and Nero. (*Strab.* v. p. 238; *Tac. Ann.* xv. 43; Nibby, *Roma Antica*, vol. i. p. 240.) It is singular that no allusion is found in any ancient writer to the lake of Gabii: this is a circular basin of small extent, which must at one time have formed the crater of an extinct volcano; it immediately adjoins the ridge occupied by the ancient city, which in fact forms part of the outer rim of the crater. Pliny, however, alludes to the volcanic character of the soil of Gabii, which caused it to sound hollow as one rode over it. (*Plin.* ii. 94.)

A strong confirmation of the ancient importance of Gabii is found in the fact that the Romans borrowed from thence the mode of dress called the *Cinctus Gabinus*, which was usual at sacrifices and on certain other solemn occasions. (*Virg. Aen.* vii. 612; *Serv. ad loc.*; *Liv.* v. 46, &c.) Still more remarkable is it that, according to the rules of the *Augurs*, the "Ager Gabinus" was set apart as something distinct both from the *Ager Romanus* and *Ager Peregrinus*. (*Varr. L. L.* v. 33.) The road leading from Rome to Gabii was originally called the *VIA GABINA*, a name which occurs twice in the earlier books of Livy (iii. 6, v. 49), but appears to

have been subsequently merged in that of the *Via Praenestina*, of which it formed a part. [E. H. B.]

GABRANTOVICL Γαβραντοῦν κώμης is one of the notices in Ptolemy (ii. 3. § 6) of a locality lying between *Danum Sinus* (Δανον κόλπος) and *Ocellum Promontorium* (Ὀκέλλου ἥκειον). Name for name, and place for place, *Danum* is *Dun-*-s-*ley Bay* near *Whitby* in *Yorkshire*. *Ocellum* is probably *Flamborough Head*. This makes the bay of the *Gabrantovici* the equivalent to the present *Filey Bay*. *Philipps* (in his *Mountains and Rivers of Yorkshire*) takes this view; which is, probably, the right one. Others, however, and amongst them the editor of the *Monumenta Britannica*, place it at *Burlington*, or *Hornsea*—in which case the *Ocellum Promontorium* must be *Spurn Head*. If so, a promontory so important as *Flamborough Head* has no name in Ptolemy. If so, too, the entrance to the *Humber* is mentioned twice over—first, as *Spurn Head* (*Gabrantovicorum Sinus*), and next, as the outlets of the river *Abus*, i. e. the headland is mentioned, and so are the waters immediately in contact with it. This is not the ordinary form of Ptolemy's entries. Hence, the reasoning lies in favour of *Filey Bay*, strengthened by the fact of the entry in this case being a double one in a single form—Γαβραντοῦν κώμης κώμης.

But the "bay with the good harbour" was one thing, the "*Gabrantovici*" was another: indeed, the form in *-vici* (rather than *-vicos* or *-vica*) is an assumption. All that we collect from the form of the word is, that the object expressed by the crude form *Gabrantovici-* was an object of which the name had a plural number. It might be the name of a population; it might be the name of something else.

Whatever may have been the real case, it is a word which in the eyes of what may be called the minute ethnologist is one of great interest: since it bears upon a question which, every day, acquires fresh magnitude, viz. the extent to which German or Scandinavian settlements had been made in Britain anterior, not only to the time of Hengist and Horsa, but to the time of Roman conquest. Professor *Philipps*, and probably others besides the present writer, have believed that German glosses and German forms are to be found in the British part of Ptolemy.

Now, if we admit the possibility of *Gabrantovic* being a German word, we have as a probable analysis of it the participle *gebrantus* (=burnt) and the substantive *vici* (village, station, bay). What determined the name is uncertain. It might be the presence of a beacon. This, however, is not the main point; the main point is the extent to which it is an equivalent to the modern compound *Flam-borough*. This, in the mind of the present writer, is not an accident. Further remarks on the question to which this notice relates are found under the words *PZ-TUARI* and *VANDUARI*. [R. G. L.]

GABRETA or **GABRITA SILVA** (Γαβρέτα, Γαβρέτα, or Γαβρέτα βλῆ), a range of mountains in Germany, mentioned by *Strabo* (vii. p. 292) and *Ptolemy* (ii. 11. §§ 5, 7, 24) in such a manner as to lead several of the earlier geographers to identify it with the *Thüringerwald*; but later investigations have shown that the *Böhmischerwald*, in the north of Bavaria, is meant. The name is evidently of Celtic origin (compare the name *Fergobretus* in *Caes. B. G. i. 16*), and probably signifies "a woody mountain." [L. S.]

GABROMAGUS, a town in the interior of *Syria*, on the south of the river *Aniwa*. It is identified by some with *Lietes*, on the *Isis*, and by others with *Wundsch-Garstein*. (*Itin. Ant. p. 276: Tab. Peut.*) [L. S.]

GABROSENTUM, in Britain, probably the nominative form of the *Gabroentio* of the *Nyma*, and the *Gabroentio* of the geographer of *Ravenna*. It was a station along the line of the *Valium* (per *lineum Valtis*) and was occupied by the second century of the *Thracians*. The editor of the *Monumenta Britannica* identifies *Gabroentum* with *Dunelm* in *Cumberland*: Mr. *Bruce*, with *Bowman*. At *Bowness* slight traces of the walls of a station may with difficulty be detected, "its southern line by the church being those which are most apparent." A small altar, dedicated to *Jupiter*, by *Septimius Severus*, has been dug up at *Bowman*. [*Itin.*] [L. S.]

GAD. [PALÆSTINA.]

GADAR (Γάδαρα, *Isid. Stath. Parth. p. 2*), seems to have been a small place between *Nisae* and *Antiochia* of *Margiana*. *Reinell* (*Geogr. of Herod. v. p. 390*) has conjectured, from the names of several small places mentioned also by *Isidorus*, that *Gad* is represented now by *Gandari* or *Gandari*. *Abulfeda* *Komtor*, and not improbably an earlier seat of the *Gandarii* or *Gandari*. [L. S.]

GADARA (ἡ Γάδαρα: *Eth. Palaestina*, Γαδάρ), a city of Palestine, accounted the capital of *Peraea* by *Josephus* (*B. J. iv. 7. § 3*), to the west of the sea of *Tiberias*, and 60 stadia distant from the town of *Tiberias*, on the confines of *Tiberias*, and the region of *Scythopolis* (*Vita*, §§ 65.9). It is placed by *Pliny* (v. 16) on the river *Hieromax*, north of *Tiberias*, and the district which took its name from it, the *Γαδάρη* γῆ of the *Evangelists* (*St. Mark v. 1. Luke, viii. 26*), was the eastern boundary of *Galilee* (*B. J. iii. 3. § 1*). *Polybius*, who records its capture by *Antiochus*, calls it the strongest city in the district (v. 71, and *op. Joseph. Ant. xii. 3. § 3*). It was restored by *Pompey* (*Ant. xiv. 4. § 4*), burnt shortly before destroyed, and was the seat of one of the five *Sanhedrims* instituted by *Gabinius* (*Ant. xiv. § 4*), which is the more remarkable, as it is named one of the Grecian cities (ἡ πόλις Ἑλληνική), which account it was exempted from the jurisdiction of *Archelaus* (*Ant. xvii. 13. § 4*, *B. J. i. 6. § 5*), subjected to the prefecture of *Syria*, although it had been granted as a special grace to *Herod the Great* (*B. J. i. 20. § 3*). It was one of the first cities taken by the Jews on the outbreak of the revolt (i. 18. § 1), which act was soon afterwards rewarded by its Syrian inhabitants (§ 5); but *Vespasian* took it in occupation of the Jews, on his first campaign in *Galilee*, when he took it, and slaughtered the adult inhabitants, and burnt not only the city, but all the villages and towns in the neighbourhood (iii. 7. § 1). It seems to have been again occupied by the Jews, for, on his next campaign in *Galilee*, he voluntarily surrendered to the Romans: a measure prompted by a desire of peace, and by the loss of their property, for *Gadara* was inhabited by many wealthy men (iv. 7. § 3). This last observation is in some measure confirmed by the existing remains of the city, among which are the ruins of several public edifices, as well as of important public buildings. One *Keiss*, the ancient *Gadara*, is situated on mountains on the east side of the valley of the *Jordan*, about 6 miles SE. by E. of the sea of *Gadara*, and to the south of the river *Yarmouk*, the *Barada* of *Pliny*. The ruins are very considerable. [L. S.]

10, 4to.; Geronimo de la Concepcion, *Emporio el Orbe*, Amst. 1690, folio; Ms. de Mondejar, *diz Phenicia*, Madrid, 1805, 3 vols. 4to.; *Hisia de Cadix*, Orosco, 1845, 4to.) [P. S.]

GADILONITIS. [GAZELON.]

GADITANUM FRETUM (*Straits of Gibraltar*), well-known channel connecting the Mediterranean and Atlantic [ATLANTICUM MARE], and separating the continents of Europe and Libya, only does a notice in a work on *ancient*, as distinguished in *general*, geography, for the sake of recording many different names by which it was known to Greeks and Romans. These are collected as follows by Ukert, who gives ample references to ancient authorities:—Fretum and Πορθμός, simply: *ἡραιος πορθμός*; 'Ἡράκλειος πορθμός; Πορθμός Πάρος κατὰ τὰς 'Ηρακλείους στήλας; Στόμας 'Ἡρακλείους στήλας; τὸ τῆς θάλαττης τῆς λαυσιῆς στόμα; Fretum Gaditanum; Fretum culeum; Fretum Tartesium; Fretum Iberum; tum Hispanum; Fretum nostri maris et Oceani; tum Oceani; Maris Ostium; Limen Interni Maris; Herculis Via or Herma; and lastly Fretum Septem, or Septe Gaditanum, or Septe simply, from the name called Septem Fratres on the Libyan shore.

cert. *Geogr. d. Griechen u. Römer*, vol. ii. pt. i. 248, b.) Its extent is sufficiently marked on the by the hills of ABYLA and CALPE, the Pillars of Hercules, and on the S. side of its W. entrance by promontory of AMPLEUSIA; but the NW. point is variously placed [GADES], the proper position being the Pr. Junonis (*C. Trafalgar*). [P. S.]

GADITANUS OCEANUS. [ATLANTICUM MARE.]

GAESUS, GESSUS (*Gaour*), a small river in Asia, near Mount Mycale and the town of Priene. in. v. 31; Mela, i. 17; comp. Herod. ix. 97.) Ptolemy (vii. p. 311) observes that Gaeson or Gessus was, according to some, a lake between Asia and Miletus, which had a communication with the sea. [L. S.]

GAETARA. [ALBANTIA.]

GAETULIA (*Γαιτουλία*, sometimes written Γαίλια; *Ἰθία*, *Γαιτούλιος*, and sometimes *Γαιτούλιος*, *Ἰθίλος*; *Ἀφί*, *Γαιτούλιος*, *Gaetulus*, *Gaetulicus*), a country in the NW. of Libya, S. of Mauretania and Numidia; on the E. divided by hills from the GARAMANTES, who dwell S. of Africa and Syrtica; on the W. extending to the Atlantic Ocean; and on the S. to a margin of the great basin of the river NIGRITIS, or, according to Pliny, to the river NIGRITIS, which he considers as the boundary between Africa and Aethiopia, that is, the country of the NIGRITES (v. 4). According to the tradition preserved by Sallust (*Jug.* 18, 19), the Gaetulians and Libyans were the two great races which originally inhabited Africa; i.e. the NW. portion of the continent. When the N. sea-board came into the possession of various tribes from Asia (afterwards known as Numidians and Mauretanians), the Gaetulians were forced back into the region to the S. of Asia; and they led a nomadic life in the oases of W. part of the Great Desert belt (*Sahara*), which lies between the Atlas and the basin of the Nigritis. The GARAMANTES inhabited its E. portion. It also extends the habitations of the Gaetulians even as far as the Syrtis (xvii. p. 829); and it may well be believed that the land on the margin of the Great Desert, though nominally a part of Numidia, was really a sort of neutral ground, into which the Gaetulians may have extended their wanderings. (Comp.

Strab. xvii. p. 838.) Strabo uses Gaetulia as a sort of general name for Inner Africa, and calls the Gaetulians the greatest of the Libyan peoples. (Comp. Mela, i. 4: "Natio frequens multiplexque Gaetuli.") Up to the time of the war with Jugurtha, they were ignorant, says Sallust, of the Roman name; but in that war they served as cavalry in the army of Jugurtha, besides making predatory attacks on the Romans. (Sall. *Jug.* 80, 88, 97, 99, 103.) Sallust expressly states that a part of the Gaetulians were subject to the kings of Numidia. (*Jug.* 19.) It appears that a body of them took service under Marius, who assigned them lands; and, being placed, at the close of the war, under the authority of Hiempsal, they and their successors remained in the service of the Numidian kings until the Civil War, when we find considerable numbers of them deserting from Juba to Caesar, and employed by him as emissaries to stir up their tribes to revolt. (*Bell. Afr.* 25, 32, 35, 55, 56, 61, 93.) Under Augustus, a portion of the people, who were nominally subject to Juba, king of Mauretania, became so troublesome, that an army was sent against them under the command of Cornelius Cossus Lentulus, who obtained a triumph and the surname of Gaetulicus. A. D. 6. (Dion. Cass. iv. 28; Tac. *Ann.* iv. 42, 46, vi. 30; Flor. iv. 12, 40; Juv. viii. 26.) We find some traces of the improved knowledge of the Romans respecting the country in Pliny (v. 1, 4, 8, vi. 31. s. 36, xxi. 13. s. 45, xxv. 7. s. 38, xxxv. 6. s. 26). He includes under the name of Gaetulians some tribes which had also their own specific names, such as the Autololes Gaetuli and the Gaetuli Darai (v. 1). Ptolemy includes Gaetulia under his very extensive appellation of Libya Interior, of which it is the northern part, immediately S. of the Mauretanias. (Ptol. iv. 6. § 15, viii. 13. §§ 1, 2.)

The ancients clearly recognised the distinction between the Gaetulians and the Negro peoples who dwelt S. of them. The former they justly considered as a Libyan people of the same stock as the latter settlers on the N. coast who displaced them: their darker colour and fiercer disposition were ascribed to their greater proximity to the torrid zone. ("Gaetuli sub sole magis [quam Libyes] hand procul ab ardoribus," Sall. *Jug.* 18.) They resembled their northern neighbours in their nomadic mode of life; and there was a theory which ascribed the origin of the nomadic peoples of the Algerian Sahara (for the exact meaning of this phrase see AFRICA) to an intermixture of the Gaetulians with the later Asiatic settlers. On the other hand, the southern Gaetulians mingled their blood with their Negro neighbours, the Nigritae, thus giving origin to a people called the Melanogaetuli, or Black Gaetulians (*Μελανογαετούλοι*, Ptol. iv. 6. § 16; Agathem. ii. 5).

The Gaetulians are described as men of a warlike disposition and savage manners, living on milk and flesh, clothed with skins (Varro, *R. R.* ii. 11. § 11), part dwelling in tents and others wandering about without settled abodes, and under no settled government (Sall. *Jug.* 18, 19, 80; Plin. x. 73. s. 94). They seem, however, like their eastern neighbours, the Garamantes, to have carried on a portion of the trade of Inner Africa; and their country furnished some highly esteemed productions of nature, especially the purple dye, which was obtained from the shell-fish of the W. coast, and gigantic asparagus. (Ath. ii. p. 62; Eustath. *ad Dion. Per.* 215; Steph. B. s. v.; Mela, iii. 10; Plin. v. 1, vi. 31. s. 36, ix. 60, xxxv. 6. s. 26.)

The Gaetullians appear to be the chief ancient representatives of the great aboriginal people of modern Africa, who call themselves *Amazigh* or *Amazigh* (i. e. free or noble), and to whom belong the Berbers of M. Atlas, as well as the Tuaregs, who still wander over the oases of the Great Desert, and are supposed to be the lineal descendants of the Gaetuli (Ritter, *Erdbkunde*, vol. i. pp. 1034, foll.; Hermann, *Reise*, p. 223.) The ancient Gaetulia included the E. regions of Morocco, as well as the W. part of the Great Desert.

[P. S.]

GAGAE (*Γάγαι*; *Εθ. Γαγαιός*), a town on the south-east coast of Lycia, from which the *Gagates lapis* derived its name. (Plin. v. 18, xxxvi. 34; Steph. B. s. v.; Nicand. *Theor.* 37; Galen, vol. xii. p. 203, ed. Kühn; Hierocl. p. 683, with Wesseling's note.) Ruins at *Aladja* are regarded by Leake (*Asia Minor*, p. 185, foll.) as marking the site of the ancient Gagne, while Sir Charles Fellows identifies the place with the modern village of *Hascoco*, where ruins stand upon and between two isolated rocks, now literally covered with walls. (*Discoveries in Lycia*, p. 210.)

[L. S.]

GAGANA GAGANAE, a station in Dacia, on the road from *Orsova* to the frontier of *Moldavia*, which the Peutinger Table places between *Ad Pannoniam* and *Mascliana*. The geographer of Ravenna calls it *Gazana*. Its position must be sought along the valley of the *Temes*.

[E. B. J.]

GALACTOPHAGI. [HIPPEMOLGI; ABIL.]

GALACUM, in Britain, mentioned in the 10th Itinerary. [GALAVA.]

[E. G. L.]

GALADRAE. [EORDARA.]

GALAESUS or GALEBUS (*Γαλαῖσος*, Pol.), a small river of Calabria, flowing into the gulf of Tarentum, at the distance of a few miles from that city. It was famed in ancient times for the pastures on its banks, on which were fed the sheep that produced the celebrated Tarentine wool: hence its praises are sung by several of the Roman poets. (Hor. *Carmin.* ii. 6. 10; Virg. *Georg.* iv. 126; Propert. ii. 34. 67; Stat. *Silv.* iii. 3; Claudian. *Prob.* at *Ol. Cons.* 260; Sidon. *Apoll. Carmin.* 24. 59.) Polybius tells us it was often called the *Eurotas*, from the river of that name in Laconia (Pol. viii. 35); but the *Galaesus*, which was probably its indigenous name, is the only one by which it is mentioned in any other author. Both Livy and Polybius notice it on the occasion of the siege of Tarentum by Hannibal (a. c. 212), who encamped on its banks with his main army to watch and protect the blockade of the citadel. (Pol. l. c.; Liv. xiv. 11.) Though its name was so celebrated, the *Galaesus* was a very trifling stream, and there is considerable difficulty in identifying it. The name is generally given by local antiquarians, and apparently by a kind of local tradition, to a small stream of limpid water which flows into the great port of Tarentum or *Mare Piccolo*, on its N. side, now known as *Le Cicerone*; and, according to Zannoni's map, there still exists in its neighbourhood a church called *S. Maria di Galeo*. Both Polybius and Livy, however, give the distance of the *Galaesus* from Tarentum at 5 miles or 40 stadia, a statement wholly irreconcilable with the popular view; and the stream in question is moreover so small that it is impossible for an army to have encamped on its banks, its whole course being only a few hundred yards in length. Swinburne's supposition that the *Cerone*—a much more considerable stream, flowing into the *Mare Piccolo* at its head or E. extremity—is the true *Galaesus*, would

certainly accord better with the statement of Polybius and Livy, and at least as well with the popular epithets of the stream, on which, however, no real stream must not be laid. (Rosenk. vol. i. p. 120; D'Aquino, *Delius Tarentina*, with the notes of Guadagni, p. 49; Swinburne, *Travels*, vol. i. p. 11. 232; Craven, *Travels*, p. 181.) [E. H. R.]

GALATIA (*Γαλατία*, Diod., but the older writers have *Γαλασία*; *Γαλασίη*, Steph. B.; *Εθ. Γαλαῖος*, Diod.: *Gagliana*), a city of Sicily, which according to Stephanus, was founded by the Sicilian chief *Morgos* or *Μοργος*. (Steph. B. s. v.) That we may infer from this statement (which evidently meant to connect it with the establishment of *Morgos* in Sicily) that it was a city of great antiquity, we find no mention of it in history till a. c. 345, when it was the only city that ventured to succour to the *Εσπερίνη* when besieged by the *Γαθαῖνοι* under *Hanno*. But their small force amounting to only 1000 men, was intercepted and entirely cut off. (Diod. xvi. 67.) *Agia*, a. c. 311, *Galatia* was occupied by the *Syracusan* under *Democritus*, who were, however, not defeated and driven out by the generals of *Agathis* (Id. xix. 104.) No subsequent notice of it is met in history; and as its name does not occur among the Sicilian towns enumerated by *Cicero*, *Pliny*, or *Ptolemy*, it would seem to have ceased to exist under the Roman dominion. It would indeed be hard to suspect that the *GALATIN* of *Pliny* (*Natural History*), whom he enumerates among the "populi ager diarii" of the interior of Sicily, were identical with the *Galarini* of *Diodorus*, but that there seems by some reason to admit the existence of a separate town of the name of *Galata*. We find the name of this town apparently still preserved in the village of *Galati*, E. of *Midella*, and about 10 miles from the N. coast of the island; while that of *Galata* is supposed by *Cluverius* and Sicilian topographers to be retained by *Gagliana*, on the opposite side of the *Caronia* mountains, and about 6 miles from the ancient *Agrynum*. (Cluver. *Sicil.* pp. 336. 2. *Amico*, *Lex. Topog. Sic.* s. v. *Galatia*.) It does not appear that ancient remains exist at this locality, and the evidence of name alone is conclusive.

There is nothing in *Diodorus* to lead us to suppose that *Galatia* was a Greek city, and the fact seems to be implied by *Stephanus*; but there is a coin of very early date, and of pure Greek style, which bears the inscription *ΓΑΛΑΤΙΑ*, and is certainly referred to this city. On the reverse is a sitting figure of *Zeus*, with the epithet *ΣΑΒΙΝ* in ancient characters. (It is figured by *Cluverius*, *Mus. Brit.* pl. 4. fig. 6.) [E. H. R.]

GALATA. [GALATIA.]

GALATIA (*Γαλατία*, *Γαλαρτία*, *Γαλαπία*). The history of the establishment of this province connected with the emigration of *Gauls* into the East. This emigration is an obscure subject, and we may collect enough from the scanty authorities to establish the main facts.

Strabo (p. 187) says that the *Tectosages* occupied part of *Gallia* adjacent to the *Pyrenæ*, extended along a portion of the north side of the *Pyrenæ*, were once a powerful people, and had a large population. Domestic dissension drove them from home, who were joined by other various tribes; and these were a part of the Gauls who occupied *Phrygia*, bordering on *Cappadocia*, the *Paphlagonians*. As a proof of this, he says

fact of the Galatians about the city Ancyra being called Tectosages. There were two other Gallicæ in Galatia, named Trocmi and Tolistobogii; he infers that they also came from Gallia, because they were akin (*συγγενες*) to the Tectosages; he cannot say what parts the Trocmi and Tolistobogii came from, for he had not heard of any Trocmi or Tolistobogii in his time who dwelt either in the Alps, or in the Alps, or south of the Alps. Justin (xxiv. 4), after mentioning the Gallicæ of Italy who took Rome, says that other nations passed into Illyricum and settled in Pannonia. They subdued the Pannonians, and for years carried on war with the neighbouring nations. The Galli, then, according to these authorities, spread along the east side of the Adriatic, and along the valley of the Danube. When Alexander (c. 335) made his expedition over the Haemus to the banks of the Danube, he had an interview with the Celts, who lived about the Adriatic. This is the authority of Ptolemaeus, the son of Lagos. (ab. p. 301.) Arrian (*Anab.* i. 4), who also speaks of the work of Ptolemaeus, speaks of the Celts of the Ionian gulf sending an embassy to Alexander when he was near the Danube. This appears to be the first time that the Hellenic and the Gallicæ nations saw one another beyond the limits of Gallia. The Galli seem to have been established in the neighbourhood of Macedonia during the troublesome times that followed Alexander's death, or probably earlier. At the close of the reign of Ptolemaeus of Macedonia, who is named Ceraunus, a band of Gauls, under a leader Belgus or Belgina, invaded Macedonia. The king despised the invaders, because they offered to retire for a sum of money; but his army was totally defeated by them, and he was taken prisoner. The barbarians cut off the king's head, and carried it about on a spear to terrify their enemies (a. c. 280). The Macedonians shut themselves up in their cities, and made no resistance; when all hope seemed lost, Sothènes, a Macedonian noble, collected a force, and for the time saved the country from further ravage. (Justin, xxiv. 1. 16. § 2, x. 19. § 7.) But another Gallic chief, named Brennus, — probably a title of rank, not a name, — entered Macedonia with a large army, defeated Sothènes, and ravaged the country. (Justin, xxiv. 6.) Either in the same campaign, or in another (a. c. 279), Brennus led the Gauls to plunder Delphi, for the fame of this temple's riches excited his cupidity. The Galli were an immense force, under several commanders; but they did not agree, and a large division under Leonorius and Lutarius, — as the Greeks and Romans write names, — separated from Brennus, and, taking their way through Thrace (Liv. xxxviii. 16), reached the Adriatic, with several commanders. One of whom the Greeks named Acichorius, led his savage troops through Thessaly to the pass of Thermopylae, where the Greeks under Leonidas had tried to stop the Gauls about 200 years before. The Greeks, who had been weakened and disunited since the establishment of the Macedonian supremacy, were roused by the danger that threatened their very existence. A large force from the states north of the Isthmus, and a large force from Macedonia and Asia, reached Thermopylae while the Galli were still in Thessaly, and a detachment was sent forward to destroy the Gauls over the Sperchius, and to dispute the passage of the river. The Gaul, who had the talents of

a general, seeing the enemy opposite to him and a rapid river between, made no attempt to cross in that part, but he got over a large body of troops by night near the lower part of the river, and prepared to force the defile of Thermopylae. He was driven back in disorder and with great loss. The Athenians distinguished themselves most of all the Greeks on this day.

The Gallic chief now sent off a division to ravage Aetolia, in order to detach from the confederate army of the Greeks the Aetolians, who had left their homes in a numerous body, to repel the invaders at Thermopylae. The barbarians under Combatis and Orestorice (the second seems to be a Greek name) committed dreadful devastation in Aetolia, though they were at last compelled to retreat with great loss. (Pausan. x. 22.) Less than half of them returned to the Gallic camp at Thermopylae. Brennus at last made his way to Delphi, with the assistance of the Aenianes and Heracleotae, through the country of the Aenianes, by the very pass by which Hydarnes the Persian led his troops in the invasion of Xerxes. (Herod. vii. 215; Pausan. x. 22. § 8.) The story of the defeat of Brennus at Delphi is told with many miraculous circumstances; but it seems that the weather greatly helped the Greeks in defeating the barbarians, who made their retreat with difficulty, and amidst dreadful sufferings. Only a few out of so many got back to their camp at Heracleia, where Brennus put an end to his life. Pausanias says that none of the Galli escaped. Justin contradicts himself, for he says in one place (xxiv. 8) that not one escaped, but in another place (xxxii. 3), following, as we may suppose, a different authority, he says that some of the Galli made their way into Asia, and some into Thrace. He also adds that the Tectosages returned to their city Tolosa (*Toulouse*), carrying with them the gold and silver that they had got in their marauding expeditions. Strabo (p. 188) mentions the tradition of the Tectosages returning with their booty to Tolosa, but he does not believe the story. It is possible that some of these Galli did effect a retreat; for the Galli Scordisci, who were settled at the confluence of the Save and the Danube, were said to be a remnant of them (Justin, xxxii. 3; Strab. p. 293, 313), and to be mingled with Thracians and Illyrians. Caesar was told that Volcae Tectosages once settled in Germany about the Hercynian forest (*Bell. Gall.* vi. 24), and continued to maintain themselves there to his time. But instead of concluding that a remnant of the Tectosages returned from the expedition of Brennus, and settled in the basin of the Danube, it seems more likely that their settlements east of the Rhine were made by emigration from Gallia; and it may be that the Tectosages in the army of Brennus did not come direct from Gallia, but from some of the settlements already made beyond the limits of Gallia. Polybius says that some Galli under Comuntorius, having escaped the danger at Delphi, reached the Hellespont, and settled in the neighbourhood of Byzantium. The Byzantines paid them a heavy tribute, until the Thracians, who had been subdued by the Gallic invaders, by a change of good fortune succeeded in destroying them. (Polyb. iv. 46.)

Leonorius and Lutarius escaped the misfortunes of Brennus by having taken a different road, as already observed, and through a less difficult country. Livy (xxxviii. 16) does not mention the arrival of Comuntorius at Byzantium. Leonorius and Lutarius

three tribes, when permanently settled, occupied the country between the Sangarius and Alys. Memnon incorrectly says that the chief of the Trocmi was Ancyra; of the Tolistoboi, or Tavium; and of the Tectosages, Pessinus. *non*, *ep. Phot. c. 20.*) The complete reduction Asiatic Galli was reserved for their hereditary as the Romans. Though they had now a y of their own, they still plundered their neighbors and were a formidable power to the time of wars of Antiochus the Great with the Romans. fought on the side of Antiochus in the great at Magnesia ad Sipylum, in which the Syrian was defeated (*a. c. 190*); and the consul Cn. as, in *b. c. 189*, made this a pretext for invading their country. But his real grounds were better his pretext. He saw that the Romans could cure their power in Western Asia, if the Galli not subdued. He led his troops from Ephesus circuitous route into Gallogræcia, as Livy calls *xviii. 12*). The consul, after entering Phrygia, by Synnada, Boudes vetus, Anabura, and the s of the Alexander to Abasus, which was on rders of the Tolistoboi, where he halted and raged his men. He then marched through oodless tract [*ΑΧΥΛΟΣ*], crossed the Sangarius, sacked Gordium. He was accompanied in this ition by Attalus, the brother of Eumenes, king gramum, who was now at Rome.

The Galli had enemies in their own country, the Phrygians. The priests of the Mater Magna Pessinus met the consul with sacerdotal pomp, declared that the goddess had promised the no victory. The Galli had moved off with their n, children, flocks, and carts to the mountains. Tolistoboi occupied a strong place on the range ympos; the Tectosages chose another moun- as spot named Magaba; and the Trocmi, leaving wives and children to the care of the Tectosages, d to help the Tolistoboi, against whom the l was marching. Manlius, who was both bold actions, looked at the ground well before he ked such desperate fighters. He had a great erty in all munitions of war, and chiefly in troops, who could annoy the enemy at a dis-

The entrenchment of the Galli was stormed he ground was covered with their dead bodies, er 40,000 or a smaller number the authorities t agree, and it is not material. An immense t of men, women, and children were made *era*. (*Liv. xxxviii. 18—23*; *Florus, ii. 11.*)

The consul now marched to Ancyra to attack the ages, who were 10 miles from that town. the Galli were amusing him with negotiations, ent happened, for which there is better evidence for most romantic stories; and it gives us some s into the character of these Galli. Chiomara, le of a Gallic prince, Ortigæus, was among the sen, and she was the captive of a Roman *flu*. The man not being able to corrupt her *flu*, used violence. But lust was not his only n. He was greedy of money; and he accepted *flu* of a large ransom. According to agreement, *flu* alone with the woman to the banks of a *flu* on the opposite side of which the Gallic friends *flu* were ready with the money. The Galli *flu* the river, gave the money, and received the *flu*; and while the greedy Roman was counting *flu* of them, on a signal given by Chiomara in *flu* language, cut off the centurion's head. She *flu* up the bloody head in her clothes, and on *flu*.

meeting her husband, threw it down before him. She told her story, and her husband exclaimed, "My wife, fidelity is a glorious thing." "True," she replied, "but still more glorious that there should be only one man living who has known me." The historian Polybius says that he talked with Chiomara at Sardis, and he was amazed at her noble spirit and her good sense. We may perhaps infer that Chiomara had learned the Greek language in Galatia. (*Liv. xxxviii. 24*; *Plut. Moral. ii. p. 58*, *Wyt.*; *Valer. Max. vi. 1. § 2.*)

The treachery of the Tectosages, according to the Roman historian, stopped the negotiations. They only wanted to get time to send their women and children, and moveables, beyond the Halys; and they made an attempt to seize the Roman consul. Manlius carried the strong position of the Tectosages as he had done that of the Tolistoboi, and this victory ended the campaign. As the cold weather was coming on, the consul retired after giving the Galli orders to see him at Ephesus. In the winter there came to Manlius, who was now proconsul, the year of his consulship having expired, embassies from all the states west of the Taurus. They brought him golden crowns, and their thanks for delivering them from the incursions of the Galli. The Gallic envoys were told that they must wait the arrival of king Eumenes, who was still absent, before their affairs could be settled. It was on the banks of the Hellespont, a country which the Galli well knew, that the Roman proconsul dictated his terms to the Gallic chiefs, who had been summoned there: they were to keep the peace with Eumenes, to give up wandering about, and to confine themselves within their own limits. (*Liv. xxxviii. 40.*) The humiliation of these terrible invaders, who for a century had kept Western Asia in alarm, made the Roman name known in the East, and even more than their victory over Antiochus the Great, contributed to their future dominion in Asia. Judas Maccabeus, the heroic leader of the Jews, heard of the fame of the Romans: "It was told him also of their wars and noble acts which they had done among the Galatians, and how they had conquered them, and brought them under tribute" (*Macc. i. 8. v. 2*). The commentators suppose that the Galli of Europe are meant here, and the context is consistent with this explanation; but the Jews could not be ignorant of the defeat of the Asiatic Galli, which so soon followed that of Antiochus, "the great king of Asia" (*Macc. i. 8. v. 6*); and we must conclude that the Galatians of this chapter included the Galatians of Asia, whom the Jews had seen or heard of in the armies of the Egyptian and Syrian kings, and whose horrible barbarities were known through all the East. Manlius did not obtain a triumph at Rome for his great victories without opposition from the majority of the ten Roman legati who had attended him to assist in the settlement of Asia after the defeat of Antiochus. They objected that he had no commission from the senate or the Roman people to carry on war with the Galli, and they meanly attempted to disparage his generalship and the enemies whom he had subdued. Manlius defended himself in a vigorous speech, of which Livy (*xxxviii. 47*) has given the substance, and he got a triumph. In the procession he displayed gold and silver crowns of great value, and an immense amount of coined money, probably the gift of the grateful Asiatic cities, for Manlius had maintained strict discipline, and he is not accused of plundering. Gallic arms and Gallic spoils were carried

in chariots, for it was called a Gallic triumph; and fifty-two Gallic chieftains walked in front of the triumphal car. (Liv. xxxix. 6.) Whether the Galli would have ever established a Gallic kingdom in Asia, is doubtful, for the nation, though it has carried its arms into all parts of the world, has never yet been able to subvert as a nation out of the limits of Transalpine Gallia. But Manlius did not give these Galli an opportunity of trying the experiment; and he did a good work in stopping the career of these merciless plunderers.

Though the Galli no longer ravaged Asia, they were still troublesome to Eumenes, king of Pergamum, whose family they had no reason for liking. In B.C. 167 Attalus, the brother of Eumenes, was sent to Rome to complain of a Gallic rising (tumultus). The Romans sent commissioners into Asia to expostulate with the Galli; but P. Licinius, who had an interview with a Gallic chieftain, Solovettius by name, at Synnada, reported that his remonstrances only increased the insolence of the Gaul. (Liv. xiv. 19. 34; Polyb. xxx. 1.) Livy remarks that it seemed strange, when the words of Roman commissioners had so much weight with powerful kings like Antiochus and Ptolemaeus, that they had no weight with the Galli. The Romans had their reasons, which may be easily conjectured, for leaving Eumenes to deal with the Galli; and it seems that he was successful. (Diod. Excerpt. xxxi.) The fragments of Polybius show that the Romans were jealous of Eumenes, who had great talents, and they did not choose that he should reduce the Galli under his dominion. One passage (xxxii. 2) states that certain ambassadors of the Galli, who came to Rome, were told that they should be independent, if they would stay at home, and not move with any force beyond their own boundaries.

In the wars of Mithridates against the Romans, the Galli were again in arms, both on the side of the king and of the Romans. There were Asiatic Galli in the great army which Mithridates sent into Greece under the command of Archelanus. This army was defeated by L. Sulla at Chaeronea (B.C. 86). Mithridates, fearing that he should be deserted by the Galli if Sulla should come into Asia, murdered all the Gallic tetrarchs, both those who were about him as friends, and those who had not joined him. He murdered also their women and children. Some of the Galli were killed at a feast to which the king invited them, and the rest in various ways (Appian, *Mithrid.* c. 46); three only of the chiefs escaped. Mithridates seized all the property of the men whom he had murdered, put garrisons in the towns, and set over them as governor Eumachus, probably a Greek. He could not, however keep Galatia, but he kept the money that he had got. The Galli served Cn. Pompeius in the subsequent wars against Mithridates, and Pompeius rewarded the tetrarchs by securing them in their Galatian dominions. (Appian, *Syriac.* c. 50, *Mithrid.* c. 114.) One of them was Deiotarus, who had done good service in the war by defeating Eumachus. (Appian, *Mithrid.* c. 75; Liv. *Epit.* 94.) Mithridates kept some Galli about him to the last; and, in the hour of his extreme need, one of them named Bitocetus, a genuine Gallic name, did the king the last service that he could, by killing him at his earnest request, B.C. 63. (Appian, *Mithrid.* c. 111; Liv. *Epit.* 102.) Pompeius, in settling the affairs of Galatia, extended the Gallic limits, for he gave Mithridatium, a town in the former kingdom of Pontus, to a Gallic chief

named Bogodistarus, whose name, with a slight variation, appears on a silver coin. (Strab. p. 567.) Pompeius gave to Deiotarus part of Galatia, a Pontus, an excellent sheep country, and the part about Pharnacia and the Troad, as far as Colchia and the Lene Armenia, of all which countries Pompeius made him king; and Deiotarus kept up his paternal tetrarchy of the Tolistæi. (Strab. p. 547.) Galatia and its chieftains were now under Roman protection, and Deiotarus was involved in the troubles that followed the wars of Caesar and Pompeius. He was with Pompeius at the battle of Pharsalia (B.C. 48), and escaped with him. Caesar, in an extant oration, pleaded before Caesar at Rome the cause of Deiotarus, who was charged with a treacherous design against Caesar's life when Caesar was in Galatia. After all his reverses Deiotarus died a king; and was succeeded by his son Darius, who went to Actium on the side of Antonius, but he had the Gallic prudence to go over to Octavian before the battle, in company with Amyntas (B.C. 31). Amyntas was one of the tributary Asiatic kings to M. Antonius set up (B.C. 39). He had Paphlagonia first, and in B.C. 36 he received from the new king-maker Galatia, with a part of Lycia and Pamphylia (Dion Cass. xlix. 32), and he confirmed in these possessions by Augustus, A.D. 1. (Dion, li. 2.) He died B.C. 25, having had near Galatia, Lycania, and Isauria, the south-east and east part of Phrygia, Pisidia, and Cilicia Trachyna. (Strab. pp. 568, 569, 571, 577, 671.) Antas was one of the great flock-masters of Asia Minor. He had above 300 flocks on the high fertile lands of Lycania. Ptolemy (Ant. c. 6. 1) calls Amyntas king of the Lycanians and Galatians at the time of the battle of Actium; and he also calls Deiotarus a king. This is not inconsistent with other authorities, if we suppose that Darius had his father's kingdom that was beyond the limits of Galatia, and that Amyntas had Galatia, or a great part of it, and the title of king of the Galatians. On the death of Amyntas, Augustus made a free province of Galatia, Lycania, Isauria, East and West Phrygia, and Pamphylia. The extent of the province of Galatia to the south is expressed by Ptolemy that Galatia reaches both to the Cabeiri of Pamphylia and the Myiæ, who are about Beroia and the Cylantian and Oreadian tract of Pisidia (Strab. v. 32). But the Galatia of Ptolemy is still more extensive (v. 3), being bounded on the west by Bithynia and part of Phrygia, on the east by Pamphylia, and on the east by a part of Cappadocia; it thus extended from the Euxine to the Taurus. The sea-coast of Ptolemy's Galatia commences at Cytorus, which is in Bithynia, and extends to the mouth of the Halys and to Amisus. Strabo is within these limits. The three Gallic tribes and their several cities assumed, under Augustus, the names *Ἰελασσοί* and *Ἰελασσοί*: the people of Pontus were named *Ἰελασσοί* *Τετραρχοί*; those of Ancyra, *Ἰελασσοί* *Τετραρχοί*; and those of Tavium, *Ἰελασσοί* *Τετράρχαι*. The first Roman governor of this Galatia was M. Lollius, who gave it as the legatus of the emperor, with the title of pro-prætor. This province of Galatia is supposed to have continued in this form to the time of Constantine. The metropolis of the province was Ancyra; and Tarsus and Sagalassus were its towns.

The Romans established in Galatia Proper a colony of Germani, which is known both from Ptolemy

d its coins. Ptolemy also has a place called *andropolis* in the country of the Trocmi.

The country properly called Galatia lay south of the range of Olympus. The limits can only be approximated to by the enumeration of the towns. The Tolistoboi, the most western tribe, made Pessinus, near the left bank of the Sangarius, their chief town. There were also in their territory, Tricomia, a Roman colony Germe, and Vindia; Abrostola, a Roman colony on the road to Laodicea Catacecaumene; a place Telosochorion, a compound of a Gallic and a Greek word, the first part of which looks like the name Tolosa. The Tolistoboi probably occupied the principal part of the country between the Alander, a branch of the Sangarius, and the Sangarius to its junction with the Alander. They bordered Bithynia and Phrygia Epictetus. Pliny (v. 32), speaks of the Tolistoboi, mentions the Gallic tribes Turi and Ambitai as settled in this part. They were probably the names of tetrarchies. The Tectosages, who were between the Sangarius and Halys, had the old town of Ancyra for their chief place. [LACTANIUS.] Pliny mentions the Teutobodiani as a Gallic tribe, occupying this country with the Tectosages. There were few places in the territory of the Tectosages, and they are insignificant. There were several roads from Ancyra, but the names in the itineraries are apparently so corrupted, that it is difficult to say if we can discover a Gallic element in them. Ptolemy has a list of places among the Tectosages, and among them Corbeus [CORBENS]: *sponsa* [ASRONA] is mentioned by Ammianus. The Trocmi seem to have been partly on the east of the Halys; they bordered on Pontus and Cappadocia; and Strabo says that their country was the most fertile part of Galatia. Their chief town was *AVIA* or *TAVIUM*. There were also in this territory Mithridatians, already mentioned, and Danae, near Ca. Pompeius and L. Lucullus had an interview, before Lucullus gave up the command to Pompeius in the Mithridatic War. Ptolemy has a list of unknown Trocmi towns.

One undoubted Gallic name appears in the Itinerary on the road from Ancyra to Tavium, *Eobripa*, a place at the ford or bridge of some river. When the Galli settled in the country which was called from them Galatia, or Gallograecia, there were Phrygians in it, Greeks, Paphlagonians, and probably some Cappadocians. The Paphlagonians were on the north of Galatia. The Phrygians were the most numerous race, and occupied the west and centre of Galatia. The Greeks probably were not in any great numbers in Galatia till after the time of Alexander; but they must have been numerous at the time of the Gallic occupation, for their language became the common language of the country. The three Gallic tribes had each their tetrarchy, as we have seen; and each tribe was divided into four divisions, which were called tetrarchiae. Plutarch (*de Virt. Mæd.* vol. ii. Wytt.) mentions the Tosiopi as forming a tetrarchy, that is, one of the subdivisions of the tribes. Each tetrarchy had its tetrarch, and one judge and one general, the subordinate to the tetrarch; and two lieutenant-generals. The council of the twelve tetrarchs was composed of 300 men, who met at Drynaemetum. [MYNARKMETUM.] The council were judges in cases of murder; but the tetrarchs and the judges and all other cases. "This," says Strabo (p. 567), was the old constitution; but in my time the power had come into the hands of three rulers, then two,

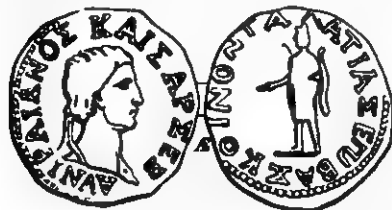

and finally one, Deiotarus, who was succeeded by Amyntas." He seems to mean the elder Deiotarus, and to take no notice of the younger, whose Galatian kingship is a doubtful matter.

The Galli probably at first, after their fashion, treated the Phrygian worship with contempt. At any rate we have seen that at the time of Manlius's invasion the Phrygian hierarchy turned against the Galli. The Romans and the Phrygians were already acquainted, for in the Second Punic War the Romans sent five commissioners to Attalus, king of Pergamus, who politely conducted them to Pessinus in Phrygia, where they got what they wanted,—a large stone. But this stone was the Mother of the Gods, and the deliverance of Italy depended on her being brought to Rome. (Liv. xxix. 10, &c.) We are not told how the Phrygians were persuaded to part with such a treasure; but the transaction, which was a friendly one, was well adapted to make them favour the Romans, especially as the Galli were intruders. Caesar says of the European Galli (*B. G.* vi. 15), "*Natio est omnis Gallorum admodum dedita religionibus*"; and the Asiatic Galli got a taste for the Phrygian worship, as the temples were rich, and priesthood was profitable. Cicero (*pro Sestio*, c. 36) mentions one Brogitarus, who was the chief priest of the Mother of the Gods at Pessinus; and he had a good title to the place, for he bought it; also another Gaul, Dyteutus, in the time of Augustus obtained the valuable place of chief priest at Comana [COMANA]. We also read of Comma, a priestess of Artemis, a deity held in great veneration by the Galli. Comma is one of Plutarch's noble women (*de Virt. Mæd.*) of whom he tells the tragic story of her fidelity to her husband, and her vengeance on his murderer. The nation had its wonderful women in Asia as it has had in Europe. The Galli, the richer at least, adopted with Phrygian and Greek superstitions the language of the Greeks, even before the time of Augustus. Deiotarus had a Greek wife whose name was Stratonice, and the evidence of coins and inscriptions fully establishes the fact of the Galli being Hellenised; which indeed we might infer from their name of Gallograeci, if there were no other evidence. Yet we have the testimony of Hieronymus, who visited Galatia in the fourth century of our era, in his preface to his Commentary on the Epistle to the Galatians, that the Galli still kept their own language, which was almost the same as the language of the Treviri or the people of Trèves; and Hieronymus, who was a good linguist, and had lived at Trèves, was a competent judge of this. Thierry (*Histoire des Gaulois*), who cites this passage of Hieronymus, misinterprets it however, when he infers from it that the Gallograeci did not use the Greek language. He also derives from this passage a confirmation of his hypothesis that the Tolistoboi and the Volcae Tectosages of Narbonensis were Kymri, and that the Volcae Tectosages were Belgæ, and came to the south of Gallia from the north.

The Apostle Paul visited Galatia after it had been made a Roman province, and established churches there. (*Ep. to the Galatians*, i. 2.) His first visit is mentioned in the Acts of the Apostles, xvi. 6; and his second, in xviii. 23. In his epistle to the Galatians he does not speak of more than one visit, from which some commentators derive very unfairly the conclusion that he wrote the epistle in the short interval between the two visits. This inquiry, however, does not belong here. It is generally assumed that St. Paul in his epistle addresses the

Galli or Gallograeci; but there is nothing in the epistle from which this can be inferred. In the Acts of the Apostles, the term Galatia is indeed used in its limited and proper sense, and not in the sense of a Roman provincial division; for Lyconia is also mentioned in the Acts, and Pisidia. There is no doubt, then, that the Epistle to the Galatians is addressed to the inhabitants of Galatia Proper; but to the Greek inhabitants of Galatia and perhaps the Hellenised Galli, who were the wealthier and better instructed part of the Galli. For this Gallic constitution of Galatia was evidently an aristocratic constitution, like the political systems of Gallia Transalpinga, in which the common sort went for nothing, "paene servorum loco habentur" (*B. G. vi. 13*). The bulk of the Galli of Asia, the herdsmen, shepherds, and tillers of the land, probably knew no language except Gallic; and it is clear that the epistle was not addressed to such people.

The student may read with profit Amedée Thierry's *Histoire des Gaulois*, if he will always turn to the ancient authorities, which will set the author right, when he gets wrong. [G. L.]

COIN OF GALATIA.

GALAVA, in Britain, mentioned in the 10th Itinerary, which runs—

Iter a Clanovento Mediolano M. P. cl. (sic).

Galava	-	M. P. xviii.
Alone	-	" xii.
Galacum	-	" xviii.
Bremetonaci	-	" xxvii.
Coccio	-	" xx.
Mancunio	-	" xvii.
Condate	-	" xviii.
Mediolano	-	" xviii.

For the elements of uncertainty in this Itinerary see CLANOVENTUM. In the *Monumenta Historica Britannica* Galacum=Appleby, Wharfedale Castle, or Kendal, and Galava=either Old Town or Great Keswick. [R. G. L.]

GALÉPSUS (Γαλέψος, Herod. vii. 122), a town on the N. coast of the peninsula of Sithonia, which Colonel Leake (*Trav. in North Greece*, vol. iii. p. 155) takes to have been the same place afterwards called ΠΥΘΥΚΚΛΑ (*Plin. iv. 10; Pomp. Mela, ii. 3. § 1*), a distinction which was required, as there was another Galepsus at no great distance.

2. A colony of Thasos, on the coast of Thrace, which was taken by Brasidas after the capture of Amphipolis (*Thuc. iv. 107*), and retaken by Cleon in the ensuing year. (*Thuc. v. 6.*)

Livy (xlv. 45) relates that Perseus, when flying from the Romans, after the defeat at Pydna, sailed from the mouth of the Strymon to Galepsus on the first day, and on the second to Samothrace, which renders it probable that it was one of the most remarkable harbours of the intervening coast, which data can only be reconciled at the harbour of Neftér, which is situated 2 hours to the S. of Právisia, just within the Cape forming the W. entrance of the

Gulf of Kavála, where still remain the ruin of a Greek city, now known by the name of Παλιόπολις, or Νεφέριπολις, or Νιχέριπολις. (Leake, *Trav. in North Greece*, vol. iii. p. 178.) [E. B. J.]

GALIBA (Γάλιβα *Isop*, Ptol. vii. 4. § 3), a promontory on the northern coast of the ancient Tyro-bane, or Ceylon, at no great distance, as it would seem, from Cory Island. The name is also connected with those of certain mountains in the immediate neighbourhood of the promontory, called Γάλιβα (*Ptol. vii. 4. § 3*), and the inhabitants of which were called Galibi (Γάλιβοι, *Ptol. vii. 4. § 3*). From the Galibi Montes, according to Ptolemy (vii. 4. § 5), flowed down two rivers to the sea, the Phae and the Ganges,—a statement which, as regards the latter river, is erroneous. In the plains at the base of these mountains Ptolemy states that there were elephants in his day, as there are now. [V.]

GALIBI. [GALIBA.]

GALILAEA. [PALAESTINA.]

GALINDAE (Γαλινδαί), mentioned by Ptolemy (iii. 5. § 21) in connection with the Venetiae, Sclavi, and Stavani. There can be but little chance of identifying the names (as Zeuss has done) with those of the Galinditae of Dniebory and the Prussian Aquarians; whose locality was the tract called Galica, Galandia, Galendia, Golentz, &c. in East Prussia, the Spirding Lakes, and in contact with that of the Sudowitae the equivalents of the Sudini. Galica was one of the eleven divisions of Prussia, that is of Prussia before it became German; its language being that of the Old Prussians, a branch of the Lithuanians. The name of the Galindae is said to occur on the coin of the emperor Valerianus (A. D. 253) which has been the subject of so much controversy. (*Valer. Num. Imp. Rom. vol. ii. p. 317; Eckhel vol. i. p. 369; Mémoires de l'Académie des Inscriptions vol. xvi. p. 606.*)

Jornandes (*de Get. 23*) enumerates this people under the name of GOLTHER, among the German tribes who were vanquished by Hermanric, king of the Ostrogoths. [R. G. L.]

GALLAECIA or CALLAECIA (Καλλαικία, *Εθ. Καλλαικίαι*, Callaici, Callaeci, Gallaeci: Galicia and part of Portugal), a large coast in the extreme NW. of Hispania Tarraconensis N. of LUSITANIA, and W. of the ASTURES and CAELI, its boundaries being on the S. the river Duro (Douro), on the NE. the river Nava or Narva (Narva), and on the E. the mountains of the Astures so that it corresponded almost exactly to the modern Galicia, with the addition on the S. of the Portuguese provinces of Entre Douro e Minho and Trás-os-Montes, and, on the E., of small portions of Asturia and Leon. Sometimes a very large extent was ascribed to the country, so as to include the Astures (*It. Cass. xxxvii. 53; Plin. iii. 3. s. 4, xix. 1. s. 21*), as even, as used by late writers, the whole of Cantabria (*Oros. vi. 21; Isid. xiv. 15; Zonim. iv. 24*). In the earliest times, however, Callaica, or at least a part, was reckoned a part of Lusitania. (*Strab. p. 152*). The people were divided into two families, the CALLAICI (or GALLAICI) BRACARI (Καλλαικoi or Βρακαριοι), and the CALLAICI (or GALLAICI) LUCCENSI (Κ. of Λουκένσιοι), hence the ARTABRA, who, though geographically distinct from the country, were regarded as a separate people. The Callaici Bracarri received their name from the chief city, BRACARA AUGUSTA, and inhabited the S. of Gallacia, from the Durius (Douro) up to the Minius (Minho); and the Callaici Luccensi the N.

part, from the Minius to the Navia; these received their name from their capital, LUCUS AUGUSTI. It should be observed, however, that this division was not an arbitrary one, as might perhaps be inferred from the derivation of the names from the two Roman cities; but the river Minius established a natural boundary between the two tribes. Each of the two capital cities was, under the Romans, the seat of a *convēctus juridicus*, that of Lucus including 6 peoples besides the Celtici (i. e. Artabri) and the Iebuni, and a free population of about 166,000; that of Bracara, twenty-four cities, and 175,000 persons, among whom Pliny mentions, besides the Bracarri themselves, the Bibali, Coelirini, Gallaeci, Haunsi, Limici, Querquerni (Plin. iii. 3. s. 4). Ptolemy ii. 6. §§ 24—27 mentions, as minor tribes of the Callaici Lucenses, the Capari (Καπαροί), Cilini, Κιλινός, Lemavi (Λεμαυός), Baedyes (Βαδύες), and Sauri (Σαυροί, vulgo Σαβουροί); and, (§§ 40—49), as minor tribes of the Bracarri, the Turudi Τουρδοί, Nemetatae (Νεμυτταί), Coelirini (Κοελιρινοί, comp. Plin. iv. 30, s. 34), Bibali (Βιβαλοί, comp. Plin. iii. 3. s. 4), Limici (Λιμυκοί, comp. Plin. l. c.) on the river Limia, Luanci (Λουανυός), Gruli Γρούλις, the Grovii of Pliny and Mela, and the Itravii of Silius Italicus, l. 235, iii. 366, who assigns to them the whole country from the Durus to the Limia, while Mela gives them even a wider extent, from the Durus to some distance N. of the Minius; perhaps originally the Grovii were between the Durus and Limia, and the Bracarri between the Limia and Minius), Quacerni (Κουακερνοί, the Querquerni of Pliny, l. c., and Quaquerni of an inscription ap. Iruter, p. 245, no. 2), Lubani (Λουβαυός, the Lunni of Pliny, l. c.), and Narhai (Ναρθαί).

Gallaecia is a rugged, mountainous country, crossed by the extreme branches of the great mountain chain which strikes off from the Pyrenees westward along the north side of the peninsula. Its chief river was the MINIUS (Μίνιο), flowing through the plain enclosed between the range just named and a SW. branch, the mountains of the Astures, and falling into the Atlantic on the W. coast. Between this and the Durus are three smaller rivers, one of them, at least, possessing considerable interest, but of which the names are somewhat difficult to identify, probably on account of the imperfect knowledge possessed by the earlier writers. Ptolemy gives them in regular order, from S. to N., as follows:—*AVUS* ἄβου ποταμὸς ἑσθλαί, Ptol. ii. 6. § 1; Mela, iii. 1: *No d' Ave*; the Celadus, which Mela mentions next, seems to be the N. tributary of the Ave, now called *alva* or *Desta*, which flows down from near *Braga*; *IBIS* (Νίβις ποταμὸς ἑσθλαί, Ptol. l. c.; Mela, c.: *R. Cavado*; this would be taken, on the evidence of the name, for the *Beûs* of Strabo (iii. 153), were it not that he expressly identifies the *Beûs* with the Minius, evidently by a confusion of names; and this, and the next to be mentioned, are the only considerable rivers that he knows in these parts): *LIPIUS*, or *LIMIA* (Λιμίων ποταμὸς ἑσθλαί: *Limia*), doubtless the river which Strabo (l. c.) calls the river of Lethe, adding that some named it Limæa and others Belion (ὁ τῆς Λήθης, ἢ τῆς Λιμίας, οἱ δὲ ἐλπίνα καλοῦσι), and that it flowed from the Celtiberi and Vaccæi. Mela, who transposes it to the N. of the Minius, calls it Limia, or the River of Oblivion ("et cum Oblivionis cognomen est Limia;" where some scholars find in the word "Oblivionis" the origin of Strabo's *Beûs*; comp. Plin. iv. 21, s. 5, "ab Minio eo. M. P. ut auctor est Varro, abest

Asimius, quem alibi quidam intelligunt et Limæam vocant. Oblivionis antiquus dictus, multumque fabulosus;" Sil. Ital. l. 235, 236.; comp. xvi. 476, 477:

"Quique super Gravior lucentes volvit arunas,
Inferne populis referens oblivis Lethe's"):

it is also mentioned under the name of *Lethe* by Appian (*Hisp.* 72) and Plutarch (*Quest. Rom.* 34), who relate that the first Roman that crossed it was Decimus Brutus, when, after his conquest of Lusitania, he advanced against the Bracarri, as far as the Minius, a. c. 136. From Livy's history of the same event, it would seem that the river was an object of superstitious terror to the soldiers of Brutus, for they were only incited to pass it by the example of their general, who snatched a standard from the bearer, and led the way in person. (Liv. *Epit.* iv., where the name is "flumen Oblivionem;" comp. Flor. ii. 17, "formidatunque militibus flumen Oblivionia.") But whether the name originated in the superstition of the soldiers, who had been taught to look for the abodes of the dead in that far west to which they seemed to be advancing, aided by some resemblance in the native name, or from the latter cause only, is all uncertain. (Comp. Strab. p. 106.) It deserves notice, however, that a trace of the name *Belion*, given to it by Strabo, appears to be preserved in that of the lake *Beon*, from which the river flows; and hence *Belion* may perhaps have been the true name, and *Flumen Oblivionis* its corruption. The names of the rivers in the country of the Callaici Lucenses, N. of the Minius, which possess no particular interest, are obtained from Mela, Pliny, and Ptolemy, though with some uncertainty, as follows: *LARROS* (Λάρ), *ULLA* (Mela; *Oula*, Ptol.: *Ulla*), *TAMARIS* (Τάμρις), *SARS* (Σάρ), *FLORIUS* (Ρίο de Castro), *NELUS* (Ρίο de la Puente), *VIRUS* (Αίλλων), *MEABUS* (Μέρο), *IVIA* (prob. the *Nélos* of Ptol.: *Juria*); the two last falling into the Sinus Artabrorum (*G. of Ferrol*) and the *NAVILIBRO* (Ναβία).

The only natural productions for which Gallaecia was famed among the ancients were its minerals. Besides the golden sands of the Limia referred to in the passages quoted above from Silius Italicus, the country yielded abundance of tin (Strab. iii. p. 147), and a sort of precious stone, called *gemma Gallaica*. (Plin. xxxvii. 10. s. 59.) The people were among the least civilized in Spain; the very prototypes of the modern *Gallegos*. Their chief serious employment was divination, their superstitious addiction to which art alone rescued them from the imputation of Atheism. Engrossed by this occupation, or else engaged in sports, or sunk in indolence, except when roused by wars, they left all husbandry to the women. (Sil. Ital. iii. 344—353:

"Filarum et pomae divinarumque sagacem
Flammam misit dives Callaica pubem,
Barbara nunc patris thulante carmina lingua,
Nunc pedis alterno percussa verbera terra,
Ad numerum resonans gaudenter plaudere cetræ.
Hæc requies ludæque viris, et sacra voluptas.
Cetera feminæ peragit labor: addere sulco
Semina, et impresso tellurum vertere aratro,
Segne viris; quicquid duro sine Marte gerendum,
Callaici confux obli irrequieta mariti.")

They were a most warlike people, preferring death to flight, and even the women went armed to the battle-field, and put themselves to death when they were taken captive. (Appian, *Hisp.* 27.) Their conquest by Decimus Brutus has already been referred to. But, although he is said, in general terms,

to have subdued all the peoples of Gallaecia (Flor. ii. 17), yet, from the few particulars recorded, his conquests appear clearly not to have extended far, if at all, N. of the Minius, so that they included only the Callaici Bracarri. As, at the very same time, the proconsul M. Aemilius Lepidus failed in an expedition against the Vaccæi (Liv. Epit. lvi.), and as the Astures were not subdued till the time of Augustus, the country of the Callaici Lucones, being only open to the Romans on the S., must have been very imperfectly, if at all, subjected, until it yielded to Augustus with the other NW. tribes.

Besides the two capitals of BRACARA AUGUSTA (Braga) and LUGUS AUGUSTI (Lugo), the following cities and towns are mentioned:—

I. Towns of the Callaici Bracarri: 1. CALES or CALEN (*Oporto*), at the mouth of the Durus, and on the road from Olisipo to Bracara, 35 M. P. from the latter. 2. On the road from Bracara to Asturica, which made a great bend southwards to, and perhaps even beyond, the Durus (*Itin. Ant. pp. 422, 423*): SALACIA, 30 M. P. (*Salomonde*); PRAESIDIUM, 26 M. P. (*Castro de Codorno*); CALADIVM, 16 M. P. (*Ciada*); AD AQUAS, 18 M. P. (*Trindad*); PINETUM, 20 M. P. (*Pinhel*); ROBORETUM, 36 M. P. (*Robledo or Bragança*); COMPLECTICA, 39 M. P. (*Comphelo*); VENTATIA, 25 M. P. (*Vinhais*); the remaining stations belong to the Astures. Besides these, Ptolemy mentions TURTORIGA (*Tourtoiriga*) and ARADUCTA (*Apo-Sente*), as towns of the Bracarri (ii. 6. § 39). 3. On another and more direct road, leading N. from Bracara to the Minis, and thence up the river towards Asturica (*Itin. Ant. pp. 427, 438*): SALAFIANA, 21 M. P. (*Santiago de Villela*); AQUAS ORIGINIS, 18 M. P. (*Bancho de Bande or Ornes*); AQUAS QUERQUENNAE, 14 M. P. (*Terra Kouaquen*); Ptol. l.c. § 47: *Rio Caldo*; GEMINAE, 16 M. P. (*Baños de Moisés or Sandras*); SALENTES, 14 M. P. (*Caldelas or Ornes*); PRAESIDIUM, 18 M. P. (*Castro de Caldelas or Rodicio*), on the border towards the Astures. 4. On the road from Bracara to Lucus (*Itin. Ant. p. 429*): LINTIA, 19 M. P., or Forum Linciorum (*Ponte de Lina*), probably different from the *Φόρος Λινκίων* of Ptolemy (§ 44); TYDE, 24 M. P., or Tyde (Plin. iv. 20. a. 35; Sil. Ital. iii. 367, xvi. 369; Tacitus, vulgo *Tudela*, Ptol. l.c. § 45; *Tuy*), a fortress of the Gruii or Gravi, said to have been founded by Diomedes and a colony of Aetolians. (Plin., Sil. Ital., &c.; Dion. Per. 485; Avien. Descr. Orb. 651: other notions of supposed Greek settlements in this quarter are found in Strabo, iii. p. 157.) Besides these, Ptolemy (l.c.) mentions the following: AQUAS LAETAE (*Terra Laet*, § 40), among the Tarodi; VOLONBREGA (*Ovalbrega*, § 41), among the Nemetæ; CORLORBREGA (*Korlorbrega*, § 42), among the Combarini; FORUM BIRALORUM (*Φόρος Βορράλων*, § 43; prob. *Vicus de Bello*), the city of the Biliæ; MINVA (*Méveda*, § 46), that of the Lemici; CAMBANTUM (*Kambanton*, § 48), that of the Labani; and FORUM NARBABORUM (*Φόρος Ναρβαβόρων*, § 49), that of the Narbati. To them must be added the baths of AQUAS FLAVIAE, the ruins of which are found E. of Bracara, at *Chaves* on the river *Pouzeiro*, which is still crossed by the ancient Roman bridge of 18 arches. (Inscr. ap. Gruter, p. 162. no. 4. p. 245. no. 2; Flavus, *Exp. S. vol. xv. p. 79*; *Misano, Decret. vol. iii. p. 85*; *Ulert, vol. a. pt. i. p. 346*.)

II. Towns of the Callaici Lucones: 1. On the

road already mentioned (No. 4) from Bracara to Lucus, and thence to Asturica (*Itin. Ant. pp. 422, 430*): from Tude (see above), BOMBA, 16 M. P. (*Borriño*); TURBOQUA, 16 M. P. (*Torre*); AQUAS CELENAR or CELENAR, 24 M. P. (*Torre Seped* τὸν Κελανῶν, Ptol. ii. 6. § 25; *Caldas del Rey*); PRILA, 12 M. P., which is probably as one for ILIA FLAVIA, a city of the Capci (Ptol. l.c. § 24; Inscr. ap. Gruter, p. 305, no. 91 *El Padral*: where the road, which has thus far kept to the N. along the sea-coast, turns NE. up the valley of the *Ulla* or the *Sar*; ASSECONITA, 23 M. P. (*Santiago*); COMPOSTALLA or ASSORF; BRYTH, 12 M. P. (*Tro or Berris*); MARCIAN, 20 M. P., probably an error for PONS NARTIAN (Geog. Rev. iv. 45: *Narta* on the river of the same name); LUGUS AUGUSTI, 15 M. P. (*Lugo*). 2. On the continuation of the same road to Asturica: TIMALIUM (*Fonissieu*), 22 M. P., or TALANINA, a city of the Senti (*Talpinis*, Ptol. l.c. § 27, who mentions N. of it another town of the same people, AQUAS QUINTIAN, *Terra Quintiana*, *Quinta*); PONS NEVIAE or NEVIAE, i.e. the *Bridge of the River Naria* (prob. *Naris de Sarras*), whence the road turns S. to UTTARA, 20 M. P. (*Corredo or Donco*), 16 M. P. from Begidum in Asturia. [ASTURIA.] 3. Another road beginning and ending in the same general direction but striking further to the NW. through the Astures, is given in the Itinerary as follows (pp. 422-425). From Bracara by sea to Aquas Caldas (161 stadia; thence again by sea, 195 stadia to VETUS SPAECORUM (*Olema* & *Olema*, Ptol. l.c. § 23: *Sp*; thence 150 stadia by sea to AD DUROS PORTUS (prob. *Ponteduro*); thence 180 stadia by sea to GASTUMINUM or GLANDIMARIUM (Geog. Rev. i. 43 *Γλανδύμιον*, Ptol. l.c.: prob. *Muros*, at the mouth of the *Noya*), whence, avoiding the promontory of Nerium (*C. Finisterrae*), the road proceeded by land NE. to TRIGUNDUM, 23 M. P. (*Berris or Trass*: apparently the *Τριγύρρα* & *Τριγύρρα* of Ptolemy, l.c.), and thence to BRIGANTUM, 30 M. P., chief sea-port of the country (see art.); where it struck inland to Lucus Augusti, with the intermediate station of CARANTUM, 18 M. P. from Brigantium and 17 from Lucus (prob. the *Kapinos* of Ptolemy, l.c.: *Quintines*). Ptolemy mentions, in addition to the above places, the following: among the Callaici Lucones (§ 23), BULCIN (*Buñol*); OLINA (*Olema*); LIBUNCA (*Libunça*); PISTIA (*Pistia*); TUROPTIANA (*Tourtoiriana*); OCELIN (*Ovelas*); and among the Lemavi (§ 25), DACTINIUM (*Daquinos*); and PENT (iv. 20. a. 34) mentions ABORRICA, as a not inconsiderable place (*Bayona*). [P. 5.]

GALLIA CISALPINA (Cass. B. G. vi. 1), also called GALLIA CITERIOR (Cass. B. G. i. 54; Cic. de *Invent.* ii. 37), and simply GALLIA (Cic. de *Fam.* xii. 5), is the name which the Romans gave to North Italy as late as the time of the dictator Caesar and Cicero, and even to a.c. 43. Cass. (B. G. i. 10, 54; ii. 35) sometimes includes Gallia Cisalpina under the name Italia; but he then uses the term in a geographical, and not in a political sense. The name Cisalpina denoted Gallia such of the Alps, as opposed to Transalpine Gallia, or Gallia north of the Alps; and Citerior is the nearer Gallia, as opposed to Ulterior (Cass. B. G. i. 7, 10; B. C. i. 33) or the further, which in Cassar means the Provincia. Ulterior Gallia was also used sometimes generally, to signify all Gallia north of the Alps. The name Gallia Togata, applied to Cisalpine Gaul

ch occurs in the eighth book of the Gallic War i. 24, 53), and in later writers, was given at some time after the country was settled by the Romans, it indicated the numerical superiority of the *ati* or Romans over the Gallic population. The inhabitants north of the Po were sometimes called *napadani* (Cic. *ad Fam.* xvi. 12), a term which lies Cispadani, or the inhabitants south of the Po; there does not appear to be any Latin authority for the word Cispadani.

Among the various names by which the Greeks designate this country, some are simply descriptive of its geographical position, and others represent the Roman names. Plutarch (*Caes.* c. 20) calls it *ἡ γὰρ Ἰταλὶα Γαλαρία*; but there is no authority for the name *Circumpadana*. Walcker conjectures that the names *Gallia Circumpadana*, *Transpadana*, and *Cispadana* are older than the term *Gallia Cisalpina*; and if he could prove that these terms were used, we might accept his hypothesis. Livy (xxi. 35) calls the plains about the "Circumpadanos campos."

Polybius names this country both *Καλαρία* and *Ἰταλία* (iii. 77, 87); but though he applies the word *Transalpini* to the Galli north of the Po, and explains it (iii. 15) as a term in use in his time, he does not use the word *Cisalpi*, or any equivalent Greek word. He comprehends this *Calor* or *Galatia* in the geographical term *Italia*, and tribes it as a part of the Italian peninsula. We conclude that the term *Gallia Cisalpina* was used by the Romans before they were acquainted with *Gallia Transalpina*; and that the oldest name north Italy among the Romans was simply *Gallia*. The fact that the Romans gave the name of *Gallia* the chief part of the basin of the Po, and the name of *Galli* to the people, would be some evidence of the identity of the Galli north and south of the Po. We have no historical evidence of the emigration of the Galli into Italy before the time that Livy mentions; but there was a tradition, partially served, that this was not the first time that the Galli appeared south of the Alps. Cornelius Boesius proved that the Umbri were of the stock of the Galli Veteres. (Solinus, *Polyhist.* c. 8.) Servius (*Virg. Aen.* xii. 753), using nearly the same words as Solinus, refers to Marcus Antoninus as authority, by which name is meant M. Antiochus Gniphos. It appears, then, that some of the names of letters believed that the ancient nation the Umbri were Galli Veteres; but we know nothing of the facts which led to this conclusion. We do not know who the Galli Veteres were; but may suppose that these writers meant a nation Galli who were in Italy before the Galli who crossed the Alps at a later period. There are no means of approximating to a solution of this question, except by a comparison of the old Italian languages with the existing Cumri (Welsh), or with Gaelic, and by an examination of the names of mountains, rivers, and other natural features of the Italian peninsula, which we may assume to be the oldest historical records that exist of the inhabitants of Italy. There is no ancient language of Italy, except the Latin, of which we have any competent knowledge; and there is no ancient language known, with which we can compare the Latin and the names in the Italian peninsula, except the *aque*, the Cumri, and the Gaelic dialects. This comparison has been made, to some extent, for the Umbri, by Archdeacon Williams, who is well ac-

quainted with the Welsh language. (On one source of the non-Hellenic portion of the Latin language, by the Rev. Archdeacon Williams, *Tractate of the Royal Society of Edinburgh*, vol. xiii.) In this essay the author limits himself, as he states, "to the subject of the original population of Central Italy," of which he affirms, "that it was of the Cumrian or Cimbrian race, cognate with the Cumri of our island, and that their language formed some portion of the non-Hellenic elements of the Latin tongue." The question is one that requires great nicety in dealing with, for resemblances of words are very deceptive; but it is a fair conclusion that we cannot absolutely reject as a probable hypothesis, the existence of a people in the peninsula long before all historical periods commence, whose language was nearly related to some one or all of the languages which come under the general denomination of Celtic. The great mountain-range which forms the back-bone of the peninsula has a pure Celtic name, *A-penninus*; for whether the *A* is a euphonic prefix, or whether we prefer the form *Ap-penninus*, and consider the *Ap* to be significant, we have in either case the root *Pen*, "a summit," which appears in the Alps *Penninae*, and in numerous mountain names in Great Britain. The names of rivers in the basin of the Po, and as far as the limits of Central Italy at least, the *Duria*, *Stora*, *Tura*, *Turia*, *Athesis*, *Bedesia*, *Medocanus*, *Assia*, *Timia*, *Anasar*, and many others, are either precisely the same with the names of many rivers in France and Great Britain, or may be reduced to the same forms by a perfectly fair process. (See Mr. Williams's Essay.)

The Romans, after they had got a footing in *Transalpina Gallia*, often recognised the *Aedui*, a people once the chief of all *Gallia*, as their "brethren and kinsmen" (*Caes. B. G.* l. 43); and this has been used as evidence that the Romans thought the relationship to be proved, or they would not have given such a title to barbarians, and those who were their greatest enemies. If the relationship did exist, we must of course go a long way back for its origin, to the ante-historical times when a Roman nation rose out of a mixture of races, one of which was Celtic. But this fraternising with the *Aedui* seems as easy to be explained, as the kinship of the Romans and the *Segestani* of Sicily through their common ancestor *Aeneas*. (Cic. *Ferr.* ii. 4. c. 33.) It may be observed, that if we admit the probability of Celtic nations (*Galli Veteres*) having existed in Italy before the great invasion which Livy mentions (v. 34), this probability is not diminished by the fact of the *Galli Veteres* not having maintained themselves as a nation; unless they be the Umbri, as to which we shall never make all the learned agree. For the Galli have not been able to fix themselves permanently anywhere out of their native limits; and their second settlement in Italy, recorded by Polybius and Livy (admitting the fact of a prior settlement) was ultimately unsuccessful. The proof of some Celtic nation having been in the peninsula long before all historical times, rests on the incontestable evidence of the geographical names of the peninsula.

The authorities which Livy followed state that the great immigration of the Galli into Italy took place in the reign of the Roman king Tarquinius Priscus, at which time the *Bituriges* in the basin of the Loire were the dominant people in *Transalpina Gallia*. The causes of the emigration were excessive population (Liv. v. 34), or, as Troguus, Justin's authority, says, civil commotions. The cause is not very material

nor can we with certainty say what it was; but it may have been both these causes, and something else. The Galli have always been a military people; and the desire of active employment, the weariness of doing nothing, and the hope of plunder would at any time be sufficient to put their fighting men in motion. Two chieftains led the emigrants. Sigovesus conducted his men into Germany, into the great Hercynian forest. Livy does not mention what tribes accompanied him; nor is it certain whether he is following the same authority as Caesar (*B. G.* vi. 24), who speaks of the Gallic settlements in the Hercynian forest. Bellovesus, the other chief, led to the conquest of North Italy, Bituriges, Arverni, Senones, Aedui, Ambarri, Carnutes, and Aulerci, all which nations belonged to that division of Gallia which Caesar calls the country of the Celts (i. 1). The invaders entered Italy by the Taurinus Salus, or the pass of *Mont Genève*, and defeated the Tuscans or Etruscans, who then held the plain of the Po, not far from the banks of the Ticinus. Finding here a people named Insubres, which was also the name of a pagus of the Aedui, they built a city and called it Mediolanum (*Milan*). The Insubres of Gallia Transalpina are only known from this passage; but there was a Mediolanum near Lugdunum, and it is supposed that this place may mark the position of the pagus of the Insubres. Of the names of all these tribes mentioned by Livy, not one appears in the geography of Italy except that of the Senones, and the country which the Senones occupied was south of the Po. Livy, or the authorities that he followed, probably attempted to explain the origin of the Cisalpine tribe of the Insubres or Isomabri (*Ἰσούμαροι*) as the Greek writers call them, by the clumsy expedient of supposing all these invading tribes to have changed their name for one that they found on the spot, which happened to be the name of a small Transalpine pagus. But Livy has not explained the origin of the Insubres; and if the Insubres were in North Italy before this invasion, and were a Celtic people, they must have come in a former immigration; and if Isomabri is the genuine form of the word, we may assume that they were Umbri, who had long been settled in the basin of the Po. Indeed, if we look carefully at Livy's narrative, we shall see that he does not say that these Insubres whom the invaders found in Italy were Galli; nor does he say who they were. He lets all the names of the invaders disappear, and that of the Insubres remain in their place. Yet the Insubres were Galli beyond all doubt. Polybius merely fixes the position of the Insubres as one of the Gallic nations of Cisalpine Italy. The name appears in his text in various forms. Strabo has the Roman form Insubri, and in one place *Ἰσούμαροι* (p. 218; and Geokurd's Note, Transl. Strab. vol. i. p. 373).

A new band according to Livy's authorities soon crossed the Alps by the same pass, the Cenomani (*Liv.* v. 35) under Eilitorius, and occupied the places where in Livy's time Brixia (*Brescia*) and Verona were: the Libui were the previous occupiers of these parts. Livy may not have perceived that he has already mentioned (v. 34) the Aulerci as Gallic invaders of Italy, and that the Cenomani were a division of the Aulerci. [CENOMANI.] Cato found a tradition somewhere (*Plin.* iii. 19) that the Cenomani once dwelt near Massilia (*Marseille*) in the country of the Volcae, which, if the tradition is true, may have been during their migration from their original country between the *Loire* and the *Seine*.

The Cenomani (Livy) were followed by the Saluvii, who settled near "an ancient people, *Laevi, Ligures*," as some texts have it, "who dwell about the river Ticinus." But here Livy has not observed, though he knew the fact, that the Saluvii or Salvi were Ligurians, and dwell between the Lower Rhone and the Alps. In this passage (v. 35) perhaps he may mean the Saluvii.

Another band of invaders, Boii and Lugones, crossed the Alps by the Pennine pass (the *Great St. Bernard*), and finding all the country occupied between the Alps and the Po, they passed the over a raft, and drove out of the country both Etruscans and Umbri; but they did not advance beyond the Apennines. (*Liv.* v. 35.) The position of the Gallic Lingones of Caesar's time is marked by the site of *Langres*, in the country at the head of the *Seine*, but the original country of the Boii (*Boen*) is uncertain. The Senones (*Liv.* v. 35) were the last invaders, and they occupied the coast of the *Mozelle* from the river *Utiis* (*Montone*) to the *Aene* (*Esne*), which is a little north of *Ancona*. Livy has already mentioned Senones among the first invaders. In Senones and Lingones were also Celts; and the Senones were from the basin of the *Seine*. All the tribes which Livy here enumerates appear in Caesar's history of the Gallic War, except the Insubres, or the Saluvii, who were in Caesar's time within the limits of the Provincia.

At the time of the Gallic invasion the Tuscan, who were the masters of this country, had but many towns, cleared the forests, cut small artificial embankments; at least, tradition ascribes to them the credit of doing this. Polybius (ii. 1) assigns a very simple cause to the Gallic invasion of this fine country. The Galli had often crossed the Alps to trade with the inhabitants of the plain, and they soon found a pretext for seizing the land of plenty, as they have done since. *Massina*, and the old Tuscan towns north of the Po (*Plin.* iii. 17), survived the Gallic invasion, being probably saved by its position amidst marshes; but *Malpica* (as it stands in Pliny's text, iii. 17), one of the Tuscan cities, was destroyed by the Insubres, Boii, and Senones, on the day on which *Camillus* met *Veii*. The description which Polybius gives of the habits of these Transalpine nations (ii. 17) is just what we might expect. They lived in several villages, — in houses of some kind, we must suppose, or they could not have been villages, — but they had no household stuff: their bed was straw, leaves of grass, and flesh their food; their only business was all that they understood was agriculture and war. Their agriculture did not consist in tilling the ground, but in feeding sheep and cattle, which, with war, formed their wealth, because these were the things that they could most easily carry about with them: the chiefs were most concerned to have a large number of followers, for a man was feared and respected in proportion to the number of folk that he had about him. Such a people would not found towns at the first invasion of Italy: indeed, the founding of towns would have been useless, for they did not live in them, and if they had chosen that mode of life they might have been content with the Tuscan cities. Livy's story of the foundation of Mediolanum, Brixia, and Verona is a fable; and yet Mediolanum at least is an undoubted Gallic name, for there are several cities in Transalpine Gallia called *Mediolanum*; and Brixia and Verona are probably Gallic too.

These audacious barbarians levied contributions —

neighbours. The most memorable event in the history of Rome is the capture of the city and of these Italian Galli, who, after threatening the Romans, who had taken this Etruscan city under protection. The Galli and the Romans first tried their strength on the Allia, a small affluent of the Tiber. The Romans were defeated, and this was ever a black day in their calendar (a. c. 496).

The capture of Rome and the siege of the city by the Galli were embellished with the fiction of a great battle. The early Roman history. To all this was no more than one of their ordinary expeditions. An invasion of the lands of the Galli by their neighbours the Veneti is assigned to the immediate cause of their retreat from Rome. The Galli had also enemies around them. The Galli came to possess the plains only, and the mountaineers of the Alps knew the value of plunder. The Galli. They were probably kept employed in taking care of themselves for the thirty years that elapsed between the capture of Rome and the next expedition to the south. From the time of their little city being sacked, the Romans knew that they had an enemy whom they must destroy, or perish themselves. "Gallicus tumultus," or simply "tumultus," was the name that was given to a hostile movement of the Galli tribes into Italy. This was the signal to prepare for a great fight (Liv. viii. 20); for with the Galli, all that was necessary was their existence, and the Romans fought for their glory (Bell. Jug. c. 114). They set apart treasure in the Capitol for the emergencies of a Gallic war; for the fear of the Galli seems to have been the origin of the *aerarium sanctum*, as it was sometimes called. (Appian, B. C. ii. 41; Liv. x. 10.)

Twenty years after the capture of Rome, as Polybius (ii. 18, 19) fixes the time, the Galli came again with a large force as far as Alba, and the Romans fled to meet them. The historian does not say how long they staid in the neighbourhood of Alba, as he says that they came twelve years afterwards with a great force, we may infer that it was the first time as long as the country could stand in them. The second time that they came with their allies were ready to meet them; the Galli fled as the Romans advanced, and, returning to their own country, remained quiet for many years. Finding that the Romans were increasing in power, the Galli consented to a treaty of peace with them, which they strictly observed for many years. This dry narrative of Polybius is intended to show what a dangerous enemy the Galli were to the city on the Tiber. We can easily imagine that Latium suffered from these pitiless barbarians.

The Romans had many traditions or fictions of these Gallic wars; and a marvellous story of Manlius fighting a duel with a Gallic giant on the banks of the Anio, in presence of both armies, killed him. (Liv. vii. 10.) Manlius took from his enemy a blood-stained chain (*torques*), and put it on his own neck; and the soldiers gave him the name of Torquatus, which became the distinctive name of a noble Roman family. The narrative contains two facts worth notice. The Galli were a great enemy to the Romans. The Galli tried their incursions into Campania (Liv. vii.

11), and, either going or returning, plundered the country about Lavicun, Tusculum, and the Alban territory. The Roman annalists here repeat the story of Torquatus under another form. A Gallic giant challenges the Romans, and is killed in a duel by M. Valerius; but his glory was not equal to that of Manlius, for a raven came to his assistance and pecked and scratched the face and eyes of the Gaul, till, blinded and frightened out of his senses, he was pierced by the sword of the Roman. (Liv. vii. 26.)

About a. c. 299 some fresh bands of Transalpine Galli crossed the mountains into the valley of the Po, without being invited. Though we do not know when the Transalpine people first found their way across the Alps, we know that they have at intervals, whenever the opportunity has offered, repeated these visits up to the present time. To get rid of these dangerous kinsmen, the Cisalpine Galli pushed them on against the Romans, and joined them in an expedition to the south. In their way through Etruria their numbers were increased by some Tuscan. They got a good booty within the Roman territory, and returned; but, as usual with the nation, they had a dispute about the division of the spoil, and came to blows. They were given to drink and all kinds of excess, and fond of quarrels. Four years later (a. c. 296) the Galli and the Samnites were leagued together. (Polyb. ii. 19.) Livy (x. 21) mentions the Umbri and Etruscans also as joining the league against the Romans. Polybius states that the Romans were defeated with loss in the territory of the Camertii, as he calls it. (Comp. Liv. x. 26.) But in another battle, fought a few days after in the neighbourhood of Sentinum, on the north side of the Apennines, the Romans defeated the Galli and their allies. Livy, in his description of this battle (x. 28), for the first time mentions the war-chariots of the Galli (*essedae*). Caesar, in his Gallic War, never speaks of the Transalpine Galli using war-chariots; and when he invaded Britain and found them there, the strangeness of the thing led him to describe it minutely. These war-chariots of Livy are probably a rhetorical embellishment. The chariots (*ovropides*) which Polybius (ii. 28) speaks of do not seem to have been war-chariots. Livy is, however, satisfied with fixing the number of the enemy that fell at 25,000, which later writers raised to 40,000 and 100,000. It was a victory won after a hard fight, and on Gallic ground. It was a sign that Rome was growing stronger, and that the latter days of the Galli were approaching.

About ten years later (a. c. 283) the Galli Senones, with a large force, besieged Arretium (*Arezzo*), an Etruscan town under the protection of Rome. The Romans came to its relief, under L. Caecilius Metellus. Roman ambassadors, however, were first sent to expostulate with the Senones, and to induce them to retire; but they were murdered by the Galli, contrary to the law of nations. Polybius tells the story of the massacre somewhat differently. Upon this the consul P. Cornelius Dolabella entered the country of the Senones, burnt all before him, put the men to the sword, and carried off the women and children. He treated the Galli as they had treated other nations. In the mean time Metellus was defeated by the Senones before Arretium, with great loss; but it does not appear that the town was taken by the enemy. (Comp. Polyb. ii. 19 with Liv. Epit. 12, and Frœnsheim's *Supplement*). The quarrel between the Romans and the Senones was soon decisively settled. The Romans gave them a com-

Picene defeat. Most of the Senones fell in the battle, and the Romans, driving the remainder out of the country, at last got a firm footing north of the Apennines, and on the coast of the Adriatic. This was the first part of Gallia to which they sent a colony. It was named *Sena Gallica* (*Sensigaglia*), to distinguish it from *Sena* in Etruria. The *Epitome* of Livy (*Ep.* 11) places the foundation of *Sena Gallica* before the complete conquest of the Senones, which must be a mistake. This occupation of the country of the Senones alarmed their neighbours the Boii, who, prevailing on the Tuscans to join them, advanced as far as Lake Vadimon in Etruria, apparently on their way to Rome. But they were met at the lake by the Romans, who slaughtered the greater part both of the Tuscans and the Boii. The next year the Etruscans and Boii mustered all the youth that could bear arms, and again were defeated by the Romans. The Galli and Etruscans were now glad to accept terms of peace. "These events," says Polybius (ii. 20), "took place in the third year before Pyrrhus crossed into Italy, and in the fifth year before the destruction of the Galli at Delphi; for at these times Fortune put into all the Galli a kind of pestilential disposition for war." This statement fixes the events at the year B.C. 283. These wars with the Galli were the Roman apprenticeship to danger, for they never met with more desperate enemies; and the interval of forty-five years' rest from all farther disturbance from that quarter which followed the peace, left the Romans leisure to fight with Pyrrhus, who invaded Italy, and to carry on their first war with the Carthaginians.

The Romans had excited the fears of the Galli by founding the Roman colony of *Sena*; but in 268 they went further north, and founded the Latin colony of *Ariminum* (*Rimini*). Polybius (ii. 21), in a few words full of meaning, shows how the new war began: "When those of the Galli who had seen the terrible things departed from this life by reason of their years, and a new race came on, full of passion, without reason, and having no experience of and never having seen all kinds of evil and events, they began again to stir the state of affairs, as is natural, and to be irritated against the Romans by any thing that occurred." The chiefs privately sent for a body of Transalpine Galli, who marched to *Ariminum*; but there the common sort among the Boii, distrusting the new comers, and quarrelling with their own leaders, killed their chiefs *Atis* and *Galatus*, and then came to a pitched battle with their Transalpine allies. Five years after this (B.C. 233) the tribune *O. Flamininus* carried a bill for the division of the land in *Picenum*, from which they had ejected the Senones, and the distribution of it among Roman citizens. This is the allotment of the "Gallicus ager" which is often mentioned (*Cic. de Sen.* c. 4); a measure which Polybius considers to have been the beginning of a change in the Roman state to the worse, but which was certainly the cause of a dangerous war; for the Galli now saw that the Romans aimed at their total destruction. The Boii, who were nearest to the new Roman territory, and the *Isombri* (*Insubres*), the most powerful of the Gallic peoples in Italy, invited some Galli from beyond the Alps to come and help them against the Romans. These Galli, who were from the Alps and the Rhone, were called *Gaesati*, or "mercenaries," for that, says Polybius, is the proper meaning of the word. But though the word might have got that sense in the time of Polybius, it was apparently not the original

meaning; for "*gaesum*" is a Gallic name for a javelin. The men from beyond the Alps came under the kings *Concoditan* and *Aneroet*; and new, larger, more famous, or more warlike body of men go out of these parts of Gallia. (Polyb. ii. 22.) The Romans made great preparations for this war, and was to decide whether they or the Galli were to be the masters of Italy. It was eight years after the division of the lands of *Picenum*, and is B.C. 225, when the *Gaesati* came to the Po. They were met by the *Isombri* and Boii; but the *Comani* and the *Veneti*, having been visited by some Roman ambassadors, forsook the Gallic combination for a Roman alliance, and the Galli were obliged to have a force behind them to watch these people. They entered Tuscany with 50,000 foot and 3,000 horse and waggons, under the command of *Comani*, *Aneroet*, and *Britomar*. (*Florus*, ii. 3.)

The alarm of the Italians was shown by the readiness to assist the Romans with men and all kinds of supplies; for they did not view the Gauls simply as the enemies of Rome, but as the enemies of the whole peninsula, from whom they could expect no mercy. Polybius (ii. 24) has given an estimation of the force of Italy at this critical time for the purpose of showing what a bold undertaking Hannibal's subsequent invasion was. The total number of men capable of bearing arms, *Roman*, *Socii*, was 700,000 foot, and 70,000 horse. The number that was called out for the defence of Italy was above 150,000 foot, and 6000 horse. The Gallic army advanced through Etruria as far as *Cisium*, plundering all before them; but here, as there was a Roman army in their rear, they moved towards *Faessulae*, followed by the Romans. A battle was fought, in which the Romans were defeated. The consul *L. Aemilius Papas*, who had been sent to *Ariminum* to oppose the enemy's march to that quarter, hearing of the advance of the Galli to Rome, moved from the upper sea, and crossed the Galli after their victory over the Romans. The Galli, who wished to save their booty, moved on to the coast, with the consul after them: as it happened at this time that *C. Atilius* *Regius*, another consul, who was returning from *Sardinia*, landed with his troops at *Pisae*, and was moving towards Rome by the opposite road to the victor Galli had taken. They were going north, as the consul was coming south. Thus they were brought in between two armies; but, like brave and skillful soldiers, finding an enemy before and behind, they formed two lines of battle, and presented their front to their enemy's two armies. The Galli were, as *Telamo*, as Polybius says, on the coast of Etruria, when their foragers fell in with the advanced troops of *Atilius*; but it is not easy to see why they had got so far south, as their object was to reach as quickly as they could. The Galli fought with the most resolute courage, being in no respect inferior to the enemy, except in the quality of their weapons and their armour. It is said that 40,000 Galli were slain and 10,000 were made prisoners. "In the next, then, the most formidable of the Celtic invasions was brought to naught, after threatening all the Italian, and especially the Romans, with great and ruinous danger." (Polybius.)

In the following year the Boii submitted, and B.C. 223 the Romans for the first time crossed the Po with their armies, and invaded the country of *Insubres*, under the command of the consul *C. Flaminius*, who defeated the enemy in a great battle.

us on this occasion states a curious fact about Illic swords: they were made only for cutting, ere so bad that they were bent by the first blow, and could not be used again till the men rightened them on the ground by means of a ret. The Roman sword was pointed and fitted thrust. In the following year (a. c. 222) the M. Claudius Marcellus and Cn. Cornelius continued the war against the Insubres, who a fresh body of Gaesati to help them. The s took Aeseras on the Addua, and Mediolanum, ef town of the Insubres, by storm. This ended r; and the Insubres submitted without terms. lus (a. c. 221) had a triumph in which he the Spolia Opima, having killed with his and a Gallic prince, Viridomarus. (Plut. *lives*, 6.) In a. c. 218 the Romans planted tin colonies in their new conquests, each of nen,—Placentia (*Piacenza*) on the south side Po, and Cremona near the north bank of the little lower down. The Italian Galli, though were not disposed to remain quiet, and it was hope of rousing this formidable people against mance that Hannibal determined to invade hrough their country (a. c. 218). He hoped he aid of the Galli to destroy the Roman . When Polybius began his history of the Punic War, he wrote as an introduction to it torical sketch of the history of the Cisalpine own to a. c. 218, which has often been referred . But as he well knew the value of a geocal description of a country which is the scene ical events (iii. 36), he prefixed to his hissketch of the Cisalpine Galli an outline of graphy of the country which they occupied &c.). This is the first attempt that we find geographical description that deserves the Polybius (ii. 14) compares Italy to a triangle, x of which is at the south, in the promontory he calls Cocynthia. [COCYNTHUS.] The base triangle is the hill country along the foot of the ἡ ῥῶν Ἀλπεων ὑπερσπείρα), which, beginning lassalia (*Marseilles*) and the parts above the an sea, extends without interruption to the ost recess of the Adriatic; but it does not quite he Adriatic, for it stops short, and leaves a intervening space. At the base of this hill r, on the south, lie the most northern plains of which were the seat of the Gallic peoples. plains also form a triangular figure, the apex h is at the junction of the Alps and Apennines, from the Sardinian sea above Massalia. The n side of this triangle, which is formed by the 2200 stadia long; and the southern, which ed by the Apennines, is 3600 stadia long. coast of the Adriatic forms the base of the , which from the city Sena to the northern ity of the Adriatic is 2500 stadia long. Conse-; the text says, the whole circuit of these plains far short of 10,000 stadia. The Ligustini es) inhabit the Apennines, from the place hey commence above Massalia and their juncth the Alps. They inhabit both the slope s the Tyrrhenian sea and the slope towards ins; along the coast as far as Pise, the most y city of the Tyrrheni, and inland as far as um (*Arezzo*), where the Tyrrheni begin. o them, the Umbri occupy both slopes of the nes. At the place where the Apennines are 500 stadia from the Adriatic, they turn to the and run through the middle of Italy. The

remainder of this side of the triangle belongs to the plain country, and extends to the sea and the city Sena. The Po, famed by the poets under the name of Eridanus, has its sources in the Alps, about the apex of the triangle described above, and it descends to the plains by a southern course. Having reached the plain country, the river turns to the east, and flowing through it, enters the Adriatic by two mouths. The greater part of the plain country, which is divided into two parts by the Po, lies on the side towards the Alps and the northern part of the Adriatic.

The junction of the Alps and Apennines is an arbitrary point. [APENNINUS.] There is no branch of the Po which answers the description of Polybius, except the Duria Major (*Dora Baltea*); and if he means this branch, he makes the Apennines extend as far north as the *Little St. Bernard*. This may seem to explain why he gives so large an extent (3600 stadia) to the Apennines, from the point of junction with the Alps to the latitude of Sena. But a place so remote from the Sardinian sea and from Massalia does not agree with the rest of his description, which would apply better to the branch of the Po which rises in Mons Vesulus (*Monte Viso*). But this branch runs north before it turns to the east. His choice of Massalia as a point of reference is not exact; but it was the best known place on the coast between the Var and the Rhone. The conclusion is, that his knowledge of the western part of the basin of the Po was not very exact; but his general description of the great plain is correct, and, with such means and maps as he had, it is good. [ALPES.]

This basin of the Po consists of a hill country, which lies at the base of the highest ranges, and of a plain country, a fact which Polybius had observed in his travels; for he says, "On each side of the Alps, the side to the Rhodanna, and the side to the plains, the hilly and earthy (not rocky) parts, those towards the Rhone and the north, are inhabited by the Transalpine Galatae, and those towards the plains by the Taurisci and Agones, and several other barbaric peoples." The northern slope of the Apennines is formed by lateral branches, which run down from the axis of the mountain to the plain. The direction of these branches is shown by the numerous river valleys, from the Stura in the west, which flows into the Tanarus, which flows into the Po, to the streams which enter the sea about Ravenna, which town may be considered near the southern limit of the basin of the Po. The streams that flow from the Apennines south of Ravenna as far as the Aesis, which is a little south of Sena, run into the Adriatic, and are beyond the basin of the Po. The boundary between the plain and the hill country in the eastern part of the Po is marked pretty nearly by the road from Ariminum through Modena to Parma.

On the north side of the Po, the valleys which lie within the hill country (ἡ ὑπερσπείρα) along the base of the Alps have a general southern direction, as the course of the rivers shows by which they are drained. In several of these valleys there are deep, longitudinal depressions, into which the rivers flow at the north, and, filling them up, flow out from the southern extremity through the plain to the Po. The depressions filled with water are the lakes of the sub-Alpine region,—Verbannus (*Lago Maggiore*), Larius (*Lake of Como*), Sebinnus (*Lago d'Isco*), Benacus (*Lago di Garda*), and some smaller lakes. The southern end of these lakes marks in a general way the limit of the hill country, and south of this limit

the great plain begins. The most eastern of these affluents of the Po is the Minusio, which flows through the great lake Benacus. A ridge of hills lies between this lake and the river Athesis (*Adige*), which descends from the Rhaetic Alps in a long valley, which has a general southern direction. On reaching the plain, the Athesis turns SE. and E., and, running parallel to one of the branches of the Po, enters the Adriatic. The Athesis forms a natural boundary in this great plain, and is the limit of Gallia Cisalpina, considered as the country of the Galli. The territory east of it, Venetia, or the country of the Veneti, extended along the Adriatic to the head of the gulf. It is drained by numerous streams, whose upper courses are in narrow valleys in the mountain region: and the lower part of their course is through the flat country which borders the coast of the Adriatic from Ravenna northwards to the bay of Tergeste (*Trieste*). The Po, and the numerous streams that enter the Adriatic through the plains north of it, are described under their several names [*ATRENTA, PADUS, &c.*].

The length of the great plain from Augusta Taurinorum (*Torino*) to the delta of the Po is above 200 miles; the breadth varies in different parts. Between Bononia (*Bologna*) and Verona it is near 70 miles wide. From the towers of Bologna, a man can see over this wide level as far as the Euganean hills at the back of Verona.

Gallia Cisalpina, as already observed, has a narrow meaning, if we limit the term to the parts which were occupied by the Galli. There is no doubt that the Romans first used it as a general name for North Italy, without fixing its meaning exactly, though they meant by it the country of the Cisalpine Galli. Afterwards they gave the name to all the basin of the Po, and included in it at least so much of the hill country as they had subdued; but the people within the Alps (*Inalpinii*) and on the Italian side were not subdued till the time of Augustus.

The following are the chief Alpine tribes of Gallia Cisalpina, proceeding from west to east. The Lepontii were both on the north and on the south side of the Alps, in the country that lies between the sources of the Rhodanus, Rhenus, and Ticinus. The Focantates were probably on the west side of the Lago Maggiore; the Mesiatas, at the north end of the lake; and the Iarici, on the south-east side. The Genauni are placed by some writers on the north-east side of the Maggiore. About the lake Larina, or Como, in the south part, were the Orobii, in whose country Caesar established the Latin colony of Novum Comum. The Culiccones [*CULICCONES*] were on the N.E. side of the lake of Como; and the Venonoes are supposed to be the inhabitants of the Valteline. The Stunetes and Ragnaci seem to have been in the hills north of Bergomum (*Bergamo*). The Camuni [*CAMUNI*], a tribe akin to the Euganei, were in the upper valley of the Ollia (*Oglio*); and the Euganei, an old Italian people, were situated, in the historical times, about the lake Benacus (*Garda*) and about Edrum (*Iseo*). The Stoeni, mentioned by Pliny, may, perhaps, be somewhere north of the Benacus. The warlike nation of the Rhaeti, who gave name to a part of the High Alps, were east of the Lepontii, but only a small part could be within the limits of Italy. The valley of the Adige, which forms one of the great roads into Italy from the basin of the Danube, contained the Tridentini, whose position is determined by that of Tridentum (*Trieste*) on the Adige; and the Brix-

untas are the people of Brione, higher up in the valley of the Adige. The Bresi were still farther north [*BRESCIA*]: they are incorrectly placed by some modern writers east of the Lago Maggiore.

East of the Athesis in the hill country in position of the Medocci was probably in the valleys of the two rivers named Medocci or Medocci; and in the mountains above the head of the Adriatic were the Carni, a Celtic people. The Carni were Celts in these parts. [CARNI.] The country between the Adige and the Carni was Venetia: the country of the Veneti, which is generally called from the descriptions of Gallia Cisalpina in the sense; and this is correct enough, for the Carni had no wars with the Veneti, and their names were not told us that they were Galli. This was the oldest national name of Italy, has lasted to the present day. If the Veneti were Celts, as they belong to some very early migration, it is a supposition that they were Celts, as it is as probable as any other. The remark of Pliny (ii. 17) as to their language, is not decisive against the supposition of their being of Gallic or Celtic stock. Herodotus (v. 9) had heard of the Etrusci or Etrusci on the Adriatic, and he speaks of them (i. 196) as Illyrians, from which, even if it is true, we can conclude nothing, except that the Etrusci, who are probably the Veneti, were on the Adriatic in the fifth century before our era. Pliny (p. 212) gives two traditions about the Veneti, so that they were from the Aemone Veneti or Gauls and another that they were from the Padanus Veneti. In another place (p. 195) he has a remark on this matter: he says, "I think the Veneti of Transalpine Gallia were the part of the Veneti on the Adriatic, for nearly all the Celts who are in Italy, have migrated from the country beyond the Alps, like the Senones; but on account of the name of the name (some) say that they are Etrusci. However, I do not speak positively, for all matters probability is sufficient." The passage contains a good deal. First, it states that the Celts of Italy came from the country beyond the Alps, which implies that there were some who did not come from Transalpine Gallia. He means to say, that the Veneti are Celts. He says, "nearly all the rest of the Celts, who suppose that the Veneti were Celts. But they were not Celts, but something else. It is well supposed that they were descended from Transalpine Veneti. His text clearly says that they were Celts. His argument for their Transalpine origin is not worth much. We might as well suppose these Italian Veneti to be the descendants of the Transalpine Veneti; for, as Pliny says, "in a very long time any thing may happen."

Polibius (ii. 17) enumerates the principal tribes, for he does not profess to mention all; first, those on the north side of the Alps. He places the Lai and Leberci or Leberci and the sources of the Po, which is very precise. Probably they did not extend farther than the Ticinus. Polibius only mentions the Etrusci once (*Fræg.* xxxiv. 10), and he does not speak of the passes over the Alps as lying through the country. They were north of the Lari in the valley of the Duria Major, the Val d'Aosta in which was the subsequent Roman settlement of Augusta Praetoria, and lower down at the source

valley was Eparodia, also a Roman settlement; according to Pliny (iii. 17), a Gallic name. There is no evidence that the Salassi were Celts, and the want of evidence does not prove that they were not. They were mountaineers, not inhabitants of the plains. They took no part in the Cisalpine Galli against Rome; and they not subdued till the time of Augustus, though living at the southern entrance of the great valley, as settled before that time. [EPOREDIA.] To the Laevi and the Libicii were the Isomabri, between the hill country and the Po. The eastern limit seems to have been the Addua; and their chief city, Mediolanum, had a name, but its origin is unknown. There is a confusion in the MSS. about the name of the people. In the passage already quoted from us (ii. 16), where he describes the Apennines or the Ligurians as occupied by Umbri, three (ed. Bekker) have Isomabri instead of Umbri; iii. 86 one MS. has Isomabri. But in both cases the Umbri are meant. Another form of the name, Sumbri, has been mentioned, which occurs above. Editors generally take great pains to rid of all these troublesome varieties, and to bring them to uniformity. The forms Insubres, Insubri, are stated to be the forms in Polybius by some (s. v.); and the form Insubri occurs in fragments of Polybius, but this does not prove was his genuine form. In the Roman form, the *s* does not seem to be a radical part of the name, and *subri* is the real element. There is authority for the existence of a tribe in Gallia Insubres, except the passage of Livy already mentioned and this name ought to be excluded from the list of Transalpine Galli. The Isomabri are an people, of whose origin nothing is known; they were Galli.

Cenomani or Goncomani, as Polybius writes them, were due east of the Isomabri along the Adige, their eastern limit was probably the Adige; we do not know whether they occupied the valley between the Lower Adige and the Po. Mantua lies within their territory, and Cremona, the Roman settlement north of the Po (a. c. 218), the name of which may have been determined in measure by the friendly relations between them and the Cenomani at that time. Verona, the Adige, is named by Livy as one of the tribes of the Cenomani, which is certainly not true, the territory of the Cenomani extended some distance east of the Adige; for this river is a natural political boundary. Brixia was one of the tribes of the Cenomani, and there may be no reason to think that Bergonum was one also. The northern limit of the Cenomani was the hill country of the *ei*.

tribes on the south of the Po were also all plains. The most western were the Ananes (ii. 17), whom Polybius, the only author who mentions them, describes as about the Apennine, by which he means the base of the hills. They are otherwise unknown. Their neighbours on the east he Boii. Polybius (ii. 32) speaks of Anamarae, who have been identified with the Ananes; but the name is different enough, and Polybius places the Ananes in Gallia Transalpina near Massilia. The Cisalpine country along the south side of the foot of the Apennines, and the northern slopes of these mountains. Their limits can only be estimated by mentioning the towns within

their territory. Bononia, originally called Felisina, when it was an Etruscan city, was one of them, and Mutina and Parma were two others. Placentia, near the junction of the Trebia and the Po, may have been within their limits; if it was not, we must place it in the country of the Ananes. East of the Boii were the Lingones, "towards the Adriatic" (Polybius). This would place them in the low flat land east of Modena and Bologna, in the Ferrarese, a country that cannot be inhabited without keeping up the canals and embankments any more than many parts of the Netherlands. If the Lingones really maintained themselves in this place, they must have been an industrious people. We know nothing at all of their history in Italy, except what a modern writer says, founding his remark on Livy (v. 35), that the Lingones came into Italy with the Boii, and probably shared all their undertakings and their fate, since there is no other special mention of them. A man who has the gift of reason would come to a different conclusion; that the Lingones shared neither the undertakings nor the fate of the Boii. They were in their marshes, keeping out the water and looking after their bogs and beasts, and the Romans would not touch such people till all the rest were subdued. The last tribe was the Senones, "on the sea" (Polybius). The limits of the Senones cannot be exactly defined. The river Aesis may have been their southern limit. Strabo (p. 217) says that the Aesis was originally the boundary of Gallia Cisalpina (*ἐπὶ τὴν κελύφην*), and afterwards the river Rubicon.

Thus we see that these Gallic nations, with whom the Romans had so long a struggle, were all inhabitants of the plains, and only of those parts of the hilly region which are contiguous to the plains; but not a hill people, nor mountaineers. Only two nations make a great figure among them, the Isomabri and the Boii. There is no evidence that the Isomabri came from Gallia Transalpina; and very little to connect the Boii with this Gallia. These facts are worth the consideration of a future historian of ancient Italy. Niebuhr, who rejects Livy's account of the time of these Cisalpine Galli settling in Italy, supposes them to have crossed the Alps only some ten or twenty years before they took Rome, and he affirms this on the authority of Polybius. Diodorus certainly places the passage of these Galli over the Alps (xiv. 113) immediately before the capture of Rome; but we cannot infer from Polybius at what time he supposed these Cisalpine Galli to have crossed the Alps. He says nothing of ten or twenty years, for he knew nothing of the time, and like a prudent man he leaves the thing as obscure as he found it. The true conclusion is, that we know nothing at all of the Gallic settlements in North Italy; and yet there were Galli there, and the country which they occupied was Gallia in Italy. We cannot suppose that the Galli exterminated all the people of the plains which they got possession of. If any were left, they would be Umbri; for as to the Tuscans, they, probably, during their possession of the Po country, lived in strong towns, and made somebody else cultivate the ground for them. There is one remarkable place in the country, Spina, an Hellenic settlement near the sea, and perhaps on the southern branch of the Po. What effect it had on the civilisation of Cisalpine Gallia, we do not know; and, indeed, it may have been at an early period reduced to insignificance. It was fixed in a like position with respect to inland Galli and barbarous tribes with the Phocaean town of Massalia, on the south coast of Trans-

alpine Gallia; but it had a less fortunate and less brilliant history. (Strab. v. p. 214.)

The other tribes in the plain of the Po, which have not yet been spoken of, are Ligurians, or else tribes of unknown origin. Polybius (ii. 15) has already mentioned Taurisci and Agones as inhabiting the hill country in the basin of the Po. He does not say that they were Galli, but he seems to mean that they were. There were Taurisci in the Gallic army at the great battle near the Telamo. (Polyb. ii. 28.) After mentioning these Taurisci, Polybius adds that the Ligustini inhabit both sides of the Apennines. As he places the junction of the Alps and Apennines considerably north, and describes the position of the Taurisci in the terms already stated, he may intend to place them a great way to the east, and they may be a people belonging to the Taurisci of Noricum. If this is true, it shows that the Cisalpine Galli in their contests with the Romans got help from other Galli besides those within the limits of Gallia Transalpina as determined by the Romans. It is at least certain, notwithstanding the similarity of name, that Polybius, when he speaks of the Taurisci does not mean the Taurini, whom he places in the west part of the basin of the Po, in the higher part of the river (iii. 60). We might infer from Polybius that the Taurini were not Galli; and Strabo (p. 204) and other authorities distinctly state that they were Ligures. Their chief town, afterwards Augusta Taurinorum (Turin), determines their position in a general way, which is all that is necessary here. In that angle of the Po which is drained by the Stura and other branches of the Tanarus were the Vagienni, whose limits Pliny (iii. 16) extends to Mons Vesulus. Their chief town was afterwards Augusta Vagiennorum (Bene). [AUGUSTA VAGIENNORUM.] East of the Vagienni were the Statielli, one of whose places, Aquae Statiellae, is the modern Acqui in the valley of the Bormida. None of these Ligurian tribes in the basin of the Po belong to Gallia Cisalpina in its limited sense of the country of the Galli; but they were included in the political Gallia Cisalpina of a later period, together with Liguria south of the Apennines. As Ligurians however they are properly treated under that name. We cannot fix the limit between the Ligures and Ananes on the south side of the Po. It was probably west of the Trebia, and certainly east of the Tanarus. Nor can we fix the limit between the Ligures and Galli on the north side of the Po; but it seems likely that the Duria Major may have been the limit.

Hannibal arrived in the north of Italy a. c. 218, with his forces diminished and weakened by a long march and the passage over the Alps. Before he reached Italy the Boii and Insubres took up arms and invaded the lands of Placentia and Cremona. The Roman triumviri, who had come to mark out the allotments, fled to Mutina, where they were besieged by the Galli. (Liv. xxi. 25; Polyb. iii. 40.) L. Manlius, who was hurrying to Mutina to relieve the Romans there, lost many of his men from the attacks of the Galli in his march through the forests, but at last he made his way to Tanetum near the Po, where some Cenomani from Brixia came to him. Manlius was also joined at Tanetum by the praetor C. Atilius, who was sent to his aid.

Though Hannibal had prepared the Italian Galli for his arrival, and relied on them for the success of his invasion, he was coldly received at first. The Cenomani, Veneti, and some of the Ligures, were on

the Roman side; and the Boii and Insubres were kept in check by the presence of the consul P. Cornelius Scipio. The victory of Hannibal at Trebia, though it was only a fight between men determined the disposition of his enemy An and from this time the Galli followed his march his Italian campaigns. In the battle on the Trebia there were still Cenomani on the Roman side (Liv. xxi. 55), who fought against the other Galli who were with Hannibal. The Carthaginian was the battle of the Trebia, with little loss of his Boii and Libyan soldiers. His Gallic soldiers lost a great number of men. When he crossed the Apennines he had a large body of Galli with him, as required all the prudence of this great commander to keep his turbulent, discontented auxiliaries in order. The Galli, however, served him well in the great battle at the Trasymene lake (a. c. 217), and at Cannae (a. c. 216), where 4000 of them more than two-thirds of the whole loss of thethaginian side. (Polyb. iii. 117.)

Though the victory of Cannae brought over to the Southern Italians to the side of Hannibal, he were not like the desperate fighters who had driven him from the banks of the Po, and of which is now lost the greater part without being able to fresh supplies. He never could renew his communication with North Italy after he had passed south. The Romans turned their arms upon Gallia Cisalpina, both to punish the rebels, and to cut Hannibal off from getting reinforcements. Postumius (a. c. 216), consul designate, went over the Apennines into the country of the Boii, and he and nearly all his army perished in a forest called Litana, which was somewhere in the northern slopes of the Apennines which had been in the basin of the Po. The story is told by Livius in marvellous circumstances of exaggeration, but founded on some small truth (xxii. 34). Postumius's head was cut off by the Boii, and, after being cleaned, was lined with gold, and in this fashion, and used as a cup in their great and solemn occasions. This barbaric practice of the Galli was not so inhuman as Roman spectacles the year before at Rome they had had a vestal virgin who was accused of unchastity as among the extraordinary religious ceremonies performed after their great defeat at Cannae, on a Gaul male and female, and a Greek male and female, alive, in a stone vault in the castrum. (Liv. xxii. 57.)

Hannibal was still in South Italy in a. c. 215 eleven years after he had crossed the Alps. He attempted to open his communication with Italy by his brother Hasdrubal, who went to Spain through Gallia and crossed over the Alps into the basin of the Po, by the route that he had taken. Hasdrubal had been joined by the Arverni, — the warlike people of the Auvergne, — and by other Gallic and Alpine tribes (Liv. xxi. 39); and he got recruits from the Cenomani. One of the consuls, M. Livius Salinator, was sent to oppose him, posted himself near the stream Metaurus, which flows from the Apennines into the Adriatic between Fano and Sena. The other consul, C. Claudius Nero, was watching Hannibal in the south, intercepting him from Hasdrubal to Hannibal. He was deterred of letting the two brothers unite their forces, and determined to prevent it. He hurried to the Po with a division of his army, and joined his colleague

ubal was compelled to fight, and he made the disposition of his troops that he could. Against the right wing of the Romans, where Nero commanded his picked men, Hasdrubal posted the Galli on his own left,—not so much because he trusted as because he supposed that the Romans feared.

On the banks of the Metaurus the Romans all satisfaction for Trasymenus and Cannae. The enemy was slaughtered by thousands; and so it was the victory that Livius allowed some of the Cisalpine Galli, who either had not been in battle or had escaped from the rout, to move off at being followed: "Let some remain," he said, "to be the messengers of the enemy's defeat of our victory." (Liv. xxvii. 29.) Hasdrubal died in the battle; and when Nero returned to camp in the south he ordered his head to be sent before the Carthaginian outposts, that Hannibal might have no doubt about his brother's fate.

The Carthaginians made another and last effort to drive the Romans through North Italy. In the summer of B. C. 205, in the fourteenth year of the war, the son of Hamilcar, landed on the Ligurian coast and seized Genoa, where the Galli flocked to him. Here also Mago received twenty-five ships from Carthage, 6000 infantry, 800 horsemen, and elephants, a large sum of money to hire troops and orders to move on towards Rome and join his brother. (Liv. xxix. 4.) Mago maintained himself in Cisalpine Gallia to the year B. C. 203, when he was defeated in the territory of the Insubres by the Romans, and dangerously wounded. He was sent to Africa by the Carthaginians, and he set out on his voyage. Hannibal, who recalled about the same time, took with him of the men who had followed him all through his campaigns; and in the battle of Zama (B. C. 202) where he was defeated by P. Scipio, one-third of his men, it is said, were Ligures and Galli. The second Punic War ended A. C. 201.

Mago left one of his officers, Hamilcar, behind in Cisalpine Gallia (Liv. xxxi. 10), or he was those who escaped from the slaughter on the Metaurus; it is not certain which. Hamilcar stirred up the Insubres, Boii, and Cenomani, and some of the Cisalpine Gauls, and falling on Placentia took and burnt it, then crossed the Po to plunder Cremona. Marcus Purpureo, the governor of the province, (Liv. xxxi. 10) terms it, was near Ariminum with a force too small to relieve Cremona. He wrote to the senate for help, and his letter states that the Cisalpine Gauls and Cremona having maintained themselves all through the Punic War. Purpureo after defeating the Galli, before Cremona, and then fell in the battle. (Liv. xxxi. 21.) But the war still continued, and the prætor Cn. Baebius Hilus fell into an ambuscade in the territory of the Insubres, and was compelled to leave the country with the loss of above 6000 men. (Liv. xxxi. 7.)

Sex. Aelius, one of the consuls of 198, did no more in Gallia than settle the Cisalpine Gauls at Placentia and Cremona, who had been seduced in the late troubles. It was only by giving those two colonies that the Romans could govern this country, and they prosecuted the war with the characteristic national stubbornness. In B. C. 197 both the consuls, C. Cornelius Cethegus and Minucius Rufus, went to Gallia. Cethegus directed against the Insubres; Rufus went to the Ligures and began the war with the Ligures in the valley of the Po. Having reduced all the Ligurians

on the south of the Po except the Ilyates, and all the Galli except the Boii, he led his troops into the country of the Boii, who had gone over the river to help the Insubres. The Boii returned to defend their lands. The treacherous Cenomani were induced by Cethegus to betray the Insubres, whom they had joined; and the story is, that in the battle which followed the Cenomani fell upon their own countrymen and contributed to their defeat. Above 30,000 Galli are said to have fallen; and according to some authorities it was in this battle that Hamilcar fell. (Liv. xxxi. 21, xxxii. 30.) Livy found even some authorities which affirmed that Hamilcar appeared in the triumph of Cethegus. (Liv. xxxiii. 23.) The news of this defeat discouraged the Boii, who dispersed to their villages, and left the Roman commander to plunder their lands and burn their houses, which is still the way of dealing with nations who will not consent to be beaten in a pitched battle. In B. C. 196 the consuls, L. Furius Purpureo, who as prætor had served before in Gallia, and M. Claudius Marcellus, of a race well known in Gallia wars, were both employed at home. They had Italia for their province, as the Roman phrase is. (Liv. xxxiii. 25.) Marcellus defeated the Insubres in a great battle, and took the town of Comum, upon which eight-and-twenty strong places surrendered to him. Purpureo carried on the war in the country of the Boii in the usual way; burning, destroying, and killing. The story of these campaigns is confused; but if the narrative is true, we learn that the Boii, being unable to do any damage to the cautious Purpureo, crossed the Po and fell on the Laevi and the Libui, who were Galli. Returning home with their booty, they met the two consuls; and the fight was so fierce, for the passions on both sides were greatly excited, that the Romans left scarcely a Boian to return home and tell of the defeat. (Liv. xxxiii. 37.) Marcellus had a triumph at Rome; and Livy on this and on previous occasions records the fact of the great quantity of copper and silver coin which was brought into the æsarium from this Gallic war. There is no doubt that the Galli used copper and silver money, and probably had their own mint, as in Transalpine Gallia. Part of this money might be Roman or Italian, the produce of old plunder. The consul, L. Valerius Flaccus, the colleague of M. Porcius Cato, was employed in B. C. 194 in fighting with the Boii, and restoring the buildings in Placentia and Cremona which had been destroyed in the war. (Liv. xxxiv. 22.) Flaccus continued in Cisalpine Gallia the following year as præconsul, carrying on the war in the country of the Insubres. The consul, T. Sempronius Longus, led his troops against the Boii. This unconquerable people were again in arms under a king Boiorix. They attacked Sempronius in his camp; and after a desperate fight, with great loss on both sides, and a doubtful result, the consul took shelter in Placentia. (Liv. xxxiv. 46.) The numbers that fell in these battles are exaggerated, and are a mere guess; but these continued losses were destroying all the manhood of the Boii. In B. C. 192 the Ligures were in arms, and advanced as far as the walls of Placentia. (Liv. xxxiv. 56.) The history of these campaigns shows that the ultimate success of the Romans depended on their two colonies on the Po. The senate declared that there was a "tumultus," a Gallic war. One consul, Minucius Thermus, was sent against the Ligures. The other consul, Murela, had a battle with the Boii near Mutina; and the

narrative of the Roman historian admits the obstinate resistance of the Galli, of whom 14,000 fell, and 1099 of the foot were taken prisoners. The mention of the exact number of the captives is curious (Liv. xxxv. 5), and Livy probably had good authority for it. The number of prisoners could be ascertained, for they would be sold. The Romans also counted their loss in this battle by thousands.

The complete subjugation of this brave people was accomplished by the consul P. Cornelius Scipio Nasica (s. c. 191), a cruel man, who slaughtered the Boii without mercy, and made it one of the grounds for claiming a triumph that he had left only children and old men alive (Liv. xxxvi. 40.) In the triumph of Scipio a great quantity of the precious metal appeared. Like most uncivilized people, and civilized too, as they are called, the Boii were fond of gold ornaments. They had also bronze vessels and silver vessels, which they made themselves, and not without skill, for the nation has always excelled in ingenuity, and shown an aptitude for all works of taste. They must have become a very different people in their habits from the Gallic invaders whom Polybius describes. The brutal consul led in his triumph, all together, the nobles of the Boii and the horses that he had taken from them. The nation had surrendered ("sece dediderant"), according to Roman phrase; and about half the land was declared the property of the Roman people. This was the end of the nationality of the Boii in Italy. The survivors are said to have left the country. [Boii.] In a. c. 189 the Romans made Bononia a Latin colony (Liv. xxxvii. 57), and six years later the Roman colonies (Liv. xxxix. 55) of Parma and Mutina were settled. Polybius incorrectly speaks of Mutina as a colony in a. c. 218. The name of the Senones had been effaced long ago; the Boii now disappeared, and of the Lingones we know nothing, nor of the Amnes. The whole of Gallia Cispadana was Roman. In Gallia Transpadana there were no enemies except the Insubres, who, next to the Boii, had made the most vigorous resistance to Rome; but they had taken no part in the last wars, and they were now quiet. The perfidious Cenomani were long since the slaves of the Romans, and the Veneti never gave them any trouble.

It is generally supposed that Gallia Cisalpina was made a province upon the conquest of the Boii, s. c. 191. But though a great part of the basin of the Po was now brought under Roman dominion, and colonies were planted, we have no account of a regular provincial administration being established. In fact, the Romans dealt with their conquered countries in different ways, according to circumstances. Gallia Cisalpina was a Roman province, in one sense, long before s. c. 191, for every praetor or consul who was commissioned by the senate to carry on war there, had it for the time as his "province," the field of his operations. However, the making of the great road, called the Via Flaminia, from Rome to Ariminum, and the Via Aemilia from Placentia to Ariminum (s. c. 187), proves that the Romans were now settling in the country, and it must have had some kind of administration. A road was also made from Bononia across the Apennines to Arretium. (Liv. xxxix. 1, 2; Strab. p. 217.) But the limits of this provincial administration were less than those of the Cisalpine Gallia of Caesar's time. The conquest of the Ligurians, both those in the plains of the Po, and those in the mountains, was not yet completed; but these industrious, brave people were incessantly attacked by the Romans. The consul, M. Popilius,

made war on the Statielli, near Carvian (s. c. 179), and sold the people and their property, though they had never attacked the Romans. The senate, however, made amends for this monstrous injustice as far as they could, by an order for restoring the people to their liberty, and giving back what could be found of their goods; an order which we may be sure could only be imperfectly executed. (Liv. xlii. 2, 3.) It was probably from s. c. 168, when M. Aemilius Scaurus made the road from Piae, past Luca, to the Apennines to Dertona, that we may date the subjugation of the Ligures. The Ligurian country was certainly a separate province, in the Roman military sense, for some time after the final loss of the Boii. (Liv. xlii. 1, 10.)

In s. c. 186, 12,000 Transalpine Galli crossed the Alps into Venetia. Probably they came down the valley of the *Adige*. They began to build a town near the site where Aquileia afterwards stood. To Roman consul Marcellus (s. c. 183) gave them notice to quit. He took from them the implements they had seized in the country, and what they had brought with them. These poor people sent word that their number humbly to state their case to the Roman senate: poverty had compelled them to cross the Alps, and they had chosen an uninhabited spot where they had settled without troubling anyone, and they had begun to build a town, which was proof that they had not come to plunder. They were told that they must quit Italy, and that their goods would be restored to them. They quietly packed their moveables and crossed the Alps under the inspection of three Roman commissioners, who were well received by the Transalpine Galli. Scarcely was this warlike nation, that the Transalpine Gauls affected to complain of the great loss they had suffered, had shown to a body of men who gave permission of their nation, had dared to enter Roman ground. (Liv. xxxix. 54.) The consul Marcellus now asked permission of the senate to go to the sea, to lead his legions into Istria. At the same time the Romans founded the Latin colony of Aquileia, in the same year that they sent troops to Parma and Mutina. Thus they secured a position at the head of the gulf of Venice, which was carefully maintained, to check the inroads of barbarians on that side of Italy, and to extend their own dominion to the east of the gulf. In s. c. 183, 3000 Transalpine Galli crossed the Alps, and begged the consul, Q. Fulvius Flaccus, and the senate to allow them to settle as free subjects of the Roman people; but the senate gave them no instructions to punish the leaders of the expedition. We do not know from what part these Gauls came, whether from Transalpine Gallia, as limited by Strabo in his Commentaries, or from the country west of the eastern Alps. But, if we consider the state of Gallia as it was in Caesar's time, when the Gauls were oppressed by the rich, and the cultivators of the soil was a serf, we can easily understand why these men sought for a new home.

We know very little of the history of Gallia Cisalpina as a Roman province. It was rapidly won by the Romans, and became one of the most fertile of the Roman possessions. An instance of its vigorous exercise of power by the consul C. Caesar is recorded when he held the province (s. c. 67). The ambassadors of a Gallic prince, Cassius, a mountaineer, complained to the senate that Cassius had invaded the country of the Alpine people.

Socii of the Romans, and carried off many into slavery. The consul filled his pockets with his prisoners. He was no better than a cruel African chief, who catches men, and sells to the white man of Europe or America. An instance of gross injustice occurred at a later date (a. c. 44), when D. Brutus, then governor of Cisalpine Gallia, led his men against the people in Rome (Inalipini), to please his soldiers, and their fidelity. (Cic. *ad Fam.* xi. 4.) The declared their willingness to hear the evidence of Cassius, when he returned from Macedonia, he then was. But in the mean time they of their troublesome complainants by hand-presents, and allowing them to purchase ten and take them out of Italy. (Liv. xliii. 7.) Peace of Cisalpine Gallia was not disturbed except in a. c. 103, when the Cimbri came from the Eastern Alps, and crossed the Adige. were defeated by Marius and Catulus in the battle near Vercellae.

Cisalpine Gallia remained quiet during the Social War, and it was probably to reward the people for fidelity that the consul Cn. Pompeius was sent, a. c. 89, by a Lex Pompeia to give the old condition called *Jus Latii* or *Latinitas* to the towns north of the Po. Asconius, who is the authority for this, does not say that the *Latinitas* was given to all the towns north of the Po; but it is clear that it was. He remarks that Pompeius did not establish new colonies, but gave this *Jus Latii* to the towns which existed. The *Latinitas* was the Transpadani in a middle position between the *Cives* and *Peregrini*, for those who had filled the towns with the *Latinitas* were thereby the Roman *civitas*. This new law or *Jus Latii* is a different thing from the condition of the towns of Latium and the colonies. The Roman colonies (*coloniae Romanorum*) consisted only of Roman citizens; they were Roman communities. *Latinas* might be composed either of Roman citizens or *Latini*; but a Roman citizen who joined a colony in order to get a house and land, was a *civitas*; and these *Latinas* colonies were as Latin communities. The Lex Julia, a. c. 90, after the Social War had broken out, gave man *civitas* to all the *Nomen Latinum*, that is, all such towns of Latium as were not already colonies; and to all the Latin colonies. Thus all the *Latinas* colonies became *civitas*; and when it is said that the *Latinitas* was given by Cn. Pompeius to the Transpadani, it means to those towns which were not colonies. The new political condition of Transpadani was expressed by this term as *Jus Latii*; and accordingly the word now received a new signification, designating of people in a certain legal condition, and no reference to a particular country and

not stated by any ancient authority what was the condition of Gallia south of the Po. The Transpadani received the *Latinitas*; they cannot refuse to accept Savigny's conjecture, he supports by the strongest arguments, that the *Latinitas* was given to the Roman *civitas*; and it may be, as appears, by virtue of the same Lex Pompeia, that the *Latinitas* was given to the Transpadani (a. c. 89, a. c. 65), which means all Cisalpine Gallia, had influence over the elections at Rome by their

votes; and therefore a large part of Gallia had the *civitas* at this time, and it must have been given either in a. c. 89, or between a. c. 89 and a. c. 65. But there occurred no occasion between these two dates for giving new political rights to Cisalpine Gallia, so far as we know; and there was a good reason for giving them after the close of the Social War. The conclusion, then, of Savigny is this: "In a. c. 89 the towns of the Cispadan regions became Roman municipia, and the Transpadani became *Latinas* colonies. We must except Placentia, Cremona, and Bononia, which, being old *Latinas* colonies, were changed into municipia by the Lex Julia (a. c. 90); also Mutina and Parma, which, being old Roman colonies, underwent no change in their condition; we must also except Eporodia in Gallia Transpadana, which must have belonged to the one or the other of these two classes, for we do not know whether it was a Roman or a Latin colony." This explains why Mutina is called by Cicero (*Phil.* v. 9) a colony. It was in its origin a colony, and might always be called so; but in Cicero's time it was a Roman town, and a municipium in the sense of that period. Cicero also calls Placentia a municipium, and he calls it so correctly, for such it was in his time; but it was originally a Latin colony.

There is a passage of Suetonius (*Caes.* c. 8) in which he says that Caesar, when he was quaestor in Spain (a. c. 66), left it sooner than he ought to have done, in order to visit the *Latinas* colonies, who were agitating about the *civitas*. This is explained by Savigny to refer to the Transpadani. In the following year (Dion Cass. xxvii. 9) the censors could not agree whether they should admit the Transpadani as *cives* or not; which is another proof that the people south of the Po had the *civitas*. It was again talked of in a. c. 51, as we infer from the letters of Cicero (*ad Att.* v. 2, *ad Fam.* viii. 1), when they are rightly explained. Finally, in a. c. 49, Caesar, after crossing the Rubicon, gave the Transpadani the *civitas*. (Dion Cass. xli. 36.) Thus the towns of the Transpadani became municipia, except Cremona, Aquileia, and Eporodia, which were already municipia by virtue of the Lex Julia. When it is said that the towns of Gallia Cisalpine became municipia, we must understand this of course only of the larger towns: the smaller places were attached to the large towns, and depended on them. During Caesar's government of Gallia Cisalpine he added a body of colonists, some of whom were Greeks, to the inhabitants of Comum, and put them on the same footing as the former inhabitants. (Strab. p. 212.) Appian (*B. C.* ii. 26), states that Caesar established Novum Comum, and gave it the *Latinitas*; and he shows that he understood what he was speaking about, for he says, "Those who discharged an annual magistracy there became Roman citizens, for this is the effect of the *Latinitas*." Caesar's enemies at Rome took a malicious pleasure in treating a magistrate of Comum as if he were not a Roman citizen, intending by this to insult Caesar. Suetonius (*Caes.* c. 28) says that it was by virtue of a *rogatio* Vatina that Caesar gave the *civitas* to the people of Comum. He may be mistaken about the *civitas*, but Caesar no doubt acted under some law.

The limit of Gallia Cisalpine on the south-east, during Caesar's proconsulate, was the Rubicon; and it was this circumstance that made his crossing the river with his troops into Italy equivalent to treason against the state. The boundary on the west side

is fixed at the *Macra* (*Magra*), which enters the sea a little west of Luna. Some (Sigonius, *de Aust. Jov. Italica*, i. c. 22) would extend the boundary to the Arnus. Polybius certainly (ii. 15) extends the Ligurian territory to the neighbourhood of Piasa, yet not to the Arno: for Piasa was an Etruscan city. But the boundary of Liguria, in the time of Augustus, was the *Macra*; and on the Gallic frontier the boundary was the *Varus* (*Var*): and this may have been so when Caesar was proconsul of Gallia. In the N.E. the province extended at least to Aquileia. Caesar had Gallia Cisalpina and Illyricum as his provinces, besides Transalpine Gallia. Liguria was certainly within his province. At Aquileia he had three legions at the commencement of the Helvetic War (B. C. i. 58), which he carried over the Alps with him. (B. C. i. 10.) Aquileia was in the country of the Carni, but it was at this time within the province of Cisalpine Gallia; and this explains Livy (xl. 34), when he says that Aquileia was in the *Ager Gallorum*, which he might say in a certain sense. Venetia was of course in the province of Gallia Cisalpina. It seems from a passage in the eighth book of the Gallic War (B. C. viii. 24), that Caesar considered *Tergete* (*Trieste*) to be in Gallia Togata; or at least the author of this book did. Sigonius makes the *Formio* (*Riscone*), a little south of *Tergete*, the boundary of Gallia Cisalpina in this part; but the boundary probably was not fixed. If the province included Istria, into which the proconsuls of Cisalpine Gallia had carried their arms, we may perhaps extend the limit here as far as the river *Arvis* (*Arso*), which was at a later time the boundary of Italia. But there is no evidence to show how far the *civitas* was extended when the *Transpadani* became Roman citizens; it must have extended to Aquileia, or further, but we know nothing about this. Caesar generally passed the winter in North Italy during his Gallic wars, and he used to hold the *comitia* at this season. (B. C. i. 54, vi. 44.) Gallia Cisalpina, therefore, at this time had its division into *comitia*, like Sicily, and Hispania and Lusitania at a later time; but we do not know the names of the *comitia*, nor the divisions of the country for judicial and administrative purposes. The proconsul had the complete civil power in his hands.

Even after B. C. 49, when Gallia Cisalpina had the *civitas*, and consisted of Roman communities organised after Roman fashion, there was still one exception. The towns had no *II. vir juri dicundo*, or magistrates for the administration of justice. The proconsul had the general administration of justice, which he exercised either in his own person, or by *praefecti*, to whom he delegated his authority. "The towns were consequently here, on the whole, in a like condition with the single *praefecturae* elsewhere, which however were not numerous; with this exception, that they had not, like the *praefecturae*, separate *praefecti*, but the proconsul was the general *praefectus* for the whole province. Only one place, *Mutina*, was a real *praefectura*. The praetor did not exercise jurisdiction there, but a *praefectus juri dicundo* was sent from Rome." (Savigny.)

After the dictator's murder, B. C. 44, D. Brutus, one of his friends and assassins, held the province of Gallia Cisalpina, as governor, by the authority of the senate. He was besieged in *Mutina* by M. Antonius; and in the spring of B. C. 43 the battle took place, before *Mutina*, in which the consuls *Hirtius* and *Pansa* fell. Cicero, in his *Philippics*, still speaks

of the *Provincia Gallia* to the end of April, A. C. 43. In the autumn of B. C. 43 the last proconsul of Gallia Cisalpina, D. Brutus, was caught and put to death by order of M. Antonius. No governor of Cisalpine Gallia was again appointed. *Diem Ciceroni* (xlviii. 12) speaks of *Gallia Togata*, as he calls it, in the year B. C. 41, as being already included in Italia; "so that no one, on the pretext of having the government there, could maintain troops on the west side of the Alps." This seems to imply an arrangement made between Octavianus and M. Antonius. From this time the name Italia, which is the popular language had sometimes been extended to Gallia Cisalpina, as already observed, comprehended all the country south of the Alps.

A lex was enacted for the regulation of the jurisdiction in Gallia Cisalpina, which is termed the *lex de Gallia Cisalpina*. A considerable part of it was found A. D. 1760, in the ruins of *Velea*, and is preserved in the Museum at Parma. The date of its enactment was probably soon after B. C. 43. The name of the lex is now generally admitted to be the *Lex Rubria*, or *Lex Rubria de Gallia Cisalpina*, though some critics do not think that the name of the proposer of the lex is known. In his notes on this subject Savigny doubted about the propriety of calling this lex the *Lex Rubria*, and he has proposed the object of the lex to be to give decision to the newly established magistrates in Gallia a procedure. In the additions to his original work he has expressed himself perfectly satisfied with the explanation of the purpose of the lex, as he derives from this explanation satisfactory evidence that the true name of the lex is *Lex Rubria*. The purpose of the lex is important for the understanding of the municipal organisation of Italy under the empire.

In the Digest we find the jurisdiction of the municipal magistrates limited in two ways: first, by the amount of the sum of money or matter in dispute; secondly, by the fact that they had the *powers* which belonged to the proper jurisdiction only, and not those which were comprised in the *imperium*. The effect of this double limitation, which appears to be just as a general rule for all municipal magistrates, will be sought for in the *Lex Rubria*. The enactment deprived those magistrates of the power of granting a *missio*, *bonorum possessio*, and *restitutio*, and of compelling a *praetor* to stipulate. As to the amount or value of the matter in dispute, the magistrates of Gallia were not allowed to decide in cases where it was above 15,000 *aurei*. They then, had two objects: one was to limit the amount, as just stated, and to exclude the magistrates from the exercise of those powers which were reserved to the *imperium*; the other was to provide rules for their direction, which these limitations made necessary, in order to prevent the administration of justice from being impeded. The magistrates mentioned in the lex are *II. vir*, *III. vir*, *praefectus*. The first is the ordinary name for a municipal magistrate; but probably *II. viri I. D.* (just as *II. viri* were in Gallia, as in other places, were common in *III. viri I. D.* The third name, *praefectus*, was twice with the designation of *Municipalis*. The colony of *Mutina* was a *praefectura*, and the *praefectus* in Gallia. Accordingly, all the Gallic towns had for magistrates either *II. viri I. D.* or *III. viri I. D.* except *Mutina*, which had a *praefectus I. D.*

The amount of the matter in dispute in which Gallic magistrates had jurisdiction was, as we saw

15,000 sestertii. It remains to be explained was the process, if the party who was condemned to pay did not obey the judgment. Puchta, keeps close to the principle (which is true in law) that execution belongs to the imperium, that the municipal magistrates had no power over execution, but that the praetor at Rome be applied to. This monstrous unpractical notion is a simple impossibility. According to as Savigny remarks, if a plaintiff at Padua obtained judgment in his favour in the matter of a few ii, or for a bushel of wheat that he had sold, the defendant did not pay, the plaintiff must a journey to Rome to get execution. We must add that it was one of the objects of the lex, after it limited the jurisdiction of the Gallic magistrates to a fixed sum, to provide the means of enforcing their judgments, though we have no evidence. But both the general principles of Roman law jurisdiction (Javolenus, l. 2. de Jurisdic. 2. 1), the arguments urged by Savigny, are decisive at the absurd conclusion of Puchta.

The names by which these Gallic communities are named in the lex are various. In one passage "municipium" is used as a generic name, comprising coloniae and the praefectura; and this designation could be correctly used, for the whole country contained only Roman communities. In other passages occur "municipium," "colonia," "civitas," where "locus" means any place which does not belong to the other two classes. Savigny supposes "coloniae" may mean such places as had not yet been changed into "municipia;" but that could only be a few, for he thinks that the towns of the Po, when that country obtained the civitas, and the Transpadani, when they also, at a later date obtained the civitas, must first have become as the Romans termed it (see *Dict. Antiq.*, *FUNDUS*); that is, must have given their communities the name of Roman municipalities, like the Italian cities which received the civitas by virtue of the Lex.

This explanation of the word "coloniae" in the Lex Rubria seems doubtful; and it may be nothing more than a legal superabundance of language. It is that, if there was not and could not be a colonia, the name would have no meaning in the lex, could be not only an idle, but an absurd redundancy; but there had been coloniae, and the lex meant, whether you call the place municipium, colonia, or any other name which is applicable to it. In other passages there is a larger enumeration of abbreviations are rightly explained: — *forum, municipium, colonia, praefectura, castellum.* Here "oppidum" is generic, not a special class; "municipium" comprehends most chief towns; "colonia" according to Savigny, few towns; and "praefectura," only Mutina. These three names denote smaller places, which had less complete organisation. Places of this kind it is assumed (and there can be no doubt of it), that they had their separate magistrates; a village had not a judge. This appears from the general system of organisation in Italy, where each chief place of a district or territory, the smaller places or villages in which were attached to the chief place, were included in its jurisdiction. A "forum," "vicus," "aetellum," would be a part of the territory of a *municipium*. The *municipium* was the centre of administration, as we see in the fact of the census taken there. When the lex, in speaking of smaller places, says, "qui ibi juri dicundo praes-

est," this does not lead to the conclusion that these places had their separate magistrates, for this expression may apply just as well to the II. viri of the town to whose jurisdiction the "vicus" or the "forum" belonged. (Savigny, *Vermischte Schriften*, vol. iii., *Tafel von Herakles*; Puchta, *Zeitschrift für Geschicht. Rechte*. *Lex Rubria*, &c. vol. x.)

The division of Italy into eleven "regiones" by Augustus had for its immediate object the taking of the census, which was conducted in a new way, and was taken in the several districts. The regiones into which Gallia was divided were: *Regio XL*, which was Transpadana, or Italia Transpadana; *Regio X*, which was Venetia et Histria, sometimes called Venetia only; *Regio IX*, which corresponded to the former Liguria; and *Regio VIII*, which was bounded on the north by the Po, on the east by the Hadriatic, on the south by the Rubicon, and on the west by the Trebia, which separated it from that part of *Regio IX*, which was north of the Apennines. [G. L.]

GALLIA TRANSALPINA, or simply **GALLIA** (ἡ Κελτική, Γαλατία: *Adj.* Gallicus, Κελτικός, Γαλατικός). Gallia was the name given by the Romans to the country between the Pyrenean Montes and the Rhenus. When it became Roman, and was divided into several parts, they were called Galliae. (Plin. iii. 3; Tac. *Ann.* i. 31.) It is sometimes called *Uterior Gallia*, to distinguish it from *Citerior Gallia* or *Gallia* in North Italy; though the name *Uterior* is applied by Caesar in one or two passages to the Provincia only. It was also called *Gallia Comata* (Cic. *Phil.* viii. 9), with the exception of the *Narbonensis*, because the people let their hair grow long. The southern part of this country along the shore of the Mediterranean, which Caesar calls Provincia, was originally called *Braccata*, because the natives wore "braccas" or breeches; afterwards it was termed *Narbonensis*. (Mela, ii. 6; Plin. iii. 5.)

The Greek name *Celtice* (ἡ Κελτική) was earlier in use than the Roman name, for the Greeks were settled on the south coast of France long before the Romans knew anything of the country. But the name *Celtice* was used in a vague sense by the early Greek writers. [CELTICÆ.] The name *Galatia* came into use from the time of the historian Timæus; and even the compound *Κελτογαλατία* (Steph. B. s. s. *Ἀσπίδοι*; Ptol. ii. 7) was afterwards used. In the Roman period the Greek writers sometimes also used the Roman form *Gallia*. The Greek names by which Transalpine Gallia was distinguished from Cisalpine Gallia, were merely descriptive of its position, as: ἡ ἐπὶ τῶν Ἀλπεων Κελτική, ἡ ὑπερῶν, ἡ ἔξω, ἡ ἑκτος. The Romans used the name *Galli* as a general term for all the people whom they considered to be of Gallic race. But the oldest Greek form of the name was *Κελτοί* (Herod. ii. 33), and *Κέλται*, and *Γαλάται*. Polybius (ii. 15) uses the Roman word *Ἰστρογαλαῖοι*, to distinguish the Transalpine from the Italian *Galli*, which word Strabo renders by the Greek *ὑπερῶν* (p. 212).

A complete geography of Gallia might be a chronological exposition of all that the Greeks and Romans said or supposed about this country; but, as much of this is erroneous, and as their knowledge of it was gradually extended and corrected, the proper purpose of such an article as this is to say what can be said within reasonable limits, and what is useful for reading the best Greek and Roman writers. When Herodotus (ii. 33) says that the Istrus (*De-*

note), which has its source in the country of the Celti and at the city Pyrene, in its course divides Europe into two equal parts," and "that the Celti are out of the Pillars of Hercules, and that they border on the Cynetes, who are the remotest inhabitants of Europe to the west," it is clear that he was entirely ignorant of the geography of Northern and Western Europe. Nor does he mend the matter when he says, in another place (iv. 49), that the "Istrus flows through the whole of Europe, rising in the country of the Celti, the remotest people towards the setting of the sun, after the Cynetes, that dwell in Europe." It is the universal practice of all who write and speak of distant places of which they know nothing, to suppose them indefinitely removed from the writer or speaker, but near to one another. Ignorance makes all the unknown meet in a point of indeterminate position. Even when we come to the time when Gallia was pretty well known to the Greeks and Romans, there is a great deal that is erroneous in their geographical notions which it would take many words to correct. A great part of our labour in comparative geography consists in determining what are the countries, mountains, rivers, and places which they designated by certain names: but if we attempt to correct all the erroneous notions which they attached to such names, we shall undertake a labour of infinite extent; nor shall we be able to correct it completely, for geographical knowledge always admits of improvement. With their imperfect means and imperfect maps, the Greeks and Romans were not bad geographers. They were often better than many modern historical writers, who have much superior means at their command.

The chief ancient authorities for Gallia are few. They are: Caesar's Gallic War; Strabo (lib. iv.), who used Caesar, but got much from Posidonius, who had travelled in Gallia; Mela (ii. 7, and iii. 2); Pliny (iii. 4, and iv. 17—19), and Ptolemy who made a map of Gallia, not very correct. His particular merit, as D'Anville observes, consists in having assigned a chief town, and sometimes two, to each people; for without his assistance we should be less accurately acquainted with the names of the capitals, since in the period after Ptolemy the original names of the chief cities were replaced by those of the several peoples of which they were the capitals. Thus, Caesarodunum, the chief town of the Turones, became Turones (*Tours*); Avaricum, the chief town of the Bituriges, became Bituriges (*Bourges*); and Andematunum, the chief town of the Lingones, became Lingones (*Langres*).

From the historians we obtain incidental information—from Polybius, Tacitus, Appian, Dion Cassius, and some little on the later period from Ammianus Marcellinus; something also from Ausonius, Sidonius Apollinaris, and the description of the Mediterranean coast called that of Festus Avienus. Something is got from the *Notitia Imperii* for the later period. But the most valuable information is obtained from the Roman Itineraries. The Itinerary named that of Antoninus, and the Table generally named the Theodosian, extend to all parts of Gallia. There is also a route very particularly described in the Itinerary from Burdigala (*Bordeaux*) to Jerusalem, which runs through the southern parts of Gallia to the Alps. The Roman remains in Gallia are very numerous, particularly in the Provincia or the basin of the Lower Rhone, and they often give information which we find in no writers. The French have a very large number of valuable works on the history and

Roman antiquities of their country; and they continue to add to them.

The first description of Gallia that we have, is by the man who conquered it, the Roman general Caesar. His description is brief, after his fashion. It is founded chiefly on his own observation; but he takes the parts of Gallia, Germania, and Britania which he knew nothing, we may infer that he acquired of the "mercatores" or bold traders who carried their wares among barbarous tribes, though his good sense would make him use their information cautiously. He also used the Greek writers, as particularly the geographer Eratosthenes, as we see from his own words (*B. G.* vi. 24). As it will show that the knowledge of these peoples was not very exact. Hipparchus (*Strab.* p. 14, 115), who lived in the second century before Christian era, placed Massilia (*Marseilles*) and Byzantium in the same parallel; and he derived the authority of Pytheas of Massilia, who says that the proportion of the gnomon to its shadow was the same in both places. We see, from this and other passages, that the Greeks of Massilia were the authorities for the earlier knowledge of Gallia. Strabo disputes the accuracy of this statement, especially in his way, that Byzantium is much further north than Massilia. But Strabo also was mistaken: Byzantium is about 41° N. lat. and Massilia but of 43° . Hipparchus also supposed Celso to extend so far north that the sun never set at the summer solstice; a great mistake (*Strab.* p. 75), but is corrected by Strabo. Caesar (*B. G.* iv. 15) fixes the northern limit of Gallia at the embouchure of the Rheneus.

It is useful to examine the boundary of this extensive country, as the inquiry will show the nature of the mistakes which the ancient geographers made. They used to determine their latitudes with remarkable accuracy by ascertaining the length of the longest day at various places, which they measured (*Strab.* p. 133; *Ptol.*) by the hours of the day when the night and day are equal. The error for the longitude were of course very small, as they fail. The part of Gallia that they were acquainted with was the coast of the Mediterranean. We do not know the earliest boundary known to the SE. part of Gallia and Liguria; nor can we suppose that there was one. The boundary in the time of Augustus between Gallia and Italia was the river Varus (*Var*). The boundary at the eastern extremity of the Pyrenees was the Promontorium Pyrenaeum, or Cap Creus, which projects into the sea south of Portus Veneris (*Port Vendre*). The most southern Gallic town along the eastern part of the Pyrenees, in the country of the Sordani, was Cerveria. [*CERVARIA*.] From the mouth of the Var to the delta of the Rhone the coast of Gallia presents an irregular convex outline to the Mediterranean. The interior is a hilly country, which extends to Massilia. Between Massilia and Narbonne which Strabo (p. 106) knew to be in nearly the same latitude, the coast forms a bay called Sinus or Massilioticus. Strabo considered this bay to be divided into two bays by the hill Semele, a necessary correction of the false reading *Xipho*, which term comprehends also the island Rhodanus. [*Rhodanus*.] The coast from the mouth of the Rhone to the country at the foot of the Pyrenees is about the whole length of this coast from the Var to the Cap Creus is about 500 English miles; and it was known to the ancient geographers.

the Pyrene (Πυρην) or Pyrenæi Montes were boundary between Gallia and Iberia, or Hispania, the Romans called it. Strabo supposed that they in a direction parallel to the Rhine (p. 128), which he makes the eastern boundary of Gallia. He therefore has supposed that the Pyrenees ran south to north, instead of nearly from east to west; and in another passage he distinctly affirms (p. 137) that they do run north. In a third passage (p. 199) he supposes that the directions of the Pyrene and the Pyrenees may deviate from the parallel direction as they severally approach the sea, so to reduce the 5000 stadia—the greatest distance he supposes between the Pyrenees and the Rhine—to the smaller distance of 4300 or 4400 stadia between the mouth of the Rhine and the northern extremity of the Pyrenees. Strabo, in fact, makes the range of the Pyrenees the east side of the Rhine (p. 137), and the coast on the Mediterranean south side of Spain. He knew, however, that the narrowest part of Gallia was between Narbonne and the bay on the Atlantic, which he also calls the Ilcus Sinus,—the bay that is formed between the coasts of France and Spain at the bottom of the Gulf of Biscay. Ptolemy (Strab. p. 188) made the length of this isthmus, as he calls it, less than 30 stadia. Strabo more correctly says that the isthmus is less than 3000, but more than 2000, stadia wide. The length of the Pyrenees in a direct line from Port Vendre to the mouth of the Bidassoa, the lower part of which little river is the boundary between France and Spain, is about 255 miles. The distance between Gallia and Hispania on the west coast, according to Ptolemy (ii. 6. § 10) was Ouessant, a promontory of the Pyrenees. We may certainly fix between Lapurdum, in the Tarbelli (supposed to be the Gironde), and Ouessant or Olarno (Oyarzo, near Fuentebia) in Spain. The Bidassoa is near to Fuentebia. The passes through the eastern and western Pyrenees were used long before the Romans were in the country. Hannibal crossed from Spain into France through the pass at the east end; and Cn. Pompeius went this way to oppose Sertorius in Spain. The Romans afterwards had a road between Narbonne and Barcelona in Spain, by the pass where the Tropæa Pompeii were erected. On the west a road ran from Aquæ Tarbellicæ (Dax), on the Adour, to Pompelo (Pamplona), in Spain. The isthmus may have been at the station of Summus rhenanus, the summit level of the road, between Aquæ Tarbellicæ and Pompelo. Another road led from Aquæ Tarbellicæ, by Aspaluca [ASPALUCA], and over the Summus Pyrenæus, to Casuarugusta (Saragosa) in Spain. In Cæsar's time the passes were used for commercial purposes, for he bought horses in Spain during his Gallic War; but they had obviously been used many centuries before. The coast of Gallia on the Atlantic runs nearly north, with a flat sandy shore, to the great estuary of the Garumna (Garonne), which Strabo (p. 190) aptly calls a lake-sea (Λιμνοθάλασσα). At the extremity of the Garonne the direction of the coast turns a little to the west of north as far as the mouth of the Ligeris (Loire). From the mouth the Loire its general course is about WSW. as far as Uxantis Insula (Ouessant), which is opposite the western termination of the great peninsula between the mouth of the Loire and the bay of Cantabrie. The distance along the coast from the mouth of the Bidassoa to the point of the mainland opposite Ouessant is about 814 English miles.

The west coast of this peninsula, the *Bretagne* of ante-revolutionary France, is broken by singular headlands and deep bays. In the latitude of Ouessant the French coast runs due east to the bottom of the bay of Camacelle, where another peninsula (Cotentin) runs nearly due north into the English Channel and terminates in *Cap de la Hague*. The great bay that lies between the Cotentin and Bretagne contains the islands of Cæsarea (*Jersey*), Sarnia (*Guernsey*), and Riduna (*Alderney*). From *Cap de la Hague* the French coast has a general east direction to the outlet of the Sequana (Seine); and from the outlet of the Seine its general course is NE. to the mouth of the Samara (Somme), and then nearly due north to Iltium Promontorium (*Cap Gris Nez*), the nearest point of the European continent to Britannia. The ancient navigators had observed that the coast of Britain from the *Land's End* runs eastward nearly parallel to the French coast, forming a long channel (*La Manche*, or the Sleeve, as the French aptly call it), wide at the western extremity, and narrowing to the eastern, where it terminates in the *Straits of Dover* or *Pas de Calais*, between *Dover* and *Cap Gris Nez*. The length of this channel measured along the French coast is about 660 miles, which is much greater than the distance measured along the English coast of the channel, for the form of the French coast is much more irregular. The distance along the coast from *Cap Gris Nez* to the mouth of the old Rhine near *Leiden* is about 170 miles. The coast of Gallia from the Iltium to the mouth of the Rhine is flat: it belongs to the great plain of Northern Europe. Strabo supposed the mouths of the Rhine to be opposite to the *North Foreland* in Kent; no very great mistake, for the whole tract from the mouth of the old Rhine at *Leiden* to the estuary of the Scaldia (Schelde) might easily be taken as belonging to the Rhine. Cæsar was told that the Scaldia flowed into the Mosæ, which receives the Vahalis (Waal) from the Rhine (*B. G.* vi. 33). This general parallelism of the NW. coast of France and the south coast of England, led Strabo into a strange mistake. He supposes these two coasts to be exactly of the same length, 4300 or 4400 stadia. He makes the Gallia coast extend from the mouth of the Rhine to the northern promontories of the Pyrenees in Aquitania, and the English coast from Cantium (Kent) to the western extremity of Britannia, which he supposes to be opposite to Aquitania and the Pyrenees (p. 199). Consequently he supposed that the Seine, Loire, and Garonne flowed into the English Channel. He also says that the distance from the (mouths of the) rivers of Gallia to Britain is 320 stadia; a monstrous mistake, but consistent with what he has said. Ptolemy's map of this coast of Gallia is much better than Strabo's delineation. Mela, who probably wrote somewhat later than Strabo, and compiled a very scanty geography, had however a much more correct notion of the Atlantic coast of Gallia than Strabo. After describing the north coast of Spain up to Ouessant, he says: "Then follows the other (Atlantic) side of Gallia, the coast of which at first not projecting at all into the ocean, soon advancing almost as far into the sea as Hispania had receded from it, becomes opposite to the Cantabrian land, and, winding round with a great circuit, turns its shore to the west; then turning to the north, it again spreads out in a long and direct line to the banks of the Rhine"; which is indeed a very fair description. And Mela proves that he under-

stood the form of the coast, by saying, "that from the outlet (exit) of the Garumna commences that side of the land which runs out into the sea, and the coast opposite to the Cantabrian shores." Ptolemy's notion of the coast was also much more correct than Strabo's. Agrippa (Plin. iv. 17) ascertained by measurement the whole west coast of Gallia to be 1800 M. P.; and the general form of the coast must have been learned when the measurements were made. We do not know, however, from what point on the Spanish border he reckoned, nor to what mouth of the Rhine they were carried; but Gosselin, by assuming that they commenced at Oenseo (*Cape Mechicoco*, as he names it), which he takes to be the boundary between Gallia and Hispania, "to the mouth of the Rhine called the passage of the *Vie*," finds that the Roman measures agree with the truth. But this contains an assumption more than many people will allow, which Walckenaer, who adopts Gosselin's opinion, expresses as a fact as follows:—"The measures show that Ptolemy's eastern outlet of the Rhine is that which is known at present under the name of *Fleuve-Stroons*, between the islands of *Friesland* and of *Schelling*, which represents the old mouth of the *Flevum* or of the *Yssel*, before the great inundations of the 13th century converted into a vast lake the ancient *Flevo*." (*Géog. Ancienne, &c. des Gaules*, &c. vol. ii. p. 291.) However, the true length of the French coast from the Pyrenees to the old Rhine shows that the measurement of Agrippa was a fact.

The great mass of the Alps that lies between the basin of the *Po* and the Rhone forms a natural boundary between Italy and France; but this mountain range, which has a general northern course from near the borders of the Mediterranean to the pass of the *Great St. Bernard* (Alps Pennina), covers a great extent of country from west to east, and boundaries can be fixed in such a country only at the heads of the valleys which penetrate the mountain mass on each side. The Romans did not trouble themselves with these mountain tribes till they had subdued the people in the lower country. In a. c. 58, when Caesar passed from Aquileia over the Alps into Ulterior Gallia, he had to fight his way. He crossed the Alpes Cottiae by the pass that leads from *Furcia*; and he remarks that the last place in Cisalpine Gallia is *Ocellum*, *Uxos* or *Ocellio*, in the valley of the *Clusio*. He was attacked by *Centronces*, *Graicocci*, and *Caturiges*, all of them Alpine tribes, and it was on the seventh day from *Ocellum* that he reached the *Vocantii* in the Ulterior Provincia (B. G. i. 10). It is clear that Caesar did not consider these Alpine tribes as belonging either to the province of Citerior or Ulterior Gallia. [ALPES COTTIÆ.]

At *Mont Blanc*, the highest point in the mountains, the axis of the Alps takes a general east and then a N.E. direction towards the snow-covered masses in which the Rhone and the Rhine rise. The road from *Asola*, in the basin of the *Po*, to the *Summus Penninus* (the pass of the *Great St. Bernard*) was used at a very early period. It leads down to *Octodurus* (*Martigny*), where Caesar's troops were attacked in the winter of a. c. 57. *Octodurus* is at the great bend which the Rhone makes after descending the longitudinal valley which lies between the Pennine Alps and their continuation on the south side, and the Bernese Alps, one of the chief Alpine ranges on the north side. The

lower part of this valley, between *Ocellum* and the head of the *Lacus Lemanus* (*Lake of Geneva*), into which the Rhone flows, was occupied by the *Nantuates*. Above *Octodurus* in this long valley were the *Veragri* and the *Seduni*, all Gallic tribes, but neither included in the Provincia by Caesar's description nor in the country of the Helvetii. In fact, this long valley is entirely within the *Ala*. Caesar has not attempted to fix any boundary between the Citerior and Ulterior Provincia from the sea to the sources of the Rhine. He heard of an Alpine people named *Lepontii* (B. G. iv. 18) in the high valley of the Upper Rhine, and he found it convenient to define the eastern limit of *Belgica* and of Gallia, which was his Provincia, by the course of the Rhine from its source to the *German Ocean*. After the *Lepontii* he mentions *Vandues* or *Mantuautes* (*Nantuates* in the common text: corruption), the *Helvetii*, *Sequani*, *Mobacorum*, *Tribocci*, and *Treviri*, as the nations on the Gaul side past which the river flows. It would be well to inquire which of the branches of the Rhine *seu Chur* Caesar meant; but from *Chur* to the *Lake of Constance* he obtained a well-defined boundary in the river. The Rhine within the Alps runs certainly not the limit of the Gallic mountains, who extended along the north face of the Alps to the basin of the Danube. The *Lake of Constance* the course of the Rhine in a general western direction from the outlet of that lake to *Biele*, formed a well-defined boundary of Gallia in this part. Caesar's description shows that he excluded from the country of the Helvetii all the parts to the south of the *Lacus* lake and of the *Bernese Alps*; and he knew that the Rhine where it entered the hill and the last country was the disputed boundary between Germanic and the Celtic nations (B. G. ii. 11). From *Biele* to the outlets of the Rhine the river was the boundary of the two races, though there were Galli east of the Rhine in the *Hercynia foresta*, as the Germans had got to the west side in several places long before Caesar's time.

The Rhine, as Caesar was told (B. G. vi. 16) entered the sea by many outlets, between the great islands were formed. *Ammius Paulus* (xv. p. 193), who took a pleasure in finding fault with Caesar, says that the Rhine had only two mouths. The *Batavorum Insula* was within the limit of Caesar's Gallia. In the time of Augustus, when Drusus made his *Fossa* [*Fossa Drusiana*] and established a navigation between the *Elvis* and the *Flevo* [*Flevo*] and thence to the *Narus*, this river line became a frontier against the Germans, extending from *Aracela* on the Rhine about the canal of Drusus to *Donsburg*, and thence about the *Yssel* to the lakes. This new river frontier seems to be Ptolemy's eastern outlet of the Rhine, the middle outlet being that at *Leiden*, and the western being where the *Leck* now is. (Plin. ii. 9.)

This extensive country lies between 48° 35' to 52° 10' N. lat., if we carry the boundary as far as Lugdunum *Batavorum* (*Leiden*). It is between the meridians of 4° 45' W. of *London* to 9° 40' E. of *London*. The following measurements will give a better notion of its extent. A straight line from the mouth of the *Var* to the SW extremity of *Bretagne* is about 660 miles long. A line drawn from the Spanish frontier on the west side of the Pyrenees to 48° 50' N. lat., 8° 10' E. long. on the Rhine, near *Rastatt*, is about 600 miles long; and a line drawn from this point to

Rhine, through *Paris*, nearly due west to *Bec de Bretagne*, is about 594 miles long. A line the eastern extremity of the Pyrenees to *Paris* 15 miles; and a line from *Paris* to *Arnhem* on Rhine is about 270 miles long. It comprises all France, Belgium, Luxembourg, and a part of the kingdom of the Netherlands, those parts of German states which lie west of the Rhine, the tier part of Switzerland, and the country south of *Leman lake* which belongs to the kingdom of *Urdinia*. The area of France within its present limits is estimated at about 200,000 square miles.

Gallia has the best position of any country in Europe. It has a large coast on the Mediterranean and a larger one on the Atlantic, which give it a communication with all the world. These seas are well stocked with fish. Except the mountains that form boundaries, and a few ranges that cover only a very small part of its surface, it is a plain country with a very large proportion of fertile soil. It produces corn in abundance, wine of the best quality, and, in the southern part of the valley of the Rhone, the olive. Some parts have good pastures, and it is well adapted for the growth of every thing. Though the winters are cold in the north, summer is warm, and fruits generally ripen.

It is not so rich in minerals as Britain, but contains coal, and iron in abundance; also lead, copper, and a great variety of valuable stones. It is rich in mineral springs, and it has brine springs and salt. This wealth was not neglected even in the period before the Roman conquest; but under their dominion it was still more productive. The Gauls of Caesar's time were an ingenious people: they made some progress in the working of metals other than iron, and they were apt learners. Of the nations of Western Europe none has had so much influence on civilisation than the Galli, both before and during the Roman dominion, except the Gauls themselves; and since the establishment of the Franks in Gallia, the country between the Rhine and the Pyrenees, though now containing several small states and parts of states, has still a unity both natural and social which makes it the most important part of the whole world.

The ancient geographers had a better notion of the Gauls than some of the moderns. Strabo says (77), in his book on Gallia: "It is the office of the geographer to describe natural divisions, and names, and also all that is worthy of mention; but the rulers variously dispose of their political arrangements according to circumstances, it is enough for a man to mention it in a summary way. As to the culture, he must leave that to others." The ancient geographers (Pliny, Mela), as well as Strabo, had a right conception of the great natural divisions of Gallia. Pliny and Mela describe Gallia Narbonensis as apart from the rest of Gallia, and they place a description of it between the descriptions of Gaul and Italy, not only because Narbonensis was completely Romanised, but for better reasons. Narbonensis, says Pliny (iii. 4), "is divided from the rest of Gallia on the north side by the mountains Gebenna and Jura, a country in its culture, population, and civility of manners, and in wealth, inferior to no provincia, and in brief Italia rather than a provincia." The range of the Cévennes, as these geographers rightly saw, separates Gaul from the Mediterranean from the Gallia that is bounded by the ocean. [CERVENNA.] Strabo made a mistake about the position of the Cévennes; for

as he supposed it to be at right angles to the Pyrenees, he must also have supposed that it ran from west to east. The basin of the Rhone below *Lyon*, bounded on the west by the Cévennes, and on the east by the Alps, is a country by itself, and in all respects more like Italy than the rest of Gallia. Pliny may have supposed or he may not have supposed that the Jura was a continuation of the Cévennes, which it is not; but the Jura also forms a natural division between Gallia to the east and the west, as Caesar saw. The Jura, as Caesar supposed (*B. G. i. 2*), extends from the north bank of the Rhone at *Fort l'Ecluse* about 20 miles below Geneva to the Rhine; for he estimates the width of the country of the Helvetii at 180 M. P., and this is about the length of the Jura from the Rhone to the junction of the Rhine and Aar. The Jura is a natural boundary between France and Switzerland. Caesar makes the length of the country of the Helvetii 240 M. P., which may be measured from *Fort l'Ecluse* along the Rhone, the *Leman lake*, and the northern base of the snow-covered Bernese Alps to the source of the *Reuss*, and thence along the *Vorderrhein* to *Chur*, the Roman *Curia*, where the Rhone begins to be navigable with rafts. But the longest straight line that can be drawn in Switzerland eastward from *Fort l'Ecluse* is to *Bregenz* on the *Lake of Constance*, and this line agrees very well with Caesar's length. Neither the Valais or Wallis, down which the Rhone flows, as already observed, nor any part of the highest Alpine country, is included in Caesar's Helvetia, though a large part of it is a mountainous country. He says, therefore, quite correctly, "Undique loci natura Helvetii continentur,"—on the west by the Jura, on the south by the Rhone, the *Leman lake*, and the mountains, on the east and the north by the Rhine. The basin of the Upper Rhone is a distinct country from the basin of the Lower Rhone, and from the rest of Switzerland: it is shut in between the Bernese and Pennine Alps as far as a point somewhat lower down than the bend at *Martigny*. The valley widens before it reaches the *Lake of Geneva*, which is a deep cavity in the valley of the Rhone filled with water. The level of this large lake, the lowest part of the valley of the Upper Rhone, is more than 1000 feet above the Mediterranean. The high lands on the west side of the Rhone basin extend northward under various modern names, from the utmost limit that we can assign to the Cévennes [CERVENNA], but with diminished elevation. They extend to the heights of *Langres*, the country of the Gallic Lingones, and form the west limit of the basin of the Arar (*Saône*) which joins the Rhone at *Lyon*. The heights of *Langres* run eastward, and are connected with the Vosges of Caesar (*B. G. iv. 10*), the *Vosges*. This Vosges, which Caesar saw, runs northward from the valley of the *Alduadubis* (*Doubs*), a branch of the *Saône*, and parallel to the Rhine as far as *Bingen* (*Bingen*) on the Rhine. Between the *Vosges* and the Rhine is a long, narrow, and fertile plain, one of the finest parts of Gallia, which the Germans from the other side of the river looked on with a longing eye. The high lands about *Langres* and the neighbouring *Vosges* contain the sources of the *Meuse*, the *Meuse*, the *Seine*, and the *Saône*; and from this elevated, but not mountainous country, a tract of moderate height runs NW., forming the northern boundary of the basins of the *Seine* and the *Somme*, and terminates in the chalk cliffs (*Cap Gris Nez*) which project into the *English Channel* between

Celtes and *Brygones*. All the streams north of this watershed, the *Scheldt*, the *Meuse*, and the western branches of the *Rhine*, belong to the great fluvial system which extends northward along the coast from *Cap Giv* to the mouth of the *Rhine*. The streams which lie south of this watershed, and between it and the *Pyrenees*, flow into the *English Channel* and the *Atlantic*.—the *Sonne*, the *Seine*, the *Loire*, the *Garonne*, and other smaller rivers. Thus four large river-basins west of the *Cévennes* and the *Pyrenees* discharge their waters into the *Atlantic*. The basin of the great central stream, the *Loire*, drains a surface as large as *England*. One large river-basin, the *Rhine*, discharges its waters into the inland sea. The west of the surface of *Gallia* is drained into the *Rhine*, and the *North Sea*. The *Meuse* and part of the course of the *Meuse* lie in a deep but sometimes several hundred feet below the level of the high irregular plains through which they flow; and part of this country, which extends from the *Rhine* at *Cologne* in a westerly direction through *Luxembourg* and the north of *France* into *Belgium*, is the *Ardenne Silva* of *Caesar* (*Ardenne*), to which he gives an extent far beyond the truth. [ARDEENNA.] Nearly the whole of *Gallia* west of a line drawn from *Narbonne* to *Cologne* is a plain country. A man may walk from *Leiden* to the *Auvergne* for 450 miles without meeting with a mountain or a really hilly country. The peninsula of *Brytannia*, which contained the *Armorica Civitates* of *Caesar*, is swags and hills, but not mountains. The centre of *France* is the only mountainous country which is completely within the modern limits, the *Auvergne*, an extensive region of extinct volcanoes, which on the east is connected, so far as elevation of surface makes the connection, with the rugged *Cévennes*. This country of the *Arverni* of *Caesar* contains many lofty summits, some of them 6000 feet high. The *Auvergne* and the highest parts of the *Cévennes* have a short summer, and a long cold winter, during which the mountains are covered with snow, which, when it melts, sends the *Durance* (*Dordogne*), *Oise* (*Loire*), and *Tarn* (*Tarn*), three of the great branches of the *Garonne*; and the heavy rains in the upper valley of the *Loire* and its great branch the *Elver* (*Ailier*) pour down floods into the basin of the *Lower Loire* which fills the river (*Caes. B. G. vii. 35*) and often do great damage.

This outline of the geography of *Gallia*, if it is well understood, will enable a student to comprehend many things in the history of the people which are otherwise unintelligible. He will see that this extensive country has natural limits, two seas, two great mountain ranges, and a large river. It is subdivided into a western and north-western, and into an eastern and south-eastern, part by natural, well-defined boundaries.

Caesar divides this country into four parts. The first is the *Provincia*, afterwards *Narbonensis*, which lies altogether in the basin of the *Rhine*, except that small part of the basin of the *Garonne* between *Toulouse* and *Narbonne* which for political reasons was included in the *Provincia* before *Caesar*'s time. He divides the rest of *Gallia* into three parts, the limits of which he marks in a general way. Between the *Pyrenees* and the *Garonne* he places the *Aquitani*. North of them he places the people whom the Romans called *Galli*, but who called themselves *Celtes* or *Celts*, as he says (*B. G. i. 1*). He makes the *Sequani* and the *Matroni* (*Marne*), its chief branch, the northern limit of these *Celtes*; and though he does not ex-

press himself with great precision, he seems to say that they extended from the coast to the *Alps*. The *Helvetii* were *Celtes*, and also their western neighbours the *Sequani*, who reached to the *Elbe* and north of them the *Lingones*. North of the *Lingones* were the *Leuci*, in the highest part of the basin of the *Meuse* and the *Mosel*; and north of them the *Mediomatrici*, on the *Meuse*, whose position is shown by *Divodurum* (*Metz*): the *Leuci* and *Mediomatrici* were *Belgae*. North of the *Seine* and the *Marne* were the *Belgae*. [BELGAE.] We should notice that there was a great diversity in the language and customs of a people spread over such a country as *Gallia*, if nobody told us so, for the fact is the case even now. But *Caesar*, who observed this diversity, saw also that there was both difference and likeness between the peoples of the great divisions; so that they were not the same, and resembled each other among the peoples of the several divisions; and a nearer relationship among them. The front of the *Aquitani* seems satisfactorily established. They were *Iberians*, probably mixed with *Celts*. To *Celts* form a well-determined division, but they were not confined to this country between the *Garonne* and the *Seine*: they were the natives of the *Provincia*, a fact that *Caesar* of course knew; so that the *Ligurians* also were there; but in his general description he purposely omits the *Provincia*. To *Belgae* properly so called may have been a people, but the *Germani* had long been in this part of *Gaul*, and we must suppose an indistinctness to have taken place between them and some of the native *Celts*, if *Belgae* was their true name.

As an hypothesis which rests on probable proof is better than no opinion at all, if the hypothesis is not accepted as final, and so as to exclude all else, we may take that of *Thierry* (*Histoire de Gaule*) without taking all his reasons and all his facts. The *Gallie* race seems to consist of two great divisions, which we may call *Galli* and *Celts*; and while we admit the relationship of these races shown by their language, religion, and customs, we may also admit that the differences are sufficiently marked to distinguish them. The modern representatives of the *Cumri*, the *Welsh*, have preserved integrity better than any of the *Gallie* races. Of the other peoples in the north of Great Britain, the *Irish*, who belong to the *Gallie* race, the race has no distinct opinion, and is not required to accept any here; nor has he the knowledge that would enable him to form an opinion. The *Belgae*, as *Caesar* calls the *Galli* north of the *Seine*, though he does not properly belong in his time to the inhabitants of that part only of this country, were different from the *Celts*, and they may be the *Cumri*; and the probably, was the race that occupied all the *Ardenne* or the sea-coast as far as the *Loire*. The representatives of these people are the modern *Bretons*, a fact which cannot be denied, whatever question there may be about the origin of their present name and that of their country (*Brytannia*) about settlers from *Britannia* having gone over in the fourth century of our era, or later. Of the two races the *Celts* seem to be superior in intelligence, and we found this opinion on the character of the French nation at the present day; for it is admitted by all competent judges, that though the Romans formed a dominion in *Gaul* which lasted several centuries, though many Germanic nations were settled in it, and though the *Franks* founded the empire now called the French, the great mass of the

ple south of the *Seine* are still of Celtic stock. Franks, who were a small tribe, probably had effect on the Celtic population except in the north than the Italians who, during the Roman domination, settled in all parts of Gallia in a peaceable manner. Whatever may be the exact truth within the limits of these probabilities, the Celtic race, as now lifted, is superior to the Cimbri and to the Germanic ones respects; superior certainly in the striking features of distinguished individuals, inferior probably in solid qualities that fit the bulk of a nation for a life.

The physical type of the Gallic race and its various branches, may be better fixed now than by the doubtful evidence of the ancient authorities; for the type exists and may be examined, and the ancient authorities are vague. To enter on such an investigation without prejudice, a man must get a firm conclusion, which may be got, that, though nineteen centuries have now passed since Caesar subdued the Gauls, the population in a large part of the country is still essentially what it was then. The Romans and the Greeks describe the Galli as big men, and having a white skin, blue eyes, and light-coloured hair; which they even reddened by artificial means. (Plin. *H. N.* xviii. 12.) Their valour, courage, warlike character, fickle temper, and their ingenuity are also recorded. If a man will attentively their history two thousand years ago, he will find the good and the bad, the weak and the strong, part of the Gallic character very much the same that it is now.

All the auto-historical history of the Gallic race, as some writers amuse themselves with proving, must be rejected as fiction. Nothing is said except that the Gallic race has been widely used over Europe, but on what soil it first died its restless activity and versatile talent we do not know. The Galli have been in various parts of Spain, in Italy, probably, as far at least as the Rhine, and east of the Rhine to a limit that cannot fix. Within the historical period they crossed the disputed boundary of the Rhine into Germany, and the Germans have crossed into Gallia; even in our times the French have, by their like talents, reduced Germany to a temporary occupation. But in the long contest the slow and steady German has had the advantage over his more fiery neighbour, and his race occupies extensive tracts on the west side of the Rhine, and he made his footing there in some parts even before Caesar's time.

The historical period of Gallia commences with the settlement of Massilia or Massalia, as the Greeks called it, by the Phœacians of Asia Minor (about 600), on the south coast of Gallia east of the Alps, in a country occupied by Ligurians. Few settlements on a barbarous coast have had a longer or a brilliant history than this ancient city, which subsists, though it does not occupy exactly the same ground. The Greeks brought with them the cultivation of the vine, though the vine is a native of Gallia, and they taught the Galli the use of it. The origin of Gallic civilisation is probably of Greek. The history of this town and its elements requires a separate article. [MASSALIA.] In the article GALATIA the history of a Gallic nation of Delphi and of Asia Minor is briefly given; and the fact of the Galli being in the country north of the Julian and Carnic Alps, in the basin of the Danube, has been stated. It seems that this

people must have been also on the east side of the Gulf of Venice, either mingled with Illyrians, whoever they may be, or among them as a separate race. For Pyrrhus, the adventurous king of Epirus, after his unlucky knight-errantry in Italy, took a body of Galli into his pay, who probably came from the country north of Epirus. Pyrrhus was a captain quite to the taste of the Galli. He led them into Macedonia against Antigonus Gonatas, who had a Gallic army too. Pyrrhus defeated Antigonus, whose Galli, as usual, made a desperate resistance. Having got possession of Argæ, he left a garrison of Galli there, who, as the biographer says, being a nation most greedy of money, plundered the royal sepulchres of the precious metals that they contained, and kicked about the bones of kings. (Paus. i. 11—18; Plut. *Pyrrhus*, c. 26.) His Galli followed Pyrrhus into the Peloponnesus, and were with him at Argos, where he was killed (B. C. 273). We know not if any of them returned.

The Carthaginians, who had settlements on the Spanish coast, and in Sardinia and Sicily, and composed their armies of mercenaries, found employment for some Galli in the First Punic War. These men served them in Sicily; but they were turbulent and dangerous auxiliaries. When the Romans were besieging Eryx, in the west part of Sicily, during this war, the Carthaginians had some Galli in garrison there, who, after failing in an attempt to betray the place and their comrades, went over to the Romans. The Romans afterwards entrusted them with the place, and they pillaged the temple. When the First Punic War was over, the Romans, disgusted with these fellows, put them in vessels, after disarming them, and got them out of Italy. The Epirotes received them, and suffered for their folly in trusting men who could not be trusted. (Polyb. ii. 7.) After the close of the First Punic War the Carthaginians had a dreadful struggle with their own mercenary troops, — Iberians, Ligurians, Galli, and a race of mongrel Greeks. A Gallic chief, Antaratras, made a great figure in this war; for though he had only 2000 men, the remainder of his troops having gone over to the Romans during the siege of Eryx (Polyb. i. 77, 80), he had great influence with the rebels from being able to speak the Punic language, which the long service of these men in the Carthaginian armies had made the common language. The mercenaries were finally destroyed, after a war of three years and four months; a war distinguished above all others, says Polybius, for the cruelty with which it was conducted, and the disregard of all morality.

The history of the Galli in Italia is placed under GALLIA CISPADANA.

The Romans had carried their arms into Africa, Macedonia, Greece, and Asia, before they got a firm footing in Transalpine Gallia. In B. C. 154 the Massaliots came to ask their assistance against the Ligurian Oxybii and Decæates, who were besieging the Greek settlements of Antipolis (*Antibes*) and Nicaea (*Nice*). The senate sent three commissioners, who landed at Aegina, a town of the Oxybii, near Antipolis. The people of Aegina were not willing to receive the Romans; and, a quarrel ensuing, two Roman slaves were killed, and Flaminius, one of the commissioners, escaped with difficulty. The consul Q. Opimius was sent with a force against the Ligurians. He marched from Placentia, across the Apennines, took Aegina, made slaves of the people, and sent those who were the prime movers in the attack on Flaminius in chains to Rome. Opimius,

who was a bold and prudent commander, defeated the Oxybii and Decates in two successive battles. The Ligurians now submitted, with the loss of part of their land, which the consul gave to the Massaliots. (Polyb. xxxii. 7. &c., ed. Bekker.) A second demand of aid from the Massaliots, who were pressed by the neighbouring Ligurian tribe of the Salyes, brought the consul M. Fulvius Flaccus into the country (a. c. 125). Flaccus defeated the Salyes, and even invaded the country of the Vocontii, who lived north of them; though it does not appear that they had given the Romans any provocation. (Liv. Ep. 60.) C. Sextius Calvinus, consul a. c. 124, and afterwards proconsul in Gallia, completed the subjugation of the Salyes, whom he sold (a. c. 123). The Salyes had a king Teutomal, who, with other chiefs, fled for refuge among the Allobroges, a people higher up the Rhone. Calvinus cleared the way for the passage of the Romans from Etruria into Gallia, along the Ligurian coast, by removing all the barbarians to a certain distance from the sea-shore. During a winter residence north of Marseille, near some hot springs, he found the place so pleasant that he chose it as the site of a town; and here the Romans planted the Latin colony of Aquæ Sextiæ (*Aix*), their first settlement north of the Alps (a. c. 122). (Liv. Ep. 61.)

At this time, the Aedui, a people between the *Saône* and the upper course of the *Loire*, were at war with the Allobroges, whose allies were the powerful people of the Arverni, who lived in the mountains of Auvergne. The Romans chose the party of the Aedui, made an alliance with them, and gave the barbarians, as they called them, the grand title of brothers and kinsmen. (Caes. B. G. i. 45, vi. 12.) The consul Cn. Domitius, who now commanded in Gallia (a. c. 122), demanded of the Allobroges the refugee chiefs of the Salyes. Bituit (as Appian calls him, perhaps incorrectly), king of the Allobroges, sent an ambassador to the consul, to deprecate his anger. The ambassador was richly dressed, and had with him a splendid train and a number of fierce dogs. He was accompanied by his bard, who sung the glories of his king, of his nation, and of the ambassador; but the Roman consul was not moved by his music. The Allobroges now crossed the *Jévre*, and found the consul at Vindalium, at the junction of the *Solgas* (*Sorgue*) and the Rhone, a little north of Avignon. The Allobroges were entirely defeated (a. c. 121). The consul for this year, Q. Fabius Maximus, came with large reinforcements, and Cn. Domitius had a command under him. The Roman generals crossed the *Jévre*, and entered the territory of the Allobroges. The Arverni, with their neighbours the Ruteni, were now advancing upon the Romans, who found that they had just crossed the Rhone by a bridge of boats, near the junction of the Rhone and the *Jévre*. (Strab. p. 191.) The king of the Arverni, called Bituit by Livy (Ep. 61), who was at the head of more than 200,000 men, no doubt a greatly exaggerated number, looked with contempt on the Roman legions, whom he considered hardly enough for a dinner for his dogs. But he soon discovered what an enemy he had to deal with. His men were frightened by the elephants in the Roman army (Flor. iii. 2); and in the rout the Arverni fled across the bridge, which broke under their weight, and men and horses were swallowed up in the rapid current of the Rhone. It appears that the Allobroges also were in the battle. King Bituit wandered about the mountains, till Domitius treacherously got him into his hands, and

sent him to Rome. The senate put him in prison at Alba, on the lake Fucinus; and they afterwards put his son Comentiast into their hands. The Arverni, though defeated, were not further molested by the Romans: in fact, it was not easy to enter their country. But the Allobroges were declared Latin subjects; and the Romans continued the march to the east side of the Rhone as far north as Gera, the remotest town of the Allobroges, a Roman province, which they designated simply by the name of Provincia. Fabius, who got the name of Allobrogicus from his victory, and Domitius, reaped their victory by erecting a trophy of marble on the battle-field (Strab. p. 185), or each erected one; and Fabius built two temples. Domitius a worthy ancestor of the emperor Nero, was seen the new province riding on an elephant, with a train of soldiers after him. (Sueton. Nero. c. 2.) Nero and Domitius had a triumph at Rome for their victories, in which king Bituit appeared in his usual-coloured armour and his silver chariot. The Romans had now always a Roman army in it, and a Greek army was always kept employed. The senate Fabius extended the province, west of the Rhine along the *Côtesmeuse*; and the Helvi, Voconces, and Sardenes, at the foot of the Pyrenees, were included in it. They also made an alliance with the Volcae Tectosages, whose chief town was Tolosa (*Toulouse*); and thus they prepared the way for getting into the basin of the Garonne. The Romans had hitherto no passage into Gallia west of the Alps. It was to secure new passage over the Alps, as it seems, that the consul Q. Marcius Rex (a. c. 118) attacked the brave tribe of the Insubric Ligurian people, all of whom perished, either by the sword of their enemies or by their own hand. (Oros. v. 14; Liv. Ep. 62.) A brief notice is preserved of a memorable defeat of the Latins about this time. The Scordisci, a people north of the Sava, a Gallic race, or a mixed race, near the Macedonian frontier, and threatened by the consul C. Porcius Cato crossed into their country, where he and his army perished. These people, however, still annoyed the Northern Gauls, whom they horribly maltreated. It is to this time the like incursions of the Galli that Polybius alludes when he says (ii. 35): "The attack on Galatæa, not only of old, but in my time also, was times, has terrified the Hellenes." We have seen and in many other places, evidence of the existence of a great number of Galli in the country north of Macedonia and Epirus.

The Roman dominion in the Provincia was secured (a. c. 118) by the establishment of *Nova Marcina* (*Narbonne*), a Colonia Romana, on the Atax (*Aude*). The Romans thus connected the road into Spain through the Eastern Pyrenees, and had an easy access to their new friends the Tectosages. They spared no pains to secure and embellish the important position of Narbo, which became a commercial rival to Massilia.

An invasion of barbarians from the east of the Rhone and north of the Danube now threatened the Roman dominion. Livy (Ep. 63) speaks of a nation called Cimbrî who entered the country near the mountains north-east of the Adriatic, the country which the Romans called Noricum. This was the first time that the Romans heard the name of the Cimbrî. (Tacit. Germ. c. 37.) Appian (*de lib. Gall. xiii.*) calls these invaders Teutones. The consul Cn. Papirius Carbo (a. c. 113) crossed the

almost them, and, after coming to terms with the Romans, treacherously attacked them, but he saved part of his army, and narrowly escaped (13). The Cimbri then, according to Apollonius, which is worth very little, retreated to the straits of the Galatææ; but what Galatææ are we do not know. Some few years later Teutobach entered the country of the Belgææ. (B. G. ii. 4.) This seems to have been a tribe of barbarians: Caesar says that the Belgææ are only people of Gallia who prevented the Romans and Teutones from invading their territory, and that the Belgææ were a part of the barbarians, who were left behind to guard the baggage, while the rest moved on to the Rhine. A short notice of the terrible devastations of the barbarians is preserved by Caesar (B. G. vii. 1). They ravaged Celtica; and the people, who were driven up in their towns, were compelled by the Romans to eat one another. From Celtica the invaders moved into the Provincia; and, in B. C. 109, Julius M. Junius Silanus was defeated by them (p. 65). In B. C. 107 L. Cassius Longinus, governor of Transalpine Gallia. The Tigurini of the Helvetian pagus, under the command of Ariovistus, were entering the country of the Allobroges, and within the Provincia, and the consul went to meet them. The Roman commander fell in the battle, and his army was ignominiously compelled to surrender the yoke. The text of Orosius (v. 15), is undoubtedly corrupt, states that Cassius, the Tigurini to the ocean, where he was killed; but the Leman lake was probably the (Liv. Ep. 65.) L. Calpurnius Piso, who died under Cassius, perished in the battle. The grandfather of the Piso whose daughter married (B. G. i. 12.) M. Aemilius Scaurus, as probably of Caepio, the consul of the following year, was defeated about this time by the Romans, and being taken prisoner was killed by a Gaul named Boiorix, because he advised the Cimbri to invade Italy. (Liv. Ep. 67.) In B. C. 105 the consul, Cn. Manlius Maximus, invaded Gallia north of the Alps, with Q. Servilius consul in the preceding year. It was during his consulship, it seems, that he took and sacked Tolosa, the capital of the Volcae Tectosages, who had formed an alliance with the Gaulish barbarians, or showed a disposition to do so. (Cass. Frag. 97.) The consul and his army were encamped separately near the Rhone, the barbarians fell upon them, and stormed the camp after the other. The incredible number of Roman soldiers is said to have perished. (Liv. Ep. 67.) Among the few who escaped was Ariovistus, who saved himself by swimming over the Rhine. After such a victory it is not surprising that the invaders advanced further south. They ravaged the country between the Rhone and the Pyrenees, and entered Spain. But they were driven back by the Celtiberi, and returning they joined the Teutones. The brief notices of the wars generally mention the Cimbri and Teutones together. We have hardly any evidence that they were two people or one. It is generally said that the Teutones must be a Teutonic race, but this name would show; but this is not conclusive. The Cimbri are also supposed by some writers

to be a Germanic people, though the reasons for this supposition are not sufficient. Plutarch (*Marius*, c. 11) has collected some of the opinions about the origin and nationality of these people, and nobody has found out anything better yet. It was a whole nation in movement, with their waggons, dogs, wives, and children. The Romans appointed C. Marius consul for the third time, B. C. 103, to continue the war against the barbarians. Soon after his arrival in the province he made the cut at the outlet of the Rhone the traces of which still remain. [Fossæ Mariana.] Marius had with him L. Cornelius Sulla, as legatus, who defeated the Teutones, who were in arms against the Romans, and took their king Copillus prisoner. (Plut. *Sulla*, c. 4.) The barbarians now divided themselves into two parts. The Cimbri, with the Helvetii Tigurini, crossed Helvetia to make their way into Italy by the Tridentine Alps. The Teutones, and a people with them named Ambrosii, moved on towards the Ligurian country. (Plut. *Mari*, c. 15.) The story of the movements of the barbarians cannot be accepted as true. The fact of a body of barbarians advancing along the Rhone towards Italy, and of another body about the same time entering the basin of the Po from the north-east, is all that we know. C. Marius (B. C. 102.), now consul for the fourth time, entrenched himself near the junction of the Rhone and the Isère, while the countless host of barbarians past him on their way to the south. Marius followed the Teutones, and in a battle near Aquæ Sextiæ destroyed and dispersed them. Their king Teutobochus, a gigantic barbarian, was made prisoner, and afterwards walked in Marius' triumph at Rome. (Florus, iii. 3.) In the next year, C. Marius, consul for the fifth time, with his colleague Lutatius Catulus, defeated the Cimbri in the country north of the Po. The destruction of these invaders kept Northern Gallia quiet for a time, and there was no great movement of the barbarians until B. C. 58.

In the wars which followed Sulla's usurpation, Q. Sertorius, he who escaped from the rout of Caepio's army on the Rhone, maintained in Spain the cause of the Marian faction; and many of this party fled to the Provincia. Some of the Aquitani served under Sertorius in Spain, where they learned the art of war. (B. G. iii. 23.) In B. C. 78 L. Manlius, proconsul of Gallia, was obliged to quit Aquitania with the loss of his baggage; and the legatus, L. Valerius Proconinus, was defeated and killed. (B. G. iii. 30.) In B. C. 76 Cn. Pompeius marched into Spain against Sertorius. He made his way into the Provincia, over the Alps, by a new route to the Romans, and his road to Narbonne was marked by blood. The Galli of the Provincia were in arms against the Romans. Pompeius gave the lands of the Helvii and Volcae Arvernici, who had been the most active in the rising, to the Massilioti. (Cass. B. C. i. 35.) Pompeius left M. Fonteius governor of the Provincia. During his administration the Provincia was in rebellion, and the Galli attacked both Massilia and Narbo, but Fonteius drove them off. He was three years in Gallia, during which time the country was drained of its resources to supply the Roman armies opposed to Sertorius in Spain. Fonteius was also charged with enriching himself by illegal means; and when affairs were more settled, B. C. 69, he was tried at Rome, on charges made by the Allobroges and Volcae, for the offence of *Repetundæ*. He was

defended by Cicero; part of whose oration on this occasion is extant.

Another governor of the Provincia, during a. c. 66, 65, C. Calpurnius Piso (consul a. c. 67), was prosecuted by C. Julius Caesar a. c. 63 on a charge of *repetundae* and other offences. Cicero defended him, and he was acquitted.

In the consulship of Cicero (a. c. 63) Catiline and his desperate associates made proposals to the ambassadors of the Allobroges who were then at Rome. The ambassadors had come to get protection from the senate against the greediness of the Roman governors. They were overwhelmed with debt, both the state and individuals; a common complaint of the provincial subjects of Rome. The Romans levied heavy contributions on those people who had made most resistance, and both communities and individuals felt it. Besides this, the Gallic cultivator seems to have been always in debt. He borrowed money from the Roman negotiators at a high rate, and his profits would be hardly sufficient to pay the interest of the money. The profitable business of feeding sheep and cattle was in the hands of Romans, who probably got the exclusive use of much of the pasture land. As the Allobroges were a conquered people, we may conjecture that their waste lands had been seized by the Roman state, and were covered with the flocks of Romans who paid to the Roman treasury a small sum for the right of pasture. P. Quinctius, for whom Cicero made a speech which is extant, had a good business in Gallia as a flock-master ("Pecunaria res satis ampla," *pro P. Quinctio*, c. 3). A Roman named Umbrenus, who had been a "negotiator" in Gallia, undertook to open the conspiracy of Catiline to the Allobroges, and he promised them great things if their nation would join in the rising. From fear, however, or some other cause, the Allobroges betrayed the conspirators to the consul Cicero. (Sallust, *Cat.* 40; Appian, *B. C.* ii. 4.) It does not appear that the ambassadors got anything for their pains, though they well deserved it. There were signs of insurrection in Southern Italy as well as in Gallia Citerior and Ulterior, and the revelations of the ambassadors saved Rome at least from a civil war.

The Allobroges at home were not satisfied with the mission to Rome, for they rose against the Romans, and ravaged the country about *Narbonne*. Manlius Lenticus, a legatus of the governor C. Pomptinus, narrowly escaped perishing with his army near the *Isère*, having fallen into an ambuscade laid by Catugnat, the commander of the Galli. By sending fresh forces across the Rhone, Pomptinus defeated the Galli near Solonium (perhaps *Sallonas*), and ended the war by taking the place. (Dion Cass. xxxvii. 47; Liv. *Epit.* 103.)

Though the Greek and Roman writers give us no satisfactory information about the Cimbric and Teutonic, they are quite clear about the people whom they call Germani. The Germani were on the east side of the Rhine, opposite to the Helvetii, with whom they were constantly fighting (Caes. *B. G.* i. 1), and to the other Celtic and Belgic peoples who lived along the Rhine from the territories of the Helvetii northward. The Germani had got a footing in the country of the Belgae long before Caesar's time [BELGAE]; and the Tribocci, also a German people, were settled in the plain between the *Voeges* and the Rhine about *Strasbourg*, and consequently within the limits of the Celts. A quarrel between the Aedui, who were east of the

Saône and in the valley of the *Doubs*, brought the Germans into Gallia. One meter in depth on the tolls on the navigation of the *Aar*. (Str. p. 192.) The Sequani made an alliance with Arverni to annoy the Aedui on one side, and the other they brought over the Rhine Arverni, a chief of the Suevi. The Germans came to be hardy men, and soon reduced the Aedui to submission. An Aeduan named Divicius, a Drac, who had the title and rank of *Vergobret*, came into the Provincia, and thence made his way to complain of the tyranny of the Germans (Caes. *B. G.* i. 30.) Cicero (*de Divin.* i. 40) mentions this learned Celt at Rome, and his brother (Caes.) was acquainted with him when he was sent Caesar's legati in the Gallic War. Arverni, after defeating the Aedui, took possession of one part of the lands of his friends the Sequani, as new comers from the other side of the river to be provided with lands, he demanded of the Sequani another third. (*B. G.* i. 31.) This was the cause of affairs in that part of Gallia when (a. c. 60) a mob reached Rome that the Helvetii were preparing to move from their country. (*B. G.* i. 2.) The mob had already suffered from the arms of the Treveri, one of the four Helvetic pagi. This movement of a whole people was an attempt to seize the sovereignty of Gallia, and in the end to eject the Romans. In a. c. 59 C. Julius Caesar was consul; and it happened that during this year Gallia was quiet, owing to Caesar's own contrivance, partly because it was during his consulship that the strange German Ariovistus was honoured with the title of "amicus et auxilium" (*B. G.* i. 35) by the Roman state. Caesar obtained for him "provincia," after the expiration of his consulship, Gallia Cisalpina et Illyricum, with Gallia north of the Alps, in 70 years; and he had a general commission to do what he liked north of the Alps under the pretext of protecting the friends and allies of the Roman people. (*B. G.* i. 35.) Early in a. c. 58 he met that the Helvetii were beginning to move from their country, and the road they were going to take was through the Provincia. Caesar hastily crossed the Alps, and in a few days he was at Geneva.

The conquest of Gallia by Caesar is told in great brevity by himself. His purpose was to describe his military operations, and he tells us little more about Gallia than what strictly belonged to the matter. In one instance (vi. 11-20) he made a digression to speak of the institutions, manners of the people; but he has given a description of the country except his brief introduction (*B. G.* i. 1). All the rest that we learn of the country and the people is told as part of his military operations; and we may learn from the state of Gallia then from the learned sketch of a modern compiler. His war with the Helvetii may be more conveniently spoken of under the heading. [HELVETII.] After driving the Helvetii back to their homes he went against the Ariovistus. His course was to Vesontio (*Besançon*), the capital of the Sequani, on the *Doubs*, the region of which he has well described. From Vesontio the direction of his march is not clearly stated; he reached a large plain, and defeated Ariovistus five miles from the Rhine; for five miles is the reading, not fifty. (Caes. *B. G.* i. 31-34.) The battle was fought in the plain between the *Voeges* and the Rhine, somewhere north of *Bâle*. Nothing was

f Germans in this part of Gallia after the near the Rhine: the news of the defeat pre- others from coming over. Caesar only came he country of the Sequani to drive out the us, but he left his army there for the winter, crossed the mountains into Cisalpine Gallia to his circuits ("conventus agere," *B. G. i. 54*). winter the Belgic nations formed a union to themselves, for they suspected that Caesar attack them after he had reduced the country Celtæ. They were urged to arms by some Celtæ, who did not like to see the Romans ing in their country. Caesar, who gives reasons for the combination of the Belgæ, another; that the great men in Gallia, and who had the means of hiring followers, were omed to usurp royal power whenever they had nce, and, if the Roman dominion were esta- d, they knew this mode of making what their m imitators call a "coup d'état" would not be le (*B. G. ii. 1*). Caesar in his *Commentarii* ons several instances of this kind of usurpa-

His second book contains his history of the with the Belgæ (a. c. 57). The Bemi sub- l from the first. The submission of the ionæ, Bellovacæ, and Ambiani followed. He ed the Nervii and their allies in a great battle e Sabis (*Somère*); and then took the strong- of the Aduatuci, who were the descendants of imbræ and Testoni. (*B. G. ii. 39*.) The sur- of the Aduatuci were sold, and the number ted to Caesar was 53,000. They were pur- d by the mercenaries who of old followed the m camp (*Liv. x. 18*) and followed Caesar's (*B. G. vi. 31*). We do not see how the mer- ces could make anything of their bargain, unless had some escort to assist in conveying the s to the nearest market, which would be the incia; or it may be that the Belgians would no objections to buy a few of these intruders. sale of slaves was one way that Caesar had of g money. After the great battle with the li, P. Crassus with a single legion was sent to Veneti, Unelli, Oesami, Carisoliæ, Sesuvii, rci, and Redones, whom Caesar calls "the mari- states which border on the Ocean." All these le submitted to a mere youth at the head of a ibousand men. The Transalpine Germans also to Caesar to proffer hostages and to do as they bid. The præconsul was in a hurry to visit and Illyricum, and he told the Germans to see him the next summer. We have no ice of the Roman armies having been led north he basin of the Rhine before Caesar's Belgian aign. The rapidity of his movements, his ces, and his savage treatment of those who red, struck terror into the barbarians. He placed seldiers in winter quarters between the Seine the Loire, and south of the Loire, in the territory he Carnutes, Andes, and Turones, and imme- ely went to Italy. (*B. G. ii. 85*.)

Caesar sent a legion and some cavalry under Ser- æ to winter in the country of the Nantuates, agri, and Seduni, who occupied the country from north-eastern boundary of the Allobroges and Leman lake to the highest Alps. They were he great valley called the Vallais, between the nese and the Pennine Alps. Galba placed part his troops in the country of the Nantuates, who e nearest to the lake, and he fixed himself with remainder at Octodurus (*Martigny*). Caesar

says that the purpose of Galba's mission was to clear the pass over the Alps by which the "mer- catores" were accustomed to go at great risk and with the payment of heavy tolls. These "mer- catores" were the enterprising Italian traders who crossed the pass of the *Great St. Bernard* from Cis- alpine Gallia to carry their wares among the Galli. Galba was attacked by the people in his quarters at Octodurus, which he left after driving off the enemy; and, retreating through the country of the Nantuates into the territory of the Allobroges, where he was within the Provincia, he spent the winter there. (*B. G. iii. 7*.)

Caesar was recalled from Italy (a. c. 56) by a rising of the maritime states, whose submission had perhaps only been made to gain time; but the im- mediate provocation was the demand for supplies made on some of them by P. Crassus, who was win- tering somewhere about *Angers* with a legion. The movers of this war were the Veneti, a skillful mari- time people, who had many ships with which they traded to Britain. (*B. G. iii. 8*.) Caesar's cam- paign against these states, and the sea-fight, are one of the most difficult parts of the *Commentarii* to ex- plain [VENETI.] He defeated the fleet of the Veneti; and Q. Titurius entered the country of the Unelli, who submitted. Before the battle Caesar sent P. Crassus into Aquitania with twelve cohorts, to prevent the Aquitani from coming to the aid of the Armoric states. Crassus first defeated the So- states, who lived about the modern *Sos*, between *Auch* and *Bosca*. (*B. G. iii. 21*.) The Vocates and Ta- rusates, who were next attacked, sent for aid from Spain, which is some evidence in confirmation of the relationship of these Aquitani to some of the Spanish peoples. [AQUITANI.] The Spanish auxiliaries whom Caesar names were Cantabri. (*B. G. iii. 26*.) After defeating the Aquitani and their Spanish allies in the wide plains south of the *Gironde*, Crassus re- ceived the submission of the greater part of Aquit- ania; the names of the peoples are mentioned by Caesar. (*B. G. iii. 27*.) The position of several of these tribes can be determined; but the position of others is uncertain.

The summer was near ended, and Caesar had put down all his enemies except the Morini and Menapii, who were in arms. The Morini lived along the channel, from *Gessoriacum* (*Boulogne*) northwards at least as far as *Castellum Morinorum* (*Caesl*). [CASTELLUM MORINORUM.] The enemy fled into the forests and marshes, where the Romans followed them, not without loss. Caesar began to cut a road through the forests, and he had just reached the enemy, when the heavy rains compelled him to re- tire. (*B. G. iii. 29*.) Before taking leave of the Morini he burnt their lands, and burnt all the build- ings that he could reach. He placed his army in quarters between the Seine and the Loire, in the country of the Auleri and Lexovii.

In the next year (a. c. 55) the Usipetes, whom Caesar calls Germani (iv. 1), and the Tenctheri, crossed the Rhine, and fell on the Menapii. These invaders were themselves driven on by more power- ful enemies, the Suevi, whose habits Caesar describes (*B. G. iv. 1*); and he states that the "mercat- res" used to go into their country. Here we have the evidence of the Roman præconsul to the fact of mer- catores crossing the Rhine into Germany before the Roman arms had been carried over the river. It is here assumed that these mercatores were Italians. Caesar determined to stop these German invaders,

who, after living on the Menapii during the winter, had moved south into the territories of the Eburones and the Condrusi, who were dependents of the Treveri. The Germans had got as far south as *Löge*, when Caesar came towards them. He tells us his own story of the treacherous dealing of the Germani with him, but he also shows that he was quite a match for them in cunning. The Germans at last were fallen upon by the Romans at the confluence of the Mosæ and Rhenus ("ad confluentem Mosæ et Rheni," as it is in Caesar's text, iv. 15), where those who escaped the Roman sword were drowned in the river. There is a great difference of opinion about the explanation of this campaign. But the writer still thinks that this river Mosæ is the *Mosel*, and that the Germans were beaten and drowned near *Coblenz*. A little below *Coblenz*, if this explanation is accepted, and between *Coblenz* and *Andernach*, Caesar built a wooden bridge on which he passed over the Rhine to the German side (*B. G.* iv. 17), rather to make a display of Roman power than for any other purposes. He stayed eighteen days in Germany, and returning into Gallia destroyed his bridge (iv. 19). The rest of the summer was occupied with Caesar's first expedition to Britain, the immediate motive for which, he says, was the information that he had of aid being supplied from Britain to the Roman enemies in almost all the Gallic wars. (*B. G.* iv. 20.) The fact may be true or not: he does not say that it was so. He has mentioned one occasion (*B. G.* iii. 9) when the Veneti sent to Britain for aid; but he does not say that it came. What he says (iv. 20) may be fairly interpreted to apply to the wars of the Romans with the Galli before his time, as well as to his own time. Caesar remarks that "few persons" went to Britain except "mercatores," and they were only acquainted with the coast and the parts which were opposite to Gallia. These "mercatores" may have been Italians from the Provincia, and also Galli. One would suppose that in those days nobody would go to Britain except traders, but Caesar's expression of "few persons" is explained by other parts of his work. (*B. G.* ii. 14.) Political refugees used to run away from Gallia to Britain. Caesar sailed from Portus Itius (*Wissant*), and landed about *Deal* on the Kent coast. On his return to the French coast the Morini, whom he had left on good terms, could not resist the temptation of plundering some 300 Romans, who had landed on a different part of the coast from the rest of the troops (iv. 37). But the Morini got nothing by their treachery; and they lost many of their men in the pursuit by the Roman cavalry. Labienus also entered their country, and the Morini submitted: for this autumn had been a dry season, and the Romans were not stopped by the waters. The country of the Menapii, who lived on the Lower Rhine and the Lower Mosæ, was mercilessly ravaged this autumn. The people hid themselves in their thickest forests, while the Romans wasted their hands, cut down the corn, and burnt the buildings. (*B. G.* iv. 38.) Caesar placed all his men in winter quarters within the territory of the Belgæ.

Caesar prepared for his invasion of Britain in a. c. 54 by building a great number of ships in Gallia, but he had to get from Spain the materials for fitting them out. (*B. G.* v. 1.) In this spring he visited the country of the Treveri, who were on the Rhine above and below *Coblenz*, and he settled the disputes between the two factions. These Gallic states were continually distracted by quarrels among the chief

people. Caesar sailed on his second expedition to Britain from Portus Itius, and landed on the same part of the British coast as in his first expedition. (*B. G.* v. 8—23.) On his return he found that the harvest had failed in Gallia, which made it necessary for him to disperse his troops in winter quarters (24). He had various ways of keeping the Gauls quiet. If he found a man who could be useful, as was fit for the place, he would make him a king, as in the case of Tasget, who was a son of high rank among the Carnutes, for his ancestors had held real power. Caesar, finding Tasget useful, restored him to his ancestral rank; but in the third year of his reign he was murdered, and a great number of persons were implicated in the conspiracy. (*B. G.* v. 25.) In this winter the Romans had a great division of the army was cut off in the country of the Eburones; and Q. Cicero, the brother of M. Cicero, had great difficulty in defending his army against the Nervii till Caesar came to his assistance. (*B. G.* v. 38—52.) Caesar spent all this winter in Gallia. Things were in too disturbed a state to permit him leave. The Senones had a king, Carnac, whom Caesar had made them a present of. They were going to put their king to death by a decree of the whole people, or the senate at least (perhaps consilio); but the king, hearing of their intent, escaped to his friend the proconsul. Caesar summoned the senate of the Senones, and the king refused to come. In this winter the Treveri came to the camp of Labienus, who was on their border, but Indutiomarus, the leader of the Treveri, was killed, and the assailants were defeated. (*B. G.* v. 38.)

In a. c. 53, Caesar, expecting fresh troubles in Gallia, increased his forces. (*B. G.* vi. 1.) After checking a rising of the Nervii, he summoned the states of Gallia to assemble in the spring, a practice had been, and all came except the Carnæ, Senones, and Treveri. He does not mention the places to which they were summoned; but he says the meeting to Latetia Parisiorum (Paris), a city to be nearer to the Senones, who soon submitted, also the Carnates. (*B. G.* vi. 4.) His present business now was with the Treveri and Ambiorix, king of the Eburones, who had cut off the Roman troops in the previous winter. The Senones, his friends to Ambiorix, and they had been guilty of the insolence of never having sent ambassadors to Caesar. He entered their country with his three divisions, burnt as usual all that he encountered and carried off many head of cattle and some prisoners. (*B. G.* vi. 6.) This brought them to terms, and the proconsul without delay set off to punish the Treveri, who had got Ambiorix sent among the Germans east of the Rhine. Before Caesar came Labienus had defeated the Treveri, and on his arrival Caesar built a second wooden bridge over the Rhine, a little above the place where he built the first, and went a second time into Germany. (*B. G.* vi. 9.) This second passage of the Rhine was not marked by any great event. The Ubii, a nation on the east bank, who will always appear on the Gallic side, humbly submitted to Caesar, finding that his real enemies on the German side were the Suevi, made inquiries about them. They had retired with all their forces a long way and planted themselves at the place where a first boundless extent commenced. There they were waiting for the Romans, who prudently turned their backs on the Suevi and returned by their known route. Being bent on taking Ambiorix, who had

him so much mischief, Caesar entered the country of the Eburones. He left his heavy baggage with Q. Cicero at Aduatua, the winter quarters of the troops that had been destroyed the before. (*B. G. vi. 33.*) Aduatua seems to be the site of Tongres, and, as Caesar says that it was the middle of the territory of the Eburones, it is their position. [ADUATUA; EBURONIA.]

Caesar was wasting the lands of this unfortunate people, some Germans, Sigambri, crossed the river, and fell on the camp of Q. Cicero. (*B. G. vi.*) Caesar returned to the camp, but the Sigambri did not get safe off with their booty. (*B. G. vi.*) Again he set out to vex the Eburones, as he does it; and we have his own word for what he burnt every building that he could see, off the cattle, and the corn that his men and did not consume was laid by the rains. He is in the country with the belief that, if any of the Eburones had escaped him, they would die of hunger. (*vi. 43.*)

After this merciless devastation Caesar summoned the Aduatui to Durocororum (*Râcine*), and he made inquiry into the conspiracy of the Aduatui and Carnutes. Acco, who had been the cause of the rising, was flogged to death; and his accomplices ran away. (*B. G. vi. 44.*) Caesar put his troops in quarters among the Treviri, the Lingones, a people who had always been quiet, and at Aduatua (*Sens*), the chief town of the Senones. He went into Italy to hold the conventus.

The Galli, hearing of disturbances at Rome this year, thought that Caesar would be detained in Italy. (*B. G. vii. 1.*) and this would be a good opportunity for getting rid of the Romans. The Carnutes, and the Arverni next rose under a brave and skilful commander Vercingetorix, who led up the Galli north and west of the Arverni as far as the ocean. This brought Caesar into the country in the depth of winter. (*B. G. i. 52.*) It was his way through the snows on the *Côte d'Or*, at deep, and came down on the Arverni, who did not expect him by that way. (*B. G. vii. 8.*) But he was in the neighbourhood of Vercingetorix, at the request of the Arverni, advanced to aid from the country of the Bituriges, whom he had brought over to his side. Unless Caesar could collect his scattered forces, he could not make good against Vercingetorix. He resolved to do this, if, without the knowledge of his men, whom he left under the care of Brutus; he went across the river again in the depth of winter to Vienna (*Vienna*) on the Rhone, where he found some newly raised troops of horse, who had been ordered to fight there. From Vienna he travelled day and night to the country of the Lingones, where he had his garrison. Having reached these troops, he summoned the rest of his forces from the country of the Aduatui and the Treviri, and got them all together at the Arverni could hear of his approach. He sent his legions and all his heavy material at *Sens*, and set out towards the country of his allies, the Lingones, between the *Allier* and the *Loire*, whom Vercingetorix was threatening. His march was rapid and terrible. In two days he took Vellaudunum, the chief town of the Senones, and then came right upon the Aduatui (*Orléans*) on the *Loire*, where the Carnutes, at the beginning of the outbreak, had murdered the Roman "negotiators" who were living at *Genabum*. He broke into the town, his men sacked; he left it in flames, and

crossed the *Loire*. (*B. G. vii. 11.*) He was now in the country of the Bituriges (*Berris*). The first town that he took was Noviodunum. He then came on the capital Avaricum (*Bourges*), which was defended by a strong wall, made with great skill. The Galli had a way of building their town walls, which Caesar describes very briefly and very well (*B. G. vii. 23*); this people had made some progress in the art of defending places. The siege was a work of great difficulty, and the sufferings of the Roman soldiers were extreme; for it was winter, and they had to work in the mud, the cold, and in continual rain. The Roman commander tells the end of the affair in a few words (*B. G. vii. 28*): "The soldiers, whose passions were roused by the massacre at Genabum and their own sufferings, spared neither the helpless through age, nor the women, nor the children; out of the whole number, who were about 40,000, only 800, who had hurried out of the place on hearing the shouts of the invading enemy, escaped safe to Vercingetorix."

Caesar found stores in Avaricum, and, the winter being over, he was ready for a regular campaign. But he had first to settle a domestic dispute among the Aduatui. (*B. G. vii. 32.*) Two men had been elected to the chief magistracy, an annual office, and the constitution allowed only one. The whole state was in arms, one party against the other. Caesar summoned the Aduatui to Decetia (*Décise*), an island on the *Loire*, and settled the dispute in favour of one of the men. He exhorted the Aduatui to give him their assistance in the war, with fair promises of what he would do for them after Gallia was completely subdued. The position of the Aduatui, between the *Upper Loire* and the *Saône*, made their alliance most important for the Romans. It was the easiest line of communication between the north part of the Provincia and the basin of the *Seine*. Caesar was still afraid of the Senones and the Parisii, and he sent Labienus with four legions into that country.

[PARISII.] He marched south with six legions, with the intention of taking the hill town of Gergovia, in the country of the Arverni, in the upper part of the basin of the *Allier*. This, his most signal failure in Gallia, is told in another place.

[GERGOVIA.] After his defeat before Gergovia Caesar was in great straits. He moved northwards to join Labienus; but his treacherous friends, the Aduatui, seized Noviodunum (afterwards Nervium, *Noyers*) on the *Loire*, where Caesar had great stores, and the booty that he had got in the Gallic War. (*B. G. vii. 55.*) His military chest also was there. His enemies lined the banks of the *Loire* with troops, and the river being swollen by the melted snows was difficult to pass. He could not think of retreating. It would be a confession that he was beaten. Nor could he attempt to cross the *Côte d'Or*, where the roads were almost impassable; besides, Labienus was on the *Seine*, and he was afraid that he would be cut off. Nothing remained but to cross the river, which he accomplished. He found corn and cattle on the east side, and was joined by Labienus, who was as lucky as himself in escaping from a very dangerous position (*B. G. vii. 57—62*), and getting safe to *Sens*. All Central and Western Gallia was now in arms, and Vercingetorix was chosen commander-in-chief. The Remi and Lingones still stuck to the Roman alliance; and the Treviri, who were kept busy by their German neighbours, sent aid to neither side. Vercingetorix bestirred himself to rouse all the country against the Roman precon-

He pushed on the Gabali, and some of the Arverni against the Helvi, who were within the Provincia; and the Ruteni and Cadurci were sent to ravage the land of the Volcae Arecomici, who were also within the Provincia. (*B. G.* vii. 64.) Caesar, knowing that the enemy was superior in cavalry, and that all the roads into the Provincia and Italy were blocked up, got cavalry from over the Rhine, from some of his German friends there, and light troops who fought among the cavalry after German fashion. The proconsul, however, had an eye to the safety of the Provincia, and he began to move through the borders of the Lingones into the country of the Sequani. He was on his road to the Provincia, with the intention, no doubt, of returning when he had got reinforcements. The occasion was tempting to the Galli. They attacked him on his march, and were defeated. (*B. G.* vii. 67.) The Germans contributed largely to the victory. All the cavalry of Vercingetorix was routed, and he fled to Alesia, a town of the Mandubii. [ALISIA.] The siege of this place and the capture of Vercingetorix put an end to the campaign, the result of which was more unfortunate to the Galli than glorious to Caesar. But a man of less ability and energy would have perished, with all his army.

The eighth book of the Gallic War is not by Caesar, though it is possible that he left some memoranda which have been used by the author. Gallia (*a.c.* 51) was still not quiet. The Bituriges were again preparing to rise, but they were soon checked. The divisions among these Gallic people were more fatal to them than the Roman army. The Carnutes were quiet while Caesar was putting down the Bituriges, and they began to attack them as soon as they had yielded to the Romans. The Bituriges applied to Caesar for protection. It was a hard winter when the Romans again entered the territory of the Carnutes. Caesar sheltered his infantry as well as he could in the ruins of Genabum, and sent out his cavalry to scour the country. The houseless Carnutes had no place of refuge except the forests, which could not protect them against the severity of the season. A large part of them perished, and the rest fled to the neighbouring states. (*B. G.* viii. 5.)

The last great struggle of the Galli was made north of the Seine by the Bellocaci and their allies. This campaign, which is not very well told by the author, contains some difficulties (*B. G.* viii. 7-23), but it is well worth a careful study. These Belgae and their allies showed considerable military skill. They seem to have learned something from their enemy, and the Roman general is said to have acknowledged that their plans were "very judicious, and showed none of the rashness of a barbarous people." (*B. G.* viii. 8.) The defeat of the Bellocaci and their allies was considered by Caesar the end of his Gallic wars. (*B. G.* viii. 24.) The revengeful proconsul had not yet caught Ambiorix, nor forgotten him. He once more entered his country, and did all the mischief that he could, thinking, as the historian says (*B. G.* viii. 24), that if he could not catch Ambiorix, the next best thing for his honour (dignitas) was to treat his country in such a way that his people, if any were left, might hate him so much, for the misfortunes that he had brought on them, as never to let him come among them again.

The last town that Caesar had to besiege was Uxellodunum, the site of which is uncertain. It was a town of the Cadurci, in the basin of the Garonne,

and perhaps on the Oltis (Lot). When Gallia rebelled in *a.c.* 52, Drappes, a Senon, had got together what the historian calls (*B. G.* vii. 36) some men of desperate fortune. He had also induced some to join him, men banished from the various parts of Gallia, and robbers; with this rabble he had won Dumnacus, a leader of the Andes, who was up arms in the country of the Pictones (Poitou). C. Caminius and C. Fabius easily defeated the ruffians as the Romans would call them, near the *Loire*. Drappes escaped from the dreadful slaughter with about two thousand men, and, in company with another adventurer, Lucterius, a Cadurci, he went to the country of the Cadurci. It is worthy of note that the Carnutes were in the battle on the *Loire*. This obstinate people had not yet come to terms with the Romans. They had been cut to pieces driven from their homes and dispersed, and now appeared in arms. But it was the last time. They now submitted to the Roman tyranny, and the Armoric states followed their example. (*B. G.* viii. 31.) The geographical position of the Carnutes and their courage, made them the defence of the states to the west between the Seine and the *Loire*.

Drappes and Lucterius shut themselves up in Uxellodunum, and Caminius began the siege. Caesar, leaving M. Antonius among the Bellocaci, came among the Carnutes, against whom he had a heavy grudge; for the Carnutes were the only rising in *a.c.* 52, which had nearly driven him out of Gallia. He caught Grotus, whom he held with being the author of all the mischief, and put him to death. (*B. G.* viii. 38.) This example was considered sufficient. Nobody else was punished. The reports that he had from Caminius about the resistance of Uxellodunum, irritated Caesar. He despised the rebels, but he thought that he ought to make an example of them. The first fruits of his government had been extended by military years, which commenced from the beginning of *a.c.* 53. It was now *a.c.* 51, and the Galli knew that he had not long to stay; it was necessary, therefore, to show them what they might expect, if they were rebellious. His treatment of the prisoners after the capture of Uxellodunum [UXELLADUNUM] was the most disgraceful part of his history. (*B. G.* viii. 40.)

He now thought that he had finished his work and he had. Gallia remained for centuries a Roman country. Caesar, who had never seen Britain, paid that country a visit, and found it more fertile. After going to Narbo, he spent a few days visiting all the conventus of the Provincia, and settling its affairs. He placed his forces, for the winter, in Belgium, and west of the *Cévennes*; four legions in Belgium, a sign that he still feared that wild people. He only placed two legions east of the *Cévennes*, and they were in the country of the Aedui, a nation that had still great influence over the Gallic people. He spent the winter at Novesium (Arves) in the present department of the *Haute-Savoie*, not a place which an Italian would choose to winter in. But the author (*B. G.* viii. 45) explains this. He wished to conciliate the people north of the Seine. He treated the chiefs with respect, made presents to the chief men, accepted new contributions; and he endeavoured to be satisfied by a mild administration, after he was exhausted by long and bloody wars. After the winter he went into North Italy, a sign that he feared no rising in Gallia. He was received with rejoicings by all the municipalities and cities.

allia Togata. [GALLIA CISPALPINA.] The gates, the roads, and all the places by which he passed were decorated with every device that could be thought of. The whole population, with their children, came out to meet him. Temples and the fora were set out with all the story of a Roman religious festival. The king showed their magnificence, and the poor good will. The Italians of Cisalpine Gallia proud of their governor; for he had tamed the nations north of the Alps, the men who for years had been the terror of Italy. No conqueror ever better deserved such fame as is due to Augustus. The conquest of Gallia is the first exploit that a soldier has ever accomplished.

Caesar returned to Nemetocenna; and, for some time which does not appear, called all his troops to their quarters, and led them to the borders of the province. There he, the Pontifex Maximus of the Romans, the head of the religion of the state, presided the solemn ceremony of a lustration, or purification. Both he and his men had much need of it.

The war was over, the country was quiet; he moved about just enough to keep himself in command of his troops. (B. G. viii. 52.) It was 50, the year before he crossed the Rubicon, that he began to understand how so busy a man could get through an idle summer. The next year he had to do in Italy.

Caesar really makes four divisions of Gallia, but he formally mentions only three, for he excludes the Provincia; nor does he determine the limits of the Provincia, though we can make them accurately enough. Of these four divisions, Gallia, Aquitania, the country of the Celts, and the country of the Belgae, two have been described. [GALLIA CISPALPINA.] The limits of the Provincia are described in that article. [PROVINCIA.] Alpine tribes do not belong to any of these divisions.

Caesar's threefold division of Gallia, excluding the Provincia, was not arbitrarily made by himself; it was a division founded on the geographical character of the country and the national character of the people. We see from his Commentaries that the Gauls knew their own limits well, both on the west of the Aquitani and on the side of the Belgae. Caesar traced the northern boundary of the Celts to the Seine and its great branch the Marne, but he did not mention the boundary from the source of the Marne to the Rhine. He did not go further in this part than the country of the Lingones; it is not his manner to tell us what he did not know or what did not concern his military operations.

However, the boundary of the Celts, from the source of the Marne to the Rhine, may be ascertained well enough for all purposes. [BELGAE.] The natural divisions of Caesar are mentioned by writers as existing divisions, though the political divisions were changed. Mela (iii. 2) makes the boundary of Aquitania, though it was not so in his time; but if we take his division of a division according to races, which he seems to do, it is true. Pliny (H. N. iv. 17) also says Gallia Comata, which is all Gallia except the Provincia, is distributed among three peoples, the boundaries are chiefly marked by rivers: the Scaldia (Schelde) to the Seine in Belgium; the Seine to the Garonne in Celtica; and thence the Pyrenees is Aquitania. This is correct for

Celtica considered as the country of the Celts; but when he adds, "which Celtica is also called Lugdunensis," he makes an error, for Lugdunensis did not extend to the Garonne. But the error is in the form of expression, and it is easy to see how he fell into it.

The following are the nations of Celtica, as Pliny calls the country of the Celts. Caesar does not use the term Celtica. The HELVETII were between the Jura, the Leman lake, and the Rhine. The SEQUANI were west of the Helvetii, and extended to the Saône: they had the valley of the Aïnadubis or Dubis (Doubs). The south part of the country between the Saône and the Rhine, the modern department of Aïn, was occupied by the AMBARRI. The ALLOBROGES, who belonged to the Provincia, had some possessions north of the Rhone, and they would in this part be the neighbours of the Ambarri. The RAURACI, neighbours of the Sequani, were along the west bank of the Rhine: they extended from a point on the river above Bâle to the borders of the TRIBOCI.

The AEDUI were west of the Sequani, and their territory extended westward to the Loire. The MANDUBII on the north were a dependent state of the Aedui. The position of the BRANNOVICI, or BRANNOVII, also dependents of the Aedui, is uncertain. The SEQUANI, or SEBUNIANI, on the west side of the Rhone, were also dependents of the Aedui; the colony of LUGDUNUM (Lyon) was planted in their country.

The ARVERNI were west of the southern part of the territory of the Aedui; and they had as dependent states the GARALI and VELLAVI, or Vellani, on the south-east, and the CADURCI on the south-west.

The RUTENI, south of the Arverni, were in Caesar's time divided into two parts, Ruteni Provinciales (B. G. vii. 7), who belonged to the Provincia; and Ruteni, who belonged to the country of the Celts. The NITIOBRIGES were west of the Ruteni, and on the Garonne. The smaller part of their territory seems to have been south of the river, and they were considered to belong to the Celts, but they may have been a mixed people. (Caes. B. G. vii. 31.) The BITHURIGES VIVISCI, not mentioned by Caesar, were about Bordeaux.

The PETROCORII were north of the Nitobriges, partly in the basin of the Duranus (Dordogne); and north-west of them were the SANTONES, extending along the sea from the estuary of the Garonne to the borders of the PICTONES or Pictavi. The Pictones occupied the country along the sea northwards to the mouth of the Loire, and a considerable distance inland. The position of the LEMOVICES east of the Santones and Pictones, is indicated by that of the town of Limoges, and the extent of their country by the old diocese of Limoges. The BITHURIGES CUSTI, north of the Lemovices, occupied the rest of Celtica south of the Loire. The BOII, who had joined the Helvetii, were settled by Caesar (B. G. i. 28) in the territory of the Aedui. The INSUBRINI, who are placed in the maps on the Upper Loire, north of the Vellavi, are unknown to Gallia history. [GALLIA CISPALPINA.]

The TURONES had territory both north and south of the Loire; and their limits are those of the diocese of Tours. The ANDES or ANDECAVI were west of the Turones, and on the north side of the Loire. The NAMNETES or NANNETES were west of the Andes, on the north side of the Loire. North

of the Nannetes, along the coast, were the VENETI; and, further west, the OSMI or OSMANI occupied the extremity of this peninsula. The CORNORITI, a small people in the territory of the Osmi, are not mentioned by Caesar. The CUNOBOLITAE, one of the Armoricae states, are north of the Veneti and east of the Osmi. The REDONNES are mentioned by Caesar among the Armoricae states: if they really extended to the sea, they could only have had the coast about the bay of St. Michel. The town of *Remes* shows their position in the interior. As to the Biduacii mentioned by Ptolemy, or Viduacii (ii. 8. § 5), see the articles BIDUACENSIS and VIDUACENSIS.

The position of the ANBULLATES, one of the Armoricae states mentioned by Caesar, is unknown. The ABERNACATI are not mentioned by Caesar. The UNELLI, an Armorica state (B. G. vi. 75), occupied the peninsula of Cotentin. The DIABLINTES and CENOMANI were east of the Redones, and north of the Andes. [AULERCI.] A territory adjoining to that of the Cenomani on the west was occupied by the ARVIL, a small people not mentioned by Caesar. The SEMURII (B. G. ii. 34) were neighbours of the Diablintes to the north. Caesar and Ptolemy (ii. 8. § 5) place only the LEXOVII on the coast between the mouth of the Seine and the Unelli; but two small peoples, BAROCASSI and VIDUCASSI, seem to have been comprised within their territory. The position of the EBUROVICES is north of the Cenomani, and on the south side of the Seine.

The CARNUTES were on the middle course of the *Loire*; and they also touched a part of the *Seine*. This position made their territory a central point of union for the Celtic nations, as we see in the history of the Gallic War. The Carnutes began the great rebellion in B. C. 52, and their submission in B. C. 51 was followed by that of the Armoricae states. Their country was also the head-quarters of the Celtic Druids. (B. G. vi. 13.)

The position of the AMBIVARETI, who are mentioned by Caesar as dependents of the Aedui, has hitherto been undetermined. In a note to Long's edition of the Gallic War (vii. 90) reasons are given, which the editor thinks satisfactory, for placing them on the east side of the *Loire*, opposite to the Bituriges Cubi.

The PARISI were part of their territory north of the *Seine*; but still they were a Celtic people. Their chief place was Lutetia (*Paris*). Their neighbours the MELDI were on the *Marne*; and part of their territory was north of this river, which Caesar makes the boundary between the Celts and the Belgae; which, as well as other like instances, shows that when he names the *Garonne*, the *Seine*, and the *Marne*, as boundaries of the Celts, he speaks in general terms, and does not affect perfect accuracy—which, in fact, was impossible. *Paris* was an important position even in Caesar's time,—being on an island, *La Cité*,—and here he held a meeting of the states of Gallia. Under the later empire it became a chief residence. The Meldi on the *Marne* are not the Meldi whom Caesar speaks of.

The SIKONES occupied the basin of the *Seine* and the *Yonne*, above *Paris*,—a nation that sent a colony to Italy, and once captured Rome. Their capital, *Sens*, retains the name of the people, and fixes a central point in their territory. The TRIGASSES were on the main branch of the *Seine*, above the junction of the *Yonne* (*Yonne*): their chief town Augustobona is *Troyes*. The LINGONES were at

the sources of the *Seine* and *Marna*, in the high lands which run east to the *Vesgus*. Caesar does not tell us that they were Celts; this conclusion may be easily derived from Ptolemy and Pliny assigning them to Belgica: true as to the political divisions of the time, the Lingones were a Celtic people, and of those that settled in Italy. No Belgic people came to Alps or invaded Italy: a fact which, among others, proves that, politically and mainly, as was a marked distinction between the Belgae and the Celts.

There is an ambiguity in Caesar's *Carnutes* which is owing to the words *Galli* and *Gallia* having two meanings. All *Gallia* (*omnis Gallia*) was of three parts, one of which the people habitually call themselves *Celtes*, but the Romans called *Galli*. (B. G. i. 1.) When Caesar was in *Gallia*, he often means all *Gallia*; and vice versa. *Galli*, he sometimes means the *Galli* proper only. (B. G. iv. 20.) But his descriptive habits of the *Galli* applies mainly, primarily, to *Celtica*; and in many passages, when he uses the word *Galli*, he means only the inhabitants of the central part south of the *Seine*. A person will read attentively the description of *Galli* (B. G. vi. 13, &c.), he will see that it can apply to the Aquitani, of whom Caesar knew little, and had little to do with; and cannot at all to a very large part of the people which includes in the general term *Belgae*. He uses many of these *Belgae* to be *Germani*, partly mixed. Of the *Mennapi* and *Nervi* he knew. The *Treviri* he considered to be as brutal as his neighbours the *Germani*. (B. G. viii. 21.) The *Morini* have a Celtic name, and were of *Galli*; but they were chiefly hog-feeders and cultivators; they had not the civilisation of the Celtic ground. The *Bellocaci* and the *Belgae* were a warlike race, and they had a name which indicates a certain degree of civility. They were nearer, both in position and character, the Celtic tribes than any other of the *Belgae*, except the *Remi*. It seems probable that the *Armoricae* peoples, the *Veneti* and others, being at that time, were in many respects different from the *Celtes*. Those *Celtes*, whose habits Caesar and the most civilized of the nation, were the *Belgi*, *Sequani*, *Aedui*, *Arverni*, *Carnutes*, *Senones*, their dependents. The *Remi*, though included in Caesar's general term *Belgae*, seem to have been closely connected with their southern neighbours, and in Caesar's time they were the rivals of the *Aedui*. (B. G. vi. 12.)

In a vine-growing country, and one where vine is indigenous, as it is in *Gallia*, the fact that this plant is an indication of greater civilization and general social improvement. Strabo (p. 175) supposes that in his time the vine had not introduced any thing north of the *Cévennes*. In the third century of the Christian era it was cultivated on the slopes along the waters of the *Moselle*. *Gallia* was, in Strabo's time, and even earlier, in cattle and bogs; and it had abundant pasture and good horses, as their large carriages show. The *Galli* would give a large supply of good horse. (B. G. iv. 2.) The southern parts were cleared to a great extent, and cultivated in abundance even north of the *Seine*. *Provincia* was considered by the Romans as Italy in climate and products: and Strabo

. 176) of Gallia generally, that "no part of it remained unproductive, except where there were swamps or forests, and even these parts were inhabited, yet rather on account of the populousness than by reason of the industry of the people; for the men are good breeders and careful mothers, but men are more inclined to war than tilling the land; but now," he says, "they are compelled to till the ground since they have laid down their arms."

There is no doubt that Gallia was a populous country in Caesar's time, populous at least after the measure of antiquity. There were not so many, nor such large towns as there are now; and there may have been a larger surface covered with forest. We may suppose, also, that the lands on the rivers and the low countries were less completely embanked: there would be more swamp and marsh. But the lands were cultivated, and well-inhabited. The woods are abundant. The news of the insurrection Genabum in A.D. 52 was carried into the country of the Arverni, a distance of 160 Roman miles, as Caesar reckons it, between sun-rise and before the fall of the first watch of the evening on a winter's day. (*B. G.* vii. 3.) This passage, which has sometimes been most absurdly explained, is a clear proof that the country was populous. The news was spread on from village to village. Men must have been to carry it; those who received the news ran on fast as they could to the next village, and so on.

In his wars we find that Caesar had few supplies in Italy. He could hardly get much, even from alpine Gallia, except horses. The resources of Provincia helped him greatly; but in many parts of Gallia he got all that he wanted from the country; corn, cattle, hides, and materials for clothing. The Gauls supported him, and even made him rich. The communications seem to have been pretty good in all parts. There were roads; well-known fords at rivers, which imply roads; and wooden bridges, at least. Caesar even mentions a bridge (*G. ii. 5*) over the Aisne (*Aisne*), in the territory of the Remi.

The Galli were acquainted with the use of the alphabet. The Bituriges had skill in mining (*B. G.* vii. 22), which they found useful when the Romans besieged their town Avericum. They worked iron extensively. Some of the Celtic nations coined money; the Sequani, for instance. They may have used this from the Massaliot Greeks and their allies, as well as the use of letters; for they used Greek alphabet. There appears to be no evidence that the Galli ever had any other than the Greek or the Roman alphabet, which are the same. Strabo (*p. 189*) has some remarks on the great natural advantages of Gallia, both for internal and external trade. He says, that it is worth while to observe the adaptation of the country to the rivers and to the sea, both the ocean and the inland sea: "if any one will attentively examine, he will find this is not among the least of the advantages of the country: 'I mean,' he says, 'that the necessities of life are easily interchanged among all, and advantages are made open to all; so that, even such things as these, one may believe that there denote the work of Providence, the parts of the country being placed with respect to one another, by chance might have it, but with wise purpose.'"
The basin of the Atax (*Aude*), on which Narbonne is, is connected with the basin of the Garonne, a fertile country; and the basins of both rivers

are connected with Spain by the passes at the two ends of the Pyrenees. Between the head of the *Saône* and the waters of the *Seine* is a portage of small extent; and there was a navigation down the *Seine* to the sea, and thence an easy voyage to Britain. As the navigation up the Rhone was difficult, some of the goods from the Provincia were taken in carts by an easy land road to the country of the Arverni and the *Upper Loire*, and so carried down to the ocean. There were four sea-routes from Gallia to Britain,—from the country of the Morini, from the *Seine*, from the *Loire*, and from the *Garonne*. These natural advantages of France were not neglected before it became a Roman provincia; but they were used much more afterwards, when the Romans made so many excellent roads in the country. It is a signal example of bad administration in this fine country, that its natural capabilities were neglected for so many centuries, and that till comparatively recent times so little has been done to facilitate the interchange of the necessities of life, and "make these advantages open to all." The political divisions of ancient Gallia would be a reason for the demanding of tolls or duties on goods carried from one country to another; a mode of raising money obvious to the rudest barbarian, and practised by all nations that call themselves civilised. The Galli had river tolls before Caesar's time, and this impeding to commerce existed in France till the great Revolution of 1789, up to which time the map of France and its political divisions preserved many of the great features of a map of Gallia that would fit the time of Caesar. The division of France into departments is one of the great monuments of her revolutionary convulsion. But political divisions cannot all at once erase national character; and France, only a part of Caesar's Gallia, is still a country of many tribes.

The maritime commerce of the south was chiefly in the hands of the Massaliot Greeks, until the Romans came in for their share by settling Narbonne, and finally by reducing all the Greek towns under their dominion. This Massaliot commerce requires a notice by itself. The trade on the Atlantic in Caesar's time seems to have been in the hands of the Armorican states. The course of the tin trade with Britain is described by Diodorus (*v. 32*), and his description may be true for centuries before his time. The traders sailed to the promontory Belerion (*the Land's End*) for the tin which the natives of Britain conveyed to an island, Ictis (*Mount St. Michael*). The merchants took it from Ictis to the French coast, whence it was conveyed on pack-horses to the Rhone, and so down the river.

The social and political condition of the Gallic nation before the Roman conquest would supply materials for a long chapter. Thierry (*Histoire des Gaulois, Deuxième Partie*, chap. i.) has treated this subject at some length, and in an instructive manner, though a careful reader will not accept all the conclusions that he derives from his authorities. The stories that are told of the great ferocity of the Gallic nations may be true only of some of them, and their manners were improving when the Romans came among them. Pausanias (*Strab. p. 198*), who travelled in Gallia in the second century before our era, speaks of practices which probably belonged to some of the northern peoples only. "After battle," he says, "they used to fasten the heads of their enemies to their horses' necks, and when they got home nailed them to their doors." He saw this often,

and at first he found it strange, but habit made him indifferent to it. Posidonius was a Stoic.

There is hardly a vice of which the Galli are not accused by the Greeks and Romans; drunkenness, cruelty, and abominable lust. We may easily guess what the Galli would have said of Caesar and his men, if they had written the history of the conquest. The Italian and Massaliot merchants encouraged the Gallic propensity to drink, just as the white trader now demoralises the Indians of North America. (Diod. v. 26.) The Belgæ had less intercourse with these greedy adventurers (*B. G. i. 1*), and they were less corrupted than the Celtae. The Galli made beer and mead; but they liked wine better, and would drink till they were mad. A Gall would give a boy for a good jar of wine.

The political condition of the Celtae and of all the Gallic nations was miserable. The country was divided into numerous independent states, the most powerful of which were always contending for the supremacy. The weaker states served one or the other of the more powerful states, and paid them tribute. The political system was a tyranny of the rich over the poor; and the religion was a horrible superstition. Two classes of men had the power and the wealth: the noble, as we may call him, and the priest. The poorer sort went for nothing. (*B. G. vi. 13*.) The Celtae had slaves, and many of the poor chose the state of servitude to some noble, instead of freedom, when they became over-loaded with debt, or unable to pay their taxes, or when they were wronged by some powerful neighbour. In servitude the poor Celt would have at least a master to feed him and protect him against other tyrants. These nobles were "equites,"—mounted men,—and each maintained as many dependents as he could, and horses for them. They were always fighting and quarrelling; almost every year till Caesar's arrival. Caesar does not explain how the poorer sort got into debt; nor how the land was divided. The rich had doubtless large tracts. There is no evidence that the poor had any land in full ownership. They were probably in the condition of tenants who paid their rent in kind, or partly in money and partly in kind; and their debts might either arise from arrears of rent, or from borrowing to supply their wants. There is no difficulty in seeing where they might borrow: the towns would contain the traders, and the market would be in the towns. Arms, agricultural implements, and clothing must be bought with corn, cattle, and hogs. The poor cultivator, whether a kind of proprietor or a tenant, would soon find himself in bad plight between his lord, the shopkeeper, and the "mercator," who travelled the country with his cart loaded with the tempting liquor that he could not resist. (Diod. v. 26.) The enormous waste of life in the Gallic domestic quarrels, their foreign expeditions, and in their wars with the Romans, was easily supplied. A poor agricultural nation, with such robust women as the Galli had (Diod. v. 32), is exactly the people to produce soldiers. Among such a people more male children are born than the land requires; and those who are not wanted for the plough, the spade, or to watch the cattle, are only fit to handle the sword. A braver set of men never faced the enemy than the Galli with whom Caesar fought. Most of them were the children of poverty, brought up to suffer and to die. We often read, at earlier periods, of their losing, through intemperance, the fruits of a hard-fought battle; but nothing of this kind appears in the Gallic wars.

The nobles were immensely rich, while the mass of the people was poor. Of their great wealth there is conclusive evidence. Caesar (*B. G. i. 18*) informs us that Dumnorix, an Aeduan, had made a great fortune by farming the tolls and other taxes, so that he was able to maintain a large body of horse. The rich Galli were polygamists, and they had the power of life and death over wife and children. Caesar does not expressly limit this power to the rich; but we may be sure that it was a power which no poor man ever exercised. He customarily of marriage settlement among the rich,—for a man only it can apply,—which shows that the seduction of women of that class was not so bad. If the husband received a portion with his wife, he asked as much from his own fortune. The portion of joint stock was accumulated, and the whole stock with its accumulations, belonged to the wife (*B. G. vi. 19*.) This is like an English custom of entailment, as it is called. It was a good custom for keeping up the wealth of a family and providing for the wife, if she survived. Caesar says nothing of the law of succession among the Galli.

It seems that in Caesar's time things were different. Gallia had gone through many revolutions. Before some instances of the superstition of the Galli, as of the barbarous practices of their religion (*B. G. vi. 15*); and he mentions the Druids and the *magi* as the ruling classes. But we see from the same source: it had evidently declined before the Gauls, the nobles, and the growth of the *magi*, which Gallia then contained; and probably the influence of the Greeks was felt over a large part of the country. Caesar (*B. G. vi. 13*) was the first to import the Druidical system was the growth of Britain into Gallia. He merely tells us that he heard; but he states that in his time the Gauls wished to master thoroughly this mysterious and generally went to school in Britain. It is more likely that some revolution in Gaul had introduced the Druids into Britain, and we must suppose they carried their most learned doctors with them. The Galli were, as the Roman says, "a nation given to superstitions," a circumstance which a conqueror and his officers did not resemble at all. The Gallic Druids had a pontiff; and, as he died, the next in merit (*dignitas*) succeeded. The several were equal, a successor was chosen by the votes of the Druids, or, as it sometimes happened, the title to the office was decided by arms. The young men flocked to the Druids to learn what they had to teach; and the priests, we may suppose, were taken from these pupils. It would be an ambition to get into this sacred class; for the Druids were highly respected. They were priests, and in almost all disputes, public and private. Like the old Roman patricians, they had both religion and law in their hands. The priest did not fight; he paid no taxes. This explains why people were so eager to get their sons into this privileged class (*B. G. vi. 14*.) It was a provision for their pupils learned by heart a vast number of verses, though the Druids were well able to write. As the Greek character for writing their language was in public and private affairs. Here we have evidence that before the Christian era the Gauls had a written language, a circumstance which we fix it; and the practice of committing to memory this long string of verses would have the same effect. Caesar supposes that the verses were not written, to writing, partly to prevent the learning from being

alged,—which implies that other people could do besides the Druids,—and partly to exercise memory. They taught the immortality of the soul and the transmigration into different bodies. They taught their youths also astronomy, and much of the nature of things, and the immortal gods. In the different states we read of a concilium or assembly, variously constituted. One thing the Gauls provided against carefully: there was to be no war on political matters except in the concilium. If a man heard anything by rumour or report that concerned the state, he must open it only to the magistrates, who concealed what they thought fit. I told the people just as much as they thought proper. (*B. G.* vi. 20.) There was no liberty of speech. Caesar speaks of senates among the Gauls (*B. G.* ii. 5); that is, a governing body to which he gives a name which a Roman would understand. He does not explain the constitution of these states, which might not always be the same. The chief of the state seems to have been elective. The chief magistrate of the Aedui, named Vergobretus (*G. I.* 16), was elected for a year, and had "vis et necis in suis potestatem;" which is sometimes understood to mean, that he could do as he liked. It simply means that he was the chief judge. Something of a popular assembly, of a democratic element, appears in some of the states. Usurpations were common things. A man who was rich enough to have a large body of adherents, would seize on power, and keep it as long as he could. In the early period Gallic history kings appear more frequently than Caesar's time; and we read of kings whose fathers had been kings,—which, however, was rather a rare occurrence. A long regular dynasty of princes is not to be traced to the Gauls. Either popular election or a successful rival displaced them. These frequent revolutions filled the country with desperate men, who had nothing to lose, and were always ready for adventure. Exiles, fugitives, and men who had saved their lives by running away, armed in the country. Those who could not find safety in Gallia found a refuge in Britain. The attempt of Thierry (*Histoire des Gaulois*) to explain the early revolutions and constitutions of Gallia, is ingenious, but not satisfactory. A careful perusal of Caesar will give a better notion of the confusion that reigned between the Pyrenees and the Rhine, when the Romans came to settle all disputes and teach the people how to live.

Caesar was assassinated in B.C. 44. Little is said of what he did with Gallia from the time when he left it to the time of his death; but we may be sure that he did not neglect so profitable a conquest. Suetonius says (*Caes.* 25): "All Gallia which was subdued by the Salus Pyrenaica, and the Alps, and the Gebenna, by the rivers Rhine and Rhone, except the allied states and those that had done him service, was reduced to the form of a province, and imposed on the people an annual payment to the amount of quadrantalibus stipendiis nomine." It was not called "tributum" or "vectigal." Ammianus Marcellinus (xv. 11), who wrote in the fourth century of our era, has a passage which has caused much difficulty. He speaks of four divisions after Caesar's conquest, made by him as dictator; but he uses terms that can only be understood by referring to the divisions that existed in his time. He says that Arvernensis contained also Lugdunensis and Vienensis; Aquitania was a second division; the Superior and Inferior Germania and the Belgae were

under two jurisdictions at the same time." (See the Note of H. Valentin.) Walckenaer attempts to explain this passage, and to show that it agrees with what Strabo (p. 177) says: but it is not worth the labour. Both authors are very obscure here; and Ammianus is too uncritical to be trusted for such a matter, even if one were quite sure what he meant.

The conqueror of the Gauls knew the value of the men whom he had conquered. He had formed a legion of Transalpine Galli, to which he gave the Gallic name Alauda; he fitted them out like Roman soldiers, and drilled them after Roman fashion. (Sueton. *Caes.* c. 24.) Finally he made them Roman citizens, which must have taken place after he was dictator. In the Civil War he had Galli in his army,—Aquitania, mountaineers from the border of the Provincia, archers from the Ruteni, and Gallic cavalry, which he had found useful also in his Gallic wars. His last military operation in Gallia was the siege of Massilia [*MASSILIA*], B.C. 49. He afterwards sent, under Ti. Claudius Nero, a supplementary colony to Narbo, and a colony to Arles (*Arles*), both of which are mentioned by Suetonius (*Ti. Caes.* 4), who speaks of other colonies, but he does not mention them. Baeterrae (*Béziers*) may have been one, and Forum Julii (*Fréjus*) another. All these were colonies of old soldiers. Caesar had Galli with him in his campaigns in Greece and Africa; and there were also Galli on the side of the Pompeian party. These war-loving men had never a better commander, for Caesar led them to victory and paid them well. The civil wars of Rome threw a great number of Gallic adventurers on the coasts of the Mediterranean. Juba, the African, had a picked guard of Gallic and Spanish cavalry (*B. C.* ii. 40); and M. Antonius made a present to Cleopatra of some hundreds of these men. Caesar even placed some of his Transalpine friends in the Roman senate,—some of the semibarbarous Galli, as Suetonius calls them (*Caes.* c. 76, 80),—a measure which well deserved the ridicule that attended it.

Dion Cassius (xliii. 51) says that, in the year B.C. 44, Caesar united the government of the Provincia and Hispania Citerior under M. Aemilius Lepidus. Hirtius had Belgica, and L. Munatius Plancus had Celtica. In B.C. 43, the year after Caesar's death, Lepidus still held his provinces. L. Munatius Plancus, who was also in Gallia, founded the colony of Augusta Rauracorum (*August*), in Switzerland, and Lugdunum (*Lyons*), at the confluence of the Rhone and Saône, which soon became one of the first cities of Transalpine Gallia (Dion *Caes.* xlii. 50); but the colony of Augusta Rauracorum perhaps was not completely settled till the time of Augustus, as we may infer from the name.

The final settlement of Gallia was the work of Octavianus Caesar, afterwards the emperor Augustus. His success in administering the Roman empire is due to his great abilities and to the name that he bore. His able assistant was M. Vipsanius Agrippa, who led his troops from Aquitania, which he found in a state of insurrection (Appian, *B. C.* v. 92), to the banks of the Lower Rhine, B.C. 37. He was the second Roman commander who crossed this river into Germany. The Ubii, a nation already well known to the Romans, had crossed the Rhine into Gallia, and Agrippa permitted them to settle there. (Tac. *Ann.* xii. 27; Strab. p. 194.) The Oppidum Ubiorum afterwards became the Roman colony Agrippinensis [*COLONIA AGRIPPINENSIS*]. Probably about this time the Tangri, another German tribe,

were allowed to occupy the country from which the Eburones had perished. Agrippa seems to have established the policy of planting German tribes on the west bank of the Rhine,—nations that were driven by their countrymen from the other side of the river. The true German hated and despised the men who shut themselves up within walls; and the Gallicised German who enjoyed his possessions on the west bank of the Rhine, was ready to defend them against his less civilised brothers.

The disputes of Octavianus Caesar with M. Antonius prevented him from directing all his attention to the Gallia. For some years the country was in a disturbed state. The Treviri were reduced to obedience by Nonius Gallus. C. Carinas defeated the Morini, and drove back the Suevi, who had crossed the Rhine. (Dion Cass. li. 20, 21.) The Aquitani, the last people who contended in arms, were subdued by M. Valerius Messalla, A.C. 28. In A.C. 27, nearly a quarter of a century after Caesar ended his campaigns, and when Octavianus, now Augustus, had become master of the Roman world, Gallia Comata was definitively organised. Augustus, who took into his own hands the administration of the most important provinces, of those which required the largest military force, went to Narbonne in A.C. 27. From this time we may date the regular administrative division of Gallia into four parts; but Augustus made very little change. The Provincia received the name of Narbonensis, from the Roman town of Narbo; but its limits were not altered. Aquitania retained its name; but it was extended to the Loire, and consequently comprised a large part of Celtica. [AQUITANIA.] The rest of Celtica received the name of Lugdunensis, from the new settlement of Lugdunum. The remainder of Gallia was Belgica. (Strab. p. 177.)

The organisation of the provincia of Narbonensis was the first labour of Augustus. During the Civil Wars it had been hostile to the party of Caesar; and particularly Masalia and its dependencies. [PROVINCIA.] The policy of the emperor was to destroy the nationality of the Galli, to confound the old divisions, and to stamp a Roman character on the country. From Lugdunum, the capital of one of the new divisions, Agrippa made four great roads (Strab. p. 208): one over the Cévennes to the Saonnes, at the mouth of the Gironde, and into Aquitania; a second to the Rhine; a third to the Ocean, in the country of the Bellocraci and the Ambiani, the termination of which would be at Bononia (Boulogne); and a fourth into Narbonensis and the Massaliot coast. Lugdunum was in fact the centre of Gallia, a kind of acropolis; and in the history of modern France its position has always been of the greatest importance. It was on the high road from North Italy into Gallia Transalpina and to the Ocean: for a carriage road led from Augusta Praetoria (Aoste), over the Alps, to Lugdunum; and another, steep and short, from the same town, over the Pennine Alps, into the basin of the Lemman lake, and thence to Lugdunum. This road over the Pennine Alps also passed to the Rhone or the Lemman lake, after crossing which the traveller proceeded into the plain country of the Helvetii, whence there was a road over the Jura into the country of the Sequani and the Lingones. In the country of the Lingones the road divided; one branch led to the Ocean, and the other to the Rhone. Agrippa made a measurement of the whole ocean coast of Gallia, and of the coast of Narbonensis.

To the time of Augustus we may safely write the Roman names of many of the Gallie towns. Caesar probably began the work, as we may see from the name Julia, which appears in several places. Juliomagus (*Anger*), for instance, was a site the Caesar had visited. Gergovia, in the country of the Arverni, where Caesar was defeated, but is not; and the neighbouring city of Augustonemetra took its place. The capital of the Sequani, *Swintum*, became *Augusta Suessiona*; and the capital of the barbarous Treviri, whose Gallie name is unknown, became *Augusta Treverorum*. Bonna, the capital of the Aedui, received the name of *Augustodunum*. Some of the old states were put to a class of *Fœderati*; others were *Liberti*, as the *Sigisani*. (Plin. *H.N.* iv. 18.) The *Lingones* were the *Berni*, two people that had always been friendly to Caesar in his Gallie wars, are mentioned by Plin. (iv. 17) among the *Fœderati*. The *Ausi* or *Aquitania* had the *Latinitas*. [AUSCI.] The *Libertine* civitas was sometimes conferred on families for their merit, that is, their services to the Romans.

Augustus made a census of the free Gallie (Liv. *Epit.* 134; Dion Cass. lvi. 22) at the time when he visited Narbonne. The object of the census was taxation, for which purpose a register was made of the people and of all their properties.

The Romanising of Gallia under Augustus was rapid, and the measures adopted for this purpose were judicious. Schools were established in the chief towns of the Provincia; and Tacitus mentions *Augustodunum*, the chief town of the *Ausi*, as a great school in the time of Tiberius (Ann. iii. 40.) The Latin language took root in Gallia, and also Roman law; and both exist to the present day. The religion of the Gallie was an obstacle to Roman civilisation; but the Emperors were too prudent to attack the religion of a nation openly. A kind of mixture of Gallie and Roman religion grew up in many of the towns, and temples to Roman deities were built in all the places where the Romans settled. Some curious proof is given of the blending of the two religions. On the site where the venerable cathedral of Notre Dame at Paris now stands, on the ancient island of *Île de la Cité* once stood a temple whose sculptures indicate a blending of the Roman and the Gallie superstitions. But among the people of the country the old religion maintained its ground, and it would be very difficult to say that all traces of it have entirely disappeared. The importance of pacifying and organising the Gallies explains why the present emperor did not attack Britain. He was busy in Gallia, and the invasion of Britain was not a light matter. Augustus had also a decent excuse for the Britons, it is said, sent him a *pacis ensis*. He made a second visit to Gallia in A.C. 16 to settle the disturbance that had risen on account of the census (Liv. *Epit.* 137) and the tyranny of C. Licinius his procurator (Dion Cass. Ev. 21). From the step-son of Augustus, completed the union of the Gallies, and he secured the defence of the Rhenish frontier by building numerous forts, first along the left bank of the river. The last *limes* was along the west side of the Rhine, from Lugdunum Batavorum southward, above the numerous positions along this route, and indicating the origin of many modern towns. In the time of Tiberius this bank of the river (Tacit. Ann. i. 11) was guarded by eight legions, a force almost equal

that which protected all the other frontiers of thepire.

Pliny (iv. 17) and Ptolemy (ii. 9) include theuci, Lingones, Sequani, and Helvetii in Belgica, which was true for their time; but it is not known when this change was made. The commander in Belgica and on the Rhénish frontier had not only Belgica of Augustus under him, but the four peoples which have just been mentioned. Thus Belgica was a second time reduced in its extent, the reduction being that made by Augustus. But insular Belgica still consisted of four great divisions,—Narbonensis, Aquitania, Celtica, and Belgica. These are the divisions in the geography of Ptolemy. He places in Belgica, or, as he calls it, *Καλαρία Βελγική*, two subdivisions,—Germania Interior (*ἡ ἑστὴ*), and Germania Superior (*ἡ ἀνω*). Germania Inferior extended along the Rhine to the sea to the river Oberrhein; but we do not know what river Ptolemy means. The southern limit, however, is fixed by the towns that he mentions. Moguntiacum (*Mosae*) is the furthest town to the south. From the Oberrhein southward he enumerates, in Germania Superior, the Nemetes, Vanniones, Tribocci, and Rauraci. The Tribocci were in the Gallic side in Caesar's time; the other three tribes came over afterwards. The most southern town in Ptolemy's Germania Superior was Augusta Stradunorum (*August*), a little higher up the Rhine than Basilea (*Basle*). The Germaniae, in fact, were ruled by transplanted Germanic peoples, who were under a military government. This will explain Pliny, when he says that Belgica extended from the *Schelde* to the *Seine*; he means that the part between the *Schelde* and the Rhine was occupied by Germanic peoples. The establishment of the Germaniae belongs to the time of Augustus. They are mentioned by Tacitus (*Ann.* iii. 41, iv. 73); at Dion Cassius (lxxi. 12, lv. 23) assigns the formation of the Germaniae to Augustus. We learn from Tacitus that Drusus and Germanicus had the command both of Belgica and the Germaniae. At a later period (*Ann.* xiii. 53) he speaks of Aelius Iulius, as legatus of Belgica, and of L. Vetus, commanding in the Germania Superior. Vetus (A. D. 59) wished to join the *Saône* and the *Mosel* by canal, in order that there might be a water communication between the Mediterranean and the North Sea, up the Rhine and the *Saône*, and down the *Mosel* and the Rhine. Gracilis would not let Vetus bring his legions into his province of Belgica; and the canal was not made. The Germaniae had at this time a distinct administration; but his division existed, as it appears from other passages, even in the time of Tiberius.

Three Alpine provinces are mentioned. On the authority of Dion Cassius (liv. 24), it is said that Augustus formed the Alpes Maritimae into a province. In A. D. 63 Nero certainly gave them to the Latins or Juv. Latii (Tacit. *Ann.* xv. 32); and in A. D. 69 they formed a province, for they were then governed by a procurator (Tacit. *Hist.* i. 12).

The Alpes Cottiae formed a kingdom under Cottius, an Alpine chief, until the time of Nero, who made this country into a province. (Sueton. *Nero*, c. 18.) It consisted of fourteen communities, and occupied a tract on both sides of the Alps. The chief place was Segusio (*Susa*) on the Italian side.

The Alpes Penninae are mentioned as a province under the later Empire.

In the Geography of Ptolemy all these parts of the Alps are included in Italy. They were not united to Gallia until after the time of Constantine, as some modern writers maintain.

At the very commencement of the administration of Tiberius, the successor of Augustus, Gallia gave a sign of what might be expected from the legions of the Rhine, who were then distributed in two camps, an upper and a lower. Germanicus, the nephew of Tiberius, was busied with the census of the Galliae when the news arrived of the death of Augustus (*Tac. Ann.* i. 31.). The soldiers on the Rhine were dissatisfied; they broke out into mutiny, and Germanicus with great difficulty reduced them to obedience. Some of them would have had him assume the imperial power, the first indication that is mentioned of the legions assuming to name a successor to the power of Augustus. In A. D. 21 there was a rising in Gallia headed by Julius Florus among the Treviri, and Julius Sacrovir among the Aedui, those brothers of the Roman people, who were their most uncertain friends. (*Tac. Ann.* iii. 40.) Both these men were Galli of noble rank, and Roman citizens, a personal distinction that had been conferred on some of their ancestors, after Roman fashion, for their services, which means their fidelity to Roman interests. The taxation, the heavy rate of interest with which they were loaded, and the tyranny of their governors, were the alleged causes of this rebellion of the Galli. Both communities and individuals, under Roman dominion, were always complaining of debt. We do not know what particular contributions oppressed the Gallic states; but it seems probable that the great works undertaken by the towns, probably by the order of the governors, may have been one cause of debt. Temples and other public buildings rose up all over the country, and must have cost immense sums. Works of more direct public utility also, such as bridges, roads, and aqueducts, of which there are so many traces in France, could not have been accomplished without a very large expenditure. The Romans embellished and improved the country, but the people paid dear for it. Gallia not only had to supply all its own expenditure, but to furnish contributions to the empire. This rising, which, if the beginning had been more successful, might have ended in a general rebellion, had no results. The Andecavi, and Turoni or Turones, on the *Loire*, who were the first to begin, were soon put down. Florus did not succeed in stirring up the Treviri, though he made a beginning in true Gallic style by murdering some Roman "negotiores;" these men of money, who settled themselves in every place where gain was to be got. A body of debtors and clients, as they are called,—needy dependants,—fled into the *Ardennes*, a country which in some parts, even at the present day, is no bad place of refuge. Another Julius, named Indus, also a Trevir, and an enemy of Florus, helped to put down the rising, which ended by Florus killing himself. Among the Aedui the matter was more serious. Sacrovir was defeated by the Roman commander C. Silius, near Augustodunum, in a pitched battle. He retired to his villa with his most faithful adherents, and there he died by his own hands. His men killed one another; and the house, which they had set on fire, consumed them all. This is a sample of Gallic desperation, which is a part of the national character.

Caius Caesar, named Caligula, the successor of Tiberius, went into Gallia, but he did nothing except exhibit his madness and brutality at Lugdunum.

His uncle Claudius, who succeeded Caius, was born at Lugdunum, on the day in which the altar at Lugdunum was dedicated to Augustus. (Sueton. *Claud.* c. 2.) This learned pedant and imperial fool wished to extirpate the old Gallic religion, and he commenced a furious persecution of the Druids. His biographer (Sueton. *Claud.* c. 25) says that he completely abolished the religion of the Druids. Augustus had gone no further than to forbid Roman citizens embracing this superstition. Pliny ascribes the extirpation of Druidism to Tiberius Caesar; but whatever these emperors may have intended to do, they did not succeed. Claudius was the first Roman emperor who set foot in Britain. Aulus Plautius, his general, was already there, and engaged in active warfare. The emperor landed at Mamilla, whence he went by land to Gesoriacum, afterwards Bononia (*Boulogne*), and from *Boulogne* he crossed the straits. *Boulogne* became from this time a Roman port, and the usual place of embarkation for Britain. Claudius crossed the Thames with his army, and took Camalodunum, the town of king Cunobelin. He was only sixteen days in Britain, and on his return he had a triumph for the victories which his general had gained. (Dion Cass. lx. 19-23.) It was probably when Claudius was in Gallia that the chief persons (primores) of Gallia Comata, "having," as Tacitus says (*Ann.* xi. 23) "long ago had treaties with Rome (foedera) and the Roman civitas, claimed the privilege of obtaining the honores at Rome." This passage of Tacitus has sometimes been misunderstood. The "civitas" had not been given to any of the states of Gallia Comata; but some of the chiefs had obtained the Roman civitas, as we have seen in the examples of Florus and Sacrovir. But it appears from this passage, that it was not the complete civitas, for they had not access to the high offices at Rome and the senate; and yet the Roman "civitas" implies both the suffragium and the honores. The "suffragium" was indeed nothing now; and the "honores" were only a name; but it was something for a Gaul to have the title of praetor and consul, and a seat in the Roman senate. Claudius made a speech to the senate, which is a singular mixture of pedantry and good sense. He supported the claim of the Gallic chiefs by the universal practice of Rome of admitting foreigners into the senatorial body; and the first instance that he mentions was that of his Sabine ancestor, Claudus, the progenitor of the Claudia gens. He observed that the Galli were already mingled with the Romans by sameness of manners, arts, and marriage; and he argued that it was better they should bring their gold and wealth to Rome than keep it to themselves. The wealthy Gallic nobles often visited Rome, and some of them resided there. The emperor thought it better to attract to Rome the rich men of the provinces than to keep them away. A senatus consultum followed the speech of the princeps; and "the Aedui were the first who obtained admission to the senate in the city" (senatorum in urbe jus). "Thus," adds Tacitus, "was granted in respect of their ancient foedus, and because they were the only Gallic people that had the title of fraternity with the Roman people" (A.D. 48). It is not said if other Gallic peoples, after the Aedui, obtained access to the senate. Probably we may conclude that they became admissible. But this was purely a personal distinction, conferred at the pleasure of the emperor on such rich Galli as chose to reside in Rome.

The Provincia, the first part of Gallia in which

the Romans fixed themselves, became, under the Empire, completely Italian in language, in manners, and in civility; and the parts of Gallia Comata nearest to it soon showed the effects of the proximity. The younger Pliny (*Ep.* ix. 11) says that there were bookellers at Lugdunum in his time, and he was glad to hear that they sold his book. The language and literature of Rome soon extended beyond the limits of the Narbonensis; for Latin was the language of administration, and of the numerous "negotiores" and "mercatores" who covered the country. It was also the language of most of the legionary soldiers. The great nobles learnt it as a matter of course; for their ambition was to live in Rome, and intrigue in public affairs. Julius Africanus, a Santon, was involved in the ruin of Sejanus at Rome (*Tac. Ann.* vi. 7); and Valerius Asiaticus, twice consul, and a man who claimed the merit of having planned the death of Caligula, was a native of Vienna (Vienna) on the Rhine; but whether it was of pure Roman blood, for Vienna was a colony, or Gallic, does not appear. (*Tac. Ann.* xi. 1.)

From Gallia came the blow which struck down the emperor Nero. C. Julius Vindex, the governor of Lugdunensis, an Aquitanian by descent, and a Roman senator through his father, hated Nero, whose infamous debaucheries he had been victim of at Rome. He stirred up the Galli of his province (A.D. 68) to insurrection, not against the Romans, but against a sanguinary tyrant whom he despised. The conspirators fixed on Ser. Sulpicius Galba, then governor of Hispania Tarraconensis, as the successor of Nero, the first example of a Roman emperor being named on a foreign soil. Galba hesitated, and with good cause; for the legions of Gallia had the power in their hands, and they were divided. Lugdunum was the only large city that remained faithful to Nero (*Tac. Hist.* i. 51), who had given 4,000,000 sesterces to restore it when it was burnt (*Tac. Ann.* xvi. 13); but its rival and neighbour, Vienna, was on Galba's side. The legions of the Rhine had not yet declared themselves, and the states in their neighbourhood waited for the decision of the troops. Verginius Rufus, who commanded in the Upper Germania, felt or affected respect for the Roman senate, and would not support an emperor made by insurgents. He entered the country of the Sequani, who had declared for Galba, and had sent to Vesontio (*Besançon*). Vindex, with the firm that he had collected, hurried to defend the place, although the two generals had an interview, and were supposed to have come to terms, their men fell in blows, and the army of Vindex was routed. Vindex ended his life by his own sword.

Galba had now declared himself, and advanced into the Narbonensis; Rufus, in the mean time, kept his men in suspense. The news of the death of Nero decided the fortune of Galba. The messengers from the Roman senate met him at Narbonne, and urged him to hasten to Rome, where he was eagerly expected. (*Plut. Galba*, c. 11.) The new emperor belied the hopes that were formed of his moderation and prudence. He punished the Gallic peoples which had not declared for him; he deprived some of their territory, imposed on them heavier taxes, and even destroyed their fortifications. (*Tac. Hist.* i. 8. Sueton. *Galba*, c. 12.) Plutarch (*Galba*, c. 18) speaks of the Gallic partisans of Vindex demanding the "civitas," and Tacitus (*Hist.* i. 8) has the same; but, whatever the historians mean by this civitas, it was a name and nothing more. When Tacitus adds,

re was a diminution of taxation, we understand what he means. The troops on the Rhine chose a new emperor. Galba had appointed a man to command in the Lower Germania, in Fonteius Capito, whom his officers murdered. He was more contemptible than Galba, but he was enough to gain the affection of his men, and he was saluted emperor in the Roman colony of *Colonia* in January, A. D. 69. Thus he was an emperor from the banks of the Rhine, receiving one from Spain. In fact, it had been so at the same time. Galba was murdered at *Colonia* before the end of the month in which Vitellius was proclaimed; and another emperor, Otho, had been proclaimed and died before Vitellius crossed the Alps. The eastern part of Gallia suffered from the march of Vitellius' troops towards the Rhine. They went in two divisions under his generals and Cæcina; the last emperor followed after. As he was passing through Gallia, a Boian, one of the meaner sort (Tacitus is ashamed to mention so low a fellow, *Hist. ii.*), assumed the title of "Vindicator of the Gallias." He got about eight thousand men together and was gaining ground in the nearest cantons, when this honoured state and the elephants who had been brought up at Augustus, with the help of a few cohorts from Vitellius, defeated the fanatical rout. Maric was thrown to death, and because he was not torn, the stolid considered him invulnerable; but Vitellius, in the present, broke the charm by ordering the emperor to be put to death. The story is significant of popular ignorance; but a parallel may be found in our own days.

Vitellius had another rival almost before half the year was over. Vespasian was proclaimed emperor at *Andria* on the first of July, A. D. 69; and twelve months passed from the time when he was proclaimed at *Colonia* to his ignominious death at Rome. One of the men who mainly placed Vespasian on the imperial throne, the active of Tolosa in the Narbonensis, Antonius

Agrippa, the contest between the partisans of Vitellius and Vespasian an insurrection broke out in the most formidable since the time when reduced this country to obedience. It began in the swamps of Holland. Claudius Civilis, of a Batavian family, had served in the Roman army from his youth, and had the rank of a Roman.

Both he and his brother Paulus had fallen under the suspicion of Fonteius Capito, the governor of Lower Germania. Paulus was put to death under the order of Capito, and Claudius was given up to the emperor who put him in prison. Galba set him at liberty and sent him back to the Germanias. Civilis decided to take the side of Vespasian when he reached the Rhine of the east having declared that his real object was to establish the independence of his country, and to get power himself. At that time he drove the Roman troops out of the *Batavorum*, and besieged two legions in *Veterna* [CASTRUM] near the Rhine. (Tac. *22.*) The success of Civilis brought him the Germanias and the Gallias; and delivered the Roman from oppression was now talked of. The Batavians paid no "tributum" or tax to the Romans; and an inscription preserves record of their being honoured with the title of (*fratres*), as the *Aedui* of old had been. But

Civilis affected to take up arms against their common tyrants, and the Galli were invited to assist in expelling them. When the news of the death of Vitellius reached the Gallias and the Germanias (Tac. *Hist. iv. 54.*), the war against the Romans was carried on by Civilis with new vigour. He did not affect any longer to be on the side of Vespasian. He was fighting against the power of Rome. The burning of the Roman capital in the contest between the partisans of Vitellius and Vespasian, seemed to the Galli an omen of the end of the Roman empire. The Druids declared that this conflagration was a sign of the wrath of heaven, and that the dominion of the world was given to the Transalpine nations. The Druids were not wrong: they only mistook the time. The Roman camp on the Rhine was full of discord. Hordeneus Flaccus, an old and feeble commander, a partisan of Vespasian, was murdered by his own men. (Tac. *Hist. iv. 36.*) Upon this message passed between Civilis and Classicus, a Trevir, who commanded a body of cavalry of the Treviri. Classicus was of royal descent, and he boasted rather of his ancestors' hostility to Rome than of their alliance. Two other men joined them; Julius Tutor, a Trevir, and Julius Sabinus, a Lingon. Tutor was set over a part of the banks of the Rhine by Vitellius. Sabinus, a vain man, was puffed up by a false conceit of a Roman descent; he gave it out that one of his female ancestors had an adulterous connection with Caesar during the Gallic War. These men met at *Colonia* to concert their plans, but in secret; for most of the Ubii were still disinclined to revolt. Indeed, it was only a part of Gallia, the north and some parts of the east, that was ready for insurrection; and chiefly the Treviri and the Lingones. The Sequani refused to join any league against Rome. The conspirators made an attempt to corrupt the legions, which were now under the command of Vocula, who was murdered by a deserter from the first legion. (Tac. *Hist. iv. 59.*) Classicus entered the Roman camp, having assumed the insignia of the Roman empire, as Tacitus expresses it, and the Roman soldiers took the military oath in defence of the empire of the Gallias. Tutor compelled the people of *Colonia* and the soldiers on the Upper Rhine to take the same oath. Civilis was still employed on the blockade of the Roman troops at *Veterna*. Famine at last compelled the soldiers to yield; but before the surrender was accepted, they were required to swear fidelity to the Gallic empire. Civilis cut off his long light hair, which he had let grow, pursuant to a vow made, after the fashion of his country, when he began the war against the Romans. (Tac. *Hist. iv. 61.*) But he neither took the oath to the Gallic empire, nor allowed any Batavian; he trusted to the power of the Germans, and he had ambitious views of dominion. There was among the Bructeri at this time a virgin, named Velela, who had great authority, for the Germans thought that most women had the gift of divination; and Velela had proved her claim to this distinction. She had foretold the success of the Germans and the destruction of the Roman legions.

Civilis and Classicus, elated by their success, deliberated whether they should give up *Colonia* to their men to plunder. (Tac. *Hist. iv. 63.*) The Transrhene people hated this strong walled place, and a deputation from the Tenctheri brought their wishes to the municipal body of *Colonia*. The speech which Tacitus puts in the mouth of these Germans is valuable, because it gives us some in-

formation of the state of this flourishing city at that time. The original Roman settlers had intermarried with the German Ubii, and they had become one people. There were duties levied on goods that passed through Cologne, and doubtless on goods passing up and down the river. The Ubii consented to abolish these imposts, and to allow the Germans to pass through their town unarméd and in the daytime. The Agrippinenses satisfied the Teutoburgi by their concessions; and it was agreed that Civilis and Velela should be the witnesses to the compact. Commissioners from Cologne were sent with presents, and the business was amicably settled. But the holy women could not be approached: she staid in a lofty tower; and one of her kinsmen brought to her the words of the commissioners, and carried back her answers, as if he were a messenger between a divinity and men. (Tac. Hist. iv. 65.)

The insurrection of the Batavians had been prosecuted with vigour and success. In the country of the Lingones it was a miserable failure. Julius Sabinus, proclaiming himself Caesar, led a disorderly rabble into the territory of the Sequani; and the Sequani, faithful to Rome, accepted the challenge. The Lingones were routed, and Sabinus was one of the first to run. His fate does not concern us here, and his name might be forgotten but for the constancy and devotion of his wife Epponina for nine years, during which he lurked in his hiding-places. She was one of the illustrious women of Gallia; for it is one of the characteristics of the nation to produce women above the common stamp. (Plut. Amatorius, vol. iv. ed. Wytt.)

The defeat of the Lingones and the news of the approach of the armies of Italy under Arminius Galba and Petilius Cerialis, checked the Gallic insurrection. Seven legions were marching upon Gallia: four from Italy, two from Spain, and one that was summoned from Britain. The Remi, who had received Caesar in a friendly manner when he first entered the country of the Belgæ, summoned the Gallic states to deliberate on the question of peace or war. It seems probable that their object was to secure peace, and that they were resolved against war. The deputy of the Treviri, a Gaul with a Roman name, Tullius Valentianus, was the eager advocate of war; but he was more a man for words than for deeds. Julius Auspex, the orator of the Remi, spoke in favour of peace. The states were divided by interests and jealousies; there was discord among them before they had got the victory. (Tac. Hist. iv. 69.) This meeting showed that a Gallic rebellion was impossible; for the Galli could not agree as to the conduct of the war, nor what they should do if the Romans were driven from the country. Nor was Rome yet so feeble as to fear the nations of the North. She had good soldiers, able generals, and a man of ability as emperor. Civilis was engaged in a quarrel with a countryman, Laber, who had a faction of his own. Neither Classicus nor Tutor made any vigorous preparations to resist the Romans. Tutor sent one division of the Roman army with the forces of the Treviri, Vangiones, Tribocci, and Caracates, the last a people who lived about *Moselle*; he had also some of the Roman soldiers who had taken the oath of fidelity to the Gallic empire. The Romans of Tutor deserted to the enemy, and the Germans followed their example. Tutor, with his Treviri, retired to Bingen (*Bingen*) on the Rhine, where he was surprised and routed. Cerialis had now got to Moguntiacum (*Mainz*),—a general full

of confidence in himself and contempt for the enemy. He declined the aid which the states of Gallia asked, and ordered their troops home: he told the Galli they might turn to their usual occupations, or could finish the war himself. He passed the *Moselle* to Eboracum on the *Moselle*, where Velela had posted himself with a large force of Treviri, and fortified himself. Cerialis quickly caught him, and on the next day entered Colonia Treverorum, the ancient city of Treviri, as the *Moselle* is capital of the Treviri. With difficulty he prevented his men from destroying a city which was the new place of Classicus and Tutor. Cerialis entered the Treviri and Lingones to Treviri. In the next which Tacitus (Hist. iv. 73) has put in the story is a wonderfully brief and watery description, well suited to make the Galli make the Roman dominion, as the only means of peace, anarchy, and to detach them from allies and Germans. The Treviri and Lingones were notified to be told that they had better make peace and enjoy what they had, than run the risk of all by persevering in their resistance. This was the end of the Gallic rising, which was not a great movement, but the rebellion of a few years. A real rebellion was among the Batavians and German settlers in Gallia, though there was no Lingones in the army of Civilis.

Civilis, with Classicus and Tutor, left the camp of Cerialis near Treviri; for Cerialis was a able commander, was cautious and a man of great. The enemy was not repelled without difficulty. (Tac. Hist. iv. 77.) This failure of Civilis except the Agrippinenses to come over to the Treviri, which they had unwillingly deserted for the Treviri and Batavian alliance. They sent to Cerialis the wife and sister of Civilis and Tutor of Classicus, who were with them, as hostages they massacred the Germans who were sent to the houses of the city. Fearing the rage of Civilis, they sent for help to Cerialis. Civilis was marching upon Cologne, hoping to find the Treviri (Zulpich), in the territory of the colony, and the Chanci and Fritii, on whom he greatly relied as on the way he heard the news of all the Treviri being destroyed by the treachery of the Agrippinenses. The Chanci and Fritii had been supplied with food and wine, and while they were asleep the Agrippinenses closed the doors to the place, set fire to it, and burnt them all. (Tac. Hist. iv. 79.) Civilis hastened to Cologne at this important city was again in the hands of the Romans.

Cerialis carried the war into the land of the Treviri. Civilis at last came to terms, and asked his pardon. The history of the last part of the campaign is imperfect in Tacitus, when was sent off suddenly. (Hist. v. 25.)

The political divisions of Gallia remained unchanged till the fourth century of our era. The origin of the new division is unknown. The history of the Gallia under Roman dominion belongs to the history of the Roman empire, and cannot be separated from it. The subject is instructive, but it belongs to a different kind of work.

This article, though long, is not complete, but perhaps complete enough for its purpose, as each limits are as reasonable. The following references will be useful. There is a good copy of France in the *Penny Cyclopædia*. *Dictionnaire de la Gaule Ancienne*; Thierry, *Histoire*

; Walckenaer, *Géographie Ancienne Histoire Comparée des Gaules Cisalpines et Transalpinas*; and Forbiger's *Compendium der alten Geographie*, &c., are all

The references in these works will show large mass of literature has accumulated on geography and history of the Gallia. [G.L.]

LICA FLAVIA. [ILICETTES.]

LICUM. [ILICETTES.]

LICUM, in Macedonia. [ECHIDORUS.]

LICUM FRETUM. [FRETUM GALLI-

LICUS SINUS (*ἡ Γαλιεῖς κόλπος*, Strab.

Golfe du Lion) was the Roman name of of the Mediterranean, formed by the south Gallia Narbonensis. It was also called *Mare n.* (Plin. iii. 5.) The western limit was *remous Promontorium* (Liv. xxvi. 19); the may be fixed near Massilia, and the bay sometimes called *Massaliotic*. Strabo gives the name to the opposite bay on the Atlantic, s formed by the north coast of Spain and the art of the Atlantic coast of Gallia; but no riter seems to have given the name to the gulf. [GALLIA.] [G.L.]

LINARIA INSULA. [ALBIUM INGAU-

LINARIA SILVA (*Γαλιναρία ἄλυσ*, Strab. 43), a forest on the coast of Campania, occupies sandy shore which extends from the mouth of the Volturnus towards Cumae. It is mentioned so in one of his letters (*ad Fam.* ix. 23) as on the road to the latter place. Shortly after it became the headquarters of Sextus Pompeius, where he first organised the predatory bands which he subsequently undertook his piratical ions. (Strab. l.c.) Even at ordinary times noted as a favourite resort of banditti, and consequently often guarded by bands of soldiers. (Juv. iii. 307.) Strabo speaks of it as a brushwood (*ἄλυσ θάμνιστος*); but from the expression of "*Gallinaria pinus*" it is evident there was also a wood of tall pine-trees, such as luxuriantly on many of the sandy shores of

In the 13th century we find it mentioned the name of *Pineis di Castel Volturno*; by it is still known, though the pines seem to have disappeared. The forest extends from the of the Volturnus to the *Torre di Patria* (the the ancient *Literum*), and some distance beyond towards Cumae. The *Via Domitiana*, cited by that emperor as the direct road to , ran through the midst of the forest, and portions of it are still visible. (Pratilli, *Vie* ii. 7. p. 183.) [E. H. B.]

LITAE, an Alpine people (Plin. iii. 20), said to have been about the junction of the and the *Var*, because there is a place there *Gilletto*. [G.L.]

LUS (*Γάλλος*; *Lefte*), a small river of ia, having its sources near Modra in the north rgia, and emptying itself into the Sangarius s more than 300 stadia from Nicomedeia. xii. p. 543.) Ammianus Marcellinus describes it as very winding (xxvi. 8). Martianus (6. § 687, ed. Kopp) confounds this river nother of the same name in Galatia, which likewise to have been a tributary of the San- and on the banks of which Pessinus is said been situated. From the river Gallus in Ga- ze Galli, or priests of Cybele, were said by some

to have derived their name, because its water made those who drank of it mad. (Steph. B. s. v.; Plin. v. 42, vi. 1, xxxi. 5; Herodian, i. 11; Or. *Fast.* iv. 364.) [L.S.]

GAMALA (*ἡ Γάμλα*), a town of Palestine, frequently mentioned by Josephus, and from which the district *Gamalit* (*B. J.* iii. 3. § 5) derived its name. This district was apparently identical with that otherwise called *Lower Gaulanitis* by the same historian, in which Gamala was situated (iv. 1. § 1). It is first mentioned as a fortress of great strength, in the life of Alexander Jannæus, who reduced it (*B. J.* i. 4. § 8). It is placed by Josephus opposite to Taricheæ, and on the lake. Its site and character are minutely described: "A rugged ridge, stretching itself from a high mountain, rises in a lump midway, and elongates itself from the rise, declining as much before as behind, so as to resemble a camel in form, whence it derives its name. Both in flank and in front it is cleft into inaccessible ravines; but at the back it is somewhat easier of ascent, being there joined to the mountains, from which, however, the inhabitants severed it by a trench, and rendered the approach more difficult. Against the precipitous face of the mountain numerous houses had been built, closely crowded one on another; and the city, apparently suspended in the air, seemed to be falling upon itself, by reason of its perpendicular site. It inclines towards the mid-day sun; and the hill, stretching upward with a southern aspect to a prodigious height, served as a citadel to the town: while an impregnable cliff above it extended downward into a ravine of vast depth. Within the ramparts was a fountain, at which the city terminated." (*B. J.* iv. 1. § 1). At the first outbreak of the Jewish rebellion it was for a time maintained in its fidelity to the Romans, through the influence of Philip, the lieutenant (*ἑταῖρος*) of King Agrippa (*Vita*, § 11); but subsequently it revolted, and was garrisoned and fortified by Josephus (§ 37) with mines and trenches, so as to make it the strongest fortress in that part of the country (*B. J.* iv. 1. § 2). Accordingly, when its recovery was attempted by the younger Agrippa, his troops were occupied for seven months in an ineffectual attempt to take it by siege. It was taken, however, by Vespasian, after a spirited resistance of the garrison, when the loss sustained by the legions was revenged by the indiscriminate slaughter of the survivors, of whom 4000 perished by the sword, and 5000 threw themselves from the walls, and were dashed to pieces in the ravines below.

The site of this strong fortress, though so remarkable, and so minutely described by Josephus, had been forgotten for nearly eighteen centuries, when Lord Lindsay attempted to recover it in a steep insulated hill to the east of the sea of Tiberias, and nearly opposite to that town. It is now called *El-Hamam*, and lies, according to Burckhardt, between the village of *Feik* and the shore, three quarters of an hour from the former; "having extensive ruins of buildings, walls, and columns on its top." (Burckhardt, *Syria*, p. 278, with a wood-cut of the site.) According to Lord Lindsay, the hill, "at a distance, so strongly resembles the hump of a camel, that I think there can be little doubt of its being the ancient Gamala. It has been a place of tremendous strength, and no slight importance. Valleys, deep and almost perpendicular, surround it on the north, east, and south. On the south side, the rock is scarped angularly for defence; on the eastern, it is built up so as to bar all approach from below; to the south-east a neck of

land, of much lower elevation, and scarped on both sides, connects it with the neighbouring mountains, and communicates by a steep descent with the southern valley; travellers from the east and west appear to have met at this neck of land, and thence ascended to the city. If, as I conclude, the houses were built on the steep face of the mountain, Josephus might well describe them as hanging as if they would fall one on the other. All traces of them have been swept away, and the mountain is now covered with thick grass. The top is sprinkled with trees; we found many ruins on it, apparently of the citadel, but not very interesting." (*Travels*, vol. ii. pp. 92, 93.) [G. W.]

GAMBRIVIL [CHAMAVI.]

GAMPHASANTES. [GARAMANTES.]

GANDARAE (Γανδαραι, Ptol. vii. 1. § 4; Steph. B. s. c.), a widely extended people of Indian or Arian origin, who occupied a district extending more or less from the upper part of the *Pamjēb* to the neighbourhood of *Kandahar*, and variously called in ancient authors *Gandaris* (Strab. xv. p. 699) or *Gandaritis* (Strab. xv. p. 697). The name is of Sanscrit origin, and is found in the *Mahābhārata* under the form *Gandhāras*, in which work these people are classed with the *Bahlikas* and other tribes beyond the Indus; the country they inhabited being described as difficult of access, and famous then, as it still is, for its breed of horses. Owing to the distinction which seems to be drawn, in the passages cited above from Strabo, between *Gandaris* and *Gandaritis*, some authors, as Grosekurd and Manert, have been led to assign different places for these districts; determining the latter to be the same as *Peucelotis*, between *Attock* and the Indus. It is much more probable that one and the same country was intended, the boundaries of which varied according to the reports of the travellers from whom Strabo and others compiled their geographical notices of these remote regions. From Strabo (l. c.) it may be inferred that he considered the country of the *Gandarae* to be to the W. of the Indus; from Ptolemy, that it was somewhat more to the E., in the direction of *Casparyrus* (*Kashmir*?). The latter view agrees with a notice of *Hecataeus* preserved by *Stephanus B.* (s. v. *Casparyrus*), who calls that city *ῥωδὸς Γανδαρῶν* *Ἰνδοῦ ἀρχῆς*. Herodotus, like Ptolemy, calls it *Casparyrus* (iii. 102, iv. 44). In Herodotus these people are called *Gandarii*, and are included by him in the seventh satrapy of *Darius*, along with the *Aparytae*, *Dadicae*, and *Sattagydae* (iii. 91); they are also found with the same name in the armament of *Xerxes*, in company with the *Dadicae*, under the same commander, and wearing the same arms, as the *Bactrians*.

Rennell (*Geogr. of Herod.* vol. i. p. 390) has been induced to place them to the W. of *Bactria*; but more minute examination leads to the belief that in this he is in error, and that east and south of *Bactria* is really the more correct determination. (Wilson, *Ariana Antiqua*, p. 131; *Asiatic Res.* vol. xv. p. 103; Lassen, *Pentapot. Indica*, p. 105; M. Troyer, *Raja-Tarangini*, tom. ii. p. 319.)

Stephanus speaks of another Indian people whom he calls *Gandri*, who fought, according to him, against *Bacchus*; adding, however, that *Hecataeus* called them *Gandarae*. There can be no doubt that the real and the mythical people are meant to be one and the same. Professor Wilson draws the general conclusion that *Heeren* and *Rennell* have both erred in placing most of these tribes to the N. of *Khorassan*,

and that they may be located with more accuracy in the vicinity of the *Paropamisus* mountains, beyond the predecessors, if not the ancestors, of the modern *Hindus*. [G.]

GANDARIS. [GANDARAE.]

GANDARITIS. [GANDARAE.]

GANGANI, in Ireland, mentioned by *Ptolemy* as lying south of the *Autari*. [AULIER.] *Ptolemy's Clava*. [R. G.]

GANGARIDAE (Γαγγαρίδαι, Ptol. vi. 1. § 1, 2. § 14), a people who lived along the coast of a bay of Bengal, at the mouth of the *Gange*, from which they probably derived their name. According to *Ptolemy* their capital was named *Gange* (l. c. § 81); in another place, however, he calls it one of the chief towns, but adds that there are many whose names he gives, in the country. It will appear from *Pliny* that a portion at least of the people extended considerably to the south of the country now occupied by the *Ganges* of the *Armenian* coast, — as he speaks of "gaugardum Calingorum" (vi. 18. s. 29). The *Ganges* were probably near *Calingopuram*, between *Madagascary* and *Maharashtra*. *Virgil* (*Georg.* ii. 5) and *Valerius Flaccus* (*Argon.* vi. 66) mention the name of the *Gangaridae*. *Curtius* places them beyond the *Ganges* to the eastward, along with the *Prasii* (ix. 7). Their name seems to have been sometimes confused with that of the *Gandariae*. In when *Dionysius Periegetes* writes *Gangaris* (p. 1144), he probably means *Gandariae*, as some commentators have supposed, this point. [G.]

GANGAS, GANGITES (Γαγγης, Γαγγίτης, Appian, B. C. iv. 106), a river of *Macedonia*, which takes its rise at and flows round *Philippi*, after its confluence with the *Zroactes* the usual name of the *Arxos* (*Arxos*), was so called from the branch at *Philippi*. (*Class. Northern Greece*, vol. iii. p. 323.) It was on this "river side" (*Acta*, xvi. 13), the famous which gave the name to the city, before the birth of *Philip* of *Macedonia*—*Cruces*—the Place of *Crucifixion*—that the "Proseucha" was situated, the consequence of the ablutions which were made with the worship in which the Gospel was preached within the limits of Europe. (*The Coneybeare and Howson, Life and Epistles of St. Paul*, vol. i. p. 316.) [G.]

GANGE (Γαγγης, Ptol. vii. 1. § 81; *Procopius Peripl. Mar. Erythr.* p. 36), according to *Ptolemy* the capital town of the *Gangaridae*, at the mouth of the *Ganges*. The author of the *Periplus of the Erythraean sea* speaks of this place as the chief for the finest cotton stuffs, for frankincense, and for the *malabathron*. It must have been in the neighbourhood of the modern *Calcutta*, though its position cannot be identified. *Strabo* speaks of a town which he calls *Gange*, but places it further up the river, in the vicinity of *Palibothra* or *Panopolis* (p. 719).

GANGES. 1. (Γαγγης, Strab. xv. p. 697, &c.; Ptol. vii. 1. § 29, &c.; in Lat. *Ganges*, &c. *Γαγγηρίς*, *Gangeticus*, *Gangotri*), one of the great rivers of Asia, and the most important one of *India* or *Hindustan*. It was unknown to *Hecataeus*, *Ctesias*, and the earlier writers of ancient times, as it was not described by ancient authors till the time under *Alexander the Great* and his successors penetrated into Western India. It is, indeed, at very modern times that the exact position of its sources has been determined; the earlier of Eu-

upholders having conjectured that, like the Indus, it is on the northern side of the chain of the Himala-mountains, in the direction of Thibet. It is now ascertained that the true river is made up of three great streams, which bear the respective names of *Yaknadi*, *Bhagirathi*, and *Alaknanda*. The first is held to be the most hallowed, and is the one to which the largest concourse of pilgrims resorted.

The spot where it bursts forth from the mountains is called *Gangotri* (*Gangavatri*), and is situated in lat. $30^{\circ} 59' 30''$ N., long. $96^{\circ} 44'$ W., at an altitude of nearly 10,000 feet above the sea. It is the summit of *Pashiparvata*, which rises to the height of about 21,000 feet. (Schlegel, *Bibl.* vol. i. p. 387; Ritter, vol. ii. pp. 947—

Lassen, *Ind. Alt.* vol. i. p. 49.) From its source it flows nearly S. till it reaches *Hastinapura*; and thence, with an easterly inclination, as far as *Allahabad*, where it receives the *Yamuna*; and thence runs S.E. till it reaches the bay of Bengal, into which it falls, after a course of about 1150 miles, forming numerous mouths. On its way it receives a greater number of affluents, of which we shall speak hereafter—one of which, the *Yamuna*, considerably surpasses itself in length.

The ancients held different opinions as to the source of this celebrated river. Strabo, on the authority of Eratosthenes, made it rise in the Indian mountains (the *Paropamisus*, or *Hindu-Kush*), and, flowing for some distance, take an eastern direction on reaching the plains, and, after passing the great city of Palibothra, enter the Indian Ocean (or bay of Bengal) by a single mouth (xv. p. 119).

In another place (xv. p. 719) he quotes Eratosthenes, who stated that the Ganges had its source in the Montes Emodi (Imans or *Himalaya*), and that it flowed southwards till it reached the Indian Ocean, when it turned off to the E. and entered the Indian Ocean. The same view is implied in Ptolemy's *Periplus* (v. 1146) and in *Mela* (iii. 7). Strabo seems to have been unable to make up his mind, but states generally that some gave to the river an uncertain source, like that of the Nile. Others placed it in the Scythian mountains (v. 18. s. 22; see also Solin. c. 53; Mart. c. 6). Strabo placed its source in an unknown mountain, which he calls *Ourobaras*. There is a more general notion as to its magnitude; most authors agreeing that it is a great stream even from its first commencement. Thus Arrian asserts, on the authority of Eratosthenes, that where it is smallest it is at least 100 stadia broad, that it is far greater than the Nile, and that it receives no rivers which are themselves as large and as navigable as the Nile. (*Indic.* c. 4.) In another place he states that if all the Asiatic rivers which flow into the Indian Ocean were joined together, they would not equal the Ganges in body of water; while it is equally superior to the European Nile, and the Egyptian Nile. (*Asiab.* v. 6.) Strabo considered it the greatest river in the three continents of which he had any knowledge; that the Indus, the Nile, and the Nile, ranked next in order after it (xv. p. 702); and that its average breadth, in the opinion of Megasthenes, was about 100 stadia, and its depth 20 fathoms. The historians of Alexander's invasion agree generally in its size, making it 32 stadia broad, by 100 fathoms deep. (Diod. xvii. 93; Plut. *Alex.* c. 62.) The writers, like Pliny and Aelian, give to the river a fabulous size; the former asserting that at the narrowest place it was 8 miles broad, and nowhere

less than twenty paces deep (vi. 18. s. 22); the latter, that from its first origin it was 80 stadia broad and 20 fathoms deep,—and that, after it had received several tributaries, it acquired a breadth of 400 stadia, and contained many islands as large as Lesbos and Corica, with a depth of 60 fathoms (*Hist. Anim.* xii. 41). Aelian is most likely here confounding the natural stream with its breadth during great floods. The ancients had similar differences of opinion with regard to the number of mouths by which it entered the ocean. Strabo asserted that it had but one (xv. p. 690), in which view Pliny agrees (ii. 108); Ptolemy (vii. 1. § 18) and Marcian (ap. Huds. *Geogr. Gr. Min.*, § 5; *Mela* (iii. 7), Virgil (*Aen.* ix. v. 30), Propertius (iii. 22. 16), and other authors, seven. The fact is, like all rivers flowing with a vast body of water through an alluvial plain, and bringing down an immense annual deposit, its mouths were perpetually changing; and old ones were filled up, while new ones were continually made. The names of some of the ancient mouths have been preserved, and can even now be identified. Their names are given by Ptolemy, in order from W. to E., and are: (1) *Kādūson* στόμα, now the river *Hooghly*, on which Calcutta stands; (2) *τὸ μέγα στόμα*, now the river *Rogmogul*; (3) *Καυδάρηχον* στόμα, now the *Marjatta*; (4) *τὸ πενδύστομον* στόμα, now the *Heringotta*; (5) *Ἀντιβελή* στόμα, the one nearest the *Brahmaputra*, and for which there does not seem to be any well-ascertained name.

The Ganges, on its course to the sea, is fed by several large rivers, some of which were known to the ancients, and have been satisfactorily identified with their original Sanscrit names. The fullest account of them is in Arrian (*Ind.* 4), and from him or from the journals which he copied most of the other writers who allude to them have probably themselves copied. The following are the seventeen which this author mentions, to which we have added (in parentheses) those Sanscrit names that are probably well ascertained:—the *Johara*, no doubt the same as the *Jomana* (*Jamuna* or *Jumna*); *Caina*, *Erannobos* (*Hiranyavahu*), *Coscosus* (*Chavahā*), *Sonus* (*Ḥonā*), *Sittocatis* (*Ḥitā*), *Solomatis* (*Saravati*), *Condochates* (*Gandaki*), *Sambus*, *Magon*, *Aguranis*, *Omalis* (*Pimāli*), *Commenaces* (*Cormana*), *Cacultris*, *Andomatia* (*Andhamati* or *Tamand*), *Amystis*, *Oxumagis* (*Jamuti*), *Erenneis* (*Varanasi*). Pliny speaks of the *Jomana*, *Prinas*, and *Caina*, which he calls tributaries of the Ganges (vi. 17. s. 21); and adds that there were in all nineteen such affluents, of which he notices (apparently for their superiority) the *Condochates*, *Erannobos*, *Coscosus* or *Coscomus*, and *Sonus* (vi. 18. s. 22). Curtius speaks of three tributaries of the Ganges, the *Acesines*, *Dyardenes*, and *Erymanthus* (viii. 9); but he has clearly here made some confusion with the accounts of the Indus, or there is a defect in our MSS. of his work. The *Acesines* (now *Chenab*) is one of the principal rivers of the *Panjab*; the *Dyardenes* is not improbably the same as the *Oxianes* (*Ḫiāns*) of Strabo (xv. p. 719), and most likely to be identified with the *Brahmaputra*; while the *Erymanthus* belongs to neither Indus nor Ganges, but may be the same as *Etymandrus* (now *Hilmend*), the principal river of *Arachosia* and *Drangiana*. The Ganges was evidently considered by the ancients as a very wonderful river. Pliny speaks of snakes thirty feet long which live in its waters (ix. 3. s. 2), which, like *Pactolus*, brought down gold also (xxiii.

4. s. 21); and other authors ascribe to some of its tributaries crocodiles and dolphins (Oldways, Strab. xv. p. 719; Dyanderon, Curt. viii. 9). The Sanscrit name *Ganga* may be, as Pott has suggested, an intensive form from the root *ga*, to go. Ptolemy gives another and fabulous origin of its name (*de Fluminibus*, ap. Hudson, *Geogr. Gr. Min.* ii. p. 8). (Rennell, *Hindostan*; Lassen, *Ind. Alterth.* vol. i. p. 130; Kiepert u. Lassen, *Karte v. Alt. Indien*, 1853; Pott, *Etym. Forsch.* p. 84.)

2. (*ἡ Γαγγή*, Ptol. vii. 4. § 6), the most important river in the ancient island of Taprobane (*Ceylon*), still known by the name of the *Mahavelle-Ganga*. It rises in the mountains to the S. and W. of *Kandy*, and after flowing round the town pursues a N.E. course, till it enters the sea by two mouths, one near *Trincomalee* (close to the 'Ofela *Sapa* of Ptolemy), and the other about 25 miles to the S. It appears from modern surveys that the Trincomalee branch is now nearly dry, except in the rainy season, and that the main body of water passes to the sea by the southern branch, which is now called *Firgyl*. (Brooke on *Mahavelle-Ganga*, *Journ. R. Geog. S.* vol. iii. p. 233.) Much of the country through which this river flows is now uninhabited, but there are extensive remains, tanks, and ruins, indicating that it was once thickly peopled. Forbiger has conjectured with some reason that the *Mahavelle-Ganga* is the same river which Pliny calls *Palasimundus* (vi. 23. s. 24), and which he says flowed to the N. by a city of the same name, and entered the sea by three mouths; of which the narrowest was five, and largest fifteen, stadia wide. It is curious that the larger stream, which he calls *Cydara*, is the northern or Trincomalee branch; and from modern researches, it is proved that this was originally the principal stream, the water having been diverted into the *Firgyl* by the priests of a temple situated at the point where the two streams naturally bifurcated. (Davy, *Account of Ceylon*, Lond. 4to. 1891; Ritter, *Erdk.* vol. vi. 24.) [V.]

GANGETICUS SINUS (*ἡ Γαγγή*, Ptol. i. 13. § 4, vii. 1. § 16), the great gulf into which the *Ganges* flowed, now generally called the bay or gulf of Bengal. According to Ptolemy it was usual with the mariners of his day to call it 13,000 stadia across; whence, in order to allow for the irregularity of the course pursued, Ptolemy takes off one-third, and reduces the breadth to 8670 stadia. This is, however, more than twice the breadth of the real bay of Bengal. The fact is, Ptolemy, in common with all his predecessors, Hipparchus, Polybius, Marinus of Tyre, greatly extended the degrees of longitude of this part of the world; hence his Caspian Sea, Persian Gulf, and bay of Bengal are all much greater in breadth E. and W. than in length N. and S., which is just contrary to the fact. [V.]

GANGRA (*Γάγγρα*: *Kiangrah*, *Kangrah*, or *Changri*), a town of Paphlagonia, to the south of Mount Olgassa, and at a distance of 35 miles from Pompeiopolis, appears to have been a princely residence, for we know that Morsus or Morzeus, and afterwards Deiotarus, the last king of Paphlagonia, resided there. (Strab. xii. p. 564; comp. Liv. xxxviii. 26.) Strabo, notwithstanding this, describes it as only "a small town and a garrison." According to Alexander Polyhistor (ap. Steph. B. s. v. *Γάγγρα*), the town was built by a goatherd who had found one of his goats straying there; but this is probably a mere philological speculation, *gangra* signifying

"a goat" in the Paphlagonian language. In the ecclesiastical writers *Gangra* is often named as the metropolitan see of Paphlagonia. (Sozom. iii. 14, and elsewhere.) The ecclesiastical town were celebrated for the excellence of their apples. (Athen. iii. p. 62.) [L.]

GANNARIA PR. [LIBYA.]

GANODUPRUM (*Γανόδρυμ*), one of the Helvetic cities mentioned by Ptolemy (i. 2. s. 10). The termination *dupr* seems to show that it was some river, but there is no evidence of any kind except Ptolemy's figures, to fix its position; and evidence is worth nothing. Some names have been given for supposing it to be near the extreme E. of Rhine, on to the *labe* of *Condam*, at *la* *Stein*. (Walckenaer, *Géographie des Gaules*, v. p. 317.) [L.]

GANUS (*Γάνυς* or *Γάνυς*), apparently a name for a fortress in Thrace, on the coast of the Propontis. (Xenoph. *Anab.* vii. 5. § 8; Harpocration, s. v.; Plin. iv. 18; Scylax, p. 28.) *Aschylus* at *Classiph.* p. 65 speaks of *Ganus* along with *Aschylus* as scarcely known to the Athenians. mentions *Ganis* along with *Ganus*, from which we may infer that the former was the name of a district in which the latter was situated. [L.]

GARAMA. [GARAMANTES.]

GARAMAEI (*Γαραμαί*, Ptol. i. 12. § 12, § 2), a tribe of ancient Assyria, who lived on the banks of the Lycus (*Zab*), between *Acapschitis* and *Apolloniastis*. [L.]

GARAMANTES (*Γαραμαντές*), a great tribe of Inner Africa. In the widest sense the name is applied to all the Libyan tribes inhabiting the S. and E. part of the Great Desert, as the *Garama* inhabited its W. part; the boundary between the nations being drawn at the sources of the *Nubia* and the mountain *Usargala*. In this wide sense were considered as extending S. and E. to the *Nuba* and both banks of the river *Gir*, as far as the mountains called *GARAMANTICA PHARIS* (*ἡ παραμάντις φάρις*), which Ptolemy places at 10° long. and 10° N. lat. E. of *M. Thalia*, and N. of *ARABIA*. (Ptol. iv. 6. § 12, 13, 16.)

In the stricter sense, however, the name is given to the people of *PHAZANIA* (*Φαζανία*), a region of the Great Syrtis, between 24° and 31° S. lat. and 12° and 18° E. long., and forming by far the largest oasis in the Great Desert (*Sahara*); it may be considered as dividing into an eastern and western part. It is surrounded by hills of sand, not exceeding 1200 feet high, which protect it from the sands of the desert: the two parts are the two parallel ranges to the N. and S. the *Black* and *White Harir* (i. e. *Mout*), the former being of basalt, and the latter of limestone (the former is the *Mout* *Arif* of the ancients); and that on the W. called *Werra*, which is the ancient *USARGALA*. It is, however, only a small part, not above one-tenth, of the entire area is cultivable; the region being intersected by ridges of hills from 300 to 600 feet high; and even in the valleys between these ridges the soil is a mixture of sand, on chalk or clay, needing constant irrigation to supply which there are no water-courses, as very few natural springs; so that the water has to be obtained from wells, at the depth of about 100 feet. The soil is impregnated with saline matter, which is used as a manure for the date-palms, which are the principal vegetable products of the country; a little grain is also grown at the present day.

country of the Garamantes was known to Strabo, who mentions the people twice; first, as *g. S. of the Nasamones*, and *E. of the Maene*, "Country of Wild Beasts," that is, the second three belts into which he divides N. Libya (4). In the second passage (iv. 183) he says the Garamantes are a very great nation, inhabiting of these oases formed by salt-hills, which are at intervals of 10 days' journey along the coast of N. Africa. (Comp. ATARANTES; ARABIA; AUGULA.) This one lies between Angula and Atarantes; but here arises a difficulty, inasmuch as the regular allowance for the caravans (see *Lejla*) to *Zuila* on the E. border of Fessan days, and it took Hornemann 16 days' very travelling to accomplish the distance. The solution of the difficulty appears to be the supposition that one station has been omitted by Herodotus (or by the copyists), namely, the small oasis *Asiela*, which is just half-way between *Asiela* and *Asiela*. Herodotus makes the distance from the *Asiela* (i. e. the coast between the Syrtes) days, which corresponds exactly to the time used by the caravans in the journey from *Tri-* to *Fessan*, which appears to have been the established route in all ages. He describes the country ringed many fruit-bearing palms, and as being used for corn by manuring it with salt, by some suppose him to mean the white clay is still used for manuring the sandy soil. Story of the oxen with singularly thick hides, with horns bending so far forward that the oxen were obliged to walk backwards as they fed (Mela, i. 8; Plin. viii. 45, s. 70), is not so absurd as it may seem; for, although modern travellers do not confirm this part, as they have the rest, an old inquirer's story, we have evidence from Arabian monuments (Gan, pl. xv.) that the antelopes of Africa, like their successors to lay, exercised their ingenuity in giving artificiality to the horns of their cattle. (Heeren, *on Nations*, vol. i. p. 223; for other stories of cattle walking backwards as they fed, see under Myndana, *op. cit.* v. p. 221, s. 2; Aelian, xvi. 33; *Aristot. de Part. Animal.* ii. 17.) In fact, and a very sad part of his account, Herodotus is too well supported by modern testimony. He tells us of a degraded negro tribe, who dwell in (near *Troglodytes* *Abdewas*) among or near the Garamantes, who hunted them with chariots, and negroes were the swiftest runners known. Wretches thus, like their race in all ages, sold after for slaves, lived on reptiles, and used a language which resembled no other language, but was the shrieking of bats. (Comp. Mela, i. 8; v. 5, 8.) The *Rock Tribes*, so called from dwelling in caves (Troglodytes), in the *Tibesti* mountains, are still hunted by the chieftains; though, by a kind of retribution, these are the successors of the ancient Libyans, have fled from more powerful conquerors into former haunts of their negro game. (Lyon, *Antiq.* &c. pp. 250, foll.) To complete the romance, the people of *Asiela* compare the language of these degraded tribes to the whistling of wind. (Hornemann, p. 143.)

In account of Herodotus contains an apparent inconsistency; for the Garamantes are described in former passage (c. 174) in terms which would better apply to these Aethiopian Troglodytes, voiding men and all society, possessing no weapons

of war, and unable to defend themselves. This description corresponds exactly to what Mela (i. 8) and Pliny (v. 8) say of a people whom they call *Garamantes*; and hence some critics have proposed to alter the reading in Herodotus; but, besides the fact that there is not a shadow of variation in the MSS., the position assigned by Herodotus to this people is precisely that occupied by the Garamantes; and the same statements are repeated by later geographers, expressly on the authority of Herodotus. (Steph. B. z. v.; Eustath. *ad Dion. Per.* 217.) The discrepancy is, probably, one of those so often found in a writer who picks up news eagerly from all quarters; for it is evident that the one account was obtained through the Nasamones and Cyrenaeans, and the other through the merchants who traded between Fessan and Egypt; and we may fairly suppose that the one class of informants repeated only what they had heard of some of the degraded tribes who lurked, as has been seen, in corners of the country. If any change be necessary, we suspect it to be, of the two, rather in the Roman compilers; for their story seems copied from Herodotus.

From the time of Herodotus to that of the Caesars, we have no further information worth mention. When the Romans had become the masters of N. Africa, they found it necessary to repress the barbarian tribes; and this office was committed, in the case of the Garamantes, to Cornelius Balbus Gadiatanus the younger, who, as praefectus, defeated them in a sense sufficient to warrant his investment with triumphal insignia, a. c. 19, though, of course, conquest was out of the question. (Flor. iv. 13; Tac. *Ann.* iii. 74, iv. 36, *Hist.* iv. 50.) The results obtained from this expedition in the form of additional knowledge are recorded by Strabo (xvii. pp. 835, 838), Mela (i. 4, § 4, 8, § 7), and Pliny (v. 5, 8). Strabo places them 15 days' journey from the oases of Ammon (*Sinai*), and 10 days' journey from the Aethiopes on the Ocean; a striking proof of the scantiness of his information respecting Inner Libya: he describes their position relative to the N. coast with tolerable accuracy. Mela copies Herodotus, mixing up with his story a statement which Herodotus makes concerning the Ausenes. Pliny (v. 5) gives a good description of the position of the Garamantes, with an account of the expedition of Balbus, and a list of the cities whose images and names graced his triumph: he also speaks of the difficulty of keeping open the road, because of the predatory bands belonging to the tribe, who filled up the wells with sand. He mentions Phazania as if it were distinct from the country of the Garamantes. Ptolemy also (iv. 6, § 30) gives a list of their cities, none of which need particular mention, except the metropolis *Garama* (*Tadmur*; *Gerrha*, with considerable ruins). This city has 13½ hours in its longest day, is distant 1½ hour W. of Alexandria, and has the sun vertical twice a year, 15° on each side of the summer solstice. (Ptol. viii. 16, § 7.)

The Garamantes were a Libyan (not Negro) people, of the old race called *Amazerg* [GAETULIA], a name perhaps preserved in that of the modern capital *Moursouk*. The inland trade between Egypt, Cyrenaica, the Tripolis, and Carthage, on the one hand, and the interior of Africa on the other, was to a great extent carried on by them. (The *Travels* of Hornemann, Captain Lyon, Denham and Clapperton, Richardson, Barth, Overweg, &c.; Renell, *Geog. of Herod.* vol. ii. pp. 273, foll.; Heeren, *African Nations*, vol. i. pp. 221, foll.) [P. S.]

GARAPHI MONTES (τὰ Γάρφακι ὄρη), a mountain chain of Mauretania Caesariensis, forming a part of the range which separates the valleys of the Chinalaph and Savna. (Ptol. iv. 2, § 14.) [P. S.]

GARBATA MONS (Γάρβατος ὄρος τὸ Γάρβατος ὄρος, Ptol. iv. 7, §§ 26, 31), was the southern portion of the ridge of mountains which separated Aethiopia from the Red Sea, and of which the most southerly and loftiest projection was Mount Elephas (Cape Felix or Djebel Feel). The entire range commenced at the eastern frontier of Egypt and Aethiopia, and extended from the 15th to the 11th degree of lat. N., running for the most part in a SE. direction. Aethiopia, or the modern Abyssinia, is a region of highlands which, as they advance southward, increase in altitude. Mons Garbata commenced to the S. of Axuma, and was the loftiest portion of the range. It contained mines of gold and quarries of porphyry. [W. B. D.]

GAREA, GAREATES. [THEBAE.]

GARESCUS (Γαρήσκος ἢ Γαρήσκος, Ptol. iii. 13, § 25; Geresus, Plin. iv. 10), a place in Macedonia, probably somewhere in the head of the valley of the river Zygactes — *Neuroscopo*. [E. B. J.]

GARGANUS (τὸ Γάργανον, Strab.), a mountain and promontory on the E. coast of Italy, still called *Monte Gargano*, which constitutes one of the most remarkable features in the physical geography of the Italian peninsula, being the only projecting headland of any importance that breaks the monotonous line of coast along the Adriatic from *Otranto* to *Ascona*. It is formed by a compact mass of limestone mountains, attaining in their highest point an elevation of 5120 feet above the sea, and extending not less than 35 miles from W. to E. Though consisting of the same limestone with the Apennines, and therefore geologically connected with them, this mountain group is in fact wholly isolated and detached, being separated from the nearest slopes of the Apennines by a broad strip of level country, a portion of the great plain of Apulia, which extends without interruption from the banks of the Aufidus to those of the Fronte. (Swinburne's *Travels*, vol. i. pp. 151, 152; Zannoni, *Carta del Regno di Napoli*.) Its configuration is noticed by many ancient writers. Strabo speaks of it as a promontory projecting out to sea from Sipontum towards the E. for the space of 300 stadia; a distance which is nearly correct, if measured along the coast to the extreme point near *Viesti*. (Strab. vi. p. 284.) Lucan also well describes it as standing forth into the waves of the Adriatic, and exposed to the N. wind from Dalmatia, and the S. wind from Calabria. (Lucan, v. 378.) In ancient times it was covered with dense forests of oak ("Querceta Gargani," Hor. Carm. ii. 9, 7; "Garganium nemus," Id. Ep. ii. 1, 208; Sil. Ital. iv. 563), which have of late years almost entirely disappeared, though, according to Swinburne, some portions of them were still visible in his time (*Travels*, vol. i. p. 153; Giustiniani, *Dis. Geogr. del Regno di Napoli*, pt. ii. vol. iii. pp. 93—98). Strabo mentions in this neighbourhood (but without directly connecting it with the Garganus) a hill called *Drimum*, about 100 stadia distant from the sea, on which were two shrines of heroes (*ἥρωες*), the one of Calchas, with an oracle which was consulted in the same manner as that of Faunus in Larium; the other of Podaleirias, from beneath which flowed a small stream gifted with extraordinary healing powers. The same circumstances are alluded to by Lycophron, from whom it would appear that the stream was named

Althæma. (Strab. vi. p. 284; Lycoph. Alex. 100—1055.) The exact locality has been a subject of dispute; but as we find a similar mention of a stream of limpid water which healed all diseases, it is a good of the appearance of St. Michael that points to the foundation of the modern town of *Monte Angelo*,—on a lofty hill forming one of the slopes of the Garganus, about 6 miles from *Neapolim*,—it seems very probable that this was no other than the *Drimum* of Strabo, and that the machinery of an archangel has succeeded, as is so often the case, to another object of local worship. The shrine of a Mt. Garganus is now frequently called *Monte Angelo*, from the celebrity of this spot; and the name of *Drimum* seems to have been sometimes used in the same extension among the Greeks, as there is very little doubt that for *Ἀπῶν* in Sicily we must read *Ἀπῶν*, the promontory of which is so often speaking being evidently the same as the *Gargara*. (Scyl. § 14; Gronov. ad loc.)

On the southern slope of Mt. Garganus, are 4 miles E. of *Monte St. Angelo*, a strategical place still called *Mettinates*, with a tower and some ruins, which has preserved the name of the *MATTINATES* of Strabo, which is correctly described by an old inscription as "moes et promontorium in Apulia." The name appears to have properly belonged to this small offshoot of the Garganus; but in one passage Lucan would seem to apply the name of "*Materia Matina*" to the loftiest summits of the range. As these hills are covered with aromatic herbs, which produce excellent honey, whence the well-known name of the same poet to the "*apis Matina*." (Hor. Carm. i. 28, 3, iv. 2, 27, *Epod.* 16, 28.) Lucan also speaks of the "*calidi buxeta Matini*" as adjoining the looking the plains of Apulia (ix. 182). There is evidence of the existence of a town of this name supposed by one of the old scholars of Bona to certainly no authority for the change suggested by some modern writers, that we should read *Mettinates* for "*Merminates* ex Gargana." Bona and others have clearly shown that an ancient town called *MERMINATES* stood near the NE. part of the promontory, about 5 miles from the modern town. It continued to be a bishop's see until late in the middle ages, and the site is still marked by a ancient church called *S. Maria di Merino*. (Bona *Not. in Chamer.* p. 278; Bonanelli, vol. ii. p. 24.)

The flanking ridges which extend down to the sea on both sides of the Garganus afford several coves and harbours well adapted for sheltering small vessels. Of these the one now called *Porto Gargano*, about 8 miles S. of *Viesti*, is generally supposed to be the *AGATHIS PORTUS* of Pliny, which he appears to have S. of the promontory. The *PORTUS GARGANUS* of the same author was situated between the promontory and the *Lacus Pantanus* (*Lago di Lano*); it cannot be identified with certainty; but it is very probable that it was situated at the entrance of the lake now called *Lago di Varano*. [E. B. J.]

GARGAPHIA FONS. [PLATARA.]

GARGARA (Γάργαρα or Γάργαρα), one of the heights of Mount Ida in Thracia (Hom. A. vi. 4, xiv. 292), which continued to bear this name in the time of Strabo (xiii. p. 583; comp. Paus. i. 22, Macroh. Sat. v. 20; Steph. B. s. v.). Its modern name is said to be *Konyak*. (Walpole's *Notes* relating to Turkey, p. 180.) A town of the same name existed from early times upon that height, rather on a branch of it forming a cape on the N. of the bay of *Adramyttium*, between *Assensium* and

2. In the earliest times it is said to have been sited by Leleges, but afterwards to have received an colonists from Aenea, and others from Miletus (Strab. l. c. pp. 606, 610; Mela, i. 18; Ptol. v. 2).

The name of this town is in some authors selt *Γάργυρος*, as in Ptolemy, and *Γάργυρα*, as in others. The territory round Gargara was celebrated for its fertility. (Virg. *Georg.* i. 103; Senec. a. iv. 608.) The modern village of *İst* probably lies the site of ancient Gargara. [L. S.]

ARGARIUS LOCUS, a place in Gallia Narbonensis, known only from an inscription of the time of Adrian. D'Arville (*Notice*, &c.) received an copy of it from Barthélemy. This inscription is the "Pagani pagi Lucreti qui sunt finibus tensium loco Gargario." The place, which is called *Garguies*, is at the foot of a mountain l. *St. Pilon*; "and the plain which extends from not of this mountain as far as *Avabagne*, in the tion of *Marceville*, is called *Lacrus*, and this be the Pagus Lucretus of the inscription" (ville). [G. L.]

ARGETTES. [ATTICA, p. 397.]

ARI (Γάρ, *Isid. Char. op. Huds.* vol. ii. p. 9), all place in Ariana, most likely represented now here, to the east of Ferrah. Perhaps it is the as *Ghirona*, which lies to the NE. from *Ma*. Mannert (v. 2. a. 61) has supposed that he same as *Gresikh* to the NE. of *Bost*, on the *ad*, which, however, is more likely to be the Chatris or Chatrische of Ptolemy (vi. 17. a. 5). [V.]

ARINAEI (Γαρινάιοι and Γαρινάιοι), mentioned totemy (vi. 16. § 5) as a population of the ry of the *Seres*. [SKERNA.] [R. G. L.]

ARITES, a people of Aquitania (Caes. *B. G.* 7), who submitted to P. Crassus, a. c. 56. are mentioned by Caesar between the *Elmantes* *lusci*, and the position of both of these peoples down within certain limits. [ELUBATES, 2.]

Some writers would connect the name as with the name *Gars*, a branch of the *Gars*. But the reading *Garites* is not certain in *u's* text. Schneider (ed. Caes. *Bell. Gall.*) has the reading *Gates*. [G. L.]

ARIUS (Γάρυς), a place on the coast of lagonia, 80 stadia to the east of Callistratia. *ian Herac.* *Peripl.* p. 72; *Anonym. Peripl. Enz.*) [L. S.]

ARIZIM. [GERIZIM.]

AROCELLI or GRAIOCELLI, an Alpine people, with the *Centrones* and *Caturiges* attacked *u* (a. c. 58) in his march from Oculum, the western place in Gallia Cisalpina, over the Alps the country of the *Vocontii*. (*B. G.* i. 10.) reading *Graiocelli* is said to have the best any for it. (Schneider, ed. Caes. *B. G.* i. 10.) : people are mentioned by no other writer; but, know where the *Centrones* and *Caturiges* lived, may suppose that the *Graiocelli* were near them. ville, as he often does, determines their position y by the aid of a name. The resemblance be- the names *Oculum* and *Graiocelli*, he says, the place of the *Graiocelli* in the valley of *Pro-* and of *Chuson*, and consequently in Gallia Cis- . But it is clear that Caesar means that were an Alpine people, whom he met after *u* *Oculum*. Walckenaer has a conjecture them which is ingenious; and it may also be

He says that they occupied the *Maurienne* the valley which is contiguous to the *Mauri-* to the east of *Mont Cenis*, the *Val di Fuis*,

L. L.

which contains a place called *Uaupio* and a canton of the same name. And he adds, what is more to the purpose, that in an ancient document, *St. Jean de Maurienne* is called *Johannes Garocellius*. He has other arguments also. (*Géog., &c. des Gauls*, vol. i. p. 542.) [G. L.]

GARRHUENUS, a river in Britain, mentioned by Ptolemy, = the *Yare* (or *Yar-mouth* River) both in respect to name and place. [R. G. L.]

GARRIANNONUM, in Britain, mentioned in the *Notitia* as a station under the *Comes Littoris Saxonici* for the *Equites Stablesiani*—*Burgh Castle* in Norfolk, where Roman remains are found. [R. G. L.]

GAESURA (Γαπεδοῦρα), a small town in Capadocia from which the prefecture *Garsauria* or *Garsauritis* derived its name. (Strab. xiv. p. 663; comp. xii. 534, and 568, where, perhaps *Γαπεδοῦρα* is to be read for *Kramer's Γαπεδοῦρα*; *Plin.* vi. 3; *Ptol.* v. 6. § 14.) [L. S.]

GARSAURITIS. [GAESURA.]

GARUMNA (ἡ Γαρονῆς, *Γαρίνας*: *Garonne*). *Tiballus* (l. 7, 11) calls this river "Magnus Garumna:" but *Ansonius* (*Moellia*, v. 483) makes the name feminine (*aequoreus*... *Garumnae*). The forms *Garumna*, *Garonna*, and *Garunda* occur; the last in a letter of *Symmachus* to *Ausonius*, and it is perhaps the origin of the name *Gironde*.

The *Garonne*, the most southern of the three great rivers of France which flow into the Atlantic, rises in the Pyrenees, within the present kingdom of Spain. The river has a north and NNE. course to *Tolosa* (*Toulouse*), from which town it has a general NNW. course to *Burdigala* (*Bordeaux*). Below *Bordeaux* it forms a large estuary, which *Strabo* (p. 190) calls a sea-lake (*ἁλυπόδασσον*). The navigation of the *Upper Garonne* as far down as the junction of the *Tarnis* (*Tarn*) below *Toulouse* is much impeded. At *Bordeaux* it is a fine tide river, and the tide ascends 20 miles above *Bordeaux*. This river has several large branches: on the right bank, the *Arrighe*, the *Tarn*, the *Lot* (*Oltis*), and the *Dordogne* (*Duranius*), which flows into the estuary; on the left bank, the *Gers*, the *Bayse*, and some others. The length of the *Garonne* is said to be about 360 miles, and the *Dordogne* is near 300 miles long. In fact, the *Dordogne* and *Garonne* are two distinct rivers which flow into one estuary, now called the *Gironde*. The basin of the *Garonne* is much less than that of the *Loire*, but larger than the basin of the *Seine*. It is a country which lies within well-defined limits, the Pyrenees, the *Cévennes*, the mountains of the *Auvergne*, and the Ocean. Part of the basin of the *Garonne* was the Aquitania of Caesar, who makes the *Garumna* the boundary between the Aquitani and the *Celtae* (*B. G.* i. 1).

Strabo (p. 190) and *Mela* (iii. 2) describe the *Garumna* as rising in the Pyrenees. *Strabo* makes the *Garumna* flow parallel to the Pyrenees, and the navigable part of it he says is 2600 stadia: it is increased by three streams, and then enters the sea between the *Santonnes* and the *Bituriges Ioci* [*Britomagus*], both Celtic nations. He speaks of the mouths of the river (*αἱ ἐκβολαὶ*) as forming the estuary: he probably means the proper *Garonne* and the *Dordogne*. *Mela's* description is much more complete: he describes the upper part of the river as shallow for a great distance and scarcely navigable, except when it is swollen by wintry rains or melted snow; as it approaches the ocean tides it is fuller, and becomes wider as it proceeds; at last is

3 K

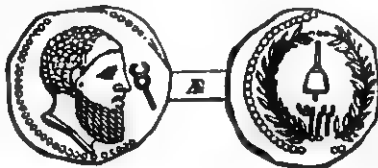

on from the Persian; the first might be derived from *Admeh* (the house-home), the second from *Gdh* (end, Gā), (the place). Arrian, on the authority of Ptolemy and Aristobolus, has corrected the mistake about the place where the battle was really fought, stating that it was at Gaugamela, and not Arbela; he adds the conjecture, that Arbela, being a well-known place, while Gaugamela, on the other hand, was one little known, obtained the credit of having been the exact site of the conflict; he suggests that the two places are as far apart as the straits of the Isthmus of Corinth, or Artemisia on Aegina or Sanium (*Arab. vi. 12*). Plutarch agrees with Arrian. (*Alex. c. 31*.) Ammianus follows the same opinion (*xxiii. 6*). Curtius, on the other hand, calls the field of battle Arbela (*v. c. 9*). Stephanus calls it a place of Persia, probably because, in his time, all that part of Mesopotamia was subject to the Persian Empire. It is, shape, represented by a small place now called *Armeleh*; yet it can hardly be the one marked in Niebuhr's Map (*ii. p. 284, tab. 45*), as that is too far to Mosul and too far from Arbela; Niebuhr himself is inclined to place the scene of action on the banks of the *Khasser*, which he calls a small tributary of the *Greater Zab*. [*ARBELA*.] [V.]

GAULANITIS (*Γαυλιανίτις*), the name of a division of Palestine, the limits of which are not very curately defined by Josephus. He assigns Galana and Gaulanitis to the dominion of Og, king of sehan (*Ant. iv. 5. § 3*), and extends these districts he former he now calls Galaditis) to Mount Lebanon (*viii. 2. § 3*), making them identical with ant is described in Scripture as Ramoth Gilead, the ies of Jair, the regions of Argob, which is Bashan, city large cities, &c. (*1 Kings, iv. 13*.) He makes with Hippene and Gadara, the eastern limit of dilee, and therefore the westernmost of the districts rich he assigns as the dominions of king Agrippa. 1. *J. iii. 3. §§ 1, 5*. These divisions, however, are not ways observed, even by the Jewish historian himself; for Gamala, which in the last-cited passage res its name to a district, is elsewhere reckoned to ulanitis (*Ant. xviii. 1. § 1*); and Judas, who is this passage called a Gaulanite, is usually designated a Galilaean (*Ib. § 6, xi. 5. § 2, B. J. ii. 8. 1, and 17. § 8*), as he is also in *Acts* (*v. 37*). For solution of this difficulty, it is not necessary to sort, as Beland and others have done, to the hypothesis of two Gamalas, but to suppose that Galilee is netimes used in a wider sense, to include the east-side of the sea of Tiberias. From these scattered ices, the district of Gaulanitis Proper may be ely fixed to the eastern side of the river Jordan, m the northern extremity of the sea of Galilee (for theaida Julius was situated in Lower Gaulanitis, *J. ii. 9. § 1*) to the sources of the Jordan and the ts of Lebanon and Hermon. Its extent in width s impossible to define with any accuracy, as there o well-defined natural boundary to the mountain ion and high table-land of the country east of the dan, until it sinks into the great plain of the uran. [*BATAHARA*.] It is supposed to have dered its name from the town of Gaulan, the Scripe GOLAN. (*Reland, Palæst. p. 317*.) [G. W.] GAULOPES, an Arab tribe, mentioned only by ay (*vi. 28*), who places them, with the CHATANI, the Sinus Capens, on the west of the Persian f, in the vicinity of the modern *Chat* or *Kasif* : (*Forster, Arabia, vol. ii. p. 216*.) [G. W.]

GAULOS (*Γαῦλος*: *Εἰς Γαυλίαν*, Gaulitanus: *Gozo*), an island in the Mediterranean Sea, between Sicily and the coast of Africa, separated only by a narrow strait from the much larger and more important island of Melita or *Malta*. Gaulos is itself, however, of considerable extent, being 10 miles in length by about 5½ in breadth, and the soil is fertile: hence the island appears to have been inhabited from a very early period; and Scylax, the most ancient author by whom it is noticed, already mentions it as containing a town of the same name. (*Scyl. § 110, p. 50*; *Mela, ii. 7. § 18*; *Strab. vi. p. 277*; *Plin. iii. 8. c. 14*; *Diod. v. 12*; *Steph. B. s. v.*) Gaulos must at all times have followed the fortunes of its more powerful neighbour Melita; hence it is seldom mentioned separately in history. But we learn that it was first visited and colonized by the Phoenicians, and subsequently passed into the hands of the Carthaginians, in whose power it remained for the most part till the conquest of Sicily by the Romans. At what period, or how, it fell into the hands of the Greeks, we know not; but that it must have done so may be inferred from the circumstance that there exist coins of the island with the inscription, in Greek characters, ΓΑΥΛΙΤΩΝ. Nor have we any account of its conquest by the Romans, which doubtless took place at the same time with that of Melita, at the beginning of the Second Punic War. (*Liv. xxi. 51*.) Under the Roman government Gaulos appears to have enjoyed separate municipal rights, as we learn from an inscription still extant there. (*Chilver. Sicil. p. 444*.) It is mentioned, together with Melita, by Procopius (*B. V. i. 14*), who tells us that the fleet of Belisarius touched there on its way to Africa.

The island of *Gozo* is at present a dependency of that of *Malta*. It contains about 8000 inhabitants, but has no port, being bounded on all sides by steep or perpendicular cliffs, though of no great elevation. It is strange, therefore, that Diodorus should especially mention it as "adorned with advantageous ports" (*Λυμὴν ἐὼςλυμὴν ἀνεωχυμένην*, *v. 13*), the want of which convenience so strikingly distinguishes it from the neighbouring island of *Malta*. Besides several inscriptions of Roman date, *Gozo* contains a remarkable monument of antiquity called the Giant's Tower (*Torre dei Giganti*); it is of circular form and built of massive blocks of stone in an irregular manner, resembling the Cyclopiian style. Near it are the remains of other buildings, constructed in the same rude and massive style of architecture, which appear to have formed part of an edifice of considerable extent consisting of several chambers. These remains, which are wholly distinct in character from anything found in Sicily, are generally ascribed to the Phoenicians; but this rests wholly on conjecture. Their nearest analogies are found in the buildings called *Nuraghe*, in Sardinia. (*Hoare, Class. Towr, vol. ii. p. 293*; *Bullett. d. Inst. Arch. 1833, pp. 86, 87*.)

The view, adopted by some ancient as well as

COIN OF GAULOS.

modern authors, which identified Gaurus with the Homeric island of Calypso, is discussed under the article OGYGIA. [E. H. R.]

GAURA MONS. Part of the Jerusalem Itin. contains a route from Civitas Valentia (*Valence*), on the Rhone, to Mansio Vapincum (*Gap*). After leaving Mansio Lucus (*Lac*), 9 Roman miles bring us to Mutatio Vologatis, which is perhaps *Vongelat*; and the Itin. adds, "inde secundum Gaura Mons." The next station, 8 Roman miles from Vologatis, is Mutatio Camborum. [CAMBORUM.] D'Anville found, in a manuscript map of the *Dauphiné*, a hill called *Col de Cebra*, which, as he supposes, preserves the name *Gaura*. Walckenaer supposes the *Gaura* to be the chain of mountains which extends from *Serve*, on a branch of the *Durance*, to *Rimnes*, at the foot of which is the place named *Le Ga*. Probably D'Anville and Walckenaer mean the same range of hills. [G. L.]

GAURE'LEON. [ANDROS.]

GAURION. [ANDROS.]

GAURUS MONS. a mountain of Campania, now called *Monte Barbaro*, in the immediate neighbourhood of Puteoli, and about 3 miles NE. of Cumae. It is in fact the central and most elevated summit of a range of volcanic hills which extend from the promontory of Misenum to Neapolis [CAMPANIA, p. 491], and is itself unquestionably an extinct volcano, presenting a distinct and tolerably regular crater. (Daubeny on *Volcanoes*, p. 200.) Its sloping sides, composed of volcanic sand and ashes, were very favourable to the growth of vines; hence the wines which it produced were in ancient times among the most celebrated in Italy, and were considered to vie with those of the *Falernian* and *Massican* hills. (Plin. iii. 5. s. 9, xiv. 6. s. 8; Flor. i. 16. § 5; Athen. i. p. 26; Stat. Silv. iv. 3. 64; Sil. Ital. xii. 160.) The position of Mt. Gaurus, towering over the lower hills which encircled the lakes *Avernus* and *Lucrines*, is distinctly pointed out by *Lucretius* (ii. 667) and by *Sidonius Apollinaris* (*Carm.* v. 345), and is implied also by *Gilius Italicus* (l.c.), who places it in the immediate neighbourhood of Puteoli. *Aurelius Symmachus* also, in a poetic description of *Banli* (*Anthol. Lat.* 268, ed. Meyer), distinctly points to the vine-covered flanks of Mt. Gaurus as rising above the hot springs of Puteoli and the lovely bay of *Baise*; but there is a confusion in the passage of *Pliny* where he speaks of the wines of Mt. Gaurus and *Massican*, which has led some writers to assume that the two hills must have been near together, and has thus given rise to much confusion. The *Mons Gaurus* was celebrated in Roman history as the scene of a great victory gained by the Romans under *M. Valerius Corvus* over the *Samnites*, B.C. 340. (Liv. vii. 32, 33.) This was the first in the long series of conflicts between those two nations, and on that account (as *Niebuhr* remarks) "is one of the most memorable in the history of the world: it decided, like the *proterogonia*, upon the great contest which had now begun between the *Sabellians* and the *Latins* for the sovereignty of the world" (vol. iii. p. 119). The exact scene of the battle is not indicated; we are only told that it was fought at the foot of Mt. Gaurus. At a later period *Cicero* mentions this hill among the fertile districts of Campania which the agrarian law of *Nullus* proposed to sell for the benefit of the Roman people (*de Leg. Agr.* ii. 14). [E. H. R.]

GAUZACA or **GAZACA** (*Tafelberg* § *Tafelberg*, *Prod.* vi. 18. § 4), a town seated in the district of the *Paragonimides*. It is no doubt the same as

Agazaca, one of the three cities of this tribe mentioned by *Ammianus* (xxiii. 6). It is supposed by *Forbiger* that it may be the same as the modern *Ghami*. The name is probably connected with *Gaza*, a word of Persian origin, signifying a town-house. [V.]

GAZA (*Tafelberg* : *Eph. Tafelberg*), a very ancient and important city of Palestine Proper, lies situated in the southern border of the *Samaria* (Gen. i. 19), but originally inhabited by the *Arims*, who were dispossessed by the *Capharims*. (Deut. i. 23.) It was included in the tribe of *Judah* (Jud. xv. 47), but remained in possession of the *Philistines* (1 Sam. vi. 17), whose capital it appears to be (*Judges*, xvi. 21). *Josephus* says that it was taken by *Hezekiah*. (Ant. ix. 13. § 2.) It is celebrated in secular, as in sacred history. *Arrian*, in his *Expédition of Alexander* (ii. 27), describes it as a city, distant 20 stadia from the sea, situated on a lofty mound, and fortified by a strong wall. It was well provisioned, and garrisoned by a force of 100 mercenaries under the command of an eunuch named *Batis* (or, according to *Josephus*, *Bahemem*), as its high walls baffled the engineers of *Alexander* (B.C. 332), who declared themselves unable to invent engines powerful enough to batter such high walls. Mounds were raised on the north side of the town, which was most assailable, and the engines were erected on this artificial foundation. They were fired by the besieged, in a spirited sally, and the rout of the *Macedonians* was checked by the latter in person, who was severely wounded in the shoulder during the skirmish. During his slow recovery engines that had been used at *Tyre* were sent to him, and the mound was proceeded with until it reached the height of 250 feet, and the width of a quarter of a mile. The besiegers were thrice repulsed from the wall; and when a breach had been effected in the third assault, and the city carried by scale, a brave garrison still fought with desperate resolution until they were all killed. The women and children were reduced to slavery. The siege had apparently occupied three or four months; and the conqueror introduced a new population into the place from neighbouring towns, and used it as a firm. (Arrian, ii. 27, followed by *Bp. Thirlwall* *Grec. vol. vi. pp. 354—357*.) If this be true, the statement of *Strabo*, that it was destroyed by *Alexander*, and remained desert, must be taken with some qualification (p. 759). Indeed, the figure which it takes in the intermediate period discredits the assertion of *Strabo* in its literal sense. Only twenty years after its capture by *Alexander*, a great battle was fought in its neighbourhood, between *Ptolemy* and *Pantaratius*, wherein the latter was defeated, with the loss of 5000 slain and 8000 prisoners. "Gaza, when he had left his baggage, while it opened its gates to his cavalry on his retreat, fell into the hands of the pursuing enemy." (Thirlwall, vol. vi. p. 357.) Again, in the wars between *Ptolemy Philopator* and *Antiochus the Great* (B.C. 217), it was used as a depot of military stores by the *Egyptians* (Polyb. v. 68); and when the tide of fortune turned, it retained its fidelity to its old masters, and was destroyed by *Antiochus* (B.C. 196). And it is mentioned, to the credit of its inhabitants, by *Polybius*, that, although they in no way emulated in courage the other inhabitants of *Coele Syria*, yet they surpassed them in liberality and fidelity and invincible hardihood, which had shown itself in two former instances, viz. in first resisting the Persian invasion

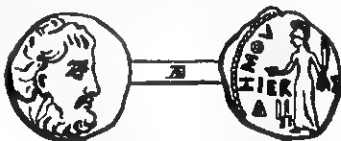

and then in maintaining their allegiance to the Persians against Alexander (xvi. 40). It was evidently a strong place in the time of the Ammonian princes, for it stood a siege from Jonathan (1 *Maccab.* xi. 11, 62; *Joseph. Ant.* xiii. 5. § 5); and having been taken by Simon, not without resistance, he cast out the idolatrous inhabitants, peopled it with Jews, 'made it stronger than it was before, and built therein a dwelling-place for himself' (xiii. 43-48). July a little later, Alexander Jannæus besieged it a vain for twelve months, when it was betrayed into his hands. Its importance at this period is attested by its senate of 500, whom the conqueror slew, and utterly overthrew their city. (*Joseph. Ant.* xiii. 13. § 3.) It did not long continue in ruins, for it was one of the many cities rebuilt by the command of Irbinius (xiv. 5. § 3). It was given to Herod the Great by Augustus (*E. J.* i. 20. § 3), but not included in the dominions of his son Archelaus, as being a Grecian city (ii. 6. § 3). These notices sufficiently expose the error of Strabo's statement above cited; nor does there seem to be any authority for the theory of the transference of the site, by which it has been attempted to reconcile his statement with these historical notices. It is true that Strabo places the city 7 stadia from the harbour (p. 759); whereas Arrian (*l. c.*) states it to be 10 stadia at the most; but this discrepancy concerning the site of a town of which neither of them could have any very accurate knowledge, cannot justify the conclusion that the ancient city had been deserted, and another city of the same name erected in its vicinity. Another and a decisive argument against this theory is, that while the modern city occupies an eminence corresponding with that described by Arrian, and is covered with ancient ruins, no vestiges have been discovered in the neighbourhood which could mark the site of an earlier city. A succession of coins, struck at Gaza, some few prior to the emperors, but many more from Hadrian onwards, attest the importance of the city subsequently to the Christian era, and present some peculiarities worthy of observation. The cypher, or characteristic sign of the city, impressed on almost all the coins, has been variously explained, but by no one satisfactorily: all that is intelligible clearly tests it to have been a pagan city, in accordance with the historical notices above cited. The city itself is represented by a woman's head; and the Greek cities, Zeus, Artemis, Apollo, Hercules, which figure on the coins, with the absence of the local deity, starts, by far the most common in the coins of her maritime cities of Syria, prove the city to have been, as Josephus asserts (*Ant.* xvii. 13. § 4), a Grecian city, probably a colony, which may account for its inordinate adhesion to the exploded superstition of the reign of Constantine (*Sosomen, H. E.* v. 3). The legends of the various coins serve no less to elucidate the history of the city. The earliest (probably A. U. C. 693) proves the city to have been autonomous; and an history bears witness to its state (*Boulay*) of 500, so does this coin to its HMOG. IEP. ACT. further prove it to have enjoyed the privileges of a sacred city and an asylum. The name EIO serves to connect this city with the mythic Io; and the name MEINΩ, applied to an armed warrior with a sceptre in his hand, connects it so with the Cretan hero Minos, and suggests the idea that it may have been colonised from that island; which idea is confirmed by another inscription, IAPNA, the signification of which is furnished by

early Christian writers, who tell us that the most magnificent temple in Gaza (afterwards converted into a Christian church) was dedicated to Marna, and thence called Marnion. This Marna, they add, was identical with the Cretan Jove. (*Eckhel, vol. iii. pp. 448-454.*) Many of the Jewish captives taken by Hadrian (A. D. 119) were sold at a fair instituted at Gaza, which was called, from this fact, the fair of Hadrian for many centuries after. (*Chron. Paschale in ann.*) The town is frequently noticed in Christian and Moslem annals. It early became an episcopal see, and the names of its bishops are found in many councils. (*Le Quien, Oriens Christ.* vol. iii. pp. 603-623.) It was a frontier town of great importance in the middle ages; and the historical notices have been collected by Quatremère (*Les Sultans Mamelouks de Mactris, tom. i. liv. 2. pp. 228-239.*)

The modern town, still called by its ancient name, 'Asasā, signifying "the strong," is situated on a low round hill of considerable extent, not elevated more than 50 or 60 feet above the plain. This hill may be regarded as the nucleus of the city, although only its southern half is now covered with houses. The greater part of the modern city has sprung up on the plain below; a sort of suburbs stretching far out on the eastern and northern sides. The ancient city lay obviously chiefly on the hill. The present town has no gates; yet the places of the former ones remain, and are pointed out around the hill." (*Robinson, Bib. Res.* vol. ii. pp. 374, 375.) "It contains, with the two villages or suburbs adjoining, about 10,000 inhabitants. It is situated a short league from the coast, which is here an open beach, and the landing difficult, excepting in very calm weather. It is surrounded by gardens, which produce fruit in abundance." (*Alderson, Notes on Acre*, p. 7, note 6.)

The port of Gaza was called "Majuma Gazae;" the Arabic word "Majuma," signifying *portus* or *navalis*, being applied alike to Ascalon, Jamnia, Azotus, and Gaza. (*Le Quien, Oriens Christ.* vol. iii. p. 623.) It was situated, according to Strabo, only seven stadia from the city (*l. c.*) Arrian, in agreement with Sosomen, makes the interval 20 stadia. (*Sosomen, H. E.* ii. 5, p. 450, ed. *Valer.*) All that we know of it we learn from the last-mentioned historian. Having been formerly strongly addicted to pagan superstition, it was converted to the faith of Christ in the reign of Constantine, who consequently honoured it with special privileges, erected it into an independent civitas, and called it *Constantia*, exempting it from its subjection to Gaza, whose inhabitants still retained their attachment to the pagan superstition. (*Sosomen, l. c.*) Under the emperor Julian the people of Gaza reasserted their supremacy, and the emperor decided in favour of their claim. Its new name was withdrawn, and it was comprehended again within the name and municipal jurisdiction of Gaza.

The ecclesiastical position of Gaza still continued distinct, with a bishop and ranges of its own; and when an attempt was made by a bishop of Gaza

COIN OF GAZA.

in the fifth century to unite the two churches, the provincial synod confirmed it in its former independence of that see. (Soasmen, *H. E. v.* 3, p. 597). Several of its bishops are mentioned in the ecclesiastical annals. (Le Quien, *Oriens Christ.* l. c.) [G. W.]

GAZA. 1. (Γάζα, Arrian, *Anab.* iv. 2), a city or strongly fortified place in Sogdiana, taken by Alexander the Great in person, on his advance beyond the Jaxartes or Silenus. Bishop Thirlwall (*Hist. of Greece*, vol. vi. p. 286), and others, conjecture that this place may be recognised at *Ghas* near *Urtappeh*, in the desert between that place and the river. Ibn Haukil (p. 270) describes *Ghas* as the summer residence of the rulers of this district. It seems, however, probable that this and other cities taken at this time by Alexander the Great were more to the eastward, in the hilly country. (Wilson, *Arriana*, p. 165, &c.; *Mém. of Emp. Baber*, introd. p. xii.)

2. In Media. [GAZACA.] [V.]
GAZACA (Γάζακα, Strab. xi. p. 523), the Palace of the Parthians, situated in a plain in Atropatene. The name in the earlier editions of Strabo was always written *Gasa*, but Grœkurd detected the error in the MS., and proposed the reading *Γάζακα* for *Γάζα καλ*, which has been adopted by Kramer, and is doubtless the correct one. The name is connected with *Gaza*, and is, perhaps, a modification of it. It is probably connected with the Persian *Ghas*, a place of treasure. (For the name, see Ptol. vi. 18; Ammian. xxiii. 6, where it is written *Agazaca*; Theoph. Chronogr. pp. 257, 270; Cedren. p. 412; Niceph. Patriarch. ep. 12; *Hist. Misc.* xviii. 16; Theoph. Simocatt. *Hist. Mœs.* v. 8, 10; and *GAUZACA*). Pliny speaks of a place he calls *Gazaca*, at a distance of 450 M. P. from Artaxata; this should probably be corrected to *Gazaca* (vi. 13, 16).

If Colonel Rawlinson be right, as we think he is, in his theory with respect to Ecbatana, this town underwent many curious changes of name, according to the rulers who successively occupied it. [ECBATANA.] [V.]

GAZELON or **GADILON** (Γαζιλόνα), a town in the north-west of Pontus, in a fertile plain between the river Halya and Amisra. (Strab. xii. 547; Plin. vi. 2.)

From this town the whole district received the name of Gadilonitis, which is probably the right form, which must, perhaps, be restored in two passages of Strabo, in one of which (p. 553) the common reading is *Γαλασιώτης*, and in the other (p. 560) *Γαζιλιώτης*. [L. S.]

GAZIURÆ (Γαζιούρα: *Asurnia* P.), a town in Pontus, on the river Iris, near the point where its course turns northwards. It was the ancient residence of the kings of Pontus, but in Strabo's time it was deserted. (Strab. xii. p. 547.) Dion Cassius (xxxv. 12) notices it as a place where Mithridates took up his position against the Roman Triarius. (Comp. Plin. vi. 2.) [L. S.]

GAZORUM, the same as *Zagorum*, *Zagorus*, or *Zagora* (Ζάγορα, Ζάγορον, Ζάγορος), a town of Paphlagonia, on the Euxine, between Sinope and the river Halya. (Arrian, *Periplus* p. 15; Marcellian Heracle. p. 78; Ptol. v. 4. § 5, where it is called *Ζάγορα*.) [L. S.]

GAZORUS. [GASORUS.]
GEBAL, **GEBALENE** (Γεβαλή, Γεβαλήνη), a people and district of that part of Arabia Petraea to which Josephus gives the name of *Idumæa*. (*Antiq.* iv. 8. § 1.) Eusebius and S. Jerome properly regard it as identical with Mount Sier (Omo-

mont. *s. v.* *Sera*), the habitation of Edom and his descendants. (*Genes.* xxxvi. 8, 31.) The same describes the mountainous character of the country situated around Petra. (*Oncosmet.* *s. v.* *Idumæa*.) [IDUMÆA.] [G. W.]

GEBALÆ, **GEBALÆCA**. [VANDAL.]
GEDERAH, **GEDEBOTH** (Γεδέρη, Γεδεβόθ). There can be no doubt that the same place is intended under these various forms. It has also been identified with *Geder* (*Josh.* xv. 31), which likewise belonged to the tribe of Judah; see below. *Geder* is reckoned as one of the cities presided over by a king or sheikh of the Canaanite tribes (*Josh.* xii. 13) reduced by Joshua. *Geder* or *Gederothaim* is reckoned to that part of the tribe of Judah situated in the valley or plain (*ex. vi.* 56); in conformity with which notice it is said in 2 *Chron.* xxviii. 18: "The Philistines also had invaded the cities of the low country, and of the south of Judah, and had taken Beth-shemesh and Ajalon, and Geder, and Shochu with the villages thereof, and Timnah with the villages thereof," &c. [G. W.]

GEDOR (Γεδόρ), one of the towns of Judah situated in the hill country. (*Josh.* xv. 58; 1 *Chron.* iv. 39.) Eusebius mentions a village named *Ede*, 10 miles distant from Diospolis (Lydda), on the road to Eleutheropolis (*Oncosmet.* *s. v.*), which may possibly be identical with "a place with ruins on the brow of the high mountain ridge . . . called *Jedir*," which is doubtless the same as the *Gedor* of the mountains of Judah." (*Biblical Res.* vi. 1. p. 338.) [G. W.]

GEDROSIA (Γεδρόσια, Strab. xv. pp. 721, 722; Ptol. vi. 21. § 1, &c.; *Κεδρωσία*, Diod. xvi. 105; *Ed. Gedrosia*, Strab. xv. pp. 723, 724; *Γεδρωσία*, Diod. v. 1086; *Γεδρόσια*, Arrian, vi. 26, 27; *Γεδρωσία*, Arrian, vi. 23; *Gedrosi*, Plin. vi. 30. a. 23; *Gedrosi*, Plin. vi. 23, 24; *Gedrosii*, Curt. ix. 10), an ancient district of Asia, which is washed on the S. by the Indian Ocean, and bounded on the E. by the Indus which separates it from India, on the N. by the Montes Baetii (now *Washkati Mountains*), *Deserta*, and *Carmania Deserta*, and on the W. by *Caraca*. It comprehended probably nearly the same district which is now known by the name of *Mekran*. It was known of this province in ancient times, and its existence was most likely not heard of till Alexander's return from India, when he and Craterus marched across it by two separate routes, while the sea under Nearchus coasted along its shore. Arrian has given some description of it, as it appeared to the archons; and there is a later and fuller account as far as the names of places, in Ptolemy and Marcon, from which we may infer that after the foundation of Alexandria some trade existed between the part of Asia and that city. Strabo differs from Ptolemy by interposing between *Gedrosia* and the nearest some maritime tribes, as the *Arabi* or *Arbi*, between the Indus and the *Arabi*, and the *Oreites*, between them and the Persian Gulf. The probability is that *Gedrosia* did include the whole district between the sea and the borders of *Seistan* and the kingdom of *Kabul*. Sir Alexander Burnes, in his Map, gives the whole country the name of *Boluchistan*, and makes *Mekran* its sea-board. The *Boluchis*, like their language, must be comparatively modern colonists from Persia.

The northern part of *Gedrosia* was lately comprehended the *Baetii Montes* (now *Washkati*). Towards the middle ran another chain of mountains with the river *Arabis*, and called the *Arbii Montes*.

these are probably the *Bale* or *Brakel* Mountains; and to the W. an extensive range, which the boundary of the provinces in the direction of Caramania, the Persici Montes (now *Bash-d* or *Burkind Mountains*). There were few rivers in Gedrosia, and these chiefly mountain torrents, or little better, which in the summer were dry or lost in the sands. The best known was to be the *Arabia* (now *Parak*) (Arrian, *Ind.* 12, 23) [*ARABIS*], which enters the Indian Ocean at 90 miles to the W. of the mouths of the Indus: there are two smaller streams mentioned in ancient times, one the *Nabrus*, which Pliny calls a navigable river (vi. 23, 26), and which may, perhaps, be the modern *Dustas* or *Basgour* (Burnes' Map). *Tomarus* (Arrian, *Ind.* c. 24), or *Tuberum* fl. (Plin. vi. 23, 26), probably the modern *Bhasul*. Arrian and Ptolemy mention several other rivers; these are probably only small streams, and none is known of them but their names.

The character of Gedrosia seems to have been for most part unfruitful, owing to the heat of the climate and the scarcity of water for irrigation. Arrian, however, and Strabo mention that it produced many rare plants, such as myrrh, spike-nard, different kinds of palms. Aristobolus (*ap. Strab.* vi. c. 22) speaks of the vast quantities of Arabian myrtle (*μύρρα*) which the soldiers of Alexander met with, and states that the Phoenicians came thither to collect the gum of this tree, which grew there to a great size. Besides these, were some species of spike-nard and laurels, which the Phoenicians also procured sweetened gums, and a plant armed with thorns so sharp that hares running through them are often caught by them (cactus). The inhabitants of the country constructed their huts of shells, and covered them (for roofs) with the bones of fish (Arrian, vi. 3), and probably subsisted, like their neighbours the Ichthyophagi, chiefly upon fish. There was a violent storm there that Semiramis, on her return from India, lost all her army, except twenty, in traversing Gedrosia, and that Cyrus escaped through some district with seven only. (Arrian, vi. 24.) Arrian has described with much minuteness the difficulties under which Alexander himself laboured.

The Gedrosians appear to have been an Arian race, akin to the Arachosii, Arii, and Drangiani. They are first known to us by Alexander's invasion; they do not seem to have been completely subdued by him: hence it is that very little is known of their political state. At the same time, it must be borne in mind, that between the time of Alexander and Ptolemy many changes may have taken place in the country, and that a district which Alexander and his generals found nearly devoid of inhabitants, in later times, have had all the cities which Ptolemy enumerates, but which we are not able to identify. A considerable number of the cities along the coast have been satisfactorily made out by Dr. Vincent (*Voyage of Nearchus*), with the aid of some modern surveys. At the time of Nearchus's voyage and Alexander's march, the people were apparently under the government of a number of petty chieftains, who ruled the different districts, though they are mentioned in the accounts we have of the expeditions. Along the coast we find (to proceed from E. to W.) the districts named Saranga, also, and Morontobaca, between the Indus and the *Arax* (Arrian, *Ind.* xiii.), with a harbour in the last called *Γυρανών λιμήν*, mentioned also by Marcian

(p. 24) and Ptolemy (vi. 21. § 2). Then follow the Arabitae, along the banks of the *Arabis*; and Oreitae, Oras, Ori, or Horitae, like the last, a people said to be of Indian extraction. (Strab. xv. p. 720; Arrian, *Ind.* 23, *Anab.* vi. 22; Curt. ix. 10.) The land of the last tribe produced corn, wine, rice, and dates. Nearchus founded, at the mouth of the *Tomarus* (*Bhasul*), a town which bore in after-times the name of *Oras* (*Ὀρᾶς*),—now *Urmara* (*Periplus M. Er.* p. 21), to serve as a port of export for the surrounding country. D'Anville has suggested *Hair* as its representative. Vincent rejects the position of *Oras* as given by the author of the *Periplus* altogether. (*Voy. of Nearchus*, vol. i. p. 218.) At no great distance from, and perhaps within the limits of, the same tribe was *Rhambasia* (*Ῥαμβασία*), which Alexander considered so well placed that he ordered Hephaestion to establish a colony there. (Arrian, vi. 21, 22.) Mannert supposes this is now *Hair* (v. 2. § 13); others, that it is represented by *Ramghar*. To the W. commenced the territories of another tribe, the Ichthyophagi (Arrian, *Ind.* c. 26), who lived, as their name indicates, along the sea-board of the land. Their territory was probably a long narrow strip of land (Strab. xv. p. 720), and containing a few places, for the most part only small fishing villages (Arrian, *Ind.* 26; Plin. vi. 23. c. 26). Still further to the W. are several towns enumerated by Arrian, and indicative of a more fruitful and habitable soil; as, *Balomum*, *Dendrobasa*, *Cyzia*, *Canasia* or *Canasida*, *Troesa*, and *Dagasiria*. The author of the *Periplus* (p. 18) adds another town, which appears to have had some importance in his time as an emporium, *Omara* (*Ὀμᾶρα*), mentioned also by Marcian (p. 22), and perhaps the same which Ptolemy mentions under the name of *Comana* (vi. 8. § 7). In the interior of Gedrosia Alexander met with a large place, which, from the description, would seem to have been a sort of metropolis, called *Pura* (*Πούρα*, Arrian, vi. 24). Forbiger supposes that this town is represented by the modern *Bunpar*: Wilson (*Ariana*, p. 158), that it may be *Pulera*—a place visited by Major Pottinger in his journey through this country. Major Pottinger's town would, however, seem to be too far inland to answer the description in Arrian. *Pura*, as a word of Sanscrit origin, signifying "town," may, after all, have only meant "the city," as the chief place of the neighbourhood. [V.]

GEIDUNI or GEIDUMNI, a people mentioned by Caesar as dependent on the Belgian nation of the Nervii. The reading of the name is not quite certain (Caes. *B. G.* v. 39., ed. Schneid.), and the position of the people is unknown. [G. L.]

GEIR or GIR FL. [LISTA.]

GELA (Γέλα; Ἐλᾶ Γελαῖος, *Gelensis: Terra-mosa*), one of the most important Greek cities of Sicily, situated on the S. coast of the island, between Agrigentum and Camarina, and at the mouth of the river of the same name. It was founded, as we learn from Thucydides, forty-four years after the foundation of Syracuse, or B. C. 690, by a joint colony of Cretans and Rhodians under the guidance of Antiphanes of Rhodes and Entimus of Crete. The Rhodian colonists came, for the most part, from Lindus; hence the spot on which the new city was first built obtained the name of Lindii, by which it continued to be known in the days of Thucydides, though the city itself acquired that of Gela, from the river of that name on the banks of which it was situated. (Thuc. vi. 4; Herod. vii. 158; Schol. ad *Pind. Ol.* ii. 16; Diod.

vii. 25. *Exc. Vat.* p. 11; *Callim. ep. Schol. Pind.* l. c.; *Virg. Aen.* iii. 702; *Sil. Ital.* xiv. 218.) Like most of the Greek colonies in Sicily, we have very little information as to its history for nearly two centuries after its foundation. Some obscure notions of its struggles with the barbarians of the interior (*Paus.* viii. 46. § 2; *Schol. Pind.* l. c.), and of internal dissensions between conflicting factions, in one of which Telinae, the ancestor of Gelon, bore a conspicuous part (*Hered.* vii. 153), are all that we hear of it during this period. But the fact that in a. c. 582 the Gelonae were able to found the powerful colony of Agrigentum, may be taken as a proof that they themselves, at that period, were in a flourishing condition. The new colony, indeed, rapidly outstripped its parent city, and rose for a time, under Phalaris, to be the most powerful state in Sicily [*Ἀστυνομήνη*]; but Gela subsequently obtained its turn of prosperity, if not of supremacy, under the rule of Hippocrates. The form of government at Gela had at first been oligarchical, as was the case with most of the Greek cities in Sicily (*Arist. Pol.* v. 12); and this constitution continued till it was subverted by Cleander, who raised himself to despotic power. We have scarcely any information concerning the circumstances of his reign; but we know that he ruled seven years (a. c. 505—498), and transmitted the sovereign power, without opposition, to his brother Hippocrates, who, during a reign of about the same duration (a. c. 498—491), raised Gela to a pitch of power and prosperity far surpassing what it had previously attained, and even extended his dominion over a great part of Sicily. He successively reduced Leontini, Callipolia, and Naxos under his yoke, took the city of Zancle, which he made over to the Samians [*Μεσσηνῶν*], and waged successful war against the Syracusans themselves, who were compelled to purchase peace by the cession of Camarina. (*Hered.* vii. 153, 154.) At the death of Hippocrates (a. c. 491) Gelon succeeded to the sovereign power, and rapidly followed in the same career of successful aggrandisement; till, in a. c. 485, he succeeded in making himself master of Syracuse itself. [*GELON, Biogr. Dict.*] But this event, which seemed likely to raise Gela to the position of the first city in Sicily, became, on the contrary, the cause of its decline. Gelon from this time despised his native city, and directed all his efforts to the aggrandisement of his new capital, with which object he even compelled half of the inhabitants of Gela to migrate to Syracuse. (*Hered.* vii. 156.) His successor Hieron also appears to have driven a large number of the citizens of Gela into exile; but after the expulsion of Thrasybulus (a. c. 466) all these returned to their native city, and Gela not only became itself repopled, but was able to settle a fresh colony at Camarina, which had been rendered desolate by Gelon. (*Diod.* xi. 76.) The period which followed, from the restoration of its liberty to the Carthaginian invasion (a. c. 466—406), seems to have been one of great prosperity for Gela, as well as for the rest of Sicily. The Gelonae appear to have adhered uniformly to the same line of policy with the other Doric cities in the island: and hence they were among the first to promise their support to the Syracusans on the approach of the Athenian expedition (a. c. 415). Immediately after the arrival of Gylippus, the Gelonae sent a small body of troops to his support, and, after the first successes of the Syracusan arms, they furnished a more considerable force of 600 troops, with a squadron of five ships. (*Thuc.* vii. 33, 58; *Diod.* xiii. 4, 12.)

A few years later the great Carthaginian invasion brought destruction on Gela, as it had previously done on Himera, Selinus, and Agrigentum. After the capture of the last city (a. c. 406), the Carthaginians afforded a temporary refuge to its inhabitants, and treated them with the utmost kindness: it is at this time they urgently applied to the Syracusans for assistance; but Dionysius, who was at that time rising to power, though he visited Gela, and talked about a democratic revolution in the city, he took no further steps for its protection. (*Diod.* xii. 29, 31.) The next spring (a. c. 405) the Carthaginians appeared before Gela, and laid siege to the city, which was a place of no natural strength, and not fortified; notwithstanding which, the inhabitants made a gallant resistance, and were able to repulse the attacks of the enemy till the arrival of Dionysius, the head of a large army to their relief. He, in general, having been defeated in his first attack on the Carthaginian camp, renounced all further effort, and compelled the Gelonae to follow the example of the Agrigentines, and abandon their city with their wives and families. The unhappy cities which he reduced to Leontini, while Gela itself was plundered and waste by the Carthaginians. (*Diod.* xii. 104—113.)

By the peace which Dionysius soon afterwards concluded with Himilco, the Gelonae were permitted to return to their own city, on condition of repairing its fortifications, and of paying tribute to Carthage (*Diod.* xiii. 114), and there is no doubt that they availed themselves of these terms; but Gela, once repopled, never rose again to its former power. In a. c. 397 the citizens gladly declared themselves free from the Carthaginian yoke, and joined Hieron in his expedition against the western cities of Sicily (*Id.* xiv. 47); and, notwithstanding the vast assistance of fortune that marked the war between the Syracusan despot and the Carthaginians, he succeeded in maintaining their independence of the last people, which was secured to them by the treaty of a. c. 385 (*Id.* xv. 17). Of their subsequent fate we hear nothing for some time; but they are mentioned as among the first to join the Carthaginians, when he landed in Sicily, a. c. 337 (*Id.* xix. 96), and, after the victory of Taormina (a. c. 338), Gela, which was at that time a very decayed state, was replenished with a new body of colonists, composed in part of her own inhabitants, with the addition of new settlers from the island of Ceos. (*Plut.* *Timol.* 35.) This only appears, for a time, to have restored Gela to a moderate degree of prosperity; and it figures in the next century as an independent city, possessing considerable resources. But a severe blow was inflicted on it by that tyrant, who, in a. c. 311, was apprehensive of its defection to the Carthaginians, contrived to introduce a body of troops into the city, and massacred above 4000 of the principal citizens. (*Diod.* xix. 71, 107.) By this means he secured his power thence for the time, and after his defeat at Ecnomus he took refuge with the Carthaginians at Gela, where he was able to defy the attacks of the Carthaginians. (*Id.* xix. 116.) In a. c. 309, when the Agrigentines, under Xenodorus, set the standard of independence, and proclaimed the freedom of the separate cities, the Gelonae were the first to join them, and took an active part in the enterprise. (*Id.* xx. 31.) Gela appears to have at this time, recovered a considerable degree of power and prosperity, but we hear nothing more of it after

time of Agathocles, and when its name next we find it subject to the rule of Phintias, the son of Agrigentum, who, with the view of augmenting the city that he had lately founded near the mouth of the Himera and called after his own name PHINTIAS, not only removed thither the inhabitants of Gela, but demolished the walls and houses of the older city. (Diod. xxii. 2. Exc. Hoesch. 95.)

It is evident that Gela never recovered from this war: we find, indeed, incidental mention of its being in a devastated state soon after by the Mamertines (Diod. xxiii. 1. Exc. H. p. 501); but in the First Punic War no notice occurs of the city, though the story is mentioned on one occasion in connection with Phintias (Diod. xxiv. 1. Exc. H. p. 506). Under Roman rule, however, the "Gelasenses" certainly existed as a separate community (Cic. Verr. iii. 43), the statement of Cicero, that after the capture of Carthage Scipio restored to them the statues that had been carried off from their city (Verr. iv. 33), would seem to prove that the latter was then still in existence. Strabo, indeed, tells us that Gela was in his day uninhabited (vi. p. 272), and associates it with those of Callipolis and Naxos, as cities that had wholly disappeared; but his expressions must not be construed too literally, and the name is found both in Pliny and Ptolemy. (Plin. iii. 8. 4; Ptol. iii. 4. § 15.) But it was probably at this period a poor and decayed place, and no substantial trace of it is found.

The site of Gela has been the subject of much controversy in modern times, many local writers tending for its position at the modern *Alicata*, at the mouth of the river *Salso*, while Cluverius, who has been generally followed by the most recent authorities, places it at *Terranova*, about 18 miles farther E., and at the mouth of the river now known as the *Fiume di Terranova*. All arguments derived from the statements of ancient writers are in favour of the latter view, which may, indeed, be considered clearly established: the only evidence in favour of *Alicata* is the fact (in general, certainly a strong one) that an honorary inscription with the name of Geloans has been found there. But as the ruins visible near *Alicata* are in all probability those of Phintias, a city which was peopled with the inhabitants of Gela, it is easy to understand how such an inscription (which is of small dimensions) may have been transported thither. No doubt exists that *Terranova* occupies an ancient site; we learn from a writer of the 13th century, that it was founded by Emperor Frederic II., "super ruinis deletae urbis obrutae urbis" (Guido Columna, cited by Zello); and the remains of an ancient temple are still visible there, of which the massive basement was served in the days of Fazello; and one column remained standing as late as the visit of D'Orville (1727), but is now fallen and half buried in the sand. Numerous coins and painted vases have been brought to light by excavations on the site. (Fasell.

Reb. Sic. v. 2. p. 232; Cluver. *Sicil.* pp. 199, 200; D'Orville, *Sicula*, pp. 111—132; Smyth, *Sic.* p. 196; Biscari, *Viaggio in Sicilia*, p. 111; Bert. *Abrag.* v. 2. *Gebiet*, pp. 47, 48.)

The situation of *Terranova*, on a slight eminence, little more than a mile from the sea, precisely corresponds with the account given by Diodorus of the operations of Dionysius when he attacked the Carthaginian camp, from which it is evident that, though situated near the sea-coast, it was suffi-

ciently distant from it to admit of the passage of one division of the army between the walls and the sea. (Diod. xiii. 109, 110.) No importance can be attached to the circumstance that Ptolemy reckons Gela among the inland towns of Sicily, as he includes in the same category Phintias and Camarina, both of which were situated almost close to the coast.

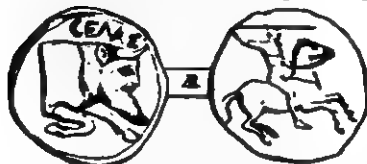

The position of the city of Gela being ascertained, that of the river follows it. This can be no other than the one now called *Fiume di Terranova*, from its flowing by the walls of that town, which rises in the neighbourhood of *Piazza*, about 25 miles N. of *Terranova*. It still retains the character of a violent and impetuous torrent, alluded to by Ovid (*Fast.* iv. 470); but has little water in the dry season. Ancient grammarians derive the name of the river (from which that of the city was taken) from a Sicilian word, *γέλα*, signifying cold or frost, evidently connected with the Latin *gelus*. (Steph. B. s. v.; Suid. s. v.; *Etym. Magn.* s. v.) An absurd story is, however, related by the same authorities, which would derive the name of the city from *γέλας*. The river-god Gelas is represented on most of the coins of the city, under the usual form of a bull with a human head: on one of them he bears the title of *ΣΑΥΙΝΟΑΙΣ*, a strong instance of that veneration for rivers which appears to have particularly characterised the Greeks of Sicily.

To the west of Gela extended a broad tract of plain, between the mountains and the sea, but separated from the last by an intervening range of hills. This is the *Γελαῖον πεδῖον* of Diodorus and the *Campi Geloi* of Virgil (*Aen.* iii. 701). It is still, as in ancient times, one of the most fertile corn-growing tracts in the whole of Sicily; whence Gela is termed, by the author of an ancient epigram, *σπυροποιος*, "the wheat-bearing" (*Epigr.* ap. *Anon. Vit. Aesch.*). According to an earlier writer (*Amphip.* ap. *Athen.* ii. p. 67), it was renowned for the excellence of its lentils (*φακὲς*). We learn also from Pliny (*xxxi.* 7. a. 39, 41), that its territory produced abundance of salt.

Gela was the birth-place of Apollodorus, a comic poet of some note, who is frequently confounded with his more celebrated namesake of Carystus. (Suid. s. v. *Ἀπολλόδορος*; *Athen.* iii. p. 125.) It was also the place to which Aeschylus retired when driven from Athens, and where he was soon after killed by a singular accident (s. c. 456). The Geloans paid great respect to his memory, and his tomb was still visible there in after-ages. [*AESCHYLUS, Biogr. Dict.*] We learn from Pausanias that they had a treasury at Olympia, in which they dedicated valuable offerings. (*Paus.* vi. 19. § 15.) The same author alludes to some statues, the reputed work of Daedalus, which had formerly existed at Gela, but had disappeared in the time of the historian. (*Id.* ix. 40. § 4.) A colossal statue of Apollo, which stood outside the town, was carried off by the Carthaginians, in s. c. 405, and sent to Tyre, where it still remained when that city was taken by Alexander the Great. (Diod. xiii. 108.)

It is certain that Gela, in the days of its power and prosperity, possessed an extensive territory; though we have no means of fixing its exact limits. It was probably separated from that of Agrigentum on the W. by the river Himera: of its extent towards the interior we have no account; but the name of a station given in the Itineraries as "Gelasium Philosophianis," seems to prove that this point (which apparently coincided with the modern town of *Piazza*,

about 24 miles from *Torvannus*) must have been comprised in the territory of *Gela*. [E. H. S.]

COIN OF GELA.

GELAE (Γῆλας, Strab. xi. pp. 508, 510; Γῆλας, Ptolemy. c. 35; Γῆλας, Ptolemy), a warlike tribe who lived along the shores of the Caspian sea, in the district now called *Gilan*, which not improbably derives its name from them. They were probably allied to, and an offshoot of, the still greater tribe of *Cadusi*, who occupied nearly the same location. [CADUSII.] Strabo divides the territory along the S. shores of the Caspian between the *Gelae*, *Cadusi*, *Amardi*, *Witii*, and *Anariacae* (xi. p. 508). If, as is likely, this order from W. to E. is correct, the *Gelae* would be the tribe next to *Armenia*, and immediately to the E. of the *Araxes* or *Kur*. Their land is said to have been poor and unfruitful. Little is known of their history as distinct from that of the *Cadusi*. Pliny considers the *Cadusi* to be a Greek, and *Gelae* an Oriental name (vi. 16. s. 18), which would favour the hypothesis that the modern *Gilan* is connected with the ancient *Gelae*. [V.]

GELBIS, a branch of the *Moosel*, mentioned by *Ausonius* in his poem (*Mosella*, v. 359):—

“Te rapidus Gelbis, te mare claus Erubus,—
Nobilibus Gelbis celebratus piscibus.”

The *Gelb* may be the *Kill*, which joins the *Moosel* on the left bank, below *Angusta Trevirorum* (*Trier*, *Trieres*). [G. L.]

GE'LUBA, is described by *Pliny* (xix. 5) as a “castellum Rheno impositum.” It is mentioned by *Tacitus* several times (*Hist.* iv. 36, 38, 36, &c.), from whom we may collect that it was near *Novesium*. The *Antonine Itin.* places it on the left bank of the *Rhine*, on the road from *Cologne* to *Leiden*, between *Novesium* (*Noues*) and *Calo* [*Calo*]. The distances and the modern names, *Gellap* or *Gell*, determine the position of *Gelduba*. [G. L.]

GELLA. [VACCARI.]

GELONI (Γελωνοί, Herod. iv. 106; Plin. iv. 12; Ann. Marc. xxi. 2. § 14), a people associated with the *Budini* [*BUDINI*] by *Herodotus* (l. c.).

Schafarik (*Slov. Aft.* vol. i. p. 186) remarks that, beyond the mention in *Herodotus*, nothing is known about the *Geloni*. The later writers appear to have misunderstood his statement while repeating it. It is possible that the name *Geloni* might be formed out of that of *Hellenes* among the *Slaves* and *Fins*. Such *Μηδellανες* were common enough in the towns upon the *Buxina*. Schafarik, who believes the *Budini* to belong to the *Slavic* family, asserts that the wooden town *GELONIA*, described as being in the middle of the *Budini*, is an exact representation of the primitive *Slavic* towns down even to the twelfth century. (Comp. *Grote*, *Hist. of Greece*, vol. iii. p. 327.) [E. H. S.]

GENELLA. [ACCI, TOCCI.]

GENINAE. [GALLIENAE.]

GENINAE, in *Gallia Narbonensis*, a station in the *Tabula* on the road from *Lucus* (*Luz*) over the *Cottian Alps*. It is an uncertain position. (Walckenaer, *Geogr.* 4to. vol. iii. p. 48.) [G. L.]

GEMINACIUM, a place in *South Gallia*, on a route in the *Antonine Itin.* from *Caesara* (*Caes.*) to *Colonia* (*Colonia*). The *Itin.* has a route from *Torvannus* (*Thurvannus*) also to *Colonia*. The route runs from *Thurvannus* to *Colonia*, where it runs through *Comminum* (*Comminum*) and *Reveret* (*Reveret*) to *Vindogobium* (*Vindogobium*) to *Table*, and thence to *Geminacium*. The distance in the *Itin.* and the *Itin.* do not agree, but the route seems to differ less than *D'Anville* makes them. The next station after *Geminacium* is *Perconia*, and the next is *Admontium* (*Tungorum*), in a certain position. The road from *Reveret* to *Colonia* is straight. *D'Anville* identifies the *Geminacium* with *Gemblen*, and he adds that in later times *Geminacium* was written *Gemmelum* and *Gellum*. Walckenaer makes the place *Fenela*, was probably within the limits of *Caesara*. A great number of places in this part of *Gallia* have the termination *-acum*. De *Valis* (p. 111) *D'Anville* supposes that the *Roman* troops stationed in the *Notitia* under the name *Geminacium* and placed “*intra Gallias*,” derived the name from the place. [G. L.]

GENABUM (Καβαίον: *Orléans*), a city of the *Carnutes*, a Celtic people. *Ptolemy* (ii. 5) places the *Carnutes* along the *Seine*; and he mentions two cities in their country, *Astricon* and *Genabum*. The latitude in which he places *Genabum* is near the truth: and he places *Astricon* (*Caesara*) correctly, both north and west of *Orléans*. *Strabo* (p. 191) states that *Genabum* (*Nervus*) is in *Liger* (*Loire*), about half way between the *Loire* and the outlet, or, perhaps, about the middle of the navigable part; a description which agrees well with the position of *Orléans*. He calls it the *porum* of the *Carnutes*. The *Roman* itineraries place the position of *Genabum* at *Orléans*. *Genabum* from *Nervium* (*Nervus*), on the east side of the *Loire*, to *Genabum*, and thence direct to *Lutetia*. The distance from *Genabum* to *Lutetia* does not quite agree in the *Table* and in the *Antonine Itin.* but both are near enough to show that, if we accept *Lutetia* to be *Paris*, *Genabum* must be *Orléans*.

Caesar (*B. G.* vii. 5) mentions *Genabum* as one of the *Carnutes*, in which the great insurrection began in a. c. 53. He describes it (*B. G.* vii. 5) as situated on the *Loire*. The true reading of the passage is—“oppidum *Genabum* pennis *Ligeris* contingebat” (not “contingebat”). The narrative of *Caesar* shows that the town was on the north side of the *Loire*, as *Orléans* is; and there was a bridge from it to the south side. *Caesar* broke into *Genabum* (a. c. 53) after the destruction there, set it on fire, and cruelly *destruxit* to besiege *Avaricum*. [AVARICUM.] In his next campaign against the *Carnutes* in the next year he quartered his men amidst the ruins of the town in the huts.

Under the later empire this town had the name *Aureliani*, of which word the name *Orléans* is a corruption. The name “*Civitas Aurelianensis*” occurs in the *Notitia* *Imp.*, and *Orléans* was then the town of a diocese, distinct from that of the *Carnutes*. *Aimoin*, a writer of the sixth century, (quoted by *Walckenaer*), distinctly states the “*Genabum*,” as he calls it, in *Aurelian*. *Walckenaer* also says that a suburb of *Orléans* “has kept the name of *Génabie*.” There are some traces of the *Roman* walls of *Orléans*, which may have been built as late as the time of the emperor *Aurelian*.

whom it is conjectured that the place took its name. [G. L.]

NAUNI (Hor.; Γενάωνι, Strab.) or GENES (Plin.), a fierce and warlike tribe (im-um genus) of Rhaetia, subdued by Tiberius Julius in the reign of Augustus. They lay in the lakes *Maggiore* and *Como* in the modern di *Non*. (Hor. iv. 14. 10; Strab. iv. p. 206; iii. 20. s. 24.) It has been conjectured that, d of Βενλαύωνι in Ptolemy (ii. 13. § 1), we to read Γενάωνι; and in Florus (iv. 12), in- of "Breunos, Senones, we ought to read unos, Genannos." (Forbiger, *Geographie*, vol. 444.)

NESTIUM (Γενέσιον), a place in the Argeia the Argolic gulf, S. of Lerna, and N. of the ain pass, called Anigræa, leading into the atis. (Paus. ii. 38. § 4.) Pausanias, in another e (viii. 7. § 2), calls the place Genethlium θλιον), and says less correctly that near it was ring of fresh water rising in the sea, called whereas this spring of fresh water is to the he Anigræa. [ARGOS, p. 202, b.] Near this Danans is said to have landed. [ΑΡΟΒΑΤΗΜΙ.] mains of Genesium have been found, but it have stood near the village of *Kyverá*. (Leake, 2, vol. ii. pp. 477, 480; Boblaye, *Recherches*, . 48; Ross, *Reisen im Peloponnes*, p. 152; 18, *Peloponnesos*, vol. ii. p. 371.)

NETES (Γενήτης), the name of a small river arbour on the coast of Pontus, near Cotyora. x. xii. p. 548; Steph. B. s. v.; Scylax, who it Γενήτις.) Some authors also mention a ntory (ἀκρω Γενήτις) in that neighbourhood 1. B. i. c.; Apollon. Rhod. ii. 1009; Val. Flacc. 3); and Pliny (vi. 4) speaks of a people Ge- in the same district. [L. S.]

NETHLIUM (Γενέθλιον). 1. A place near an, where Theseus is said to have been born. . ii. 32. § 9.)

In the Argeia, also written Genesiam. [GE- m.]

NEVA. Caesar (*B. G.* i. 6) describes Geneva furthest town of the Allobroges, and nearest borders of the Helvetii. The Rhodanus was undary between the Allobroges and the Hel- and a bridge over the Rhone at Geneva con- the two territories.

ce the time of Aldus the editors have kept the g "Geneva" in Caesar's text; but there is y any good MSS. authority for it. The best have "Genna," which reading Schneider has edition of the Gallic War. The authority for a is an inscription of doubtful age, which has VENA. PROVINCLA: but two other inscriptions GENAVENIBVS. The Greek version of Caesar *νεβωτα* and *Γενεβωτα*. (Schneid. ed. Caesar.) In antonine Itin. the form *Cenava* occurs, and va or *Gennava* in the Table. Neither Strabo tolemy mentions Geneva. The French form of me is *Genève*, and the German is *Genf*. After r's time we hear no more of Geneva for about ears. There is no authority for naming it a Allobrogum.

a operations of Caesar in the neighbourhood neva are described under the article HEL-

. [G. L.]
NNESARET. [PALAESTINA; TIBERIAS .]

NUA (Γένουα, Strab., Ptol.: Εἰθ. Genuensis: 2), the chief maritime city of Liguria, situated

on the coast of the Mediterranean Sea, at the bight of the extensive bay now known as the *Gulf of Genoa*, but in ancient times called the *Sinus Ligusticus*. It appears to have been from a very early period the chief city on the coast of Liguria, and the principal emporium of trade in this part of the Mediterranean; an advantage which it naturally owed to the excellence of its port, combined with the facility of communication with the interior by the valley of the *Porciferæ*. Its name, indeed, is not mentioned in history until the Second Punic War; but it then appears at once as a place of considerable importance. Hence, when the consul P. Scipio abandoned the intention of pursuing Hannibal up the valley of the Rhone, he at once returned with his fleet to Genua, with the view of proceeding from thence to oppose the Carthaginian general in the valley of the *Padus*. (Liv. xxi. 32.) And at a later period of the war (s. c. 205), when Mago sought to renew the contest in Liguria and Cisalpine Gaul, it was at Genua that he landed, and made himself master of that city in the first instance; though he subsequently transferred his head-quarters to Savoy, for the purpose of carrying on operations against the Ingauni. (Liv. xxviii. 46, xxix. 5.) He appears to have destroyed the town before he quitted the country; on which account we find (in a. c. 203) the Roman prætor Sp. Lucretius charged with the duty of rebuilding it. (Id. xxx. 1.) From this time Genua is rarely mentioned in history, and its name only occurs incidentally during the wars of the Romans with the Ligurians and Spaniards. (Liv. xxxii. 29; Val. Max. i. 6. § 7.) It afterwards became a Roman municipium, and Strabo speaks of it as a flourishing town and the chief emporium of the commerce of the Ligurians; but it is evident that it never attained in ancient times anything like the same importance to which it rose in the middle ages, and retains at the present day. (Strab. iv. p. 202, v. p. 211; Plin. iii. 5. s. 7; Ptol. iii. 1. § 3; Mel. ii. 4. § 9.) It was from thence, however, that a road was carried inland across the Apennines, proceeding by Libarna to Dertona; and thus opening out a direct communication between the Mediterranean and the plains of the *Po* (Strab. v. p. 217; *Itin. Ant.* p. 294; *Tab. Pent.*), a circumstance that must have tended to increase its commercial prosperity. The period of the construction of this road is uncertain. Strabo ascribes it to Aemilius Scaurus; but from an inscription we learn that it was called the *Via Postumia*.

A curious monument, illustrative of the municipal relations of Genua under the Roman government, is preserved in an inscription on a bronze tablet, discovered in the year 1506, and still preserved in the *Palazzo del Comune* at Genoa. It records that, a dispute having arisen between the Genuates and a neighbouring people called the *Veituri*, concerning the limits of their respective territories, the question was referred to the senate of Rome, who appointed two brothers of the family of Minucius Rufus to decide it; and their award is given in detail in the inscription in question. This record, which dates from the year of Rome 637 (s. c. 117), is of much interest as a specimen of early Latin; and would also be an important contribution to our topographical knowledge, but that the local names of the rivers (or rather streamlets) and mountains therein mentioned are almost without exception wholly unknown. Even the position of the two tribes, or "populi," most frequently mentioned in it, the *Veituri*, and *Langenses* or *Langates*, cannot be determined with any certainty;

but the name of the latter is thought to be preserved in that of *Langarum*, a castle in the valley of the *Poloserra*; and it is evident that both tribes must have bordered on that valley, the most considerable in the neighbourhood of *Genoa*, and opening out to the sea immediately to the W. of that city. The name of this river, which is called *Porcifer* by Pliny (iii. 5. a. 7), is variously written *Porcobera* and *Procobera* in the inscription, which was itself found in the valley of the *Poloserra*, about 10 miles from *Genoa*. The orthography of that document is throughout very irregular; and the ethnic forms *Gennates* and *Genouenses*, as well as *Langates* and *Langenses*, are used without any distinction. (The inscription itself is published by Gruter, vol. i. p. 204, and Orrelli, *Inscr.*, 3121; and from a more accurate copy by Rodorf, 4to, Berlin, 1842; and Egger, *Reliq. Latini Sarmos*, p. 185.)

On the E. of *Genoa* flows the river now called the *Bisagno*, which must be the same with the *FERRIVS* of Pliny (l. c.); it is a less considerable stream than the *Poloserra*, and is always dry in summer.

No ancient authority affords any countenance to the orthography of *Janua* for *Genua*, which appears to have come into fashion in the middle ages, for the purpose of supporting the fabulous tradition that ascribed the foundation of the city to *Janus*. This form of the name is first found in Lintprand, a Lombard writer of the tenth century. (Cluver. *Ital.* p. 70.) [E. H. B.]

GENUNII (*Γενούνιοι*), in Britain, mentioned only by Pausanias, who states that Antoninus "deprived the Brigantes in Britain of a great portion of their land, because with arms they had overrun the territory of the Genunii, who were tributary to the Romans" (viii. 43. § 4.) [R. G. L.]

GENUSIUM (*Ἔθ. Gennaius: Ginoes*), a town of Apulia, not far from the frontiers of Lucania. It is mentioned by Pliny (iii. 11. a. 16), and by the author of the *Liber de Colonia* (p. 262), of whom the latter reckons it among the towns of Calabria; but Pliny is correct in assigning it to Apulia. The site is marked by the modern town of *Ginosa*, which retains the name. It is about 15 miles from the gulf of Tarentum, and 10 from *Matera*. [E. H. B.]

GENUSUS (*Vib. Seq. p. 10; Pent. Tab. : Gennatus, Geog. Rav.*), a river of Illyricum, upon the lines of which Appius Claudius had his camp when he was employed against Gentius, at the same time that the consul Aemilius was carrying on the war against Perseus in Macedonia, n. c. 168. (Liv. xlv. 30.) Caesar (*B. C.* 75, 76; *Lucan.* v. 462), while attempting to effect a junction with the division of Calpurnius on the frontiers of Epirus and Thessaly, crossed this river.

It is the river now called *Tjerna*, or *Stjerna*. The latter is obviously a corruption of *Scampis*, at or near *Elbasan*. The branch of the *Genusus*, upon which that town is situated, may have been named *Scampis* as well as the town, and by a common kind of change may have superseded the name of *Genusus* as that of the entire course of the stream below the junction. (Leake, *Trav. in North Greece*, vol. iii. p. 280.) [E. H. B.]

GEPHYRA (*Γέφυρα, Γεφυραί*), a place in Attica at the bridge over the Cephissus, on the sacred road from Athens to Eleusis, where the initiated assailed passengers with vulgar abuse and railery, hence called *γεφυρομαχίαι*. (Strab. ix. p. 404; Suid. s. v. *Γεφυραί*; Hasyeh. s. v. *Γεφυρομαχίαι*.)

GEPIDAE, **GEPIDI** (*Γεπίδες*), one of the

principal tribes of the Goths. They are first mentioned by Vopiscus (*Prob.* 18). After their migration, they are said to have settled in the country between the Oder and the Vistula, from which they expelled the Burgundiones. In the fifth century they found them, under their king Ardaric, victors over the hosts of Attila, with whom they traversed Gaul, afterwards settled in Dacia, on the banks of the Danube. As they were regarded as dangerous enemies to the Eastern Empire, Justinian invaded the country of the Langobardi against them. The consequence of this was that the Gepidae and their kingdom were destroyed. (Paul. Dinc. i. 37; *Excerpt. de Notis Histories*, pp. 303, 310, 340, 387, ed. Heib. Niebuhr; *Procop. B. G.* iv. 5; *comp. Lat. Geog. ad Tac. Germ.* p. lxxvi.) [E. H. B.]

GERAE. [*ERAE*.]

GERARA. [*LUERTANIA*.]

GERAESTICUS. [*ERAE*.]

GERAESTUS (*Γέραεστος*; *Ἔθ. Γέραε*), a promontory of Euboea, forming the southern extremity of the island, now called *Cape Janina*. There was a town on this cape, with a temple of Poseidon, and at its foot there was a frequented port, which seems to have been mentioned by Livy, as *Leake* observes, calls it "Euboeae portus." (*Hon. Od.* iii. 17; *Strab.* 7, ix. 105; *Thuc.* v. 3; *Xen. Hell.* iii. 4. § 4; § 61; *Strab.* x. p. 446; *Scyth. B. a. c.* iv. 2. 45; *Plin.* iv. 12. a. 21; *Meib.* ii. 7; *Leake's Trav. Greece*, vol. ii. p. 423.)

GERANDREUS (*Γέρανδρος*), a town of Pontus, near Soli, where a peculiar kind of marble was found. (Apoll. Dync. *Hist. Mirab.* xxvi.; *Enop. Syria* vol. i. p. 157.) [E. H. B.]

GERANEIA. [*MEGAREIA*.]

GERANTHRAE. [*GERONTHRAE*.]

GERAR (*Γέραρ*), a town and country of Philistines, situated between *Cadash* and *Socoth*. Abraham and Isaac sojourned for many years in it. (Gen. i. 1, c. xvi. 1, &c.) According to *Strabo* it was situated 25 miles south of *Elothopas* (Togabra). (*Onomast.* s. v.; *Reinard. Palest.* &c.) Its site was recovered by Mr. Rowlands in 1840, and is thus described: "From Gaza we came to *Khalasa*; on our way we discovered ancient Gerar. We had heard of it at Gaza under the name of *el-Gerd* (the 'Emah' or 'Rapid of Gerar') which we found to lie three hours SSE from within *Wady-Gaza*, a deep and broad valley coming down from the SE, and receiving a higher up than this spot, *Wady-as-Shera*, the ENE. Near *Joor-el-Gerd* are traces of an ancient city, called *Kharbet-el-Gerd* (The Rock of Gerar). Our road beyond to *Khalasa* is a plain slightly undulated. This plain is the land of Gerar." (Williams, *Holy City*, n. c. d. ix. p. 464.) [E. H. B.]

GERASA (*Γέρασα*; *Ἔθ. Γέρασι*), a city of Coelestria, according to Ptolemy (v. 15), near to the Decapolis by Pliny, for it is clear that it must be substituted for *Galesa*, as by *Strabo* (Plin. v. 18). It is associated with *Philastria* as the eastern boundary of *Pemsa*, by *Josephus* (*B. J.* iii. 3. § 3), and mentioned in connection with *Pella* and *Scythopolis* (l. 4. ii. 19). According to Ptolemy, it was 35 miles from *Pella*. It is marked by the very extensive ruins of *Gerash*, 35 miles east of the Jordan, at the eastern extremity of the land of Bashan, and on the border of the great desert of the *Haurem*. It is remarkable

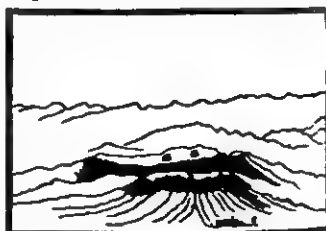

time of Xenophon (*Hell.* iii. 1. § 15) Gergis is called a strong place; it had an acropolis and strong walls, and was one of the chief towns of the Dardanian princess Mania. (Comp. *Plut. Phoc.* 18; *Liv.* ix. xviii. 39; *Strab.* xiii. p. 589; *Plin.* v. 32; *Steph. B. z. e.*; *Athen.* vi. p. 256, xii. p. 524.) King Attalus of Pergamus transplanted the inhabitants of Gergis to a place near the sources of the Caicus, whence we afterwards find a place called *Gergeia* or *Gergisium*, near Larissa, in the territory of Cyme. (*Strab.* l. c. 616.) The old town of Gergis was believed by some to have been the birthplace of the Sibyl, whence coins found there have the image of the propheticess impressed upon them. [L. S.]

GERGOVIA. In most texts of Caesar's *Gallie War* (*B. G.* vii. 9) there is mention made of "Gergovia, a town of the Boii, whom Caesar planted there after their defeat in the Helvetic War, and made dependent on the Aedui." But the name of the town in this passage of Caesar is uncertain, though it may be something like Gergovia. And if Gergovia is the right name, we do not know where the place was.

The Gergovia which Caesar tried to take was a city of the Arverni (*B. G.* vii. 34), the position of which may be determined with tolerable accuracy from Caesar's narrative. After the capture of Avericum, Caesar went to Decotia (*Décote*) on the *Loire* to settle the differences of the Aedui, after which, taking six legions and some of his cavalry, he set out for the country of the Arverni, and of course he must march southward. His course was along the river Elaver (*Allier*). But before he could reach Gergovia he had to cross the *Allier*. Gergovia, therefore, is south of Decotia, and west of the *Allier*. Vercingetorix, who was on the west side of the *Allier*, broke down all the bridges on the river; and, while Caesar was marching along the east bank, he marched along the left, and kept him in sight. Caesar could not make a bridge over the river in face of his enemy; and the *Allier*, he observes (*B. G.* vii. 35), is generally not fordable before the autumn. Caesar got out of the difficulty in this way. He encamped in a wooded place opposite to one of the bridges which Vercingetorix had broken down, and on the following day he remained there with two legions. He sent forward the other four legions with all his heavy material, distributing these troops in such a way as to present to Vercingetorix the appearance of six complete legions. The four legions had orders to make a long march; and when Caesar judged from the time of the day that they were at their camping ground, he began to repair the broken bridge, of which the lower part of the piles remained entire. This was soon done; the two legions were taken over, and orders sent to the four legions to return. Vercingetorix, discovering what had happened, and not choosing to risk fighting a battle against his will, marched ahead of Caesar as hard as he could, and reached Gergovia (*B. G.* vii. 35). From the place where he crossed the *Allier* Caesar reached Gergovia in five days' march. We neither know where he crossed the river, nor the length of his marches, nor the precise direction; but it was south.

He describes Gergovia as situated on a very high mountain, difficult of access on all sides. (*B. G.* vii. 36.) The camp of Vercingetorix was near the town on the mountain, and around him were encamped, at moderate distances and separately, the forces of the several states under his command.

The Gallic troops occupied all the heights which commanded a view into the plain below, and presented a terrible appearance. Opposite to the town and close to the foot of the mountain was an excellent fort for defence, and with a steep face round. This hill was held by the Galli, but Caesar saw that if he could take it, his men would be able to cut off the enemy from a large part of their water and prevent them from firing arrows. The force that the Galli had on this hill was very great; and Caesar, attacking it in the face of the night, before any aid could come from the town, got the place and put two legions in it. He cut two ditches, twelve feet wide, from this hill to his principal encampment, which was in the plain. The road between the two ditches was the communication between the two camps. The summit of Gergovia is marked a, a in the view; the hill in front of it, marked b, b, is the small hill which took, now called *Puy de Jussat*. This view is Scrope's *Central France*.

PANORAMIC VIEW OF THE GERGOVIAN PLAIN.

From this hill that he had occupied, near *Jussat*, Caesar attempted to surprise Gergovia. He moved his men, a few at a time, from his camp to the *Puy de Jussat*, while he drew the attention of the enemy by a feint of attacking a mountain of Gergovia on the north-west side. The hill was ready, he ordered his allies, the Aedui, up the mountain of Gergovia on the south-east, while he with his men climbed up the west side of the mountain which is opposite to the *Puy de Jussat*. The movement was successful, and he got a plateau of Gergovia and took three of the enemy's camps. But the impetuosity of the Romans marred all.

They pursued the enemy up to the last of the gates, in full confidence that they should take the place at once. One of the centurions with the help of three of his men climbed up the wall, and helped them up after him. The same happened to the rest of the Galli, who were weary of war; that part of the approaches to the city was taken, they supposed that Caesar had a design on the place, and the fight took place under the walls, to the great advantage of the Romans, who were not inferior to the enemy in numbers, were on undrained ground, and were also exhausted by running and fighting. Caesar sent to T. Sextius, whom he had left at *Puy de Jussat*, to bring up some cohorts to join them at the foot of the hill on the enemy's right, if the Romans were driven down the mountain, might check the pursuit. While the fight was going on the Aedui made their appearance, who Caesar had ordered to climb the mountain on the north, that is, on Caesar's right, or the south-east side of the mountain. The resemblance of their armor to that of the enemy made the Romans take them for the troops of Vercingetorix, though the Aedui

usual signal of being friends. The Romans were now hard pressed, and, having lost forty-six legions, were driven down the mountain. The 15th, Caesar's favourite legion, checked the hot pursuit of the enemy, and the cohorts of T. Sextius came to the relief. When the Romans got down the plain they faced about, and stood ready to meet the fight; but Vercingetorix led his men back to their entrenchments. Caesar lost near 700 men in this affair. Shortly after he left the place for the city of the Aedui, and again crossed the *Allier*, he confirms the fact, if it needs confirmation, that Gergovia was in the hill country on the west of the *Allier*. (*B. G.* vii. 53.)

There is nothing to be got from the other ancient writers who mention Gergovia. (*Strab.* p. 191; *Cass.* xl. 35.) D'Anville (*Notice*, &c.) gave good reasons for fixing on this part as the site of Gergovia. The place still keeps its name *Gergovie*. It is about 4 miles south of Clermont, in Auvergne. The summit of the mountain is a somewhat more than an English mile in length east to west, and about one-third of a mile in breadth. Excavations have laid open the foundations of a strongly built, well-lined with cement, and masonry. Broken utensils, medals, and red pottery have also been found. Gallic medals, some of silver, but most of bronze, are picked up there, when the earth is stirred for cultivation. Doubtless there was once a town here, and it was probably inhabited after the Roman conquest; though *Augustonemetrum*, or *Clermont*, was the capital of Arverni in the Roman period. [*Augustonemetrum*.]

The plan of Gergovia is from Caylus (*Recueil d'estampes*, tom. v. pl. 101). There is also a plan he places in Pasumot (*Mémoires Géog. sur les Antiquités de la Gaule*, i. p. 216). Walckenaer (*Géog.*, &c. vol. i. p. 341, note) says that the plan of Pasumot is copied from that of Caylus, but adds the addition of two or three names. He adds

the plan of Gergovia is from Caylus (*Recueil d'estampes*, tom. v. pl. 101). There is also a plan he places in Pasumot (*Mémoires Géog. sur les Antiquités de la Gaule*, i. p. 216). Walckenaer (*Géog.*, &c. vol. i. p. 341, note) says that the plan of Pasumot is copied from that of Caylus, but adds the addition of two or three names. He adds

AN OF THE MOUNTAIN OF GERGOVIA AND ITS ENVIRONS.

1. Plateau of Gergovia.
2. Roman Camp.
3. La Roche.
4. Jussat.
5. Puy de Jussat.
6. Romagnat.
7. A stream north of Gergovia.
8. Mont Romagnat.
9. Montagne de la Serre.
10. Puy de Monton.

that the commentary of Caylus and that of Pasumot on the plan of Gergovia are both very good; but the researches, and probably the opinions contained in them, are the property of Masson, prior of St André, who read a *Mémoire* on this subject to the literary society of Clermont. The plan shows the *Puy de Jussat*, separated from the hill of Gergovia by a depression. The hill to the west of the *Puy de Jussat* is that from which Scrope's view is taken. On the south is a stream which flows into the *Allier*, and Caesar's camp must have been near it. Another stream flows on the north side of the *Puy de Jussat* and of the mountain of Gergovia; which will explain Caesar's remark about the chance of cutting off part of the enemy's water. The plan shows a descent from the mountain of Gergovia on the NW., near *Romagnat*, and another on the SE., near *Mordogne*. The high ground above *Romagnat* seems to be the point of Caesar's feigned attack. D'Anville says that the mountain of Gergovia is called *Podium Mardonias* in a document of the fourteenth century, and there is now a place called *Mordogne* or *Mardogne*, at the foot of the mountain of Gergovia, between it and *La Roche*. He takes the *Puy de Monton*, due south of Gergovia, to be the hill which Caesar got possession of before he attempted to surprise Gergovia.

Ukert (*Gallien*, p. 399) concluded that Gergovia was SW. of the *Allier*; but that is all that he has done. It would hardly be worth while noticing Reichard's absurd attempt to fix the position of Gergovia, if it had not been accepted by one editor of Caesar (*Herzog*), who, knowing nothing of geography, has added to his edition of Caesar's Gallic War a map by Reichard, in which Gergovia is placed on the *Loire*, east of *Orléans*. [*G. L.*]

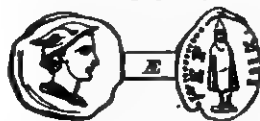

GERIZIM or GARIZIM (*Tapiçis*, *Tapiçis*). The general situation and appearance of Mount Gerizim are described, and its position identified, in the article EBAL. Josephus calls it the highest of all the mountains of Samaria (*Ant.* xi. 8. § 2), and uniformly places it in the immediate vicinity of Shechem, in agreement with holy Scripture (e. g. *Ant.* v. 1. § 19, xi. 8. § 6, xiii. 9. § 1), so that the observation of St. Jerome, "*Samaritani arbitratur hos duo montes juxta Neapolim esse, sed vehementer errant*," — as though only the Samaritans assigned them that position, — is inexplicable. That Gerizim was regarded with special veneration by the Samaritans prior to the erection of the temple, by which the schism was perpetuated, cannot be doubted. The circumstances which led to the erection of the temple are mentioned by Josephus (*Ant.* xi. 8. § 2). Manasseh, the brother of Jaddus the high priest, having married Nicaso, the daughter of Sanballat, was required by the Jews either to divorce his wife, or to withdraw from the priestly office. His father-in-law persuaded him to retain his wife, on the promise that he would procure permission to erect on Mount Gerizim a temple similar to that at Jerusalem. This permission he obtained from Alexander the Great, while engaged in the siege of Tyre, and its erection could scarcely have been completed when Sanballat died (§ 4). From this time forward sacrifices were offered at this temple to the Most High God, until the Samaritans, in order to escape a participation in the persecutions of the Jews under Antiochus Epiphanes, requested of him that their temple might be dedicated to Jupiter Hellenius, according to Josephus (*Ant.* xii. 5. § 5), but, according to the author of the second book of *Maccabees* (vi. 2), followed by

Eusebius (*Chron.*), to Jupiter Xanlus. Shortly after, in the debate before Ptolemy Philometor (*Ant.* xiii. 3. § 4), the Samaritan advocates ignore its Pagan dedication, and claim Mosaic authority for its erection; failing to establish which, they were put to death. The temple of Sanballat was destroyed by Hyrcanus, the Jewish high priest, after it had stood 300 years (*Ant.* xiii. 9. § 1); and we have no notice of its restoration. Indeed, the allusion of the Samaritan woman (*John.* iv. 20) would seem to intimate that "this mountain" was no longer the seat of their worship; but a temple was afterwards erected, probably over the ruins of the former, — whether for the Samaritans or the Pagans is not clear, as *Δὸς ἱερῶν ὑδρῶντος ἱεροῦ*, in a heathen author, may mean either. (*Dunsm.* ap. Phot. *Bibl.* cod. 242. p. 1055.) But there can be no doubt that this is the temple represented on the reverse of the coins of Flavia Neapolis from the time of Titus to Valerianus. The temple is situated on the summit of a mountain, with numerous steps leading to it. (*Eckhel.* vol. iii. pp. 433, 434; *Williams, Holy City*, vol. i. p. 241, n. 4.) It was in the possession of the Samaritans in the fifth century, when, in A.D. 474, it was transferred to the Christians by the emperor Zeno, in reprisals for the ruin and desecration of five churches, by the Samaritans, in the city of Neapolis. The church dedicated to the Virgin was slightly fortified, and guarded by a small detachment of the large garrison of the city. In the reign of Anastasius it was recovered for a short time by the Samaritans, who were finally ejected by the emperor Justinian, when the mountain was more strongly fortified. (*Procop. de Aedif.* v. 7; *Robinson, Bib. Res.* vol. iii. pp. 123—125.) From that time to the present the Samaritans have had no edifice on the site, but for a very long period have been in the habit of sacrificing on the mountain at their three great festivals; a practice which is continued to the present day. "The spot where they sacrifice the passover, seven lambs among them all, is pointed out just below the highest point, and before coming to the last slight acclivity. It is marked by two parallel rows of rough stone laid upon the ground; and a small round pit, roughly stoned up, in which the flesh is roasted." A little beyond this, and higher up the mountain, "are the ruins of an immense structure, bearing every appearance of having once been a large and strong fortress." They are called *El-Kis'as* (the castle) by the Samaritans, and are probably the remains of the fortress erected by Justinian. (*Robinson, Bib. Res.* vol. iii. p. 99.) Round a large naked rock, a little to the south of the castle, which is reputed the most sacred place of all, are traces of walls, which may possibly indicate the position of the temple, particularly as the Samaritans profess that this is the place where the ark formerly rested in the tabernacle. Further south, and indeed all around upon this eminence, are extensive foundations, apparently of dwellings, as if ruins of a former city. There are also many cisterns; but all now dry. [G. W.]

GERMA (*Γέρμα*; *Ἑθ. Γερμανός*), also called *Ἰσπὴ Γέρμα*, a town of Mysia, situated between the rivers Maeandrus and Rhyndacus. (*Ptol.* v. 2. § 14; *Steph. B. a. v.* Hierocl.) Ruins of this town are still found in the neighbourhood of *Germasloe*. Another town of the name of Germa is mentioned in Mysia, between Pergamus and Thyatira. (*Itin. Anton.*; comp. *Arundell, Seven Churches*, p. 278.)

The following coin belongs probably to the former

of these two places. The letters on the obverse on the right of the standing figure ought to be *GERM*

COIN OF GERMA IN MYIA.

The third and most celebrated place of this name was situated in Galatia, on the site of the rostrum, between Pessinus and Ancyra. *Ptolemy* (4. § 7) calls it a Roman colony, which title is confirmed by the coins found there, and which were have been conferred upon it by Vespasian or his son, for none of these coins are older than Domitian. From ecclesiastical writers we learn that Germa was an episcopal see of Galatia Salutaris, and a Bonifacine writer (*Theophan. Chron.* p. 208) informs us that at a later period Germa took the name of *Myriangeli*. (*Comp. Hamilton's Researches*, p. 442.) [L.S.]

GERMANIA (*ἡ Γερμανία*; *Ἑθ. Germani*; *Germani*; *Adj. Germanicus*, *Germanicus*; *Germani*; *French, Allemagne*; *Ital. Alemagna*; *German. Deutschland* or *Teutschland*), one of the great divisions of continental Europe, acts no very prominent part in the history of antiquity until the period of the Roman empire; but during the last period of the Western empire it attracted the attention of the various countries of Southern Europe, by sending forth hordes of barbarians, who, in the end, overthrew the established new dynasties in the conquest countries, and infused a better blood into the old inhabitants of the south-west of Europe.

I. Name. — Tacitus (*German.* 2) states: "Germanie vocabulum recenset ut imper additum, quod qui primum Rhenum transgressi Gallie imperium, et nunc Tungri tunc Germani vocati sint. In nationis nomen, non gentis, evahime palatin. ut non primum a victore ob metum, mox a se ipsi nomine Germani vocarentur." According to this passage, the name Germania had been recently given to the whole country; the name itself had been known long before his time (*Cic. de Fin.* 2. p. 21. xi. 6; *Vell. Pat.* ii. 67), though we are perhaps quite warranted in assuming that it occurred in the Capitoline Fasti as early as the year B.C. 218 (*Niebuhr, Lect. on Rom. Hist.* vol. ii. p. 65, note 1). Tacitus further regards *Germani* as a proper name of the tribe afterwards called Tungri, and not as an appellative, and intimates that from this tribe it was afterwards transferred to the whole nation. But others among the ancients (*Strab.* v. 2. 290, iv. p. 195; *Vell. Pat.* l.c.; *Enstath. ad Dion. Per.* 285) believed that *Germani* was the well-known Latin appellative which was given to the Germans to describe them as "brothers" of the Gauls or Celts. This latter view, which has been supported by some eminent Germans of modern times, is probably the reason which often led the writers to confound Germans and Celts, whence Virgil calls the Arar a river of Germany (*Ecol.* i. 63) and the Germans on the east of the Rhine are sometimes called Celts. (*Dion Cass.* lxxi. 3; *Diod. Sic.* v. 3.) The French and Italian names (*Allemagne* and *Alemagna*) are derived from the German tribes of the *Alamanni*, *Alamansi*, or *Alamanni*, who, as the name indicates (*Alle Manner*), formed a confederation of several tribes on the upper Rhine and Danube.

whom the Gauls transferred the name to the German nation; for these Alemanni made freeroads into the Roman dominion in Gaul. are first mentioned by Dion Cassius (xviii. 11. *Αλαμάννοι*) on the occasion of a war which all had to carry on against them. Some inquirers derive the name Germani from the w, referring to the Persian tribe called Ger- (Herod. i. 193), and to the Persian *Kerman* (mania), that is, hospitality; their view is supported by the resemblance existing between the ers and customs of the ancient Germans and of the Persians. But if it were true that the Ger- brought the name with them from Asia, it would be indigenous among them; but down to the t day, neither any German tribe, nor the whole t, ever called itself German, but always *Deutsch* or *ch* (Gothic *Þeudisk*, old High German *Diutisc*, Anglo-Saxon *Theodisc*). The same remark s to the derivation of the name from the Ger- *Ger*, *Gwer*, *Heer*, or *Wehr*, which has been sed by some. Surely the Romans would not called the nation by a name derived from a an root that was unknown to them, seeing that ermans themselves did not use that name. The bility is that the name *Germani* is of Celtic , and that it had come into general use among the in Gaul before the time of Caesar, who there it applied to the whole nation dwelling on at of the Rhine. In Haupt's *Zeitschrift für die Alterthümer* (vol. v. p. 614), H. Leo has sed a very probable etymology from the Celtic; great stress upon Tacitus's expression, *ob a*. He derives the name from the Gaelic *x gair* (to cry out), and *gair*, *gairm*, *gair-* (a cry); so that *Germanus* would signify hing like the Homeric *Βοηρ δρυάδης*, a fierce, le warrior. Thus much, then, is certain, *Germani* was the name given to the people by neighbours, and for a time the Germans them- may have used it in their intercourse with and Romans; but it never was adopted by the ans so as to supersede their own name. *Ten-* the name of the German hosts invading the of Europe in the time of Marius, contains in- the same root as *Deutsch* or *Teutsch*, but it ot follow that this was originally the common for the whole German nation; it is, on the con- almost certain that, in the earliest times, the ans had no name comprising all their different . Our view of the Celtic origin of the name mi is confirmed by the fact that the Belgae) applied it even to the inhabitants of Mt. Ar- a, and that the Celtiberians in Spain designated the Oretani in Spain (Caes. B. G. ii. 3, 4, 6; ii. 4), neither of which belonged to the German

Boundaries, Extent, and Divisions.—The ts are pretty well agreed in fixing the bound- of Germany. In the west, it was bounded by ine; in the north-east, by the Vistula (*Weich-* and the Sarmatian mountains, or the Carpa- ; in the south, by the river Danubius; and in rth, by the ocean (*Mare Germanicum*, *Oceanus trionialis*) and the Baltic (*Mare Sævicum*). as (*Germa*. 1) and others are of opinion that the n frontier towards Sarmatia and Dacia cannot urately fixed. In the north, ancient Germany ed much farther than at present, as it com- the countries now called Denmark, Sweden, orway. In the south, the frontier was not the

same at all times; for, according to Pliny (iii. 23; comp. Plin. *Paneg.* 14), Germania extended as far as the foot of the Alps, which separated it from Italy; but it is well known that in Caesar's time the country from the Alps to the Danube, and even further north, was still inhabited by Celts, who must afterwards have been subdued or expelled by the Germans. On the west, the Rhine is distinctly said by Caesar to form the boundary between Gaul and Germany; but from his own account, it is clear that this is only a very loose statement. The Belgae in the north of Gaul (Belgium and Holland) were a mixed race of Cymri (not Gauls, as Caesar states) and Germans; but the frontier between the Belgae and Germans is extremely uncertain, and in regard to some tribes, such as the Menapii, it is even doubtful as to whether they were Germans or Cymri. The Treviri, moreover, were ambitious to be regarded as Germans, and modern Alsacia was occupied by Germans. Hence we are probably justified in assuming that, about the time of Augustus, the western bank of the Rhine was as much occupied by Germans as it is at present. This view is also confirmed by the fact that the Romans applied the name *Germania* to the western banks of the Rhine, calling the southern part *Germania Superior*, and the northern *Germania Inferior*. Hence Tacitus divides Gaul into six provinces, two of which are formed by the two Germaniae just mentioned. [GALLIA, p. 967.] This part of Germany, which was conquered by the Romans during the reigns of Augustus and Tiberius, was distinguished from Germany on the east of the Rhine, which bore the name of *Germania Magna* (*Τεγαρινή* & *μεγίστη*, Ptol. ii. 11. § 6), and *Germania Trans-rhenana*, or *Barbara* (Caes. B. G. iv. 16, v. 11; Tac. *Hist.* ii. 76; Capitol. *Maximin.* 12; Eutrop. vii. 5; Vopisc. *Probus* 13; Am. Marc. xviii. 4). Regarding the extent and magnitude of ancient Germany, we have the following statements, which, however, greatly differ from one another, and cannot be accepted without caution. According to Strabo (iv. p. 193), the breadth of the country along the Rhine amounted to 3000 stadia; according to Agrippa (ap. Plin. iv. 25), the distance from the Danube to the coast of the ocean was 1200 Roman miles; while, according to another statement in Pliny (xxvii. 11), the distance from Carnuntum on the Danube to the sea-coast amounted only to 600 Roman miles; and the length along the southern frontier (including Rhaetia and Noricum) was computed at 696 miles (Plin. iv. 28). Along the northern frontier, the distance from Asciburgium to the mouth of the Vistula was estimated at 1350 stadia (Martial. *Herac.* p. 99); while, according to the same authority, the coast from the mouth of the Rhine to that of the Vistula amounted to from 10,000 to 13,000 stadia. Ptolemy, the principal authority on the topography of Germany, places the country between 26° and 44° of longitude, and between 47° and 59° of northern latitude, and enumerates within this extent 68 tribes, 94 towns, 7 chains of mountains, and 14 rivers.

III. *Physical Aspect of the Country.*—Although at a very early time Phœnician merchants sailed through the German ocean into the Baltic for the purpose of obtaining amber, still no information about the country was communicated to the inhabitants of Southern Europe, all the useful geographical discoveries made by the Phœnicians being kept secret, from commercial jealousy. The voyage of Pytheas of Marseilles (about B. C. 330), who likewise visited the Baltic, yielded little information

about Germany, and it was not till the time of Caesar, when the Romans commenced their military operations against the Germans, that the nature of their country became better known. The Romans describe Germany as a wild and inhospitable country, covered with forests and marshes, and of a melancholy aspect (Tac. *German.* 2; *Mela*, iii. 3); cold winds are said to blow constantly, and the barren soil to be covered during the greater part of the year with snow and ice (Senec. *de Prov.* 4; Herodian, vi. 7). The country was reported to produce little corn and luxuriant grass (*Plin.* xvii. 3), but no fruit-trees. The immense forests were the abodes of a great variety of wild beasts, some of which appear to have since become extinct. (Caes. *B. G.* vi. 95.) There can be no doubt that these statements contain much that is true; but it seems equally certain that they are in many points a little exaggerated, the Romans being anxious to account in some honourable way for their repeated failures in attempting to make themselves masters of the country. At present, the draining of marshes, the clearing away of extensive forests, and the improved cultivation of the land, have produced changes in the climate which have led some modern writers unjustly to charge the ancients with monstrous exaggeration. The north of Germany, as Tacitus correctly remarks, is flat and marshy, and mountains exist only in the south. (*German.* 3, 30.) Almost all the mountains are called by the name *Silvæ*, showing that they must have been thickly wooded. The most celebrated of these mountains, which are discussed in separate articles, are the *HERCYNIA SILVA*, *ARNOBA*, *ALPI MONTES*, *BACENIS SILVA*, *MELASCOUS MONTES*, *GABRIATA SILVA*, *ARCIBURGUS MONTES*, *TAURUS*, *SEVO*, *LUCUS BADUENHAR*, *NAHAYALORUM SILVA*, *SEMNONUM SILVA*. The principal rivers of Germany are the *REHNIUS*, *DANUBIUS* (*Idan*), *VISTULA*, *AMEHA*, *VIBURGI*, *ALBIS*, *VIADUR*. Among the lakes, the most remarkable is the *BRIGANTINUS LACUS*; besides which, many lakes are mentioned near the mouth of the Rhine, between this river and the *Aminia*, and several extensive marshes are noticed by Ptolemy (*Mela* (iii. 3)).

IV. Productions. — Among the wild beasts inhabiting the forests, none appeared so formidable to the Romans as the elc and ur; but besides them, we hear of bears, wolves, lynxes, wild cats, wild boars, stags, and deer: the cows were of small size, and had small horns, but the cows, especially in the south, yielded great quantities of milk. The horses also were small, and not handsome, but strong, and capable of undergoing great hardships. The dogs, especially those of the *Sigambri*, were thought well suited for the chase. Pigs were bred in great quantities, and have formed a considerable article of commerce for exportation. (Strab. iv. p. 301.) Sheep and goats were bred for food and clothing. The most common of the feathered tribes were eagles and geese; bees and fishes abounded in the forests and rivers. The extensive forests furnished plenty of wood, especially oak and beech-wood; but notwithstanding this, the inhabitants also used just as fuel. Many of the trees were of gigantic size; fruit-trees existed, indeed, but had not yet been improved by cultivation, which seems to be the meaning of *poma agrestia* in Tacitus (*German.* 23; comp. with 10). Although the country is described as, on the whole, not fertile, still we are informed that it produced wheat, barley, oats, flax, turneps, large radishes, asparagus, and beans. Turneps, prepared, as in Scotland, into a sort of

partridge, was an article of food very extensively used; and Tacitus (*German.* 23) informs us that the beverage (beer) was prepared from wheat and barley. Among the metals, we hear of silver, iron, copper, and calamine; crystals, opazes, turquoises, opals, even diamonds, were found in the mountains of Germany. The north coast was rich in salt, but none of the products of the north was so valuable as tin, as tin was the amber (*electrum*), and it was a substance which first drew the attention of the Greeks and Romans to the coasts of the Baltic. The cultivation of the vine is said to have been introduced into Germany by the Franks during the 5th century of our era; but on the left bank of the Rhine, on the Moselle, and in Rhenia, the vine has been cultivated at a much earlier period. (Vop. *Prob.* 18; *Ann. Vict. Caes.* 37; *Sext. Ap.* Strab. iv. p. 306.)

V. Population and Inhabitants. — Although many was covered with extensive marshes and forests, still there is good evidence that the country was thickly peopled; though, owing to the constant wars and migrations, the population was in many places very fluctuating. The tribe of the *Sorani* sent every year into the field an army of 100,000 men (*B. G.* i. 37, iv. 1), and *Ariovistus*, their king, crossed the Rhine with an army of 120,000 men (*B. G.* iv. 3). The *Usipetes* and *Tencteri* together amounted to 430,000. (Ib. iv. 15.) *Maroboduus* kept an army of 74,000 men (*Vell.* i. 109); in war with the *Sigambri*, the *Romani* counted 40,000 men (*Suet.* *Tiber.* 9); and in the war with the *Chamavi* and *Angriarii* against the *Bructeri*, 100,000 men are said to have been slain. (Tac. *German.* 10.) But all these facts do not enable us to form any approximate idea of the exact population of Germany in ancient times. It would seem, however, as a consequence of the mountains and forests in the south, the population of that part was less numerous than in the north and east.

The Germans considered themselves as a nation, that is, as the offspring of the land they inhabited (Tac. *German.* 2, 4); but there is no doubt that they, like all the nations of Europe, immigrated from Asia, though neither history nor national legends of the Germans contain the allusion to such an immigration. But what conceals from us is revealed in the languages of the people, which bears the strongest analogy to the languages spoken in India and Persia. The German language belongs to what is now termed the Indo-European family of languages. Hence we must infer that at some remote and unknown period the Germans issued from the country of Upper Asia, and passed by *Mosch*, *Caucasus*, and through the countries in the north of the *Black Sea* and the *Caspian sea*, into Europe. They must have belonged to the same great stock of nations as the *Greeks*, *Romans*, and *Celts*, to the last of which they are said to have borne a very marked resemblance in stature, character, and manners. (Strab. iv. p. 301.) The Germans are universally described as tall and handsome men, of a white complexion, blue eyes, and fair or red hair, which they took great care of, and the colour of which they rendered as bright by a peculiar kind of soap. The relation of the Germans formed a considerable article of commerce with the Romans during the imperial period, for it was a fashion with the Roman ladies to wear periwigs or curls of red hair. Men as well as women wore long hair; but they shaved their heads and

their moustaches grow. The blue eyes of the Germans, which generally have a soft expression, are nevertheless described as full of defiance. Men were almost equal to the men, both in and in size; a fact which is confirmed by a found in tombs of ancient Germans. As reclassification of the inhabitants of Germany, ancients divided them into several groups. (Germ. 2) mentions three great groups, viz., *Isaewones*, on the ocean; the *Hermiones*, in the and the *Isaewones*, in the east and south of

These three names are said to have been from the three sons of Mannus, the ancestor of Germans. Pliny (iv. 28) indeed mentions up of German tribes, adding to those just the *Vindilis* as the fourth, and the *Pescinios* as the fifth; but this classification have arisen from a mistake: for Zeux, in to be referred to hereafter, has shown that lili belonged to the *Hermiones*, and that and *Bastarnae* are only names of individual not of groups of tribes. But how the names of Germany are to be arranged under these up is a question which it is impossible ever with any degree of certainty: and Tacitus appears to have felt the difficulty; for, in his of the several tribes, he omits to mention to up they belonged. As the Scandinavian is regarded as a part of Germany, its in, bearing the general name of *Hilleviones*, divided into *Reiones* and *Sitones*, must be a fourth group.

Mode of Life and Character of the People. The physical constitution of the Germans was, no a great measure the result of their way of their commerce was inconsiderable, and ended chiefly on the breeding of cattle, the war, pursuits which created in the people an insatiable love of freedom, and made them of foreign sway. Tacitus (Germ. 14) the faithfulness and trustworthiness of the but other statements lead to a somewhat opinion, and we are probably not far wrong that the ancient Germans, like all other, had a considerable degree of honesty, with cunning and falsehood.

As of the Germans, in early times, was simple, and almost the same for both sexes; up to the time of maturity are said to have rears at all, not even in winter. The chief dress of men was a cloak, sometimes made cloth, and sometimes consisting of the skin nal. The women wore close-fitting garments, which they spun and wove themselves which were sometimes adorned with paws; the arms and part of the bosom were uncovered. In later times, men also, especially, wore similar close-fitting garments, adorned with gold, shoes, and a kind of coat own to the knee. But the German attached more importance to his arms, which he with him into the grave. The defensive, at first very simple and defective, for and helmets and breast-plates; the place of was often supplied by the skin of the head mal, on which the horns were left standing had no other defensive armour but a, made of wood or wicker-work, covered r. The most ancient weapon of attack of hammer or axe made of stone; for later period, brass was substituted. Next

in importance to the axe were the spear (or frame), club, sword, sling, and bows and arrows. The habitations of the Germans were equally simple, forming shapeless masses, probably of clay, covered with straw or turf; caverns covered with dung-hills served as store-houses, and also as places of refuge in winter. Such houses generally stood isolated in the fields and forests, near a spring or brook, and were very rarely united into villages or hamlets. Some tribes, which led a half nomadic life, appear to have had no regular houses at all.

The principal article of food consisted of flesh, which was cooked or roasted, but often prepared only by being beaten or kneaded, or dried and smoked, besides this, the Germans lived on milk, butter, cheese, eggs, fishes, and especially porridge made of oatmeal, and beer. Generally speaking, the Germans were moderate in their diet, but they were particularly fond of social meals, and no other nation ever was more hospitable to strangers; but it is at the same time well attested that they were given to excessive drinking, and no festival of a public or private character passed without great excesses in drinking (generally beer, rarely wine), which very often led to quarrelling, fighting, and even murder. For this reason, the women seem to have withdrawn as soon as the drinking commenced. The ancient Germans were so fond of singing as their modern descendants; for we are told that they sang at weddings and funerals, as well as on going out to battle. They were also much given to gambling, in which they would sometimes go so far as to stake their personal freedom, when all their property was lost; in such a case, the loser became the slave of the winner. Marriages were not contracted till a very mature age, and required the sanction not only of the parents, but of all the kinsmen, and, instead of receiving a dowry, the bridegroom had to present one to his bride. Women were probably nowhere so much honoured as among the Germanic nations; and it is owing to the influence exercised by the Germans upon all the nations of Europe, combined with that of Christianity, that women, during the middle ages, enjoyed the respect and esteem with which they are still regarded by all truly civilized nations. The ancient Germans entertained the greatest reverence for women, for they believed them to possess a certain divine and prophetic power; the women not only conducted all the domestic affairs, but also accompanied the armies on their military expeditions, attended to the wounded, cheered on the wavering to fresh deeds of valour, and sometimes even took an active part in the battles. The children grew up without much care on the part of their parents, and thus became accustomed to endure all kinds of hardship from their very infancy. Young men at the age of 20 received their armour from their father or some kinsman in the public assembly, and from that moment they enjoyed all the rights of a citizen.

In times of peace the Germans generally indulged in ease and laziness, leaving the care of domestic concerns and of their fields to the women, old men, and slaves. All the cultivated land was regarded as public property, and was annually distributed anew by the magistrates among the families, or was let out to farm. In regard to other occupations, the Germans were distinguished for their potteries, and also worked as carpenters, masons, and smiths, while the women were engaged in spinning and weaving. In the interior of the country commerce was insignificant; but on the Rhine and the Danube it was

rather active, the more important articles for exportation being amber, goose-quills, furs, hides, hams, red hair, soap for dyeing the hair, and slaves. In return for these they received wine, trinkets, and probably also arms. The Germans had no coinage of their own; but a vast quantity of Roman silver coins was in circulation among them. Navigation was carried on by sea as well as on the lakes and rivers, and their vessels consisted of simple canoes, or boats covered with leather, or regular ships. But of all the occupations none was in greater favour with the Germans than war, in which all men capable of bearing arms took part. A regular system of tactics was unknown; but their battle order was generally formed by the men arranging themselves according to their tribes, families, or clans. Their cavalry was not numerous. The first attack upon an enemy was generally very ferocious; but when a war was protracted, the men generally lacked perseverance, and became desponding. The booty made in war, and sometimes the prisoners also, were sacrificed to the gods. No kind of death was considered more desirable than that on the field of battle; to die on a sick bed was so much dreaded, that, among some tribes, sick persons and old men caused themselves to be killed rather than wait for their natural dissolution.

VII. *Religion*. — On this subject the Greeks and Romans have left us no connected information, and what they do state is not always trustworthy: for sometimes they only give the name of a German divinity, and endeavour to identify the same with some one of their own gods; or they call the German divinities at once by names of their own gods, without mentioning the names they bore among the Germans. The ancients, however, are agreed in stating that the Germans worshipped several divinities, among whom they mention the sun, the moon, the stars, Tuisto the ancestor of their whole race, and his son Mannus. Besides these, we hear of Mercury (probably Wodan or Odin), who is said to have been the most revered among all their divinities; of Iais (probably Fris, the wife of Wodan); Mars (no doubt the German Tyr or Zio); Nerthus, the mother of the gods; and the two Alces (compared with Castor and Pollux). Jupiter (i. e. Thunar, Thor, the god of thunder) is not mentioned by any earlier writer than Gregory of Tours (ii. 29). Besides these principal divinities, which, however, do not appear to have been equally worshipped among all the tribes of Germany, they believed in a variety of secondary and inferior deities, partly of a kind and partly of a malignant nature, and almost every tribe had its own peculiar divinities of this sort. The form of worship was very simple; and both Caesar and Tacitus assert that the Germans had neither statues nor temples. But this statement is opposed to facts which come out at the conversion of the Germans to Christianity, when the destruction of pagan idols is frequently spoken of. In regard to temples also, the statement must not be taken in too strict a sense; for Tacitus himself (*Ann.* i. 51) expressly mentions a temple of a goddess Tanfana among the Mariani, and the Christian missionaries of a later period called upon the Germans to change their heathen temples into Christian churches. But it is nevertheless true that many of their gods were worshipped in the open air, in groves and forests, on mountains and rocks. Priests are indeed mentioned among the Germans; but a father was always entitled in the circle of his family to assume the functions of a

priest. The priests were at the same time the highest civil functionaries next to the king; they sacrificed the pleasure of the deity in all public undertakings, and executed the sentence of death upon all persons guilty of high treason; they moreover presided at the popular assemblies, and kept the national records. There also existed prophetic persons, who foretold the future from the insinuations of vapours from the blood of the slain prisoners of war, from the murmuring of the waves, and the like. The sacrifices offered to the gods were often extremely gross; but we likewise hear of human sacrifices, though their religious festivals little is known, and that that is known belongs to a period beyond the limits of this work.

VIII. *Political Institutions*. — The various inhabiting Germany were free and independent of one another, and the territory inhabited by each was divided, apparently for military purposes, into districts or *pagi*. Each separate tribe was governed by a king, who was elected from among its men in an assembly of all the free people: this, however, was in the earliest period only the chief magistrate in times of peace; for, in case of war, special commanders were chosen, to whom the supreme civil power was likewise entrusted. The kingly power was altogether very much limited by the nobles and the popular assembly, so that having the power even of deposing the king, the *pago* had its own magistrates (*principes*), who at the same time administered justice, in what was assisted by a college of 100 men. There were also tribes which had no kings or central government at all, but in which the *pagi* were governed by *principes* alone.

The whole body of the German nation was generally divided into four classes or ranks. 1. The *nobiles* (*nobiles*, *proceres*, *optimates*), probably consisting of families whose ancestors had particularly distinguished themselves by their valor, or had acquired great influence from their possession of considerable estates. The kings, and probably also the *principes* of the *pagi*, were chosen from these nobles exclusively. Clients of the nobles are also mentioned. 2. The *freemen* (*ingenui*) formed the real strength of the nation; freemen and nobles alone had the right to possess hereditary landed property, and to choose their place of residence according to their own pleasure; they were obliged to attend the popular assembly, and serve in the national armies. 3. The *freedmen* (*liberti* or *libertini*) formed a low middle class between the freemen and the slaves; they might, however, purchase their freedom, and were obliged to perform military service, but were not allowed to take part in the popular assembly; they had no landed property, but tilled the land as farmers. 4. The *slaves* (*servi*) had no rights at all, but were mere tools in the hands of their masters, without whose consent they could not even marry, and who might even put them to death without fear of punishment. It would appear, however, that the slaves were, on the whole, treated mildly, and lived under far more advantageous circumstances than the slaves of the Romans (*Ann.* i. 51, *Ann.* i. 25). They had their hair cut short, and were not allowed to bear arms or to serve in the army, but were employed as domestic servants, labourers, or herdsmen. All slaves were educated in the house of their master, or were present at war, or they had been degraded to their present condition by judicial verdict, or, lastly, they had been purchased.

a popular assembly, consisting of the nobles and free men, deliberated upon all the more important public affairs; in it the kings and other magistrates were elected, capital offences were tried, &c. Meetings were either regular and stated, especially at the seasons of the new moon and full moon, or extraordinary meetings convened for emergencies. A considerable time often elapsed before all the men arrived at the place of meeting, which was generally near some sacred grove, or mountain. The men appeared in full armour, and a priest conducted the business; such a meeting was separated without a symposium. Justice was administered in the open air, both on stated and extraordinary occasions. All trials were carried on publicly and *ad vocem*: the judges tried the case; but the verdict was given by juries. In doubtful cases a question was sometimes decided by a trial by a judicial single combat. Priests were usually present at all the trials, which commonly terminated with a drinking bout. In the earlier times Germans had no written laws; and it was not till after the migration of nations, when all relations became changed, that various codes of laws, such as the Salian, Riparian, Thuringian, Burgundian, &c. were drawn up. The punishments indeed were intended as a compensation to the injured party, and consisted of money, horses, cattle, and fines, even in case of murder; it was only in cases where the condemned was unable to pay or amend that he was put to death. No free man could be subjected to corporal punishment, even when it was inflicted by a priest in the name of deity. Persons guilty of high treason against their country, however, cowards, and such as were guilty of unnatural lust, were hanged or drowned in the sea. Exile and captivity are mentioned only as punishments for political offences. The right of a man to take bloody vengeance, if one of his men had been murdered, is clear from Tacitus (i. 21).

5. *Language and Literature.*—It has already been remarked that the language of the Germans belongs to the Indo-European family, and accordingly is a sister of the Greek, Latin, and Celtic. So much is clear to the ear of the Romans was harsh and barbarous; it was of course little cultivated; and the art of writing can scarcely have been known to the Germans at the time of Augustus, except, perhaps, among the tribes occupying the left bank of the Rhine. Laws, legends, and history were propagated only as traditions from mouth to mouth. National songs in honour of Tuisto, Mannus, and of the glorious deeds of great heroes, are expressly mentioned; and the last were termed *barritus* or *barditus*, and were generally sung before the commencement of a battle. Writing, as said before, was little practised by the Germans. Tacitus (*German.* 3) indeed speaks of German monuments with inscriptions in Greek characters on the shores of Rhaetia; but as Rhaetia was inhabited by Celts, the inscriptions were in all probability Celtic. Certain it is that the Germans had no alphabet of their own; when they began to write as they unquestionably adopted the Celtic character, and especially the secret symbols of the Druids, called *runic*. At a later period they adopted the Latin alphabet, ornamented in the Gothic fashion, which may still be seen in the old English black letter, and in the modern German alphabet. [Compare *runes*.]

6. *History.*—If we set aside the doubtful read-

ing of the Capitoline Fasti for the year B.C. 320, the first authentic record of events connected with German tribes is met with in the accounts of the war against the Cimbric and Teutonic or Teutoni, for the latter were as decidedly Germans as the Cimbric were Celts or Cymri. But we have no connected history of the German nations until the time of Julius Caesar, from whom we learn that in B.C. 72 the aid of king Ariovistus was called in by the Arverni and Sequani against the Aedui in Gaul. On that occasion Ariovistus crossed the Rhine with an army of 120,000 Germans, and subdued the greater part of Eastern Gaul. But he was defeated by Caesar in the country of the Sequani, and driven back across the Rhine. Caesar himself crossed the same river twice, in B.C. 55 and 54, by means of bridges; but he was not able to maintain himself in Germany. In B.C. 37, Agrippa transplanted the Ubii, who were hard pressed by the Suevi, to the western bank of the Rhine, that they might serve there as a bulwark against the attacks of the other Germans upon Gaul: this plan, however, was not always successful; whence Nero Claudius Drusus, the step-son of Augustus, in A.D. 12, commenced his expeditions against the Germans from the insula Batavorum. During these undertakings Drusus advanced as far as the river Albis (*Elbe*); but he was killed by a fall from his horse in A.D. 9. The command of his forces was then undertaken by his brother Tiberius (afterwards emperor), who, as well as Domitius Ahenobarbus, was on the whole more successful than Drusus; for he actually compelled the part of Germany between the Rhene and the Visurgis for a time to submit to the dominion of Rome, until after some years, A.D. 9, Arminius, prince of the Cherusci, who had lived at Rome and was acquainted with the Roman mode of warfare, defeated the Romans in the Teutoburg forest, and put an end to the Roman dominion in that part of Germany. About the same time Maroboduus, the Marcomannian, held out manfully against the Romans, until disturbances in the south obliged them to conclude peace. Germanicus, the son of Drusus, who was then sent out to wipe off the disgrace of the Roman arms, succeeded in gaining some advantages over the barbarians, but he was unable to regain the ascendancy in Western Germany. Scarcely, however, had the wars with the Romans terminated, than a violent commotion broke out among the Germans themselves, in which they lost their ablest chiefs, and which caused several German tribes to be transplanted into the Roman dominion. The consequence of these things was, that the Romans now established themselves in the south-western parts of Germany. During this period, from A.D. 16 to 68, the AGRI DECUMATES were formed on the east of the Upper Rhine, and on the north of the Upper Danube. This Roman part of Germany was then separated from and protected against the rest of the country in the north by a wall and a ditch running from the Rhine near Cologne to Mount Taunus and the Odenwald, and from Lorch to Ratisbon. The great revolt of the Batavi in A.D. 70 and 71, in which the Western Germans also took part, was followed by repeated wars with several German tribes, until at last, in the reign of M. Antoninus the philosopher, the great Marcomannian war broke out on the Danube; many other German tribes joined the Marcomanni, and the enemy even advanced into Italy, where they laid siege to Aquileia. M. Antoninus had to carry on the war until the end of his reign, and his suc-

cessor Commodus, in A. D. 180, purchased a peace of the Germans, and gave up the forts which had been built along the Danube. Soon afterwards it was found that the Roman dominion on the western bank of the Rhine also was not safe; for several German tribes, especially the Alemanni and Franks, harassed Gaul by frequent invasions, until in the end Germany poured forth its hosts across the Rhine, the Danube, and the Alps, conquering Gaul, Italy, Spain, and even crossing over into Africa, and establishing a new kingdom on the ruins of ancient Carthage. This happened towards the end of the 5th century; while somewhat earlier other tribes, such as the Angli, Saxons, and Frisians, had crossed over into Britain, and, partly subduing and partly expelling the Celtic population, established in this island a new order of things, which lasted for upwards of five centuries. Nearly the whole of the west of Europe was thus governed by German tribes.

Our chief authorities among the ancients concerning the ethnography and geography of Germany are Tacitus, especially in his *Germania*, and Ptolemy. Pliny, too, who himself served in Germany (xvi. 1), furnishes much valuable information, although his great work in 30 books on the wars of the Romans with the Germans is lost. Besides these, Strabo, Pytheas, Eratosthenes, Dion Cassius, Velleius Paterculus, Suetonius, and others must be consulted. The works of moderns, especially Germans, are almost countless; but the principal ones are Cluverius, *Germania Antiqua*, Lugd. Bat. 1616, fol.; A. B. Wilhelm, *Germanien u. seine Bewohner*, &c. Naumburg, 1833; V. M. Wernke, *Über die Völker u. Völkerbündnisse des alten Deutschlands*, Hanover, 1835; Zeuss, *Die Deutschen u. die Nachbarstämme*; Grimm's *Deutsche Mythologie*; Latham's *Prolegomena and Epilogomena*, in his edition of Tacitus's *Germania*. An able statement of the results at which these and other inquirers have arrived is contained in the 3rd vol. of Furtiger's *Handbuch der alten Geographie*, Leipzig, 1848. [L. S.]

GERMANIA INFERIOR. [GALLIA, p. 967.]

GERMANIA SUPERIOR. [GALLIA, p. 967.]

GERMANICOPOLIS (*Γερμανικὴ πόλις*), a town in Bithynia, not far from Prusa, was in earlier times called *Helios* or *Boeocotis* (L. c. *Βοιωτία*, Plin. v. 40). A second town of the same name (though Ptol. v. 4. § 5, calls it *Γερμανικὴ*) is mentioned in Paphlagonia, not far from Gangra. (Novell. 29.) This town, like the one in Bithynia, appears to have been named after Germanicus, but none of the coins found on its site are older than the reign of M. Aurelius. A third Germanicopolis was a town in Isauria. (Herod. p. 709; Concl. Chalced. p. 639; Const. Porphy. de Thém. i. 13.) [L. S.]

GERMANICUM MARE (*Γερμανικὸν ἕλας*), the German Ocean, the sea between Great Britain in the west, and Belgium, Holland, Germany, Denmark, and Sweden in the east. (Plin. iv. 30; Ptol. ii. 3. § 5, viii. 3. § 2, 6. § 2.) [L. S.]

GERMANII (*Γερμανοί*, Herod. i. 125), one of the three agricultural tribes of the ancient Persians, according to Herodotus. There has been much dispute among the learned who these people were. The probability seems to be, that they were connected with Germania, now *Kirman*. Agatharchides, indeed, calls the Carmania of Diodorus (xviii. 6) and Strabo (xiv. 733) by the name of Germania (Paris. M. E. p. 27). Others, with less probability, have connected the Germanii with a people N. of the Oxus, which was sometimes called *Erman*, and now

bears the name *Khamuran*, and have supposed that they are the real ancestors of the modern Germans, but this is fanciful. (Hammer, *Wien Jahrb.* i. p. 319; Kruus *Archiv.* i. 2. p. 194; *Asiatick. Mus.* i. p. 278.) [L. S.]

GERMIHERRA, a place in Davis which lies in position in the Pustinger Table, west to *Germa* in the valley of the *Meros*, possibly at *Sanera* where there are ruins. It is the same as the *Germigera* of the Geographer of Ravenna, and the *Germigera* of Ptolemy (iii. 8. § 8). [L. S.]

GERONTHRAE or GERANTHRAE (*Γερωνθραί*, Paus. iii. 21. § 7, 22. § 6; *Γερωνθραί*, Paus. ii. 2. § 6; Steph. B. A. v.; *Γερωνθραί*, Herod. iii. 14. *Ἐθν. Γερωνθραί*), an ancient town of Laconia situated in a commanding position upon the south-eastern face of the mountain above the plain of Eurotas. It is represented by *Gheriti*, a ruin town of the middle ages, the name of which is a corruption of Geronthrae, while its distance from the site of Acrae upon the coast corresponds to the 12 stadia mentioned by Pausanias. We learn from the same writer that Geronthrae possessed a temple in grove of *Arca*, to whom a yearly festival was celebrated, from which women were excluded. Near the agora there were fountains of potable water. In the acropolis stood a temple of *Apella*. (Paus. ii. 22. §§ 6, 7; *ὁρδὰς νεῖκος δὲ τῶν ἡρώων Ἀρκαίων*, Böckh, *Inscr.* no. 1334.) On the northern side of the summit of the citadel remains of a very ancient wall: the position of the agora is indicated by the fountains of water on down the hill.

Geronthrae was one of the ancient *Achaean* cities which resisted for a long time the Doric invasion. It was at length taken and colonised by the Spartans, along with Amyclae and Pharis. In the time of the Roman empire it belonged to the *Entellio-Lacones*. (Paus. iii. 2. § 6, 21. § 7, 22. § 6.) At the beginning of the fourth century of the Christian era it must have been a market-town of some importance, since a Greek translation of the *Acts of Diocletian*, "De Pretis *Servus Vaticanus*," was discovered at *Gheriti*. In the middle ages it was the seat of a bishopric, and one of the most important places in the valley of the Eurotas. (Leake, *Moravia*, vol. iii. p. 7, *Poloponnesia*, pp. 160, 362; *Lower-Rheinish*, &c. p. 95; Curtius, *Poloponnesia* no. p. 302.)

GERONTIS ARX. [CAMPOSUS TRINUS.]

GERGHA, GERGHAEI (*Γέργη, Γέργη*), a town and people of Arabia Felix, at Persian gulf (Ptol. vi. 7), between the *Acrae* to the south, and the *Themi* to the north. Its description is more full and satisfactory than that of "When you have sailed along the coast of Arabia 3000 stadia (apparently from the mouth of the Persian gulf, to which he assigns a length of 110 stadia), the city of Gergha lies in a deep gulf, over Chaldean exiles from Babelylon inhabit a small country, having houses built of milk, the walls of which when they are wasted by the heat of the sun are repaired by copious applications of sea-water. The city is distant 300 stadia from the sea. The carriage of goods, especially of spicery, is carried by the *Gerrhaeans*; *Archiebalm*, on the contrary, says that they traffic with Babelylon by horse, and then sail up the Euphrates to Thapsacus, where they commence the land-carriage in all directions." (Strab. xvi. p. 766.) Pliny (vi. 32) describes a city of 5 miles in circumference, with a port

of square blocks of salt. D'Anville first identifies it with the modern *El-Katif*; Niebuhr finds it in the modern *Koweit* of the Arabs, called by the Persians (*Description de l'Arabie*, 5). Lastly, Mr. Forster thinks that he has found the ruins of this once important city "in the East India Company's Chart, seated where all ancient authorities had placed it, at the end of a deep and narrow bay at the mouth of which are the islands of Bahrein." (*Arabia*, vol. ii. 9.) His proofs of this identification are fully (pp. 216—221), and are interesting and plausible; but exception may be taken to the following: "From Strabo we learn that the city of a bay at the bottom of a deep bay; the depth of the bay and its geographical position are defined by: from the shore or extreme recess of the Gerrhaicus on which the city stood, the *Regio* (manifestly a peninsular district) projected a distance of 80 Roman miles from the opposite into the Persian gulf." Now, as Strabo is the authority for the site of the city, and his description is contained in the words *ἐν τῇ ἑξῆς τῆς θαλάσσης ὁρατοῦς ἡ κόλπος*, it must be that "the bottom of a deep bay," or "25 miles from the open sea," is a wide deduction; his statement; and the position of "the extreme of an ancient city," marked in the Com-Chart on the coast, is perhaps the strongest argument against their identity with the ancient, which, however, seems to be sufficiently established by the other evidence cited by Mr. Forster. (vol. i. p. 197.) [G. W.]

GERHAICUS SINUS, mentioned in connection with the only by Pliny (vi. 39), between the Sinus on the north and the *Regio Attene* on the south. [ATTA VICUS.] Identified by Mr. Forster with the modern *Gulf of Bahrein* in the passages to under the last article. [G. W.]

GERUS (*Γέρους*, Ptol. iii. 5. § 13; Plin. iv. ph. B. a. c.), a river of Scythia, and region of the same name, where the tombs of the 1 kings were. (Herod. iv. 19.) This region have been at a considerable distance up the river, as we are told that forty days' navigation was required before it was arrived at. (Herod. iv. 53.) Potochi (*Voyage dans les Astrakhan et du Caucase*, Paris, 1829, vol. i. 5, 163, 172, 388) has identified this with the river below the cataracts of the *Dniester*, where it becomes navigable, and where there are now a number of ancient tombs or "tumuli" in the neighbourhood of *Takmak*. (Comp. Schafarik, vol. i. p. 516.) It is difficult to reconcile the position of the courses and confluence of the *Panticapes*, and *Hippacryis* with modern

Y. The *Panticapes* (*Κοκκίαινα*) was the river of the nomad Scythians. It is a steppe desert, and comprehending a space of 14 miles, in an eastern direction, as far as *Gerrhus*, or the steppe of the *Nogai*. *Gerrius* *Gerrhus* the ruling herds of the who were named "royal," first appears. (v. 19.) The *Hypacryis* is generally considered to be the same as the *Kalamak*. According to Herodotus, the *Gerrhus* falls into the sea; by which must be understood, not the *Black*, but the *Outlook*. The course of this river has been found. The position would appear to be rather too near *Larinum* (from which it is only 4

the boundary between the Nomad and Royal Scythians, and with Ptolemy in conducting it finally into the *Palus Maeotis*; the difference only is, that Pliny leads it into the lake *BUGES*, which communicates with the gulf *COMASTUS* and the *Palus Maeotis*, while Ptolemy discharges it considerably to the E. of the lake *Buges* or *Byce* (*Βύκες Νύρε*). The *Gerrhus* is probably represented by the *Molochingiasoda*, which forms still a shallow lake or marsh at its embouchure. (Comp. Schafarik, *Slav. Ant.* vol. i. p. 270; Rennell, *Geog. of Herod.* vol. i. pp. 75, 88, 93, 94.) [E. B. J.]

GERRHUS, GERRI. [ALBANIA.]

GERRHUNTIUM, a fortress of Phaeacians, a district of the *Damaretil* on the Illyrian border of Macedonia, which was taken and sacked by L. Apollonius, a Roman officer, detached by Scipio, to ravage the territory of Philip, in the breaking out of the war against that prince. (Liv. xxxi. 27.) *Gerrhunium* (*Gerrhunium*?) is the same place as the *Gerrhus* (*Γέρους*), a place on the frontier of Macedonia, which *Scordelaidas* had taken from Philip, and which the latter retook in the second year of the Social War (Polyb. v. 108). *GERUS* (*Γέρους*), mentioned in the same chapter of Polybius, is a different place from *Gerrhunium*, which was, probably, lower down on the valley of the *Ussuri* than *Antipatria* (*Beris*), perhaps near the junction of the *Ussuri* and *Dniester*. (Leake, *Trav. in North Greece*, vol. iii. p. 327.) [E. B. J.]

GERULATA or **GERULATIS**, a town in Pannonia, where a Roman frontier garrison was stationed. (*It. Ant.* p. 247; *Not. Imp.*) It is identified with the modern *Cariburg* or *Orosauer*, and some believe it to be the same as the town *Καρθάλας*, mentioned by Ptolemy (ii. 15. § 3). [L. S.]

GERUNDA (*Γερουνδα*, Ptol. ii. 6. § 70; *It. Gerundenses*, Plin. iii. 3. a. 4), a small inland town of the *Anasetani*, in the NE. corner of *Hispania Tarraconensis*, on the S. side of the river *Alba* (*Ter*), and on the high road from *Tarraco* to *Narbo Martius*. Under the Romans it was a *civitas Latinorum*, belonging to the conventus of *Tarraco*. It stood on a hill near *Gerona*. (Plin., Ptol., *It. Ant.* p. 390; *Tab. Pent.*; *Geog. Rav.* iv. 48; *Prudent.* *Peristeph.* iv. 29, where it is called *parva*; *Ukert*, vol. ii. pt. 1. p. 426.) [P. S.]

GERUNTIUM (*Γερουντιον*), a small town or fortress of *Apulia*, not far from *Larinum*, in which *Hannibal* established his winter-quarters after the campaign against *Fabius*, a. c. 217. The Roman general encamped at *Calela* in the territory of *Larinum*, and it was between these two places that the action took place in which *Mitius* was defeated by the Carthaginian general, and saved only by the timely assistance of *Fabius*. (Pol. iii. 100—102, 105, 107; Liv. xlii. 18, 24—26.) No subsequent mention of *Geruntium* is found in ancient writers; it is termed by *Livy* a "castellum inops Apuliae" (xlii. 39), and was probably always a small place. But its name (*Geruntium*) is found in the *Tab. Pent.*, which places it 8 M. P. from *Larinum*, on a road leading from thence to *Bovianum*; and this distance accords with the statement of *Polybius* (iii. 100), that it was 200 stadia (25 M. P.) from *Luceria*. Its site is fixed by local antiquarians at a place still called *Gerione* or *Girone*, between *Casa Calenda* and *Montorio*, where a town or village still existed down to a late period, and where some ancient remains have been found. This position would appear to be rather too near *Larinum* (from which it is only 4

miles); but the evidence of the name is certainly strong in its favour. Cluverius is undoubtedly wrong in transferring it to *Dragonara* on the right bank of the *Fortora*, which is above 16 Roman miles from *Larinum*, and about the same distance from *Luceria*. (Cluver. *Ital.* p. 1213; Romanelli, vol. iii. pp. 12—15; *Tria, Mém. di Larino*, pp. 18—23; Biondo, *Ital. Illustr.* p. 421.) [E. H. B.]

GESDAO or GESDAONE, as it appears in the oblique case in the Itin. Jerusalem; Gascido in the Table, which D'Anville read Gadao. The Jerusalem Itin. places it on a road from Brigantio (*Briançon*) to *Sues*; and it makes 10 M. P. from Brigantium to Gesdao, and 9 from Gesdao to Mutatio ad Martia. The Antonine Itin. makes 18 M. P. from Brigantio to Ad Martia, and omits Gesdao. The Table makes 6 M. P. from Brigantio to Alpis Cottia (*Mont Genèvre*), and then 5 M. P. to Gascido, and 8 from Gascido to Ad Martia. All these numbers agree pretty well, and by following the road from *Briançon* the position thus determined seems to be *Cesano* or *Sesano*. [G. L.]

GESHUR. 1. A people of the south of Palestine, reckoned with the Philistines and Canaanites (*Josh.* xiii. 3), apparently contiguous to the Amalekites, against whom David made hostile incursions from Ziddag in the country of the Philistines. (1 Sam. xxvii. 8.)

2. Another Bedouin tribe, on the east of Jordan, in the borders of the country occupied by the half-tribe of Manasseh, in the land of Bashan (*Deut.* iii. 14; *Josh.* xii. 5, xiii. 11, 13), in all which passages they are joined with the Maachathites. They were not dispossessed by the Israelites.

3. Gesbur in Syria was apparently distinct from the last named. It was governed by a petty king of its own, to whose protection Absalom fled after the murder of his brother Amnon (2 Sam. xii. 37, 38, xiv. 23), his mother Maacah being daughter to Talmai, king of Gesbur. [G. W.]

GESOCRIBATE, a place in Gallia, which appears in the Table as the termination of a road from Juliomagus (*Augusta*) through *Nantes*, *Vannes*, *Salin*, and *Vorgium*. Walckenaer takes it to be *Brest*. [Buxtorf.] The first part of this name is the same as the first part of *Gessoriacum*. [G. L.]

GESONIA. Florus (iv. 12) says that Drusus established more than fifty forts along the banks of the Rhine; and in the next sentence he says, "Bonnam et Gesoniam cum pontibus junxit, classibusque firmavit." Those who think it worth the trouble to see what has been said on this corrupt passage may consult Duker's note. The reading *Gesonia* is very doubtful; and it is equally doubtful what the true reading is: probably some name ending in *cna*, so that it would be "Bonnam et G....cum pontibus junxit." Cluverius put *Moguntiacum* in place of "Gesoniam cum." D'Anville is here misled by trusting, after his fashion, to resemblance of names. He saw on the map a place called *Zone*, as he has it, below *Cologne*; and "it seems that the name *Zone* preserves some analogy to that of *Gesonia*." [GESORIACUM.] [G. L.]

GESORIACUM or BONO'NIA (*Boulogne*), a place on the NW. coast of Gallia. Mela says (iii. 3): "From the Grismii the face of the Gallic shore looks to the north, and reaches to the Morini, the remotest of the Gallic nations, and it contains nothing that is better known than the port *Gessoriacum*." This was the port from which the emperor Claudius embarked for Britain. (Suet. *Claud.* c. 17.) A road

in the Antonine Itin. runs from *Baginac* (*Bay*), through *Castellum* (*Caen*) and *Yaraca* (*Yverness*), to *Gessoriacum*. The Table has the same road, with the remark that *Gompicium* (*Gonesse*) was then called *Bononia*. Ptolemy (ii. 11) has "Gessoriacum, a naval place of the Mariti;" between *Portus Itinæ* and the river *Tahen* is *Isbulles*. But *Boulogne* is south of the line. Pto. (iv. 16) makes the shortest passage from *Britannia* to Britain to be 50 M. P.; which is so near, D'Anville remarks, whether we measure to *Jove* to *Hythe*, where he erroneously supposed the *Caes* landed. But Ptolemy's measurement is probably to *Rotupine* (*Rochefort*), near *Saintes*, where the Romans had a fortified post, and which was a landing-place from *Gallia*. This would make the distance nearer the truth, though still too small. *Gessoriacum* is also the "Portus Marinarum Britannicæ" of Ptolemy (iv. 23), as appears from the length of *Gallia* to the Ocean along a line to the Alps "per *Lugdunum* ad portum *Martium Britannicæ*." There was a district (page, see *Gessoriacum*, named from the town.

Dion Cassius (lx. 21) states that the Roman senate voted that a triumphal arch should be raised in honour of the emperor Claudius on the spot to which he sailed to Britain; and if this is true, was erected at *Boulogne*, or that was the place where it was intended to be erected. D'Anville follows the writers in supposing that the Pharus was built at *Caligula* erected on this coast, whence he knew an invasion of Britain, was at *Boulogne*. (See *Calig.* c. 45.) But there is no proof of this, and the fact of there having been an old tower called *Caligula* near the sea up to the end of the seventh century. Eginhard, the biographer of *Charlemagne*, speaks of the emperor repairing this tower, as it is being an ancient construction.

Walckenaer (*Géog.* &c. vol. i. p. 454) observes there is no historical record of the name *Gessoriacum* being changed to *Bononia*; and he presumes that *Bononia* was the name of another part of the city, or of a town built on the other side of the port. This conjecture "is confirmed by a passage of Ptolemy (ii. 12) which no commentator or editor has selected, and which has often been spoiled by corruption, or less improbable." He reads the passage as "Bononiam et Gessoriacum pontibus junxit, classibusque firmavit." But he does not say with authority he has for "Bononia"; and we have shown [GESONIA] that the other name is uncertain. Any person may see that Florus in this passage is speaking of the Rhine, and not of the coast. Besides, the notion of enameinating among the great emperor Drusus the making bridges over the *Lisae*, the river of *Boulogne*, is rather ridiculous. This is the only instance in which this laborious geographer has discovered what never existed. He adds that in the little place called *Portel*, at the foot of the *Cliff of Boulogne*, and half a league from the sea, were discovered, at the beginning of the 17th century, a large wall exceedingly hard, three paces in marble seven feet long, and a sarcophagus of a large piece, well worked; all which he supposes to confirm his conjecture.

Bononia is named *Oceanensis* on a medal of Constantine, to distinguish it from the Bononia of Italy. At this time the name *Bononia* was probably the real name used; and so Ammianus calls it (xx. 9). So Zosimus (vi. 2), who, however, speaks of it as a city of Lower Germania, though he knew it was so at

st. Constantine passed over from Britain to Asia, and this was probably the regular landing-place from Britain since the time of Claudius. It was, indeed, as the naval station on this coast, Carausius was set over the fleet at Bononia to meet the Belgic and Armoric shore against the Franks and Saxons. (Eutrop. ix. 21.)

[There are no Roman buildings at *Boulogne*. The city, already mentioned, is entirely gone. It was doubt a Roman work. Within the present century Roman medals and tombs have been discovered at *Boulogne*, and other remains. [G. L.]

CESSORIENSES, a *civitas Latina*, in the cantus of Tarraco and the province of Hispania *raconensis*. (Plin. iii. 3. s. 4.) Ukert conjectures that their city stood in the district between the *oris* and *Nucaria*, where inscriptions and coins have been found bearing the names *ARBONENSIS*. JESSORINENSIS (Muratori, *Nov. Thes.* p. 1021, 2, 3; Spon. *Misc. Erud. Ant.* p. 188; Cellar. *t. Orb.* vol. I. pp. 118, 119; Ukert, vol. II. pt. I. 52.) [P. S.]

SETAE. [DACIA.]

ETHESMANE. [JERUSALEM.]

GEVINI (Γεωvini), mentioned by Ptolemy as a station of European Barmatia (iii. 5. § 24) lying between the Carpians, and the south of the line (Βαλκάνος). *Buchowina* is as likely a place name for these Gevini. The name of this locality generally deduced from *Buch*—*Beech-tree*, so that *the land of the beeches*. But the word *Buch* is man; whereas *Buchowina* is Slavonic. Now if allow ourselves to suppose the root *gevin* to be a geographical term (i. e. the name of a tract of land), have a better derivation. No habit is commoner to the Slavic populations than to prefix to a name denoting a locality the preposition *po* (*bo*)=

Hence *Po-moravia* is the country on the sea: population on the Elbe (in Slavonic, *Laba*) was called the *Po-labingi*. As examples of this kind are multiplied, the hypothesis that the *Buchowina* is the country of the population on the *Gevin*—*gevin* becomes allowable. [R. G. L.]

GAZER (Γαζαρ), mentioned in *Josh.* xvi. 10 as a city of the Philistines, tributary to the Israelites of tribe of Ephraim. (Comp. *Judges*, i. 29.) It was razed and burnt by Pharaoh, king of Egypt, and given to his son-in-law Solomon, who rebuilt it. (*Kings*, ix. 15—17.) In the last passage it is called with Bethoron the nether, with which it also appears in *Josh.* xvi. 3, where the order shows that was situated between Bethoron and the coast. Consistently with this, Gazer or Gasara is placed by Eusebius and St. Jerome 4 miles north of Nicopolis *CHALUS*. 2.] (*Oncometast.* s. v.) It is probably identical with the Gadaris of Strabo, in the neighbourhood of Amnis, otherwise called Gadara. (Beland, *Palæst.* 434. 678—680.) [G. W.]

GIBEAH (LXX. Γιβεα; Eth. Γιβεα; *ḡibēa*), called Gibeah of Benjamin (1 Sam. xiii. 2) and Gibeah *ḡib* (1 Sam. xi. 4), Γιβεα of Benjamin by Josephus, in one place states its distance 30 stadia from Jerusalem (*B. J.* v. 2. § 1) and in another only 20 st. v. 2. § 8). It obtained a bad notoriety in early times, in the matter recorded in *Judges*, xx., which resulted in its entire destruction. It was the native place of Saul. (1 Sam. x. 26, xi. 4.) It was obviously high to Ramah (*Judges*, xix. 13), on the high road to Nablosse between Jerusalem and Ramah. (Comp. Joseph. *B. J.* I. c.) This makes out its identity with the modern village of *Jeba*,

which no doubt marks the site of the ancient Gaba, situated as it is on the direct road between Michmah and Jerusalem. (See *Isaiah*, x. 28, 29.) Ramah and Gibeah of Saul were not in the line of march of the invading army from the north, but from their contiguity to it naturally shared in the panic. Gibeah then must be sought to the west of the modern *Jeba*, and on the direct Nablosse road; and there is a remarkable conical hill, conspicuous from Jerusalem, close to the high road, about the stated distance from the city, which appears to have been occupied by an ancient city, as its modern name indicates. Accordingly, in consistency with the above notices, though inconsistently with himself, Dr. Robinson decides for *Tell-el-Fall* (more properly *Tell-el-Fall*) as the representative of Gibeah of Saul. (*Theological Review*, vol. iii. p. 645.) [G. W.]

GIBEON (LXX. Γιβεων; Eth. Γιβεων; *ḡibēon*), the metropolis and royal city of the Hivites, strongly fortified; whose inhabitants, having deceived the Israelites under Joshua, were allowed to live under bondage, with their fellow-citizens in Ghebirah, Beeroth, and Jirjath-jearim; together with which, it was assigned to the tribe of Benjamin. (*Josh.* ix. x. 2, xviii. 25.) It was a priestly city (*Josh.* xxi. 17), which may account for the tabernacle being placed there, prior to its removal to the temple prepared for it at Jerusalem. (1 Chron. xvi. 1. 37—40, xxi. 29; 2 Chron. i. 2—6; 1 Kings, viii. 4, &c.) "Josephus, in one place, gives the distance of Gibeon from Jerusalem at 50 stadia, and in another at 40 stadia. (*B. J.* ii. 19. § 1, *Ant.* vii. 11. § 7.) Eusebius places Gibeon 4 Roman miles west of Bethel, while the corresponding article of Jerome sets it at the same distance on the east. (*Oncometast.* s. v. Γιβεων.) The text of Jerome is here probably corrupted." (Robinson, *Bib. Res.* vol. ii. p. 137. n. 2.) Its site is fixed by *Josh.* x. 10, 11, where the Philistines, on their rout at Gibeon, retreat to the plain by Bethoron. (Comp. Joseph. *B. J.* ii. 19. § 1.) Accordingly, on the camel-road between Jaffa and Jerusalem, by way of Lydda and the two Bethorons, we find a modern village named *el-Jib*, situated on a rocky eminence, and exhibiting traces of an ancient city. It is distant from Jerusalem about 2½ hours, by the nearest route, which would equal 60 stadia. It has a fine fountain of water, which discharges itself into a cave excavated so as to form a large subterranean reservoir, near which are the remains of another open reservoir, about 120 feet in length by 100 in breadth, doubtless intended to receive the superfluous waters of the cavern. (Robinson, *Bib. Res.* vol. ii. pp. 136—138.) This may be the Pool of Gibeon (2 Sam. ii. 13), called in *Jeremiah* "the great waters in Gibeon" (xli. 13). [G. W.]

GIBLITES. [BYZANTINE.]

GIFIL (Jornand. *de Get.* 23; Gülpit, *Geog. Rav.*), a river of Dacia, which has not at present been identified. [E. B. J.]

GIGLIUS (Ἰγλίωv Ἰπες, vulgo Γίγλιωv), a mountain in the interior of Cynicism. (Ptol. iv. 3. § 30.) [P. S.]

GIGONIS FROM. (Γίγωνις Ἰπες, *Etyim. Mag.* s. v. Ἰγλίωv, Ptol. iii. 13. § 23), a promontory on the coast of the Cossænes, in Macedonia, with a town GIGONIS (Γίγωνις, Steph. B.), to which the Athenian force, which had been employed against Perdiccas, marched in three days from Berea. (Thuc. i. 61.) It appears, from the order of the names in Herodotus (vii. 193), that it was to the S. of Cape Aeneium, the great *Karaburná*; hence its situation

was nearly that of Cape Apennin. (Leake, *North-east Greece*, vol. iii. p. 452.) [E. B. J.]

GIGONUS. [GIGONIA PROUL.]

GIGUREL [ASTURIA.]

GIRON. [JERUSALEM.]

GILBOA MOUNT (Γελβόνα *Spee*), a low mountain district to the south-east of the plain of Esdrælon, situated in the tribe of Issachar, infamous for the defeat of the Israelites under Saul and Jonathan, by the Philistine hosts. (1 Sam. xviii. 4, xxiii.) From this fact they are called *ἔρη ἀλλοφύλων* (alienigenarum montes) by Eusebius, who places them six miles from Scythopolis, where a large village named Gelbus (Γελβός) existed in his day. This village still exists, under the name of *Jelbén*, and serves to identify the mountain tract which it occupies as the Mount Gilboa of Scripture. The road from Boissam (Scythopolis) to *Jasna* passes near this village, and over the mountains. (Robinson, *Bib. Res.* vol. iii. pp. 157, 170.) The village of *Jelbén*, however, "lies south of Takouah, on the western declivity of Mount Gilboa, and not on the east side, as it is marked in Robinson's map." (Dr. Schultze, in Williams, *Holy City*, vol. i. p. 469.) [G. W.]

GILEAD. [PALAESTINA.]

GILGAL (Γαλαλα, LXX; Γελγιά and Γελγιά, Euseb.), the first station of the Israelites after crossing the Jordan, and, therefore, between Jericho and that river, "in the east border of Jericho." (Josh. iv. 19.) It was here that the twelve stones taken out of the bed of the Jordan were deposited, that the first passover was celebrated in the promised land, and the ordinance of circumcision renewed, from which last circumstance the place derived its name. "This day have I rolled away the reproach of Egypt from off you; wherefore, the name of the place is called Gilgal (i. e. *rolling*) unto this day." (v. 9.) It seems to have been the head-quarters of Joshua during the subjugation of the land (ix. 6, x. 6, 43), and was probably invested with a sacred character from that time forward: for there Samuel judged, in his annual circuit (1 Sam. vii. 16); there he publicly inaugurated the kingdom (xi. 14, 15); and there he commanded Saul to await his arrival, when he should come to offer sacrifice (x. 8. xiii. 4, &c.). According to Eusebius, it was 2 miles from Jericho (Onomast. s. v.); but Josephus, with greater show of accuracy, places it 10 stadia from Jericho, and 50 from the Jordan (*Ant.* v. 1. § 4). It was a desert place in the time of Eusebius, but regarded with great veneration by the inhabitants of the country. No traces of an ancient city can now be discovered between the site of Jericho, which is clearly identified, and the river. It may be doubted whether the Gilgal mentioned in 2 Kings, ii. 1, where there was a school of the prophets (iv. 38), is identical with the one above noticed. Eusebius alludes to another in the vicinity of Bethel (s. v.), whose site is still marked by the large modern village of *Filgilia*, to the left of the *Nabéls* road, about 2 hours north of Bethel. (Robinson, *Bib. Res.* vol. iii. 81, 82.) This is possibly the Gilgal mentioned in *Deut.* xi. 29, 30, in the vicinity of Mounts Ebal and Gerizim; a notable difficulty, which Eusebius and St. Jerome propose to solve by transferring these mountains to the banks of the Jordan. Another modern village of the same name near the coast, a little south of Antipatris, seems to indicate the site of a third town of the same name. Dr. Robinson thinks that "the Gilgal of *Nehemiah*, xii. 29 and of 1 *Macc.* ix. 2 may be referred to the place so

called in the western plain, near Antipatris. (*Bib. Res.* vol. ii. p. 287. n. 3.) [G. W.]

GILIGAMMAE (Γιλγίγμμαι, Herod. in IG. Γιλγίγμμαι, Steph. B. s. v.), a Libyan people, who dwelt originally on the N. coast of Libya, W. of ADYRMACHIDAE, as far as the island of Apollonia W. of the part of Cyrene; but were afterwards put back by the Greek settlers to the inner part of Marmarica and Cyrenaica. [P. S.]

GINDANES (Γινδάνες or Γινδάνες), a Libyan people, who dwelt W. of the MACAE, and S. of Tripolis in the Regio Syriae; and of whose customs some curious particulars are given by Herod. (iv. 176; Steph. B. s. v.) [P. S.]

GINDABUS (Γινδάβος), a city of the Syriae district of CYRRHISTICA; an acropolis, and robbers, according to Strabo (p. 751). Ptolemy, however, places a city of this name in the G. of Seleucia (v. 15). [G. W.]

GIR FL; GIRA METROPOLIS [LXX.]

GIRRA. [MEXICUS.]

GIRGASHITES (Γιργάσιται), one of the idolatrous nations descended from Canaan (Gen. 16), and dispossessed by the children of Isr. (Josh. xxiv. 11). They do not occur in the *Exodus*, iii. 8, 17, or *Deuteronomy*, xx. 17; nor there any indication of their position in Palestine. Dr. Wells supposes them to have been a tribe of the Hivites; as in no case of its name where the nations of Canaan are reckoned they are omitted, while in the tenth, where they are so, the Hivites are omitted. [G. W.]

GIRGIRI M. (Ἰργίριος ὄρος), a mountain of Libya Interior, above the Regio Syriae containing the sources of the river Cydnus (ix. 6. § § 11, 17.) It is probably the *Monte Girgiri* of Pliny (v. 5) and the *GRATIARIUM COLLIS* of Ptolemy. [P. S.]

GITANAE, a town of Epirus, described by Strabo as being near Corcyra, and about 10 miles from the coast. (liv. xlii. 38.) It is not mentioned by any other ancient writer, and it has therefore been conjectured that the word is a corrupt form of *Gyræ*, which Ephorus spoke of as a place in Epirus named by the Clasmoneii. (Steph. B. s. v. *Leake, Northern Greece*, vol. i. p. 76.)

GITTITES (Γιτταῖες), the citizens of Gath. (2 Sam. vi. 10, 11, xxi. 19.) [GATH.]

GLANDIMARIUM. [GALLARICA.]

GLANIS. [CLANIS.]

GLANNIRANTA, in Britain, the first of the Notitia of Clannovum. [CLANOVUM.] [R.]

GLANUM (Γλανός; Eth. *Glanicus*), a name for the five towns which Phalaris (ii. 10. § 15) sent into the country of the Salyes in Gallia Narbonensis. Pliny (iii. 4) enumerates it among the Opuntinae of Narbonensis, and calls it *Glanus* Latin name due, as it is supposed, to *Livius Drusus*, who settled a colony here about a. c. 4. Glanus placed in the Antonine Itin. on a road from Caes. (Covallium) to Arelate (Arles): it is 16 M. P. from Cabellio to Glanum, and 12 from Glanum to Eraginum. [ERAGINUM.] The Tabula has the same route and the same names, — but it makes 12 M. from Cabellio to Glanum, and 8 from Glanum to Eraginum; and these distances appear to be correct. Glanum is the village of St. Rémi, which is proved by an inscription found there with the words "Reipublice Glanorum" on it. The site of Glanum is above a mile south of St. Rémi near which there are at present, in a good state

ervation, a Roman mausoleum, and also a Roman nthal arch, which are engraved in several works. *m. de l'Acad.* tom. vii. p. 263; Millin, *Voyage des Départ. Méridionaux*, tom. iii. p. 394. 3. fig. 1.)

be triumphal arch is much damaged. The lower contains eight columns, two on each side of the , or four on each front; and four bas-reliefs out inscriptions: the figures, which are above feet high, represent captives chained, men and en; only two heads are entire. A garland of e and fruits, sculptured with great skill, orna- is the archivolt. In the intercolumniations e are the remains of consoles, which, it is sup- 3, supported statues. The building, which is d a mausoleum, is about 60 feet high, resting on ure base formed of large stones, and consisting hree stories or stages. The lowest is a qua- gular stylobate, on the upper part of each face hich is a bas-relief. The next stage, which is square in the plan, has four open faces, and d pillars engaged, with Corinthian capitals. third stage rests on a circular basement, above h are ten fluted columns with Corinthian ca- s, surmounted by an entablature, above which kind of dome. This third stage is a kind of temple, with open spaces between the columns. friezes and the archivolt are ornamented with reliefs. There were two male figures in this temple clothed with the toga, which used to against the columns, where they had fallen or thrown down. They have been set again on base, and the heads have been restored; but, usually happens, the heads make a miserable rast with the rest of the figures. It is generally sed that this building is a tomb, though some e deny it. But it has the following inscription, orted in a recent work: *SEX. L. M. IVLII PARENTISVS SVBVS*. The three names appear Sextus, Lucius, and Marcus named Julii; and c. F. signify "curaverunt faciendum." It is, fore, clearly a monumental building. On Italian lchral inscriptions "fecerunt" or "fecit" is the non expression; but "faciendum curaverunt" occurs. (*Fabretti, Inscr. Ant. Græc.* Romæ, 1699, 38, &c.) Perhaps some careless copier of the iction has put the c. before the F. It is a com- on of some French writers, which must be ted, that the Julii who erected this monument e connected by blood or alliance with the Roman i. Some even conclude that it was erected in er of the dictator Caesar and of Augustus. They er conclude, without their premises, that it was ed in the first century of the Christian æra, that the bas-reliefs represent the conquests of ar in Gallia. It was usual for Galli to take ames of their Roman patrons; and these Julii e Galli whose ancestors had received some ar from the dictator, and probably the Roman uship. The style of the edifice certainly shows it does not belong to a late period of the empire; that is all that we can say.

silver coin of Glanum is mentioned, with the p of Massilia and the legend *ΓΛΑΥΚΟΥ*, from h we may conclude that this place was at some dependent on Massilia. (*D'Anville, Notice, &c.; kmaer, Géog.* &c. vol. ii. p. 214; Ukert, *Gallien*, 15; Richard et Hocquart, *Guide du Voyageur*, [G. L.]

LAPHYRAE (*Γλαφυραί*), a town of Thessaly, ioneed by Homer along with Boeoe and Iolcos

(*Il.* ii. 712; comp. Steph. B. a. c.), but of which the name does not subsequently occur. Leake con- jectures that it is represented by the Hellenic ruins situated upon one of the hills above the modern vil- lage of *Káprava*, between Boeoe and Iolcos. The entire circuit of the citadel on the summit of the hill may be traced, and on its lower side part of the wall is still standing. (*Leake, Northern Greece*, vol. iv. p. 432.)

GLAUCANITAE, or GLAUSAE (*Γλαυκανίται*, or *Γλαῖται*, Arrian, v. 20), the name of a people conquered by Alexander during his Indian expedi- tion. They appear to have lived near the banks of the Hydaspes. Alexander gave their country to Perna. Arrian says that the name is written Glauconicee by Aristobulus, and Glanæe by Ptolemy. [V.]

GLAUCONNE'SUS. [*EUBOEÆ*, p. 872, a.]

GLAUCUS (*Γλαῦκος*). There are no less than four rivers of this name in Asia Minor: 1. A tribu- tary of the Phæcis in Colchis, now called *Tekorocnos*. (*Strab.* xi. p. 498; *Plin.* vi. 4.) 2. One of the two small rivers by the union of which the Apocritus or Acampsis, in Pontus, is formed. (*Ptol.* v. 6. § 7.) 3. A tributary of the Maeander in Phrygia, not far from Emmeia. (*Plin.* v. 29.) There are coins with the name of this river. (*Leake, Asia Minor*, p. 157.) 4. A river in Lycia, on the frontier of Caria, which empties itself into the bay of Telmessus, whence that bay is sometimes called *Sicæ Glæmæ*. (*Plin.* vi. 39; *Quint. Smyrn. Poethon.* iv. 6, foll; *Strab.* xiv. p. 651.) The modern name of the bay is *Makri*. Steph. B. mentions a *Σῆκος Γλαῦκος*, which was probably a place on the banks of the river. [L. S.]

GLAUCUS, a river of Achaia. [*ACHAIA*, p. 13, b.]

GLESSARIA INSULA. [*AUSTRAVIA*.]

GLINDITIONES, a people or town of Illyrium (*Plin.* iii. 22), probably represented by *Ljubine* in the *Horogovina*. [E. B. J.]

GLISAE (*Γλίσαι* or *Γλίσαις*; *Ἑθ. Γλαυδρίαι*), an ancient town of Boeotia, mentioned by Homer in the same line with Plataea (*Il.* ii. 504), and cele- brated in mythology as the place where the Epigoni fought against the Thebans, and where the Argive chiefs were buried who fell in the battle. (*Paus.* i. 44. § 4, ix. 5. § 13, ix. 8. § 6, ix. 9. § 4, ix. 19. § 2.) Pausanias, in his description of the road from Thebes to Chalcia, says that Glisæ was situated be- yond Teumessus, at the distance of seven stadia from the latter place; that above Glisæ rose Mount Hy- patus, from which flowed the torrent Thermodon. (*Paus.* ix. 19. § 2.) Strabo (ix. p. 412) places it on Mt. Hypatus, and Herodotus (ix. 43) describes the Thermodon as flowing between Glisæ and Ta- negra. Leake identifies Glisæ with the ruins on the bank of the torrent of *Platanidi*, above which rises the mountain of *Siamad*, the ancient Hypatus. (*Leake, Northern Greece*, vol. ii. p. 250.)

GLOTA. [*CIOTA*.]

GLYCYS LIMEN. [*ACHERON*, p. 19, a.]

GLYPIA or GLYMPIA (*Γλυπία*, *Paus.* iii. 22. § 8), a village of Laconia, situated near the frontiers of Argolis. Glypia is the name in Pau- sanias, who simply describes it as situated in the in- terior above Marua. It appears to be the same place as the fortress called *Γλαυρεῖς* by Polybius, who places it near the borders of the Argæia and Laconia, and who relates that the Mæonians were defeated here in B. C. 218 by the Spartans, when they were endeavouring, by a round-about march

from Tegae, to penetrate into the southern valley of the Eurotas. (Polyb. v. 20.) It is also mentioned on another occasion by Polybius (iv. 36). The ancient town is probably represented by the Hellenic remains at *Lympeida*, which is probably a corruption of the ancient name. The district south of *Lympeida* is called *Olympe-khōria*, which name would seem to indicate that one of the mountains in the neighbourhood bore the name of Olympus in ancient times. Leake indeed conjectures that *Taurovia* was the ancient local form of *Olympeia*, and consequently that *Lympeida* and *Olympe-khōria* may both originate in the same ancient name *Olympia* having the local form of *Glympeia*. (Bobyas, *Recherches*, &c. p. 363; Leake, *Poloponnesos*, p. 363; Curtius, *Poloponnesos*, vol. ii. p. 303.)

GNOSUS, GNOSSUS. [GNOSUA.]

GOBAEUM (*Góbaev* *Ἰσχυρ*), is placed by Ptolemy (ii. 8. § 1) in Gallia Lugdunensis, and it is the most western part of Gallia. D'Anville concludes that it is *Finiatère* or *Mahé*, commonly called *Pont de St. Mallicien*. It is certainly some point between the *Pont de Penmarc'h* and the place where the French coast turns east. Gosnell and others make it the cape on which stands the light of *Audierne*, and which terminates on the east the road of *Gob-eston*. In such a case as this the name helps to a probable conclusion.

[G. L.]

GOBANNIO, in Britain, mentioned in the 12th Itinerary, probably = *Aber-gwynny* in Wales. [R.G.L.]

GOGANA (*Góyana*, Arrian, *Ind.* c. 38), a small place on the coast of Persia, to which the fleet of Nearchus came, at the mouth of a small stream or torrent called the *Aron*. It is now called *Konkha*. (Vincent, *Voy. of Nearchus*, vol. i. p. 385.) [V.]

GOGARENE (*Góyapnā*), a canton of Armenia, which Strabo (xi. p. 538) places to the N. of the Cyrus. It is the same as the Armenian *Koukar* or *Koukarikā*, and is represented by the modern *Akhalkalaki*, lying between *Guria*, *Imiretia*, *Georgia*, and the river *Jordā*. St. Martin (*Mém. sur l'Arménie*, vol. i. p. 81) corrects the reading *Góyapnā* in Stephanus of Byzantium (s. v.) into *Góyapnā*.

[E. B. J.]

GOLGI (*Gólyoi*; *Ἐθ. Gólynos*, *Gólyia*, *Gólyis*, Steph. B.), a town of Cyprus, famous for the worship of Aphrodite (Theocr. xv. 100; Lycophr. 589; Catull. xxxvi. 15, *Nept. Pel. et Thea* 96), which, according to legend, had existed here even before its introduction at Paphos by Agapenor. (Pausan. viii. 5. § 2.) The town is mentioned by Pliny (v. 35); but its position is not known. (Engel, *Kypros*, vol. i. p. 145, vol. ii. p. 81.) [E. B. J.]

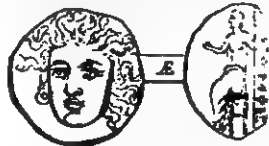

GOLGOTHA MONS. [JERUSALEM.]

GOLOE. [CARYLE.]

GOMPHI (*Gómpoi*, Strab. ix. p. 437; Steph. B. s. v.: *Ἐθ. Gómpoi*, *Gómpois*, Gomphensis), a town of Histiaeotis in Thessaly, situated upon a tributary of the Peneios, and near the frontiers of Athamania and Dolopia. Its position made it a place of historical importance, since it guarded two of the chief passes into the Thessalian plains: "that of *Muski*, distant two miles, which was the exit from Dolopia, and the pass of *Portes*, at a distance of four miles, which led into Athamania, and through that province to Ambracia." (Leake, *Northern Greece*, vol. iv. p. 521.) In the war against Philip, Amyntander, king of the Athamanes, in co-operation with the Roman consul Flaminius, having descended from the latter pass ("Fauces angustae, quae ab Athamania Thessaliam dirimunt"), first took Phoca, a town

lying between the pass and Gomphi, and then Gomphi itself, B. C. 198. The possession of this place was of great importance to Flaminius, since it secured him a communication with the Ambracian gulf, from which he derived his supplies. The road from Gomphi to Ambracia is described by Livy as very short but extremely difficult. The capture of Gomphi was followed by the surrender of the town named Argentea, Pherimm, Thimerus, Lera, Stimo, and Lampus, the position of which is now uncertain. (Liv. xxxii. 14, 15.) When Alexander revolted from Philip in B. C. 189, he made his country by the above-mentioned pass, he was obliged to retire with heavy loss. (Liv. xxxii.) There can be no doubt that it was by this route that the Roman consul Q. Marcus Minucius marched from Ambracia into Thessaly in B. C. 191. (Liv. xlv. 1.) In the campaign between Crassus and Pompey in B. C. 48, the inhabitants of Gomphi, having heard of Caesar's repulse at Dyrrhacium, shut their gates against him, when he arrived at the place from Aegium; but he took the place by assault in a few hours. Caesar, in his account of these events, describes Gomphi as the "first town of Thessaly to those coming from Epirus" (Caes. B. C. iii. 80; Appian, B. C. ii. 64; Dio Cass. 51.)

The Greek geographer Melitinus placed Gomphi at *Stagias*, but, from an inscription found at Stagias, it is clear that this is the site of Aegium. [AGNIUM.] Leake, however, has shown that Gomphi is represented by *Episkopi*, which is the name of an uncultivated height lying along the left bank of the *Bidiri*, at a distance of two or three miles from the mountains. On this height there are still the remains of the ancient town. The modern name owing to the fact of Gomphi having been a heroic in later times. (Herod. p. 642.) Leake places Phoca at a small village called *Bidiri*, midway between the hill of *Episkopi* and the pass of *Portes*. (Leake, *Northern Greece*, vol. iv. p. 519.)

COIN OF GOMPHI.

GO'NGALAE. [LIBYA.]

GO'NGYLUS. [SKILLARIA.]

GONNO-CONDYLON. [CONDYLON.]

GONNUS or GONNI (*Gónnos*, Herod. ix. p. 100; Polyb., Steph. B.: *Ἐθ. Gónnos*, the *Gónnos*, Steph. B. s. v.), an ancient town of Perrhaebi in Thessaly, which derived its name according to the later Greek critics, from Gonn mentioned in the *Iliad*. (Il. ii. 748; Soph. B. i. p. 100.) Its position made it one of the most important places in the north of Thessaly. It lay on the northern side of the Peneios, near the exit of the only two passes by which an army could penetrate into Thessaly from the north. The entrance of Tempe begins to narrow at Gomphi, and pass across Mt. Olympus a little to the west. Tempe leads into Thessaly at Gomphi. It was the latter route that the army of Xerxes entered Thessaly. (Herod. vii. 123, 173.) The position of Gomphi with respect to Tempe is clearly shown by

numerous passages in which it is mentioned by . After the battle of Cynoscephalae, in B. C. Philip fled in haste to Tempe, but halted at Gonnî, to receive such of his troops as might survive the battle. (Liv. xxxiii. 10; Polyb. 10.) In the war against Antiochus, in B. C. when the king, having marched from Demetrius, had advanced as far north as Larissa, a portion of the Roman army under the command of Appianus marched through the pass across Mt. Olympus and thus arrived at Gonnî. On this occasion says that Gonnî was 20 miles from Larissa, describes it as situated "in ipsâ fœnibus saltus Tempe appellantur." (Liv. xxxvi. 10.) In 171 it was strongly fortified by Perseus; and a this monarch retired into Macedonia, the Roman consul Licinius advanced against the town, but it was impregnable. (Liv. xlii. 54, 67.) Gonnî does not occur in history after the wars of the Romans in Greece, but it is mentioned by Strabo (ix. 10; Ptol. iii. 13. § 42).

he site of Gonnî is fixed by Leake at a place called *Lykôstomo*, or the "Wolf's Mouth," in the of *Dereli*, at the foot of a point of Mt. Olympus, a mile from the Peneius. Here are some ruins of a Hellenic city, mixed with other ruins of later date. It would therefore appear that the of *LYCOSTOMIUM* (*Λυκοστόμιον*), which occurs in the history as early as the eleventh century (Cantacuz. ii. 28, iv. 19), was built upon the of Gonnî. (Leake, *Northern Greece*, vol. iv. 38.)

ONOESSA, GONUSSA. [PALLENE.] OPHNA (*Ὀφνη*, Joseph. ; *Γόφνη*, Ptol.), a town of ancient times, situated in the country of Benjamin. It has its name to one of the ten toparchies (*Γόφνη τριτάτη*, Joseph. B. J. iii. 3. § 5; "to his Gophnitica," Plin. v. 14). Josephus reckons it of importance to Jerusalem, and usually it with Arcabatta. It was one of four cities of Judaea by Cassius and reduced to slavery (Ant. xiv. § 2), but restored to freedom by a decree of Augustus Antonius, after the battle of Philippi (§§ 2, 3). It was taken by Vespasian in his campaign in Palestine (B. J. iv. 9. § 9), and, after he marched on Jerusalem by way of Caesarea Samaria, he passed through Gophna (v. 2. § 1). This makes it the *Ὀφνὴ τριτάτη*, Vallis Botri, of Holy Scripture, — its name being identical in signification, — (from *ἵδρῳ*, a vine), which is the fertility of the place in his days. He places it 16 miles from Jerusalem, on the road to Neapolis (Nabes), in near agreement with the Pentateuch, which states the distance at 16 miles. The site is still marked by an inconsiderable Christian church, retaining its ancient name unchanged, preceded by the natives *Yefna*. It is situated in a basin formed by the concurrence of several rivers, and surrounded on all sides by hills. Considerable traces of the Roman road between this town and Jerusalem, are to be seen to the south of the village.

The soil around is remarkably fertile, and its ruins are celebrated throughout the country. (Bon. Bib. Res. vol. iii. pp. 77—79.) [G. W.] O'RDIIUM (*Ὀρδίον*), a town of Bithynia, a little to the north of the river Sangarius, was in later times called Juliopolis. This city must have been of considerable antiquity, having been the residence of the Phrygian kings; but in the time of Strabo (p. 568) it had sunk to the condition of a mere village; it appears, however, that it was rebuilt and

enlarged in the time of Augustus under the name of Juliopolis, and thenceforth it continued to flourish for several centuries. (Strab. l. c. p. 574; Polyb. xxii. 20; Liv. xxxviii. 18; Plin. v. 42; Ptol. v. 1. § 14.) In the time of Justinian it had suffered from the inundations of the river Scopes, and was therefore repaired by that emperor. (Procop. de Aed. v. 4.) Gordium is celebrated in history as the scene of Alexander's cutting the famous Gordian knot. This adventure took place in the acropolis of the town, which had been the palace of king Gordius. (Arrian, Anab. i. 29, ii. 3; Q. Curt. iii. 1, 12; Justin, xi. 7.) [L. S.]

GORDIUTICHOS (*Γορδιούτιχος*), a town in Caria, one day's march from Antioch. (Liv. xxxviii. 13.) Steph. B. says that it was founded by Gordius, a son of Midas, whence it must once have belonged to Phrygia. [L. S.]

GORDYENE, GORDYENI. [CORDYENE.] GORGON or URGO (*Γοργών*, Ptol. iii. 1. § 78; *Gorgona*), a small island in the Tyrrhenian sea, between the coast of Etruria and Corsica, and distant about 20 miles from the mainland. Its name is written *Urgo* by Pliny and Mela; but Rutilius, who describes it in his poetical itinerary, calls it *Gorgon*, and this form is confirmed by the authority of Ptolemy (l. c.), as well as by its modern name of *Gorgona*. (Plin. iii. 6. a. 12; Mel. ii. 7. § 19; Rutil. Itin. i. 515.) It is a small island, only about 8 miles in circumference, but elevated and rocky, rising abruptly out of the sea, which renders it a conspicuous object from a distance. Between it and the port of *Livorno* is the islet of *Meloria*, a mere rock, which is supposed to be the *Masmaria* of Pliny. [E. H. B.]

G'ORGYLUS. [LACONIA.] GORNEAS, a fortress in the north of Armenia (Tac. Ann. xii. 45), which D'Anville identifies with *Arborea*. [E. B. J.]

GORTYN, GORTYNA (*Γορτίον*, *Γόρτυνα*; *Eth. Gortynios*), a town of Crete which appears in the Homeric poems, under the form of *Γορτίον* (Il. ii. 646, Od. iii. 294); but afterwards became usually *Γόρτυνα* (comp. Tzschuck ad Pomp. Melas, vol. iii. pt. ii. p. 811), according to Steph. B. (s. v.) it was originally called *Larissa* (*Λάρισσα*) and *Gremnia* (*Κρήμνισ*).

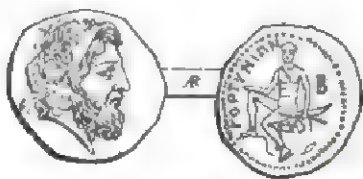

This important city was next to Gonosus in importance and splendour; in early times these two great towns had entered into a league which enabled them to reduce the whole of Crete under their power; in after-times when dissensions arose among them they were engaged in continual hostilities (Strab. x. p. 478). It was originally of very considerable size, since Strabo (l. c.) reckons its circuit at 50 stadia; but when he wrote it was very much diminished. He adds that Ptolemy Philopator had begun to enclose it with fresh walls; but the work was not carried on for more than 8 stadia. In the Peloponnesian War, Gortyna seems to have had relations with Athens. (Thuc. ii. 85.) In B. C. 201, Philopoemen, who had been invited over by the inhabitants, assumed the command of the forces of Gortyna. (Plut. Philop. 18.) In B. C. 197, five hundred of the Gortynians, under their commander, Cydas, which seems to have been a common name at Gortyna, joined Quintus Flaminius in Thessaly (Liv. xxxiii. 3.)

Gortyna stood on a plain watered by the river *Letheus*, and at a distance of 90 stadia from the Libyan Sea, on which were situated its two harbours, *Lebens* and *Metallum* (Strab. l. c.), and is men-

tioned by Ptery (iv. 20), Scylax (p. 19), Phabry (iii. 17. § 10), and Hierocles, who commenced his tour of the island with this place.

In the neighbourhood of Gortyna, the fountain of Sarcos is said to have been surrounded by poplars which bore fruits (Theophrast. *H. P.* iii. 5); and on the banks of the Lethæus was another famous spring, which the naturalists said was shaded by a plane-tree, which retained its foliage through the winter, and which the people believed to have covered the marriage-bed of Europa and the metamorphosed Zeus. (Theophrast. *H. P.* i. 15; *Varr. de Re Rustic.* i. 7; *Pha.* xii. 1.)

The ruins of Gortyna, as they existed previously, have been described more or less diffusely by various writers (Belon, *Les Observ. des plus Singul.* p. 8; Tournefort, *Voyage de Lévant*, pp. 58—64; Pococke, *Trav.* vol. ii. pt. i. pp. 252—255; Savary, *Lettres sur la Grèce*, xxiii.); their statements, along with the full account of the Venetian MS. of the 16th century, will be found in the *Museum of Classical Antiquities*, vol. ii. pp. 277—286. The site of Gortyna cannot, till the survey of the island is completed, be made out, but Mr. Pashley (*Trav.* vol. i. p. 295) has placed it near the modern *Haghios Dhékis*, where the ten Saints of Gortyna, according to tradition, suffered martyrdom in the reign of Decius (comp. Cornelius, *Creta Sacra*, vol. i. pp. 156—166). In this neighbourhood is the cavern which Mr. Cockrell (Walpole, *Memoirs*, vol. ii. pp. 402—406) has conjectured to be the far-famed labyrinth; but as the ancients, with the exception of Claudian (*Sext. Cons. Rom.* 634), who, probably, used the name of the town as equivalent to Cretan, are unanimous in fixing the legend of the Minotaur at Cnossus, the identification must be presumed to be purely fanciful. The coins of Gortyna are of very ancient workmanship. Besides the autonomous, there are numerous imperial coins, ranging from Augustus to Hadrian. (Eckhel, vol. ii. p. 312; Sestini, p. 82.) [E. B. J.]

COIN OF GORTYNA.

GORTYNIA (Γορτυνία, Gothynia: *Εἰθ. Γορτυνία*, Steph. B.; Γορτυνία, Γορτυνία, Ptol. iii. 13. § 39), a place in Macedonia which the host of Sitalces passed in their march between Idomene and the plains of Cyrrhus and Pella (Thuc. ii. 100). Hence its position must be looked for in the upper valley of the river Axius. (Leake, *Northern Greece*, vol. iii. p. 444.) [E. B. J.]

GORTYNUS. [GORTYNA.]

GORTYS, or **GORTYNA** (Γόρτυς, Paus. viii. 27. § 4; Γόρτυς, Paus. v. 7. § 1, Plin. iv. 60. § 3, Plin. iv. 6. s. 10), a town of Arcadia in the district Cynuria, situated near the river Gortynius (Γορτύνιος), also called Lusius (Λούσιος) nearer its source, which was a tributary of the Alpheius, and was remarkable for the coldness of its waters. The town is said to have been founded by Gortys, a son of Stympbalus, and is described by Pausanias as a

village in his time, though it had formerly been a considerable city. Most of its inhabitants were removed to Megalopolis upon the foundation of the latter city in a. c. 371; but it must have continued to be a place of some importance, since Pausanias says that it was taken by Euripides, the poet of the *Electra*, in the Social War, a. c. 218. At that time it was subject to Thebes. It contained a celebrated temple of Asclepius, built of Pentellic marble, and containing statues of Asclepius and Hygieia by Scopas. Cicero alludes to the temple when he says (*de Nat. Deor.* iii. 23) that near the river Larius was the sepulchre of one of the Argonauts, of whom he reckoned three. In 1700 it was seen upon a height near the village of *Archie*. There are still remains of its principal gate and its walls, consisting of polygonal masonry. (Paus. v. 7. § 1, vii. 4. § 8, viii. 27. § 4, 28. § 1; Plin. *H. Nat.* ii. 4; Leake, *Morae*, vol. ii. p. 25; Poloponnesia, p. 233; Curtius, *Poloponnesia*, vol. i. p. 349, seq.)

GORYA (Γόρυς, Paus. vii. 1. § 43), the name of the small district of Gortyna (Γορτυνία, Paus. i. § 42), in the country at the foot of the *Imos* *Kosk*, to the N. of the *Pangée*, on the banks of the *Soustan*, one of the tributaries of the *Copos* or *River of Cálal*. The *Soustan* is, doubtless, the *Soustan*, or *Soustan* (Lamart's *Karte v. Attika*). There is a manifest connection between the name and its territory and the *Gurasi* and *Gurasi*. There can be hardly any doubt that they refer to the same people and localities. In Arrian (x. 1. Alexander crosses the *Gurasi* (Γορτυνία) with some difficulty, and passes through the country of the *Gurasi* (Γορτυνία), on his way to attack the *Aspati* or *Aspati* (Ασπατι). Here the *Soustan* and *Gurasi* are probably the same, and, as Pausanias suggests, only other names for the *Champs* or *Khond*, one of the tributaries of the *Copos* or *Cálal* river from the north. In another passage Arrian distinguishes the two rivers; stating that the *Copos* flowed into *Ponochia*, carrying with it tributaries, the *Malamantis*, *Soustan*, and *Gurasi* (Paus. Arrian, *Ind.* c. 4). In Lamart's map appears a stream called the *Gurasi*, to the W. of the *Soustan*, which probably represents the source of this stream and people. In the *Malamantis* are found *Soustan*, *Gurasi*, and *Campani*—are in this part of the country; the second is no doubt a Greek *Gurasi*. Pott suggests another derivation, which seems much less probable (*Elg. Form.* p. xlv.). [V.]

GORYAEA [GORTYNA.]

GORYS (Γόρυς, Strab. xv. p. 687), a small river of Bactriana, near the junction of the *Champs* or *Copos*. The passage in Strabo in which the name occurs is very corrupt, and has led to various readings. The older editions read *Γόρυς* or *Γόρυς*, and hence made *Gorydia* the name of the place. The later ones of *Cory*, *Gurasi*, as *Kramer* have *Γόρυς* or *Γόρυς*, which seems to be a preferable reading, and gives *Gury* as the name of the place. The similarity of the name and the neighbourhood of the place, suggest a connection between it and *Gory*. [V.]

GOTHI, **GOTONES**, **GOTHOKES**, **GITAS**, **GUITONES** (Γόθοι, Γόττοι, Γόττοι, Γόττοι), a tribe of Germans, noticed even by Pytheas of Marseille, in his account of the coast of the Baltic. (Plin. xxxvii. 2.) According to Tacitus, they dwelt about the *Aestuarium Oceanus*.

in *Frieche Hag*). Tacitus (*Germania* 43), who sees them beyond the Lygii, that is, on the th-east of them, points to the same district, though he does not intimate that they were inhabitants of the coast. Ptolemy (iii. 5, § 20) mentions them under the name of *Tôdewes* as a Sarmatian tribe, and as dwelling on the east of the isthmus, and in the south of the Venedae or Wends; that he, too, does not place them on the sea-coast. who (vii. p. 390) speaks of the *Buiones* (*Bodures*) as a tribe subject to king Maroboduus, which agrees with the story of young Catualda, the Goth, Tacitus (*Annales* ii. 69). The later form of the name of this people, *Gothi*, does not occur until the time of Caracalla (*Spartian. Carac.* 10, *Antonine* 26), and approaches the native name of the tribe, *Guthiunda*, which is preserved in the *Fragmenta* of Bishop Ulfphilas.

From the statements above referred to, it is manifest that in the earliest times the Gothi, or Goths, as shall henceforth call them, inhabited the coast of modern Prussia from the Vistula as far as Brannsbürg Heiligenbeil, where the country of the Venedae commenced. After the time of Tacitus we hear no more of the Goths until the beginning of the third century, when, simultaneously with the appearance of the Alemanni in the west, the Goths are spoken of as a powerful nation on the coasts of the Black Sea. The emperor Caracalla, on an expedition to the East, is said to have conquered the Goths several engagements (*Spartian. Carac.* 10); Alexander Severus soon discovered that they were so dangerous neighbours of the province of Dacia; those German tribes on the Lower Danube showed determined a hostility against the Romans as their brethren on the Rhine. The most formidable of these tribes were the Goths, who now occupied the countries once inhabited by the Sarmatian Getae, Scythians, whence they themselves are sometimes called Getae or Scythians, as, for example, in *Ulpian*, *Capitolinus*, *Trebellianus Pollio*, and even their own historians *Jornandes*. In the reign of the emperor Philip (A.D. 244—249) they took possession of Dacia, and laid siege to Marcianopolis, the capital of Moesia Secunda, which purchased peace at a large sum of money. (*Jornandes de Rebus Goth.* 16.) Afterwards, however, they again ravaged Moesia: in A.D. 250 they indeed retreated before the army of Decius in the neighbourhood of Neapolis, on the Danube; but not long afterwards they annihilated the whole Roman army near Philippopolis at the foot of Mount Haemus. (*Jornandes* 18; *Ammianus Marcellinus* xxxi. 5.) The Goths now moved down upon Macedonia and Greece, and advanced as far as Thermopylae; but the pass was guarded, and the invaders were obliged to return upward: in Moesia, however, they defeated Decius some time, and destroyed his whole army near *Adrianum* or *Forum Trebonii*. (*Zosimus* i. 23; *Aurelius Victor de Caesaribus* 29; *Epitome* 39; *Symeon* p. 375; *Arrian* xii. 20, foll.; *Ammianus Marcellinus* xxxi. 13.) Meanwhile the Goths extended more and more on the coast of the Euxine; and having become possessed of the coast, they sailed in A.D. 253 with a large number of boats against Pityus. Meeting with a powerful resistance there, they raised the siege; but they afterwards returned and took the town. Trapezus expected the same fate; and in its harbour the barbarians captured a large fleet, with which they sailed away, in A.D. 258. In the following year they undertook a fresh expedition against the Thracian

Bosphorus, in which they conquered Chalcedon, Nicomedia, Nicaea, Prusa, Apamea, and Cius. A third expedition, undertaken with a fleet of 500 ships, was still more terrible for the Roman empire. They landed at Cyzicus, which they destroyed; then sailed down the Aegean, and made a descent upon Attica: the whole coast, from the south of Peloponnesus as far as Epirus and Thessaly, was ravaged in a fearful manner, and Illyricum was literally massacred. At length, apparently tired of their roving expeditions, a portion of the Goths returned through Moesia and across the Danube into their own country, on the north-west of the Euxine: the remainder continued their devastations on the coast of Asia Minor; but afterwards they also returned home. (*Zosimus* i. 33, foll.; *Trebellianus Pollio Gallienus* 5, 6, 13; *Jornandes* 30; *Zosimus* xii. 36; *Orosius* vi. 22; *Symeon* p. 382.) But they did not remain quiet for any length of time; for in A.D. 269 they undertook another vast maritime expedition, in which, notwithstanding many reverses in Thrace and on the coast of Asia Minor, they ravaged Crete and Cyprus, and laid siege to Cassandria and Thessalonica. At length, however, the emperor Claudius, in A.D. 269, gained a brilliant victory over the Goths in three great battles, from which he derived the surname *Gothicus*. (*Trebellianus Pollio Claudius* 8, foll.; *Zosimus* i. 43, foll.; *Zosimus* xii. 29, foll.) Although only few returned to their own country after these battles, the Gothic tribes still continued to harass the frontiers of the Roman empire under the two successors of Claudius; and Aurelian was even obliged, in A.D. 272, to cede to them the large province of Dacia. (*Zosimus* i. 48, foll.; *Eutropius* ix. 15; *S. Rufinus* 9; *Ammianus Marcellinus* xxxi. 6.) There now followed a period of about 50 years, during which the Goths appear to have remained quiet, except that in the reign of Tacitus they made an unsuccessful expedition into Colchis and Asia Minor. (*Zosimus* i. 53; *Vopiscus Tacitus* 13.) At the time when Constantine had overcome all his enemies, the Goths again came forward against the Romans, but soon concluded peace. (*Zosimus* ii. 21; *Jornandes* 21.) In A.D. 332 their king Araric crossed the Danube: in his first encounter with Constantine he was successful; but in a second engagement he was worsted, and, as his own dominion was invaded by the inhabitants of the Crimea, he concluded a peace. The consequence was, that henceforth, so long as the family of Constantine occupied the imperial throne, that is, till A.D. 363, the Goths never made any attack upon the frontiers of the empire. Their great king Hermanric never made war against the Romans. In the reign of Valens the western portion of the Goths carried on a war against the Romans, which lasted three years (from A.D. 367—369), but in which no decisive battle was fought, and which was terminated by a peace, in which the Goths ceded the part of victory. (*Ammianus Marcellinus* xxxvii. 4, 5; *Theodoretus* *Oratio* x. p. 129, foll.) At the time when the Huns invaded Europe from the east, the southern portion of the branch of the Goths, called Visigoths, took refuge in the country on the right of the Danube, imploring the emperor of Constantinople to admit them and protect them against the barbarians; in A.D. 375 they accordingly crossed the Danube under their chiefs, *Fridigerus* and *Alavius*, amounting to 200,000. The Ostrogoths, another part of the nation, being refused admission into the Roman empire, took refuge in the mountains with their king *Atha-*

naric. The Visigoths, when settled in Moesia, were insolently treated by their protectors, in consequence of which they attacked and defeated the Roman general Lupicinus, traversed the neighbouring countries, and, conjointly with the bands of Goths that served in the Roman armies and with others of the Ostrogoths, defeated the Roman army near Adrianople, where the emperor Valens himself lost his life, A. D. 378. The Visigoths then appeared before Constantinople, but without being able to take it, and advanced westward as far as the Julian Alps. In the reign of Theodosius they spread devastation both in the south and in the north; and their hosts, though reduced by many reverses, remained masters of Thrace and Dacia (Jornand. 26), for their numbers were constantly increased by fresh reinforcements from the north, and the court of Constantinople saw no other way of securing itself against their attacks than by forming friendly relations with them, and making them an integral part of the empire. (Oros. vii. 34; Socrat. v. 10; Themist. Oration. xvi. p. 252, foll.; Zosim. iv. 56.) Henceforth the Goths were regularly engaged in the service of the Roman empire; but after the death of Theodosius, swarms of Goths, under the command of Alaric, quitted Thrace, advanced unmolested through the pass of Thermopylae towards Thebes and Athens, plundered Argos, Corinth, and Sparta, and then returned to Epirus, where they remained. (Zosim. v. 5, foll. 26.) In the meantime Gainas, another chief in the east, attempted to make himself master of Constantinople and put himself at the head of the empire, but was compelled to withdraw with his army across the Danube. (Zosim. v. 13, foll.; Socrat. vi. 6.) After this Alaric again appears in the service of the empire with the title of *Dux Illyrici*, whence he made an invasion into Italy, but was obliged to withdraw, about A. D. 400. (Claudian. *de Bell. Get.* 535; Jornand. 29; Oros. vii. 37.) His example, however, was followed by Radagaisus, who, in A. D. 403, crossed the Alps with a numerous army of Goths, though apparently without producing any results. Alaric himself then again poured down his hosts upon Italy, and thrice advanced to Rome, which had not seen an army of northern barbarians within its walls since its capture by the Gauls. From Rome Alaric turned to the south of Italy, where death cut short his victorious career. In A. D. 412 the Goths quitted Italy, the south of Gaul being given up to them; after having remained there for a short time, they crossed the Pyrenees and took possession of a large part of Spain, where Athaulf, the successor of Alaric, was assassinated. His successor, Wallia, assisted the Romans against the Vandals and Alani in Spain, and was rewarded by a portion of Western Gaul, from Tolosa to the ocean. The succeeding kings of the Goths extended their empire on both sides of the Pyrenees, and the kingdom reached its highest point of prosperity during the latter half of the fifth century under Euric. The empire of the Visigoths then embraced the greater part of Spain and a large portion of Gaul, and the kings resided at Tolosa, Arles, or Burdigala; but after Euric's death the Goths in Gaul were compelled to retreat before the Franks, while in Spain their empire was overthrown about two centuries later by the Saracens.

At the time when the Visigoths were received by the emperor Valens within the Roman dominion, the application of the Ostrogoths, as already stated, was rejected; but they took the first opportunity of

crossing the Danube notwithstanding, and joined Fridigerus, during whose expedition to the south, however, they marched into Pannonia (Ann. Max. lxxxi. 5, 12; Jornand. 27.) In the reign of Theodosius, when the Visigoths had become united with the Romans, there appeared a revolt of the Goths about the mouth of the Danube, but it was tempting to cross the river they were once defeated by the Romans. (Zosim. iv. 35; *Caes. de IV. Cons. Hon.* 623, foll.) During the weakness of the Huns, the Ostrogoths did not themselves commit any act of hostility against the Romans, but joined Attila in his expeditions into Gaul. (Jornand. 38.) After the overthrow of the Huns the Ostrogoths appear again in Pannonia, which was ceded to them, and the Eastern empire was in fact obliged to purchase their peace by large sums of money. But after some time the Ostrogothic king Widimir led his hosts into Italy, but his son, being prevailed upon by the emperor Glycerius by presents, quitted the country and the Visigoths in the west. In the western empire hosts under different leaders traversed the vast empire, and finally received settlements in the country between the Lower Danube and Mount Rhaetia, in the very heart of the empire. The town of Buda in Moesia is said to have been the residence of the king Theodoric, who, in A. D. 489, on the invitation of the emperor Zeno, entered on his grand expedition, the object of which was the conquest of Italy. He was successful, and established the kingdom of the Ostrogoths in the heart of Italy, upon the ruins of the kingdom of Odoacer. The emperor was so powerful that during the lifetime of Theodoric no one ventured to attack it. But his death involved the downfall of his kingdom; for the members of his family were embroiled in domestic feuds, the kingdom was attacked by foreign enemies, and, though it was bravely defended, became a vassal of the Eastern empire, and the Ostrogoths ceased to be an independent people.

Such is a sketch of the history of the Goths, their two chief branches down to their disappearance from history. The part which they acted in the history of the Roman empire was so important and conspicuous, that down to the present day the name is often used as synonymous with German nation. Having traced their history, we now subjoin a brief account of the various tribes which the nation of the Goths consisted of, and their sub-divisions. Pliny (iv. 28) describes the Goths as belonging to the groups of tribes which he calls *Vindili*, while some modern critics regard them as a part of the *Latavians*. This much, however, is certain, that ever since the beginning of the first century the name Goths embraced the German tribes occupying the south-eastern part of the country. The different branches making up the Goths group are the following:—

1. The *Gothi minoris*, also called *Wagri*, were the branch of the Western Goths who, after having received permission to settle in Moesia, remained there in fixed habitations, applying themselves to the peaceful pursuits of agriculture. (Jornand. 51, 52.)

2. *Gothi Tetrastis*, belonging to the Eastern Goths on the Palus Maeotis (*Procop. Hist. iv. 4, 5, 18*); they maintained their nomadic habits for a long period.

3. The *Taisalae*, on the Danube in Dacia, were

art of the Western Goths. (Amm. Marc. xvii. xxxi. 3; Eutrop. viii. 2.)

1. The *Gepidae*. [GEPIDÆ.]

2. The *Rugii*. [RUGII.]

3. The *Sciri* and *Thervingi*; see these articles.

4. The *Heruli* [HERULI], and

5. The *Juthungi*. [JUTHUNGI.]

Some writers also include the Alani and Vandals among the Goths; but see ALANI and VANDALI. The whole nation of the Goths, in the strict sense of name, was divided into two main groups or tribes, the *Ostrogoths*, occupying the sandy steppes to the east, and the *Visigoths*, inhabiting the more fertile and woody countries in the west. The former are under the names of *Austrogothi* (Pollio, *ad. 6*) and *Ostrogothi* (Clandian, in *Eutrop.* ii. 1). The earliest traces of the name of the *Visigoths* (*Visigothi*), which occurs only in very late writers, are found in Sidonius Apollinaris (*Carmin.* 399, 431, v. 476) in the form *Vesni*; and in Isidore (*Varr.* iii. 1, 3) we find *Visigothi* and *isigothae*; while Jornandes has *Weegothas* and *isigothas*. As to the meaning of these names, we can be no doubt that they were derived from countries occupied by the two branches of the nation, the one signifying the Eastern, and the other Western Goths. Zosimus and Ammianus Marcellinus know neither of these two names, which do not appear to have been used until the time when the Goths were in possession of a large extent of territory in the north of the Black Sea. The two tribes just named frequently mention the *Greutungi*, *Grutungi* and the *Tervingi* or *Thervingi*, where they are evidently speaking of Goths. In regard to these names, different opinions are entertained by modern writers, some believing them to be merely local names, which accordingly disappeared after the migration of the Goths from the country north of the Rhine, whence they are not mentioned by Jornandes; others think that *Grutungi* is only another name for the whole of the *Ostrogoths*; but it is most probable that the *Grutungi* were the most illustrious among the *Ostrogoths*, and that the *Tervingi* occupied the same rank among the *Visigoths*.

As the Goths were a thoroughly German race, their religion must, on the whole, have been that common to all the Germans; but ever since the time of Constantine the Great, Christianity appears to have gradually struck root among the Goths settled in Moesia (the *Moeso-Goths*), whence a Gothic bishop is mentioned as present at the council of Arles in A. D. 335. Their form of Christianity was probably Arianism, which was patronised by their protector Valens, and which was certainly the form of Christianity adopted by their celebrated bishop Ulfilas. Athanasius, one of their chiefs, however, made great efforts to destroy Christianity among his people, and punished those who resisted his attempts in a most cruel manner; but he did not succeed. The introduction of Christianity among the Goths, and the circumstance of their dwelling far and even among civilised subjects of the Roman Empire, greatly contributed to raising them, in point of civilisation, above the other German tribes. Their bishop Ulfilas, in the fourth century, formed a new alphabet out of those of the Greeks and Romans, which in the course of time was adopted by all the German tribes, and is essentially the same as that still in general use in Germany, and is known in its country by the name of "black letter." (Socrat. *hist. Eccl.* iv. 27; Sozom. vi. 36; Jornand. 51;

Philostorg. ii. 5.) The same bishop also translated the Scriptures into the Gothic language, and this translation is the most ancient document of the German language now extant. Unfortunately, the translation has not come down to us complete; but the fragments are still quite sufficient to enable us to form an opinion of the language at that time. It contains many words which the Goths in their intercourse with Greeks and Latins borrowed from them, and a few others may have been derived from the Sarmatians or Dacians. Besides this translation of the Scriptures, we possess a few other monuments of the Gothic language, which, however, are of less importance. It may be observed here, by the way, that of all the Germanic dialects the Swedish is least like the Gothic, though there is a tradition according to which Scandinavia (*Scandia*) was the original home of the Goths. (Jornand. 4, 5.) The fact that Goths once did dwell in Scandinavia is indeed attested by a vast amount of evidence, among which the names of places are not the least important; but the probability is, that the Goths migrated to Scandinavia from the country east of the Vistula, even before they proceeded southward: at least Ptolemy (ii. 11. § 35) mentions *Gutas* (*Γούτα*) in Scandia. The *Visigoths*, lastly, appear to have been the first of all the German tribes that had a written code of laws, the drawing up of which is ascribed to their king Euric in the fifth century. (Comp. Eiseenschmidt, *de Origine Ostrogothorum et Visigothorum*, Jena, 1835; Zahn, *Ulfilas's Gothische Bibelübersetzung*, &c., Weissenfeld, 1805; Aschbach, *Geschichte der Westgothen*; Manso, *Gesch. der Ostgothen in Italien*, 1824, together with the works referred to at the end of the article GERMANIA, and Dr. Latham on Tacit. *Germ.* p. 162, and *Epilogom.* p. xxxviii., foll.) [L. S.]

GOTHINI or GOTTINI, a tribe on the east of the Quadi and Marcomanni, that is, in the extreme south-east of ancient Germany, who, according to the express testimony of Tacitus (*Germ.* 43), spoke the Celtic language. Some believe that the Cotini, mentioned by Dion Cassius (lxxi. 12), and the *Κάρνοι* of Ptolemy (ii. 11. § 21), are identical with the Gothini. Tacitus's description of their habitations, "Terga Marcomannorum Quadorumque claudunt," is somewhat ambiguous, whence some have placed them on the Vistula, in the neighbourhood of Cracow, while others understand Tacitus to refer to the south-east of the Quadi and Marcomanni, that is, the country now called Styria. Others again regard the country about the river March as the original seats of the Gothini; and this view derives some support from the fact that the names about the Lunawald are Celtic, and that the mountain contains ancient iron mines; for Tacitus expressly states that the Gothini were employed in iron mines. (Comp. Wilhelm, *Germanien*, p. 231, fol.; Dancker, *Orig. German.* i. p. 55, foll.; Latham, on Tacit. *Germ.* p. 156.) [L. S.]

GOTHONES. [GOTHI.]

GRAAEI (Γραιοί), a Paenonian tribe, situated on the Strymon. (Thuc. ii. 96.) [E. B. J.]

GRABAEI, a people and place in Illyricum (Plin. iii. 22. a. 26), perhaps *Grabovo* in the S. of the *Herzegovina*. [E. B. J.]

GRACCURIS (Εἰς, Gracuritanus; near *Correlia*), a town of the Vascones, in Hispania Tarraconensis, on the great road from Asturica to Tarraco, 64 M. P. west of Caesaraugusta. Its former name, *Iurcia*, was changed in honour of Sempronius Graec-

chus, who placed new settlers in it, after his conquest of Celtiberia. It belonged to the *conventus* of Caesaraugusta, and was a *municipium*, with the *civitas Romana*. (Liv. Fr. xii., *Epit.* xii., comp. Freinsh. *Suppl.*, Liv. xii. 4.; Festus, s. v.; Plin. iii. 3. s. 4.; *Itin. Ant.* p. 450; Coins ap. Flores, *Med. de Esp.* vol. ii. p. 448; Monnet, vol. i. p. 44, *Suppl.* vol. i. p. 88; Sestini, p. 52; Eckhel, vol. i. p. 50; Ukert, vol. ii. pt. 1. p. 448.) [P. S.]

GRADUM, AD, or GRADUS, AD. The Maritime *Itin.* of the south coast of Gallia makes it a distance of 16 M. P., "a fossis ad gradum Massilianorum fluvius Rhodanus;" and then 30 M. P. "a gradu per fluvium Rhodanus Arelatum." The Fossae are the Fossae Marianae (*Fos-les-Martignes*), and "ad gradum" must be one of the old mouths of the Rhone. The site of "ad gradum" is supposed by some French writers to be *Galejon*. Ammianus Marcellinus (xv. 11) describes the Rhone as entering the sea "per patulum sinum quem vocant Ad Gradum." There may have been several Gradus at the mouths of the Rhone, for "gradus" is a landing-place, or steps for getting in and out of ships (Valer. Max. iii. 6); and D'Anville observes that the name Gradus is not limited to the mouths of the Rhone, but occurs on the coasts of Spain and Italy, where it is pronounced *Grao* and *Grado*. Ammianus places this "sinus" 18 miles from *Arelas*, which is a great deal too little. The word "scala," a Latin word of the same meaning, adopted by the Greeks, is also used to signify a landing-place or maritime town in the eastern part of the Mediterranean. [G. L.]

GRAECIA, the name given by the Romans to the country called HELLAS (Ελλάς; Ἑλλά, ΕΛΛΑΣ, pl. ΕΛΛΑΔες) by the inhabitants themselves. It is proposed in the following article to give a brief outline of the physical peculiarities of the country, and to make a few general remarks upon the characteristic features of its geography. The following sketch must be filled up by referring to the names of the political divisions of Greece, under which the reader will find a detailed account of the geography of the country. The general political history of the country, and discussions respecting its early inhabitants, are purposely omitted, as these subjects more properly belong to a history of Greece, and could not be treated here at sufficient length to be of real value to the student.

I. NAME.

The word *Hellas* was used originally to signify a small district of Phthiotis in Thessaly, containing a town of the same name. (Hom. *Il.* ii. 683; Thuc. i. 3; Strab. ix. p. 431; Dicaearch. p. 21, ed. Hudson; Steph. B. s. v. ΕΛΛΑΔς.) From this district the Hellenes gradually spread over the rest of Greece; but even in the time of Homer their name had not become common to the whole Greek nation. The poet usually calls the Greeks by the names of Danaï, Achæi, or Argæi; and the only passage (*Il.* ii. 530) in which the name of Pan-Hellenes occurs was rejected by Aristarchus and other ancient commentators, as spurious. But at the commencement of Grecian history we find all the members of the Hellenic race distinguished by this name, and glorying in their descent from a common ancestor, Hellen. And not only so, but they gave to every district in which they were settled the name of *Hellas*, which was thus the land of the Hellenes, and did not indicate any particular country, bounded by certain geographical limits. In this general sense the most distant Hellenic colonies belonged to *Hellas*; and

accordingly we read that the cities of Cyrene in Africa, of Syracuse in Sicily, and of Tarentum in Italy, formed as essential parts of *Hellas* as the city of Athens, Sparta, and Corinth. (Comp. Herod. i. 182, iii. 136, vii. 157; Thuc. i. 12.)

Besides this extensive use of the word, a distinct sense of the *Hellenes*, *Hellas* was also employed in a more restricted sense to signify all the country south of the Ambracian gulf and the mouth of the river Peneus, as far as the isthmus of Corinth. In this application it is called by Dicaearchus and Scylax (testimonies *Hellas* (ἡ Ἑλλάς οὐρεῖται), by other writers *Hellas Proper*. The two former writers stated that Continuous *Hellas* commenced with town and gulf of Ambracia on the Ionian sea, as extended as far as Mount Homole and the mouth of the Peneus, on the opposite side. Ephorus, in the same manner, makes *Hellas* commence at Acarnania. (Scylax, p. 12, ed. Hudson; Dicaearch. 31, p. 1; Ephor. ap. Strab. viii. p. 334.) According to these accounts, the northern frontier of *Hellas* was then drawn from the Ambracian gulf upwards along Mt. Pindus, and then at right angles to the latter, along the Cambunian mountains, to the mouth of the Peneus. Epeirus consequently formed no part of *Hellas*; for, though there was a mixture of Hellenic blood among the Epeiroi tribes, they differed so widely in their habits and general character from the great body of the Hellenes, to be entitled to a place among the latter. The same remark would apply with even still greater force, to some of the inhabitants of Aetolia, who are described by Theophrastus as eating raw meat and speaking a language which was unintelligible. (Thuc. iii. 102.)

There seems to have been some discrepancy respecting the exact boundaries of *Hellas Proper*. When Demetrius Aetolius called upon the last Philip of Macedonia to withdraw from *Hellas*, he retorted by asking him: where they would fix its boundaries? and by reminding him that the greater part of their own help were not Hellenes, adding, "The tribes of the Agræi, of the Apodoti, and of the Amphiochei, are in *Hellas*." (Polyb. xvii. 5; quoted by Thirlwall, i. p. 4.)

Herodotus, in opposition to the preceding account, appears to have extended the boundaries of *Hellas* north of the Ambracian gulf, and to have regarded the Thesprotians as Hellenes. (Herod. ii. 56.) On the other hand, some ancient writers would exclude Thessaly from *Hellas*, and would make its northern boundary a line drawn from the Ambracian to the Malic gulf; but Dicaearchus justly argues that the country in which the original *Hellas* was situated ought surely to be included under its name (p. 21, seq.).

Peloponnesus, or the island of Pelopos, formed a part of *Hellas Proper*, although it was of course inhabited by Hellenes (Dicaearch. p. 20; Paus. iv. s. 5); but sometimes Peloponnesus and the Greek islands were included under the general name of *Hellas*, in opposition to the land of the barbarians. (Dem. Phil. iii. p. 118; Diod. xi. 39; comp. Strab. viii. p. 334.) At a later period, when the Macedonian monarchs had become masters of *Hellas*, and had extended the Hellenic language and civilization over a great part of Asia, Macedonia and the southern part of Illyria were included in *Hellas*. Thus we find that Strabo (vii. p. 333) calls Macedonia *Hellas*, but he immediately adds, *καὶ τὰ μέρη τῆς ἡμετέρας ἀνατολῆς ἀπὸ τῆς Ἑλλάδος τῆς ἐκείνης*, &c.

The reason why the Romans gave to Hellas the name of *Græcia*, and to the Hellenes the name of *Græci*, cannot be ascertained; but it is a well-known fact that a people are frequently called by foreigners a name different from the one in use among themselves. Thus, the people called Etruscans or Tuscan by the Romans, and Tyrrhenians or Tyrsenians by the Greeks, bore the name of *Rasna* among themselves; and the different names given to the Germans in their own country and among foreigners applies a parallel instance in modern times. The word *Græci* first occurs in Aristotle, who states that the most ancient Hellas lay about Dodona and the Achelous, and that this district was inhabited by the Selli, and by the people then called *Græci* at now Hellenes. (Aristot. *Meteor.* i. 14.) The Selli are mentioned in the *Iliad* as the ministers of the Dodonaean Zeus. (Hom. *Il.* xvi. 234.) By Phœnians they were called Selli; and Hesiod spoke of the country about Dodona under the name of Helopia. (Strab. vii. p. 328.) We do not know what authority Aristotle had for his statement; but it was in opposition to the general opinion of the Greeks, who supposed the original abode of the Achæans to have been in the Achæan Phthiotis, between Mounts *Thrys* and *Oeta*. According to another authority, *Græci* was a son of *Themals*. (Steph. B. s. v. *παῖδες*.) In consequence of the statement of Aristotle it has been inferred that the name of *Græci* was at one period widely spread on the western coast, and hence became the one by which the inhabitants were first known to the Italians on the opposite side of the Ionian sea. (Thirlwall, vol. i. p. 82.) After the conquest of Greece by the Romans the country was reduced into the form of a province, under the name of *Græcia*, and did not bear the name of *Græcia* in official language. [ACHAIA, p. 17.]

II. SITUATION, BOUNDARIES, AND SIZE.

Hellas is the southern portion of the most easterly of the three great peninsulas which extend from the north of Europe into the Mediterranean sea. These peninsulas are very different in form. Spain is an irregular quadrangle, possessing very little of the character of a peninsula, except in its northern part, where it is united by an isthmus to the rest of Europe. Italy does not commence with an isthmus, it projects from the continent in the shape of a long narrow tongue of land, down which runs from north to south the back-bone of the Apennines, dividing it into two nearly equal parts. The most easterly of the three peninsulas commences with so large a breadth of territory that one is hardly disposed to recognise at first its peninsular shape; but as it proceeds to the south it gradually assumes the form of a triangle. Its base extends from the top of the Adriatic to the mouths of the Danube; and the two sides of the triangle are broken into a number of bays and gulfs, which form a series of peninsulas, the last and most effect being the peninsula of Peloponnesus.

The great peninsula to which Hellas belongs is cut off from the rest of Europe by the lofty range the *Balkan Mountains*, known in ancient times by the names of *Hæmus*, *Scymus*, and the *Illyrian Alps*, which extend along the base of the triangle from the Euxine to the Adriatic. South of these mountains dwelt the various Thracian, Macedonian, and Illyrian tribes; but these formed no part of Hellas, though many modern geographers have designated this country by the name of Northern Greece, and have given to Hellas Proper the name of Middle or

Central Greece. But Hellas Proper begins only at the 40th degree of latitude; and, including Epeirus under this name for the sake of convenience, is separated from Macedonia and Illyria by a well-defined boundary. At the 40th degree of latitude the peninsula is traversed from east to west by a chain of mountains, commencing at the gulf of Therma, in the *Ægean* sea, and terminating at the *Acroceraunian* promontory, on the Adriatic. This chain was known in its eastern half by the names of *Olympus* and the *Cambunian* mountains, and in its western by that of *Mount Lingon*. On every other side Hellas was washed by the sea. At that period in the history of the world when the Mediterranean was the great highway of commerce and civilisation, no position could be more favourable than that of Hellas. It is separated from Asia by a sea, studded with islands within sight of one another, which even in the infancy of navigation seemed to allure the timid mariner from shore to shore, and rendered the intercourse easy between Hellas and the East. Towards the south it faces one of the most fertile portions of Africa; and on the west it is divided from Italy by a narrow channel, which in some parts does not exceed 40 geographical miles in breadth. An account of the seas which wash the Grecian coasts is given under their respective names. It is only necessary to mention here that the sea on the eastern side bore the general name of the *Ægean*, of which the southern portion was called the *Cretan*; that the sea at the southern end of the *Peloponnesus* was called the *Libyan*; and that the sea on the western side of Greece usually bore the name of the *Ionian*, of which the northern extremity was called the *Adriatic* gulf, while its southern end opposite Sicily was frequently named after that island. [ÆGEAN MARE; IONIAN MARE; ADRIATICUM MARE.]

Hellas, which commences at the fortieth degree of latitude, does not extend further than the thirty-sixth. It is well remarked by Thirlwall, that in one respect Greece stands in the same relation to the rest of Europe that Europe does to the other continents,—in the great range of its coast compared with the extent of its surface; so that, while its surface is considerably less than that of Portugal, its coast exceeds that of Spain and Portugal put together. Its greatest length, from Mount *Olympus* to Cape *Tamarus*, is not more than 250 English miles; its greatest breadth, from the western coast of *Acarnania* to *Marathon* in *Attica*, is about 180 miles; and the distance eastward from *Ambracia* across the *Pindus* to the mouth of the *Peneus* is about 120 miles. (Grote, vol. ii. p. 302.) Its area, as calculated by Clinton from *Arrowsmith's* map, exclusive of *Epeirus*, but including *Eubœa*, is only 21,121 square English miles, of which *Thessaly* contains 5674 miles, the central provinces 6288 miles, *Eubœa* 1410 miles, and *Peloponnesus* 7779 miles. (Clinton, *F. H.* vol. ii. p. 365.) The small extent of the surface of Greece will be more fully realised by recollecting the area of some of the smaller states of modern Europe,—Portugal containing 35,268 square English miles, the kingdom of Naples 31,350, and the kingdom of Sardinia 29,102. When it is further recollected that the small area of Hellas was subdivided among a number of independent states,—*Attica*, for example, containing only 720 miles,—the contrast is striking between the grandeur of the deeds of the people and the inconsiderable spot of earth on which they were performed. (Comp. A. P. Stanley, in *Classical Museum*, vol. i. p. 50.)

III. CONFIGURATION OF THE SURFACE.

The chain of Lingon and the Cambanian mountains is intersected at right angles, about midway between the Ionian and Aegæan seas, by the long and lofty range of Pindus, running from north to south, the back-bone of Greece, like the Apennines of the Italian peninsula. Mount Pindus forms the boundary between Thessaly and Epeirus. At the thirty-ninth degree of latitude, at a point in the range of Pindus called Mount Tymphrestas (now *Velestis*), various branches radiate, as from a centre. On the east the two chains of Othrys and Oeta branch off towards the sea, the former running nearly due east, and the latter more towards the south-east. To the west of Tymphrestas there is no chain of mountains extending towards the western sea and corresponding to the gigantic twins of Othrys and Oeta, but only a continuation of the Epeiriot mountains running from north to south. Southward of Tymphrestas the chain of Pindus, which here divides into two branches, no longer bears the same name. One strikes south-westward, and passes across Aetolia, under the names of Corax and Taphiæus, to the promontory of Antirrhium at the entrance to the Corinthian gulf, opposite the corresponding promontory of Rhium in Peloponnesus. The other diverges to the south-east, passing through Phocis, Boeotia, and Attica, under the names of Parnassus, Helicon, Cithæron, and Hymettus, down to Sunium, the southernmost point of Attica; but even here it does not end, for the islands of Cos, Cythos, Seriphos and Siphnos may be regarded as a continuance of this chain.

Such is a brief sketch of the general direction of the mountain-ranges of Northern Greece; but it is now necessary to enter a little more into detail, referring the reader for a fuller account to the names of the political divisions of the country. Taking Mount Pindus again as our starting-point, we observe that from it two huge arms branch off towards the eastern sea, enclosing the plain of Thessaly, the richest and largest in all Greece. These two arms, which run parallel to one another at the distance of 60 miles, have been already mentioned under the names of the Cambanian mountains and Mount Othrys. The Cambanian mountains terminate upon the coast in the lofty summit of Olympus, which is the highest mountain in all Greece, being 9700 feet above the level of the sea, and scarcely ever free from snow. Mount Othrys reaches the sea between the Pagasan and Malian gulfs. South of Olympus a range of mountains, first called Ossa and afterwards Pelion, stretches along the coast of Thessaly, parallel to Mount Pindus; Ossa is a steep conical peak, rising high into the clouds, and, like Olympus, generally covered with snow, while Pelion exhibits a broad and less abrupt outline. Thus Thessaly is enclosed between four natural ramparts, and is only accessible on the north by the celebrated vale of Tempe, between Mounts Olympus and Ossa, through which the Peneius finds its way to the sea. Towards the south, however, Thessaly was open to the sea, which here forms the extensive gulf of Pagasan, the cradle of Greek navigation, from whose shores the Argo was launched. Epeirus, the country to the west of Pindus, is of an entirely different character from Thessaly. It contains no plain of any extent, but is almost entirely covered with mountains, whose general direction, as already observed, is from north to south.

The mountains of the island of Ionia, which lies opposite to the coasts of Bœotia and Attica, may be regarded as only a continuance of the chain of Ossa and Pelion; and of that of Othrys. The mountain-system of Eubœa is further joined to the islands of Andros, Tenos, Mycon, and Naxos, belonging to the Cyclades.

At the foot of Mt. Lacmon (*see fig.*) to point where Mount Pindus bisects the water-barrier of Hellas, four considerable rivers arise. Of these rivers two, the Aous and the Sittoum, do not belong to Hellas; the first flows through Illyria, and the latter through Macedonia; but the other two, the Peneius and the Arctus, are the most important in Northern Greece. The Peneius flows with a slow and winding course through the plain of Thessaly, and finds its way to the sea through the pass of Tempe, a narrow gorge above; the Achelous, which is the largest of the two, flows towards the south through the most mountainous country of Epeirus, then crosses the boundary between Acarnania and Aetolia, and after a course of 130 miles finally falls into the Ionian sea opposite the entrance of the Corinthian gulf.

A little south of Mt. Tymphrestas, at the thirty-ninth degree of latitude, Greece is contracted to a kind of isthmus by two opposite galls, the Thracian on the west and the Malian on the east. This isthmus separates the peninsula of Northern Greece from the Thessalian and Epeiriot mainland.

The peninsula of Middle Greece may again be divided into two unequal halves. The western half, which bears the names of Astolia and Aetolia, is of the same character as Epeirus, with snow and is connected by the Achelous. The eastern half, Mount Pindus which extends from Mount Tymphrestas in a south-westerly direction, has snow with the continuation of the Epeiriot mountains, forms rugged and inaccessible highlands, which have been at all times the haunt of robbers. There are, however, a few broad and fertile plains through which the Achelous flows.

The eastern half of the peninsula of middle Greece is traversed by the branch of Mount Pindus which extends from Mount Tymphrestas in a southerly direction. It is shut in on the north by the rugged pile of Oeta, extending from Tymphrestas to the sea at Thermopylae, and forms the barrier of this portion of the midland peninsula. The only pass through it is the celebrated one at Thermopylae, between the mountain and a narrow upon the coast, which in one part is so narrow as to leave room for only a single carriage.

North of Oeta, and between this mountain and the nearly parallel range of Othrys, is a fertile vale about 60 miles in length, stretching eastward to the Malic gulf, and drained by the Spercheus, which rises at the foot of Mount Tymphrestas at the head of the valley and falls into the Malic gulf. Although this valley is usually considered a part of Thessaly, it is entirely separated from the Thessalian plain by the range of Othrys.

It has been already remarked that the southerly continuation of Mount Pindus passes through Phocis, Boeotia, and Attica, under the names of Parnassus, Helicon, Cithæron, and Hymettus, till it reaches the sea at Sunium. There is, however, another range, which takes its departure from the easterly extremity of Oeta, and extends along the coast of the Eubœan sea, through the Locrian tribes and Boeotia, under the various names

Cnemis, Ptoon, and Teumessus, till it joins rnes, which is a lateral branch of Cithaeron extending from west to east. By means of Pentelicus, in its celebrated marble quarries to the south of rnes, the range is further connected with the sin running from Cithaeron to Sunium.

Between Parnassus and Oeta is a narrow plain led Doris, from which the Dorians are said to ve descended to the conquest of Peloponnesus. re rises the Cephasus, which flows through the in of Phocis and Boeotia, and falls into the lake pais. Phocis possesses some fertile plains on the phisus, lying between Parnassus and the Locrian untains. Boeotia is a large hollow basin shut in every side by mountains, and containing a considerable quantity of very fertile land. Attica is other peninsula, resembling in shape the great ninsula for which Greece itself belongs. It is in e form of a triangle, having two of its sides washed he sea, and its base united to the land. As the umbanian range forms the outer, and Mount Oeta e inner barrier of Greece, so the chain of Cithaeron d Parnes, extending along the base of Attica, is a tural rampart protecting this country.

It has been already seen that the range of thaeron is continued towards the east under the me of Parnes. In like manner it is prolonged wards the south-west, skirting the shores of the nthian gulf and forming the mountainous ntry of Megaris. Here it rises into a new chain, tween four and five thousand feet in height, under e name of the Geranean mountains, which stretch roes Megaris from west to east parallel to Cithaen. It is highest on the western side, and gradually sinks down towards the Saronic gulf. The land of Salamis and its surrounding rocks are only continuation of this chain. Southwards the Geanean mountains sink down still more towards the thmus which separates Hellas Proper from Pelonnesus. Here the Corinthian gulf on the west d the Saronic gulf on the east penetrate so far land as to leave but a narrow neck of land between them, only four miles across at its narrowest rt. The isthmus is comparatively level, being in s highest point not more than 246 feet above the el of the sea, but immediately to the south rise e lofty range of the Oncean hills, parallel to the Geanean, with which they have often been confounded. ere stood the city of Corinth, with its impregnable wtreas the Acrocorinthus, and here the isthmus ened out into the Peloponnesus.

Before proceeding to the description of Peloponnesus, it deserves remark that Strabo divides Greece to five peninsulas. The first is the Peloponnesus, separated by an isthmus of 40 stadia. The second : the one of which the isthmus extends from the legarian Pagae to Nisaea, the harbour of Megara, eing 120 stadia from sea to sea. The third is the e of which the isthmus extends from the recess of he Criseean gulf to Thermopylae, an imaginary traight line, 508 stadia in length, being drawn, hich includes within it the whole of Boeotia, and uts across Phocis and the Locri Epizeuridii. The outh has an isthmus of about 800 stadia, extending rom the Ambracian gulf to the Malian gulf. The ifth isthmus is more than 1000 stadia, extending rom the same Ambracian gulf through Thessaly nd Macedonia to the Thracian gulf. (Strab. viii. s. 334.)

The mountain-system of Peloponnesus has no connection with the rest of Greece. The mountains in

Hellas Proper form an uninterrupted series of chains, running out from the mountains in the countries to the north of Greece. The mountains of Peloponnesus on the contrary, have their roots in Arcadia, the central district of the country, where they rise to a great height. Hence Arcadia has been aptly called the Switzerland of Peloponnesus, to which it stands in the same relation as Switzerland does to the rest of Europe. Upon closer inspection it will be seen that this Alpine district is encircled by an irregular ring of mountains, forming a kind of natural wall, from which lateral branches extend in all directions towards the sea.

The mountains forming the northern boundary of Arcadia are the loftiest and most massive. They extend from west to east, terminating in the magnificent height of Mount Cyllene (*Zyria*), 7788 feet above the level of the sea, the first of the Peloponnesian mountains seen by a person coming over the isthmus from Northern Greece. The most westerly point of this northern barrier is Erymanthus (*Olonos*), 7297 feet high; and between it and Cyllene are the Arcadian mountains (*Kakelada*), 7796 feet in height. The eastern boundary is also formed by a continuous series of mountains, stretching from Mount Cyllene towards the south. Those bearing a special name in this range are Artemisium (*Turaiti*), 5814 feet in height; and Parthenium (*Romo*), 5993 feet in height, south of the former. The range terminates in Parnon. On the southern frontier of Arcadia there is no clearly defined chain of mountains, but only a series of heights forming the water-shed between the tributaries of the Alpheus and those of the Eurotas. It is not till reaching the south-west frontier that the highlands again rise into a lofty and continuous chain, under the name of Lycæus (*Dikioforti*), 4659 feet high. From Lycæus a range of mountains, running south till it joins Erymanthus, constitutes the western boundary of Arcadia; but it bears no special name, except in its northern half, where it is called Pholoi. The northern, eastern, and southern barriers of Arcadia are unbroken; but the western wall is divided by the Alpheus, which finds its way through an opening on this side, and thence descends to the western sea.

The other chief divisions of Peloponnesus are Laconia and Messenia, on the south; Argolis, on the east; Elis, on the west; and Achaia, on the north. From the southern frontier of Arcadia a lofty chain of mountains, under the name of Taygetus, runs from north to south, forming the boundary between Messenia and Laconia, and terminating in the promontory of Taenarum, the southernmost point of Greece and Europe. The chain of Taygetus is the longest and highest in all Peloponnesus, being in one part 7903 feet above the level of the sea, or more than 100 feet above Cyllene. From Mount Parnon, at the south-eastern corner of Arcadia, another range of mountains extends from north to south along the coast, parallel to the range of Taenarum, and terminating in the promontory of Malea. Between this range, which may be called by the general name of Parnon, and that of Taygetus, was the valley of the Eurotas, in which Sparta lay, and which to the south of Sparta opened out into a plain of considerable extent. Messenia, in like manner, was drained by the Pamisus, whose plain was still more extensive than that of the Eurotas; for Messenia contained no continuous chain of mountains to the west of the Pamisus, answering to the range of Parnon in Laconia. Both the Pamisus and the Eurotas flow into gulfs

running a considerable distance into the land, and separated from one another by the range of Taygetus.

The river Neda separated Messenia from Elis. This country is covered, to a greater or a less extent, with the offshoots of the Arcadian mountains; but contains many plains of considerable size and fertility. Of these the two most important are the one in the centre of the country drained by the Alpheius, in which Pisa stood, and the one in the north through which the Peneius flows.

Achaia was the name of the narrow slip of country between the great northern barrier of Arcadia and the Corinthian gulf. From the Arcadian mountains there project several spurs, either running out into the sea in the form of bold promontories, or separated from it by narrow levels. The plains on the coast at the foot of these mountains, and the valleys between them, are for the most part very fertile.

Argolis, taking the name in its most extended sense, was used to signify the whole peninsula between the Saronic and Argolic gulfs; but during the times of Grecian independence it contained several independent states. The Argolic peninsula was united to the mainland by a broad base, at one extremity of which stood the cities of Corinth and Sicyon, and at the other the city of Argos. Corinth and Sicyon possessed a level track of country along the coast, and Argos was situated in a plain, 10 or 12 miles in length and from 4 to 5 in breadth; but the peninsula itself was nearly covered with a lofty range of hills.

The shape of Peloponnesus was compared by the ancients to the leaf of the plane tree or the vine. (Strab. viii. p. 335; Dionys. Per. 403; Agathem. i. p. 15; Plin. iv. 4. a. 5.) The isthmus is so small in comparison with the outspread form of the peninsula, that it was regarded by the ancients as an island, and was accordingly called the island of Pelops, from the mythical hero of this name. It has all the advantages of an insular situation without its disadvantages. It was sufficiently protected by the mountains at the foot of the isthmus to secure the inhabitants from all attacks from the mainland, and to allow them to develop their own character and institutions without any disturbing influences from without. At the same time, it was so closely connected with the mainland by the isthmus as to possess at all times an uninterrupted communication with the rest of Greece. From its position, approachable only by a narrow access easily guarded, the Peloponnesus was called by the ancients the acropolis of Greece. (Eustath. ad Dionys. Per. 403.)

IV. RIVERS AND LAKES.

Most of the Grecian rivers are entirely dependent upon the atmosphere for their supply of water. During five months of the year, in the autumn and winter, rain falls in large quantities, which fills the crevices in the limestone of the hills, and is carried off by torrents. In summer hardly any rain falls; and these torrents, so full of water in the winter, are then perfectly dry. Even many of the rivers, which are partly supplied by springs, dwindle in the summer into very insignificant streams. Most of the Grecian rivers, which give to the country upon the map the appearance of a well-watered district, are nothing but winter torrents, to which the Greeks gave the expressive name of χειμαρροί. None of the rivers of Greece are navigable. The most considerable in Northern Greece are the Peneius and the Achelous, already spoken of. To these may be added the Euenus, which flows through Aetolia,

parallel to the Achelous; the Sperchius, which drains the valley between Oeta and Otrrys; the Cephissus and Asopius in Boeotia; and the Cephissus and Ilissus in Attica, the last of which is dry in summer, and only deserves mention as account of its poetical celebrity. The chief river of Peloponnesus is the Alpheius in Arcadia and Elis; next come the Eurotas in Laconia, the Pamisos in Messenia, and the Peneius in Northern Elis.

Though there are few perennial rivers in Greece the nature of the country is favourable to the formation of marshes and lakes. Many of the plains and valleys are so entirely encircled by mountains that the heavy rains which descend in the autumn and winter months find no outlet, and remain as lakes in the winter and as marshes in the summer. In Thessaly are the lakes Nemoros and Boibis; in Aetolia, Trichonis; in Boeotia, Copais; and in Arcadia, Stymphealis and others. The waters of all these lakes find their way through natural or artificial in the limestone mountains, called *katavathrai* by the modern Greeks, and after flowing over ground rise again after a greater or less space. This is the case with the waters of the Copais [ΒΟΚΟΤΙΑ], and of several of the lakes of Arcadia in which country this phenomenon is very frequent [ARCADIA].

V. GENERAL REMARKS UPON GRECIAN TOPOGRAPHY.

The two most striking features in Grecian topography are the mountainous character of the country and the great extent of its sea-coast. Next to water land, Greece is the most mountainous country in Europe; but this general description conveys a correct idea of its peculiar nature. In the present account we have attempted to give a sketch of the direction of the mountain-ranges or chains, but these project in all directions innumerable branches, having very few valleys or plains of any extent. These plains, whether large or small, are for the most part either entirely surrounded by mountains or open on one side to the sea. At all times mountains have proved the greatest barriers to intercourse between neighbouring tribes. Each of the Grecian states, situated in a plain, and separated from its neighbours by lofty mountains, always difficult, and almost impossible to surmount, grew up in perfect isolation. They had the less temptation to try to scale the lofty barriers which surrounded them, since the sea afforded them an easy communication with the rest of the world. Almost all the Grecian states had ready and easy access to the sea; and Attica was the only political division which did not possess some territory on the coast.

The mountainous nature of the country exercised an important influence upon the political destiny of the people. The chain of Lingus and the Cithaeron mountains defended Hellas from foreign invasion; and the mountains in the country rendered it difficult for one section of the country to attack another. The pass of Thermopylae, which passes over Cithaeron, and those over the Geraneian and Oneian mountains at the isthmus, could only be defended by a handful of resolute men against vastly superior numbers. The same causes produced a large number of independent states, politically distinct from each other, and always disposed to form any kind of federal union even for the purpose of resisting foreign invasion. This political separation led to disputes and hostilities; and the

destine wars eventually proved their ruin by opening their country to Philip of Macedonia. (Comp. note, *History of Greece*, vol. ii. p. 300, seq.)

VI. CHIEF PRODUCTIONS.

The most fertile districts in Greece, according to *hucyrides* (i. 2), were Thessaly, Boeotia, and a great part of Peloponnesus: the least fertile were Arcadia and Attica. Wheat, barley, flax, wine, and oil, were the chief productions; but more careful attention seems to have been bestowed upon the culture of the vine and of the olive than upon the cereal crops. Bread seems to have been more generally made of barley than of wheat. We are told that by one of Solon's laws barley-cakes were provided on ordinary days, and wheaten loaves on festivals, for those who dined in the Prytaneum. (Athen. iv. 37.) The hills afforded excellent pasture for cattle, and in antiquity supplied plenty of timber, though they are at present nearly destitute of woods. The disappearance of these forests has been one of the causes of the diminished fertility of Greece as compared with ancient times. By losing the shade which they afforded, the springs have been burnt up; and, in consequence of less moisture, vegetation has become poorer.

Among the domestic animals we find horses, asses, mules, oxen, swine, sheep, goats, and dogs. Horses were not numerous in Greece, since the country is so mountainous to rear any number. Hence the Greek cavalry was always insignificant. Mules were extensively used in Peloponnesus, where they were found more useful than horses in traversing the mountains. Swine were very numerous, and pork was a favourite article of food, especially among the Arcadians. The milk of sheep and goats was preferred to that of cows. (Aristot. *Hist. An.* iii. 15. § 5, seq.)

Among the wild animals we find mention of bears, wolves, and boars. Bears seem to have been common in the forests of the Arcadian mountains. Herodotus relates that lions were found between the Isthmus in Thrace and the Achelous in Aetolia (Herod. vii. 126); and the existence of lions in Greece, at least at an early period, is rendered probable by the legend of the Nemean lion.

The mountains of Greece consist for the most part of hard limestone, of which were built those massive Cyclopiæan walls and fortifications the remains of which still exist upon the summits of the hills. In almost every part of Greece there were rich and varied veins of marble, affording abundant and beautiful materials to the architect and the sculptor. The best marble-quarries were at Caryatas in Euboea, at Pentelica and Hymettus in Attica, and in the island of Paros.

In the precious metals Greece was poor. Gold and silver were found in the island of Siphnos; but the most productive silver-mines were at Laurium, on the south of Attica. Both copper and iron were found near Chalcis in Euboea; and there were also iron-mines in the mountains of Taygetus in Laconia.

VII. CLIMATE.

The climate of Greece was probably more healthy in ancient than in modern times. The malaria, which now poisons the atmosphere during the summer months, probably did not exist to the same extent when the land was more thickly populated and better cultivated. Herodotus remarks that of all countries in the world Greece possessed the most

happily tempered seasons (Herod. iii. 106); and Hippocrates and Aristotle considered the climate as highly favourable to the intellectual energy of the inhabitants, since it was equally removed from the extremities of heat and cold. (Hippocrat. *de Aëre*, 12, 13; Aristot. *Pol.* vii. 6. § 1.) But owing to the inequalities of its surface, to its lofty mountains and depressed valleys, the climate varies greatly in different districts. In the highlands in the interior the winter is often long and rigorous, the snow lying upon the ground till late in the spring; while in the lowlands open to the sea there is hardly ever any severe weather, and snow is almost entirely unknown. Modern travellers who have suffered from excessive cold and snow-storms passing through Boeotia in the middle of February, have found upon arriving in Attica warm and genial weather. In like manner, in the month of March, travellers find midwinter on the highlands of Mantinea and Tegea in Arcadia, spring in Argos and Laconia, and almost the heat of summer in the plain of Kalamata, at the head of the Messenian gulf. To a native of the northern latitudes of Europe one of the most striking phenomena of the Grecian climate is the transparent purity of the atmosphere and the brilliant colouring of the sky; though even in this point there was a great difference between the various parts of Greece; and the Athenian writers frequently contrast the thick and damp air of Boeotia with the light and dry atmosphere of Athens.

VIII. VOLCANIC CHANGES.

Traces of volcanic agency are visible in many parts of Greece, although no volcanoes, either in activity or extinct, are found in the country. There were hot-springs at Thermopylae, Aedepsus in Euboea, and other places; but the peninsula of Methana in the Peloponnesus, opposite Aegina, and the island of Thera in the Aegæan are the two spots which exhibit the clearest traces of volcanic agency. The greater part of Methana consists of trachyte; and here in historical times a volcanic eruption took place, of which the particulars are recorded both by Strabo and Ovid. (Strab. i. p. 59; Ovid. *Met.* xv. 296, seq.) In this peninsula there are still two hot sulphureous springs, near one of which exist vestiges of volcanic eruption. The island of Thera is covered with pumice-stone; and it is related by Strabo (l. c.) that on one occasion flames burst out from the sea between Thera and the neighbouring island of Therasia, and that an island was thrown up four stadia in circumference. In modern times there have been eruptions of the same kind at Thera and its neighbourhood: of one of the most terrible, which occurred in 1850, we possess a circumstantial account by an eye-witness. (Boss, *Reisen auf den Griech. Inseln*, vol. i. p. 194.)

Earthquakes have in all ages been of frequent occurrence in Greece, especially in Peloponnesus. Laconia was called a land "easily shaken" (*ελασίστη* ἡ Λακωνική, Strab. viii. p. 367); and in the terrible earthquake which happened in B. C. 464, not more than five houses are said to have been left standing at Sparta; more than 20,000 persons were believed to have perished, and huge masses of rock were rolled down from the highest peaks of Taygetus. (Thuc. iii. 89; Diod. xi. 63; Plut. *Cim.* 16.) On the Peloponnesian shores of the Corinthian gulf the earthquakes have been still more destructive. In consequence of the waves having no outlet into a wide-spread and open sea, they have in these convulsions

Flora Graeca in 10 folio volumes, with 100 in each, and a *Prodromus* of the work, with-
 out. These works afterwards appeared; and
 a from the Journal of his Travels were given
 ipole in *Memoirs relating to Europeans and
 Turkey*, Lond. 1817, 4to., and in *Travels to
 Countries of the East*, Lond. 1820, 4to.
 of these works there are also some valuable
 by Hawkins.

he numerous books of travels in Greece which
 appeared in the present century, the following
 mention:—POUQUEVILLE, *Voyage en Mo-
 Constantinople, en Albanie, et dans plusieurs
 Parties de l'Empire Ottoman, pendant les
 1798 et 1801*; but this well-known work is
 great inaccuracies; and the author, probably,
 visit many of the places which he describes.
 15 he was appointed French consul at Janina,
 he resided several years, and from whence he
 the adjoining countries, Thessaly, Epirus, &c.
 ults of these travels appeared in a new work
age dans la Grèce, Paris, 1820—1821, 5 vols.
 This work is of more value than the former
 it still must be used with caution. HOBHOUSE,

*cy through Albania, and other Provinces of
 y in Europe and Asia, to Constantinople,
 y the years 1809 and 1810*, London, 1813.

ALLAND, *Travels in the Ionian Islands, Albe-
 thessaly, Macedonia, &c., during the years
 and 1813*, London, 1815; and, 2nd ed., 2 vols.

819. DODWELL, *A Classical and Topogra-
 Tour through Greece, during the years 1801,
 of 1806*, London, 1819, 2 vols. 4to.,—the most
 ble work on Grecian geography that had hitherto
 red, and one which may still be consulted with
 tage. SIR W. GELL travelled in Greece at
 une times as Dodwell, and partly in company
 him; and his works are of still more value than
 ravels of the latter. They are:—1. *Iti-
 y of the Morea*, Lond. 1817; 2nd ed. 1827.

*errary of Greece, with a Commentary of Pau-
 and Strabo*, Lond. 1818 (containing only
 is): 3. *Itinerary of Greece*, Lond. 1819:
rrative of a Journey in the Morea, Lond.

But it is to COLONEL LEAKE that we are
 ed for the most valuable information which we
 ecess respecting many parts of Greece. A first-
 learner, a good scholar, and a man of sound
 sent and great sagacity, he combined qualities
 found in the same individual, and may safely
 nounced the first geographer of the age. He
 led in Greece for several years at the commence-
 of the present century; but it was long before
 blished detailed accounts of these travels. His
 are:—*The Topography of Athens, with some
 rks on its Antiquities*, Lond. 1821, 8vo.; of
 ork, a second edition appeared in 1841, accom-
 l by a second volume, on *The Dæmi of Attica*,
 had originally appeared in the Transactions
 Royal Society of Literature: *Travels in the
 a, with a Map and Plans*, Lond. 1830, 3 vols.
Travels in Northern Greece, Lond. 1835,
 a. 8vo.: *Peloponnesiaca; a Supplement to
 is in the Morea*, Lond. 1846, 8vo. This last
 was written in consequence of the researches
 French Commission in the Morea, spoken of
 , and is accompanied by a large map of the
 onus, reduced from the French map, on a
 of something more than a third, but not with-
 some variations. We may close our notice of
 orks of English travellers in Greece with

COLONEL MUR's valuable, though unpretending,
 volumes, entitled, *Journal of a Tour in Greece
 and the Ionian Islands*, Edinburgh, 1842, 2 vols.,
 which we have frequently consulted, in the course of
 this work, with great advantage.

Of the modern French and German works, we
 must mention first the publications of the FRENCH
 COMMISSION of Geography, Natural History, and
 Archaeology, which was sent to the Peloponnesus
 in 1829, and remained there two years. These
 publications are:—*Expédition Scientifique de Morée,
 ordonnée par le Gouvernement Français, par Abel
 Blouet, Amable Baviot, Achille Poitot, Félix Trézel,
 et Fréd. de Gournay*, Paris, 1831—1838, 3 vols. fo.:
*Travaux de la Section des Sciences Physiques, sous la
 direction de M. Bory de St. Vincent*, Paris, 1831, fo.:
*Recherches Géographiques sur les Ruines de la
 Morée*, par M. E. Pouillon Boblaye, Paris, 1836, 4to.;
 also, Bory de St. Vincent, *Relation du Voyage de la
 Commission Scientifique de Morée*, Paris et Strasb.,
 1837, 2 vols. 8vo. This Commission also constructed
 a map of the Peloponnesus, on a scale of the
 two hundred-thousandth part of a degree of latitude,
 or twenty-one English inches and three-fifths.

Ross, who resided several years at Athens, where
 he held the post of professor in the university, and
 who travelled through various parts of Greece, has
 published several valuable works:—*Reisen und Re-
 sserungen durch Griechenland*, Berlin, 1841; vol. i.,
 containing travels in Peloponnesus, is all that has
 appeared of this work: *Reisen auf den Griechischen
 Inseln des Ägäischen Meeres*, Stuttgart & Tübingen,
 1840, 2 vols. 8vo.; the third volume appeared in
 1845, and the fourth at Halle in 1852: *Wander-
 ungen in Griechenland*, Halle, 2 vols. 8vo. 1851.
 One of the most important of all the modern German
 works is by CURTIUS, *Peloponnesos, eine historisch-
 geographische Beschreibung der Halbinsel*, Goth.
 2 vols. 8vo. 1851—1852. Besides these, the fol-
 lowing works all deserve mention, of which the two
 first are particularly valuable.

FORCHHAMMER, *Hellenika Griechenland im Neuen das Alte*, Berlin,
 1837. ULRICH, *Reisen und Forschungen in
 Griechenland. Erster Theil, Reise über Delphi durch
 Phocis und Boeotien bis Theben, Bremen*, 1840.
 BUCHON, *La Grèce continentale et la Morée; Voyage,
 Séjour, et Etudes Historiques en 1840—41*, Paris,
 1843. FIEDLER, *Reise durch alle Theile des Kö-
 nigreiches Griechenland*, Leipzig, 2 vols. 8vo. 1840
 —41. ALDENHOVEN, *Itinéraire descriptif de
 l'Attique et du Péloponnèse, avec cartes et plans
 topographiques*, Athens, 1841, taken almost entirely
 from the publications of the French Commission.
 BRANDIS, *Mittheilungen über Griechenland*, 3 vols.
 1842. STEPHANI, *Reise durch einige Gegenden des
 nördlichen Griechenlandes*, Leips. 1843.

The following are the chief systematic works on
 the geography of Greece:—MANNERT, *Geographie*, of
 which the volume containing Thessaly and Epirus
 appeared in 1812, and the one containing Northern
 Greece, Peloponnesus, and the islands of the Archi-
 pelago in 1822; but neither is of much value.
 KRUSE, *Hellas, oder geographisch-antiquarische
 Darstellung des alten Griechenlandes*, Leips. 3 vols.
 8vo. 1825—1827, which, besides the general intro-
 duction, contains only an account of Attica, Megaris,
 Boeotia, Phocis, Doris, Locris, Astolia, and Acarnania.
 CRAMER, *A Geographical and Historical Descrip-
 tion of Ancient Greece, with a Map and a Plan of
 Athens*, 3 vols. 8vo. Oxf. 1828. HOFFMANN, *Grie-
 chenland und die Griechen im Alterthum*, Leipzig,

1841, 2 vols. 8vo.; FORBIGNER, *Handbuch der alten Geographie*, 3 vols. 8vo. Leip. 1842—48; but the part relating to Greece contains little more than mere references to ancient authors and modern works. The numerous monographs on separate countries and islands are given under their respective names. A good general account is given by K. O. MÜLLER, in his work on the *Dorians*; by THIRLWALL and GROTE, in their *Histories of Greece*; and by WORDSWORTH, in his *Greece, Pictorial, Descriptive, and Historical*. The best collection of Maps of Greece is by KIEPERT, *Topographisch-Historischer Atlas von Hellas und den Hellenischen Colonien im 24. Blätter*, Berlin, 1846.

GRÆCIA MAGNA. [MAGNA GRÆCIA.]

GRAIOCELLI. [GARBOCELLI.]

GRAMATUM, a place in Gallia between Epamandurum and Larga [EPAMANDURUM]; but it is not certain that the name ought to appear in the Itin.: and if it should, we have no evidence where it is; though Ukert says that it is *Giromagny*. D'Anville has his usual kind of guess: he makes it *Gramvillars*. [G. L.]

GRAMMIUM (Γράμιον, Steph. B.), a town of Crete, which Coronelli (Höck, *Kreta*, vol. i. p. 434) has placed to the SW. of *Kavo-sidharo*, but on Pashley's map it is identified with *Erenmopolis*, on the E. coast. [E. B. J.]

GRAMPIUS MONS, in Britain, the scene of Calgacus's resistance to the Roman arms—the *Grampian Hills*. (Tac. *Agrie*. 39.) [R. G. L.]

GRANDE, a station which the Jerusalem Itinerary places on the Egnatian Way, 14 M. P. from Celsa. (Comp. Tafel, *de Viæ Egnat. Part. Occid.* p. 42.) [E. B. J.]

GRANDIMYTRUM. [GALLIÆCIA.]

GRANICUS (Γρανικός), a river in Trœs which had its source in Mount Cotylos, a branch of Ida, and flowing through the Adrastian plain emptied itself into the Propontia. (Hom. *Il.* xii. 91; Strab. xiii. p. 582, 587, 602; Mela, i. 19; Plin. v. 40; Ptol. v. 2. § 2.) This little stream is celebrated in history on account of the signal victory gained on its banks by Alexander the Great over the Persians in B. C. 334, and another gained by Lucullus over Mithridates (Arrian, *Anab.* i. 13; Diod. Sic. xvii. 19; Plut. *Alex.* 24, *Lucull.* 11; Flor. iii. 5.) Some travellers identify the Granicus with the *Dismotico* (Chishull, *Travels in Turkey*, p. 60), and others with the *Kodjeh-su*. [L. S.]

GRANIS (Γρανίς, Arrian, *Ind.* c. 39), a small river of Persia, to which the fleet of Nearchus came. There seems no reason to doubt that it is the same stream as that called by D'Anville and Therenot the *Boechavir*. It is, in fact, the river of *Abusheir*. Niebuhr speaks of a stream which passes *Grâ* and flows into the Persian Gulf (*Travels*, vol. ii. p. 91). Can *Grâ* be considered as preserving part of the ancient name? (Vincent, *Voy. of Nearchus*, vol. i. p. 400.) [V.]

GRANNONUM, in Gallia, "in Littore Saxonico," according to the Notitia Imp. Sanson supposed it to be *Grannville*. D'Anville and others guess other names; and D'Anville finds places both for *Grannons* and *Grannonum*. [G. L.]

GRANUA (Γρανύα), a river in the extreme south-east of Germany, in the country of the Quadi, and emptying itself into the Danube. Its modern name is *Graana*. (Anton. *Mediat.* i. 17.) [L. S.]

GRATIANA (Γρατιανή), a town on the frontier of Illyricum, not far from Moesia. (Procop. *Bell.*

Goth. i. 3, *de Aed.* iv. 11; Hessel, p. 637.) The modern town of *Gracianica*, on the left bank of the river Drina, is said to occupy the site of the *Gratianna*. [L. S.]

GRATIANOPOLIS. [COLAN.]

GRATIARUM COLLIS (ὁ ἄψος ἡ Λατὴν M. Gharisano), a well-wooded range of hills, in the Regio Syrtica of N. Africa, 300 stadia from the sea, containing the sources of the river Gyr (Herod. iv. 175; Callim. *ap. Schol. Pto.* i. v. 32; Deila Cella, *Viaggio*, p. 23.) [L. S.]

GRAVIL. [GALLIÆCIA.]

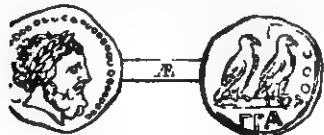

GRAVINUM, a station in Gallia, placed on a Table on a road from Juliobona (Lillemont) to join another road, the termination of which is *Gracianum* (Boulogne). As to this place, no known place, see D'Anville, *Notice*, &c. *de la Gallie*, p. 547.

GRAVISCÆ (Γραβίσκαι, Ptol.; *Tach. Strab.*), a town on the coast of Euxina, between Castrum Novum. We have no ancient existence previous to the establishment of the Roman colony in A. C. 181 (Liv. xl. 29; Tac. i. 15), and we know that its site had formed part of the territory of Tarquinii. It is impossible, indeed, that Graviscae may have been independent of that city, have served as a port just as Pyrgi did to the neighbouring Castrum Novum have no authority for the fact. The name Graviscae, by Virgil (*Aen.* x. 184), is connected with Pyrgi, among the places supposed to have taken part in the wars of Aeneas, is the monument in favour of its remote antiquity; the authority of Silius Italicus, who calls it "veteris Graviscae" (viii. 475), is on such a point of great weight. The colony sent thither was a "colonia civium," but seems, like most settlements of that class established on the coast of Euxina, to have enjoyed but little prosperity; which—in the case of Graviscae at least—may be ascribed to the unhealthyness of its situation, alluded to by Virgil and Rutilius. ("Interpestaque Graviscae," Virg. *Aen.* l. c.; Rutil. *Itin.* i. 282.) It is, however, noticed as a subsisting town by Strabo and Ptolemy, as well as in the Itineraries; at the time of Rutilius (A. D. 416) it had sunk to complete decay, and retained only a few settlements (Strab. v. p. 225; Plin. iii. 5. s. 8; Ptolemy, l. c.; Rutil. l. c.; *Itin. Marit.* p. 498; *Tab. Peut.*).

The exact site of Graviscae has been the subject of much discussion, though the data afforded by the authorities would appear sufficiently precise. It is said to have been 300 stadia from Cosa, and more than 180 from Pyrgi; but the former fact is certainly too great, as it would carry it to a distance beyond the river Minio; and it is certain that Rutilius, as well as the Itineraries, that Graviscae is to the N. of that river. On the other hand, the distance from Pyrgi would coincide with a point or near the mouth of the river *Maria*, and seems on the whole to be little doubtful. Graviscae was situated in the neighbourhood of the sea. Two localities have been pointed out as its site, at both of which there are some ancient remains: the one on the right bank of the *Maria*, 10 miles from its mouth, which is adopted by Weyl and Dennis; the other on the sea-coast, 4 miles from the mouth of the *Maria*. The latter is according to Dennis's own admission, has been a Roman station, and seems to have been

to represent the Roman colony of Graviacae. It never existed an Etruscan town of the name, and is highly probable that it may have occupied a different site. (Dennis, *Etruria*, vol. i. 7—395.)

annexed coin, with the Greek legend ΓΡΑ, is only assigned to Graviacae; but this attribution though admitted by Eckhel (vol. i. p. 92), is entirely erroneous. It belongs to some town of Calabria, but its correct attribution has not been determined. (Millington, *Nomismata Italiae*, pp. 148, 172.) [E. H. B.]

COIN ASSIGNED TO GRAVIACAE.

GRINNES, a place in Northern Gallia, mentioned in *Hist. v. 20* in his history of the insurrection of Civilis. The Table places Grinnes on a line between Noriomagus (*Nymegen*) and Lugdunum (*Leiden*). It is 18 M. P. from Noriomagus to decimum [DUODECIMUM, A.D.], and 9 M. P. to Duodecimium to Grinnes. The next station is Caspingium, 18 M. P. It seems hardly any two geographers agree about the Grinnes. Walckenaer has no doubt that it is *h. and Bochstein*, as he writes the names. The only thing that is certain is, that we do not know where Grinnes is. [G. L.]

GRON (Γρον), a chain of mountains running to Mount Latmos, on the western side of the bay, and extending from the neighbourhood of Euxine in Caria. (Strab. xiv. p. 635.) identified this range with that of PHTHIRA.

GRON (Γρον), a people of North Gallia enumerated in *B. G. v. 39* as dependent on the Nervii, mentioned nowhere else. D'Anville finds them in *Groede* or *Gronde*, the name of a small canton in *Cadecan*, in Zealand. [G. L.]

GRON. [GERASUS.]

GRON. [GALLACIA.]

GRON. [GALLACIA.]

GRON. [GALLACIA.]

GRON. [GALLACIA.]

marched into Lucania, established his camp at Grumentum, where he was encountered by the consul C. Claudius Nero, and sustained a slight defeat (Id. xxvii. 41, 42). Grumentum appears to have been at this time one of the Lucanian cities that had espoused the Carthaginian cause, and was therefore at this time in the possession of Hannibal, but must have been lost or abandoned immediately after. We hear no more of it till the period of the Social War (B. C. 90), when it appears as a strong and important town, in which the Roman praetor Licinius Crassus took refuge when defeated by M. Lamponius, the Lucanian general. (Appian, *B. C.* i. 41.) But it would seem from an anecdote related by Seneca and Macrobius that it subsequently fell into the hands of the allies, and withstood a long siege on the part of the Romans. (Senec. *de Benef.* iii. 23; Macrobius, i. 11.)

It now became a Roman municipium, but seems to have continued to be one of the few flourishing or considerable towns in the interior of Lucania. Strabo, indeed, terms it a small place (*μικρὰ κερουσία*, vi. p. 254), and the Liber Coloniarum includes it among the towns of Lucania which held the rank of Praefecturae only. (*Liber Col.* p. 209.) But we learn from an inscription that it certainly at one time enjoyed the rank of a colony; and other inscriptions, in which mention is made of its local senate and various magistrates, as well as the ruins of buildings still remaining, sufficiently prove that it must have been a place of consideration under the Roman Empire. (Monumens, *Inscr. R. N.* pp. 19—22; Plin. iii. 11. s. 15; Ptol. iii. 1. § 70.) The Itineraries attest its existence down to the fourth century, and we learn from ecclesiastical records that it was an episcopal see as late as the time of Gregory the Great; but the time of its destruction is unknown.

The site of Grumentum, which was erroneously placed by Cluverius at *Chiaromonte*, on the left bank of the *Simo* or *Siris*, was first pointed out by Holstenius. Its ruins are still visible on the right bank of the river *Agri* (*Aciris*), about half a mile below the modern town of *Saponara*: they include the remains of an amphitheatre, with many walls and portions of buildings of reticulated masonry, and the ancient paved street running through the midst of them. Numerous inscriptions have also been discovered on the site, as well as coins, gems, and other minor objects of antiquity. (Cluver. *Ital.* p. 1279; Holsten. *Not. ad Cluver.* p. 288; Romanelli, vol. i. pp. 399, 400; Mommsen, *l. c.* p. 19.) The position thus assigned to Grumentum — which is clearly identified by early ecclesiastical records — agrees well with the distances given in the Itineraries, especially the *Tabula*, which reckons 15 M. P. from Potentia to Anxia (still called *Ansi*), and 18 from thence to Grumentum. (*Itin. Ant.* p. 104; *Tab. Peut.*) Many of the other distances and stations in this part of the country being corrupt or uncertain, the point thus gained is of the highest importance for the topography of Lucania. [LUCANIA.] At the same time its central position, near the head of the valley of the *Aciris*, sufficiently accounts for its importance in a military point of view. [E. H. B.]

GRUMUM (*Grumum*; *Grumum*), a town of Apulia, in the Peucetian territory, the name of which is preserved only in that of the modern village of *Grumo*, about 9 miles S. of *Bitonto* (Butuntum), and 14 SW. of *Bari* (Barium), where ancient remains have been found. But there is no doubt

that the "Grumbestini" of Pliny (iii. 11. s. 16) are no other than the inhabitants of Grunum, though the ethnic form is singular. Many numismatists assign to Grunum the coins with the legend *ΓΡΥΝ*, which other authorities refer to Grumentum in Lucania. (Romanelli, vol. ii. p. 174; Sestini, *Class. Gem.* p. 15.) [E. H. B.]

GRUNAEI (Γρυναῖοι and Γρυναῖοι), mentioned by Ptolemy (vi. 13. § 3) as a population of Scythia. [SCYTHIA.] [R. G. L.]

GRYNIUM or **GRYNIA** (Γρυνίαι, *Γρυνία*: *Ἔθ. Γρυνίαι*), one of the Aeolian cities in Asia Minor, 40 stadia from Myrina, and 70 from Rhaea. In the early times the town was independent, but afterwards became subject to Myrina. It contained a sanctuary of Apollo with an ancient oracle and a splendid temple of white marble. (Herod. i. 149; Strab. xiii. p. 622; Virg. *Ecl.* vi. 73, *Aen.* iv. 345; Plin. v. 32, xxxii. 21; Steph. B. s. v. *Γρυνία*; Paus. i. 21. § 9; Scylax, p. 37.) Xenophon (*Hell.* iii. 1. § 6) mentions Grynium as belonging to Gongylus of Eretria; and it is possible that the *castrum Grunium* in Phrygia, from which Alcibiades derived an income of 50 talents was the town of Grynium. (Nep. *Alcib.* 9.) Parmenio took the town by assault, and sold its inhabitants as slaves, after which the place seems to have decayed. (Diod. Sic. xvii. 7.) [L. S.]

GUGERNI. Tacitus (*Hist.* iv. 28), in his history of the insurrection of Civilis, speaks of the Roman commander Vercula encamping at Gelduba, and thence attacking the nearest districts of the Gugerni, who had joined Civilis. They were Germans who lived on the west side of the Rhine, in the Lower Germania, as appears from Tacitus (iv. 28, v. 16). They are mentioned by Pliny (iv. 17) in this order: "Ubii, Colonia Agrippinensis, Gugerni, Batavi," which shows that they were between Cologne and the Batavorum Insula. We may infer from Tacitus (*Hist.* iv. 28) that Gelduba [*GELDUBA*] was south of the boundary of the Gugerni, but not far from it. There is no record of these Germans passing the Rhine, and they are not mentioned by Caesar. Suetonius (*August.* c. 21; *Tiber.* c. 9) speaks of Ubii and Sicambri submitting to the Romans, and being transplanted to the west side of the Rhine. In the first passage of Suetonius some read "Suevos et Sicambros," in place of "Ubios et Sicambros." It is an old conjecture that these Gugerni were transplanted Sicambri; which may be true, or it may not. More probably not true; for why should they change their name, when the Ubii did not? If the true reading in Suetonius is "Suevos," the Gugerni may be one of the pagi of the Suevi. But the true reading is probably "Ubios." We may suppose then that other tribes may have been transplanted besides Ubii and Sicambri, for a great many Germans were settled on the left bank of the Rhine in the time of Augustus. [G. L.]

GUJUNTA. [*BALEARES*, p. 374, b.]

GULUS (Γούλος *Γούλος* *Γούλος*, Ptol. iv. 2. § 11: *Wad Dab* or *Kanemai*), a river of Mauritania Sitifensis, falling into the sea between Igilgilis and the mouth of the Ampaga. [P. S.]

GUMFIGI (Καυεσίς, Ptol. *Bereaké*), a city on the coast of Mauritania Caesariensis, 12 M. P. west of Caesarea Id.; made a colony by Augustus. (Plin. v. 1; *Itin. Ant.* p. 15; Ptol. iv. 2. § 2; Geog. Rav.; *Not. Afr.*) [P. S.]

GUNTIA. 1. A town in Vindelicia, on the road leading from Campodunum to Augusta Vindelicorum. (*Itin. Ant.* p. 250; Orelli, *Inscript.* no. 2054.) It

is identified with the modern *San-Giulio*, near the sources of the river Gias.

2. (*Gase*), a river in Vindelicia, and a tributary of the Danube; near its source the town of Guntia was situated. This river is not expressly mentioned by the ancients; but the town of the same name, and the expression, "Danubii terminus Vindeliciae" (Eumen. *Pasey. Const.* 2), show that the name was known to them. [L. S.]

GURAEI. [*GORTA*.]

GURAEUS. [*GORTA*.]

GURGURES MONTES, a range of mountains in Central Italy, known only from a passage in Varro, who tells us that it was the custom of the mules which were fed in large herds at Rosci Campi near Reate, into these lofty mountains ("in Gurgures altos montes," Var. *R. R.* i. 16) for their summer pasturage. It is probable that they were a portion of the central mountain ranges of the Apennines, but the particular mountains meant cannot be identified. [E. H. B.]

GURULIS (Γουρούλις), the name of two cities of Sicily. Ptolemy (iii. 3. § 7) to two cities of Sicily. He distinguishes as Gurulia Vetera (Γουρούλις Ἰαυδ) and Gurulia Nova (Γουρούλις νεώτερη). The latter, according to De la Marmora, is represented by the modern town of Cagliari, about 6 M. N. of the W. coast of the island, and 12 N.E. of the city of Cornus; there still exist Roman remains at this spot. Gurulia Vetera is supposed by some authors to have occupied the site of Pedinaria in the interior, N.E. of Boas; but this is a conjecture. (De la Marmora, *Fog. Siciliæ*, vol. ii. pp. 366, 403.) Ptolemy again mentions Gurulia Nova in the 8th book (viii. 2. § 3), at the places at which he records astronomical observations, whence we are led to infer that it must have been a place of some importance, but it is not found in the Itineraries. [E. H. B.]

GURZUBITAE (Γουρζουβίται, Ptolemy, iii. 7), a fortress erected by Justinian in the Chersonese, the ruins of which are still visible on the W. of *Lambert*. (*Comp. Cass.* vol. ii. p. 258.) [E. H. B.]

GUTAE. [*GOTEL*.]

GUTTALUS, a small river on the east of Baltic, which, according to Solinus (20), empties into the west of the Vistula, and would therefore flow to Germany; but Pliny (iv. 28) places it at the mouth of the Vistula, whence it must be regarded as a Pruthian river, and is perhaps the same as the *Pruth*. [P. S.]

GYAROS, or **GYARA** (Γύραρος, Strab. x. B.; Gyarus, Tac.; γὰ Γύραρος, Arrian, *Ind. Perip.* Gyara, Juv., Plin.: *Ἔθ. Γουράρι*), a small island in the Aegean sea, reckoned one of the Cyclades, situated SW. of Andros. According to Pliny it was 62 (Roman) miles from Andros and 12 miles from the continent. (Plin. iv. 12. s. 23.) It is better than a barren rock, though inhabited in antiquity. It was one of the few spots visited by Strabo, who relates that he landed on the island and saw there a little village inhabited by fishermen, who depicted one of their gods to Augustus, then at Corinth after the battle of Actium, to beg him to reduce their yearly tribute to 150 drachmas, since they could scarcely pay more than a hundred. (Strab. x. p. 485.) So numerous were its poverty that it was said, in joke, that mice in this island gnawed through iron. (*Itin. Ant.* p. 250; Orelli, *Inscript.* no. 2054.) [P. S.]

r). Under the Roman empire it was used as a place of banishment, and was one of the most dreary spots employed for that purpose:—"in aliquo brevibus Gyris et carcere dignum." i. 73; comp. Tac. Ann. iii. 68, 69, iv. 30; de Exsil. 8.) Among others, the philosopher Seneca was banished to Gyris, in the reign of (Philost. Vit. Apoll. vii. 16.) In the time of Antonines a purple fishery was carried on in Gyris. (Lucian, Toxar. 18.) The island was uninhabited, except in the summer time by a shepherd who takes care of the flocks sent there by the inhabitants of Syros, to whom the island now belongs. It is called *và Tivôpa*, pronounced *Jura*. (Tournefort, *Voyage*, &c. vol. i. i. Engl. Transl.; Ross, *Reisen auf den Griech.*, vol. i. p. 5, vol. ii. p. 170, seq.; Fiedler, *Reise Griechenland*, vol. ii. p. 158, seq.)

ENUS. [CYANEUS.]

GAEUS LACUS (*Γαυλα Λαύη; Mermere*), in Phrygia, on the road from Thyatira to Laodicea, between the rivers Hermus and Hyllus. (Strab. ii. 864, xx. 391; Herod. i. 93; Strab. xiii. 6; Plin. v. 30.) This lake was afterwards called *Enus*, and near it was the necropolis of Laodicea. It was said to have been made by human hands, to receive the waters which inundated the country. (Comp. Hamilton's *Researches*, vol. i. p. 158, seq.) [L. S.]

MNE'SIAE. [BALCANES.]

MINIAS (*Μινίας*, Xen. Anab. iv. 7. § 19; Gymnasia by Diod. Sic. xiv. 29), "a great, high, and inhabited city," which the Ten and reached, in seven marches, after they had the passage of the Harpasus. (Xen. l. c.) Chenev (*Exped. Euphrat.* vol. ii. p. 232) says that it may be represented by the small town *Minia*, on the *Karâ Sû*, an affluent of the river. But Mr. Grote (*Hist. of Greece*, vol. ix. p. 17) with reason, thinks it is more probably the *Glimisch-Khâna*, on the road from *Trebitz* to *Erzerum*, "celebrated as the site of the ancient and considerable silver mines in the mountain dominions." (Hamilton, *Asia Minor*, vol. 168, 234.) The existence of these mines, as Grote observes, furnishes a plausible explanation of the fact which would be otherwise surprising, the existence of so important a city in the midst of barbarians as the Chalybes, Scythians, and Media. [E. B. J.]

GYNAECOPOLIS (*Γυναικωπολις*, Strab. xvii. 3; Steph. B. s. v.; Plin. v. 9. § 1: *Εὐα. Γυναικωπολις*), was, according to the ancient geographers, the chief town of the Gynaecopolis nome, and bearing its impress in the age of Hadrian are still to be seen. Many writers doubt, however, whether there was such a nome or such a city. The name seems to be allusive to circumstances unknown than to the name of a place, and Stephanus of Byzantium relates no less than three legends by way of explaining it:—(1) The women maintained a brave resistance against a hostile invader, during the absence of their husbands and male relatives. (2) A woman was so cruelly maltreated by a king, that she took up arms and expelled him. (3) The men of Nameritis were afflicted with the plague; and while all other Egyptian cities kept them at bay, the Gynaecopolites, through cowardice, admitted them, and named women for their pains. Each of these legends is palpably an attempt to explain the name. The conjectures that Gynaecopolis is but an-

other name for Anthylla in the Delta. That city, as Herodotus (ii. 97, 98) relates, was appointed by the Pharaohs to furnish the Egyptian queens with sandals or some articles of female attire. The tribute of pin-money procured for the place the appellation of Gynaecopolis, or "Woman-ton;" but see ANTHYLLA. [W. B. D.]

GYNDES (*Γύνδης*, Herod. i. 189; v. 52), a river which has been considered to belong in part to both Assyria and Susiana; as the upper course of its stream, from the mountains of Matiene, in which it takes its rise, passes through part of the former country, while the latter part belongs to Susiana, if its identification with the *Kerkhak* is admissible. Herodotus is not clear in his account of the river: in one place (i. 189), where he speaks of Cyrus's crossing it, his account would answer best with the position of the modern *Diala*, which enters the Tigris near the modern Ctesiphon; in another place (v. 52), he seems to imply a river at no great distance from the Choaspes and Susa. Hence the most contradictory views of geographers. Rennell (*Geogr. of Herod.* vol. i. p. 266) has, in one place, conjectured that the Gynides is the present *Diala*; in another, the *Mendeli*. Larcher has thought that Herodotus means only one and the same river, and that the *Mendeli* best represents it. D'Anville appears to have thought there were three rivers of the name. On the whole, it is probable that the *Mendeli* was the ancient Gynides; while it can hardly have been the *Kerkhak*, as Forbiger has supposed. It is clear that Herodotus had himself a very indistinct notion of it, as he makes the Gynides and Araxes (the *Aras*) both flow from the mountains of Matiene (i. 202). [V.]

GYRISOENI (*Γυρισόει*), a people of Hispania Baetica, in the neighbourhood of Castulo. (Plur. *Sertor.* 3; Ukert, vol. ii. pt. 1. p. 410.) [P. S.]

GYRTON, or GYRTONA (*Γυρτόν*, Thuc., Polyb., Strab.; *Γυρτόν*, Hom.; *Εὐα. Γυρτόν*; *Tatári*), a town of Perrhaebia in Thessaly, situated in a fertile plain between the rivers Titaresius and Peneius. Its site is represented by the modern village of *Tatári*. Strabo, indeed, connects Gyrtion with the mouth of the Peneius (ix. pp. 439, 441), and the Epitomisier of the seventh book (p. 329) places it near the foot of Mt. Olympus; but it is evident from the description of Livy, whose account has been derived from Polybius, that it stood in some part of those plains in which Phalanna, Atrax, and Larissa were situated. (Liv. xxxi. 10, xlii. 54.) It was only one day's march from Phalanna to Gyrtion (Liv. xlii. 54); and the Scholiast on Apollonius (i. 40) says that Gyrtion was near Larissa. (Leake, *Northern Greece*, vol. iii. p. 382, vol. iv. p. 534.) It was an ancient town, mentioned by Homer (*Il.* ii. 738), and continued to be a place of importance till later times, when it is called *Opulentis* by Apollonius Rhodius (i. 57). It was said to have been the original abode of the Phlegyas, and to have been founded by Gyrtion, the brother of Phlegyas. (Strab. ix. p. 442; Steph. B. s. v. *Γυρτόν*.)

COIN OF GYRTON.

The Gythionians are mentioned among the Thebanians who sent aid to the Athenians at the commencement of the Peloponnesian War. (Thuc. ii. 22.) The name of the city frequently occurs at a later period. (Liv. ii. cc.; Polyb. xviii. 5; Mela, ii. 3; Plin. iv. 9. a. 16; Ptol. iii. 13. § 43.)

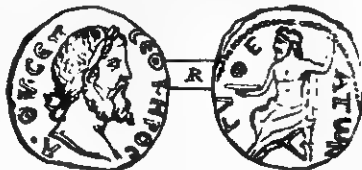

GYTHIUM (Γύθιον, Strab., Polyb., Plut.; Gythium, Liv.; Γυθίον, Steph. B. a. v.; Gytheum, Cic. *F. d. Pub. d. v.*), an ancient Achaean town in Laconia, situated near the head of the Laconian gulf, south-west of the mouth of the Eurotas, at the distance of 240 stadia from Sparta according to Strabo (viii. p. 363), and 30 Roman miles according to the Table. This distance agrees with the 43 kilometres which the French commission found to be the distance by the road from the ruins of Gythium to the theatre of Sparta. In Polybius Gythium is said to be 30 stadia from Sparta; but this number is evidently corrupt and the *vapi γυθίου* we ought to read with Müller *vapi γυθίου*. (Polyb. v. 19.) Gythium stood upon the small stream Gythius (Mela, ii. 3), in a fertile and well-cultivated plain. (Polyb. v. 19.) Its cheeses are celebrated in one of Lucian's dialogues. (*Dial. Meretr.* 14.) After the Dorian conquest it became the chief maritime town in Laconia, and was therefore regarded as the port of Sparta. It was also the ordinary station of their ships of war. Accordingly, when war broke out between Athens and Sparta, Gythium was one of the first places which the Athenians attacked with their superior fleet; and in a. c. 455 it was burnt by Tolmidas, the Athenian commander. (Thuc. i. 102; Diod. xi. 84.) On the invasion of Laconia by Epaminondas in a. c. 370, after the battle of Leuctra, he advanced as far south as Gythium, but was unable to take it, though he laid siege to it for three days. (Xen. *Hell.* vi. 5. § 32.) Even then it must have been well fortified, but its fortifications appear to have been still further increased by the tyrant Nabis; and when it was taken by the Romans in 195 it is described by Livy as "valida urbs, et multitudine civium incolarumque et omni bellico apparatu instructa" (xxiv. 29). Augustus made it one of the Eleutherio-Laconian towns; and under the Roman empire it again became a place of importance, as is shown by its ruins, which belong almost exclusively to the Roman period. Its port, according to the information received by Strabo, was artificial (ἔχει δ' ἑς φάρος, τὴ ναυπηγέοντος ὀψικρὸς, Strab. viii. p. 363).

Pausanias saw in the market-place of Gythium statues of Apollo and Hercules, who were reputed to be the founders of the city; near them a statue of Dionysus; and on the other side of the market-place a statue of Apollo Carneius, a temple of Ammon, a brazen statue of Asclepius, the temple of which had no roof, a fountain sacred to this god, a sanctuary of Demeter, and a statue of Poseidon Gaeanochus. A fountain still flowing between the shore and the Acropolis seems to have been the above-mentioned fountain of Asclepius, and thus indicates the site of the Agora. On the Acropolis was a temple of Athena; and the gates of Castor mentioned by Pausanias appear to have led from the lower city to the citadel. (Paus. iii. 21. §§ 8, 9.) Opposite Gythium was the island Cranai, whither Paris was said to have carried off Helen from Sparta. [CRANAI.]

The coast on the mainland south of Gythium was said to have derived its name of Migonium (Μυγώνιον) from the union of Paris and Helen

on the opposite island. On this coast was a temple of Aphrodite Migonitis, and above it a monument sacred to Dionysus called Larynum (*Λαρυνίον*), where a festival was celebrated to this god in the beginning of spring. (Paus. iii. 22. § 1.) Pausanias further describes, at the distance of three miles from Gythium, a stone on which Orestes is said to have been relieved from his madness. This stone was called *Zōēs* (according to Sylburg, *Λαίης*) *αλ-σώνας*, i. e. *αλυσωσάντας*, the Reliever. The town *Marathonis*, which was built at the beginning of the present century, and is the chief port of the district, occupies the site of Migonium; and the town above it, called *Kimara*, is the ancient Larynum. The remains of Gythium, called *Palaepoli*, situated a little north of *Marathonis*. They stand upon the slope of some small hills, and in the distance between them and the sea. These remains, which are considerable, belong chiefly to the Roman period, as has been already stated. Near the edge of the shore are the remains of two large buildings, probably Roman baths, consisting of several small rooms and divisions. The foundations of buildings are also to be seen under water. Ninety yards inland from the shore, on the slope of the larger hill, are the remains of the theatre, built of white marble. Some of the marble seats still remain in their places; most of them have disappeared, as the space enclosed by the theatre has been converted into a garden. The diameter appears to have been between 150 feet. From 50 to 100 feet from the theatre a slight hollow between the hills, are the remains of a Roman building of considerable size. The *Acropolis* was on the top of the hill above the theatre, and its walls there are only a few fragments. Above the town, and especially on the hills, are twenty-three ruins of small buildings of tiles and marble in the Roman style, containing niches in the walls. These were Roman sepulchres: one of them was excavated by Ross, who found there some sepulchral lamps.

On the left of the road from *Palaepoli* to *Marathonis* is an inscription on the rock, which has not yet been deciphered (Böckh, *Inscr.* 1469) and close to it, hewn in the rock, is a chair with a foot-step, which appears to be the spot where Orestes was said to have been relieved from his madness. Most of the inscriptions found at *Palaepoli* are of the Roman period. (Böckh, *Inscr.* 1325, 1326, 1327, 1329, 1469.) (Weber, *de Gythio et Laconia antiquioribus Rebus Navalibus*, Heidelberg, 1833; *Les Mores*, vol. i. p. 244; Boblaye, *Recherches*, vol. i. p. 86; Ross, *Wanderungen in Griechenland*, vol. i. p. 232, seq.; Curtius, *Peloponnesus*, vol. ii. p. 257.)

COIN OF GYTHIUM.

GYTHONES (Γύθωνες, Ptol. iii. 5. § 20), a Sarmatian people, situated to the W. of the Vistula, whose position must be sought for in the eastern parts of Prussia. (Comp. Schafarik, *Slav. Alterth.* pp. 121, 204, 301.) [E. R.]

H.

BESSUS, the ancient name of the town of selius in Lycia. (Plin. v. 38; comp. *ANTI-USA*.) [L. S.]

BITANCUM, in Britain. The following inscription is the authority for the name, which occurs in the *Notitia* nor the *Itineraries*:—

MOGONT CAD

ET N. D. N. AVG

M. G. SECUNDINVS

SV. COS. HABITA

NCI PRIMA STA

PRO RE ET SVIS POS.

ny important remains have been found here: altars, and traces of the walls of the station; at the identification of Habitancum with *Risingham* has been generally sanctioned. The inscriptions inform us of important restorations, and of its being the station for a cohort of the Vangians; "The rude but celebrated figure of *Bob of Risingham*, sculptured upon the face of the natural rock to the south of the station. A portion of the rock was rent off by gunpowder some years ago, leaving the upper part of the figure with it. He is a bow in one hand, and what appears to be a rabbit in the other." (*Bruce's Roman Wall*, 3.)

the ethnographical philologist the termination is important. Its presence in such a word as *ancus* shows it to be British, and, as such,

It is well known, however, that the name which the river *Po* was known to the Ligurians *lodencus*; a gloss which, even in the classical was translated *fundo carens*. Seeing this, and suggested the reading *Boden-los*, and from the Germanic character of the Ligurians. His name has been taken up by others. It is clear, however, that the more we find other forms in *ancus*, the reason for refining on the current form *ancus*. The more, too, such forms are Celtic, as the probability of the inference that the *ancus* were German, and the greater that of being Kelta. [R. G. L.]

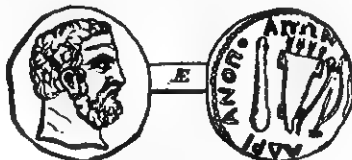

DRANUM. [ADRANUM.]

ADRIA. [ADRIA.]

ADRIANI (Ἀδριανὸν; *Eth.* Ἀδριανεύς), a town in Bithynia, not far from the western bank of the Rhynadacus. It was built, as its name indi-

cates, by the emperor Hadrian, and for this reason did not exist in the time of Ptolemy; it was situated on a spur of Mount Olympus, and 160 stadia to the south-east of Poemanenus. (Aristid. i. p. 596.) Hamilton (*Researches*, i. pp. 90, foll.) thinks that he discovered its ruins near the village of *Bey-jik*, on the road from *Brusa* to *Bergamo*; but this does not quite agree with the above-mentioned distance from Poemanenus, according to which it ought to be looked for much further westward. Adriani was the birthplace of the rhetorician Aelius Aristides, who was born in A. D. 117. In the ecclesiastical writers the town is known as the see of a bishop in the Hellespontine province. (Hierocl. p. 693; Socrat. *Hist. Eccles.* vii. 25; Concil. Nicæan. ii. pp. 51, 572; Concil. Chalced. p. 176; comp. Sestini *Geo. Num.* p. 35.) [L. S.]

HADRIANOPOLIS (Ἀδριανούπολις). 1. (*Adrianople* or *Edrene*), the most important of the many towns founded by the emperor Hadrian, was situated in Thrace, at the point where the river *Tonzus* joins the *Hebrus*, and where the latter river, having been fed in its upper course by numerous tributaries, becomes navigable. From *Arminianus Marcellinus* (xiv. 11, xxvii. 4) it would appear that Hadrianopolis was not an entirely new town, but that there had existed before on the same spot a place called *Uscudama*, which is mentioned also by *Eutropius* (vi. 8). But as *Uscudama* is not noticed by earlier writers, some modern critics have inferred that *Marcellinus* was mistaken, and that *Uscudama* was situated in another part of the country. Such criticism, however, is quite arbitrary, and ought not to be listened to. At one time Hadrianopolis was designated by the name of *Orestias* or *Odrysus* (*Lampid.* *Heliog.* 7; *Nicet.* pp. 360, 830; *Apocyp. Geog. ap. Hudson*, iv. p. 42); but this name seems afterwards to have been dropped. The country around Hadrianople was very fertile, and the site altogether very fortunate, in consequence of which its inhabitants soon rose to a high degree of prosperity. They carried on extensive commerce and were distinguished for their manufactures, especially of arms. The city was strongly fortified, and had to sustain a siege by the Goths in A. D. 378, on which occasion the workmen in the manufactories of arms formed a distinct corps. Next to Constantinople, Hadrianopolis was the first city of the Eastern empire, and this rank it maintained throughout the middle ages; the Byzantine emperors, as well as the Turkish sultans, often resided at Hadrianopolis. (*Spart. Hadr.* 20; *Amm. Marc.* xxxi. 6, 12, 15; *It. Ant.* 137, 175, 322; *Procop.* B. G. iii. 40; *Ann. Comn.* x. p. 277; *Zosim.* ii. 22; *Cedren.* ii. pp. 184, 284, 302, 454; *Hierocl.* p. 635; *Nicet.* p. 830.)

COIN OF HADRIANOPOLIS IN THRACE.

2. A town built by Hadrian in the northern part of Bithynia, which was little known in consequence of its distance from the high roads, for which reason the place is not noticed in the *Itineraries*. (*Hierocl.* p. 695; *Novell.* 29; *Concil. Nicæan.* ii. p. 52.) We possess coins of this town from the time of Hadrian to the reign of Philip. (*Sestini*, p. 68.) *Leake* (*Asia*

Min. p. 309) identifies it with the Turkish town *Boli* near the Filben.

3. A town built by the emperor Hadrian in Phrygia, between Philomelium and Tyriacum. (Hierocl. p. 672; Concil. Chalced. p. 670; Concil. Const. ii. p. 241.) Kiepert is inclined to identify this town with the ruins of *Arinchoon*. [L. S.]

HADRIANOPOLIS (*Ἀδριανούπολις*), a town of Illyricum, founded by Hadrian, and situated on the road from Apollonia to Nicopolis, about midway between those two towns. (*Post. Tab.*) It was repaired by Justinian, and called **JUSTINIANOPOLIS** (*Procop. de Aed. iv. 1*), and became one of the cities of the government of old Epirus and the see of a bishop (Hierocles). The small theatre and other vestiges in the plain below *Libóklovo* mark the position of this city. Ten or twelve miles lower down the river are the ruins of a fortress or small town of the Byzantine age, called *Drynopol*, which name has been taken for a corruption of the old city, though it really is derived from the river on which the place is situated, still called *Dryno* or *Dryno*. These remains are of a later age than the theatre, which belongs to Paganism.

The probability is, that when Hadrianopolis fell in ruins Drynopolis was built on a different site, and became the see of the bishop. (Leake, *Northern Greece*, vol. i. p. 76.) [E. B. J.]

HADRIANUTHERAE (*Ἀδριανούθραι*), a town of Mysia, on the road from Ergasteria to Miletopolis, was built by the emperor Hadrian to commemorate a successful hunt which he had had in the neighbourhood. (Dion Cass. lxi. 10; Spartian. *Hadr.* 20.) This town, of which we possess coins from the reign of Hadrian onwards, is identified by Sestini (*I viaggiatori*, p. 135) with the village of *Trihala*, one hour and a half from Soma. (Comp. G. Cedren. i. p. 437, ed. Bonn; Aristid. i. p. 500.) It seems to have been a place of some note; for it was the see of a bishop, and on its coins a senate is mentioned. (Hierocl. p. 6.) [L. S.]

HADRIATICUM MARE. [ADRIATICUM MARE.]

HADRUMETUM or **ADRUMETUM**, and in late writers (Mart. Cap. vi. 216) **ADRUMETUS** (*Ἀδρῦμας*, *ἡ Ἀδρῦμας*, *-uros*, Strab. xiii. p. 834, Polyb. xv. 5. § 3, 15. § 3, Steph. B. a. v.; *ἡ Ἀδρῦμας*, Scyl. p. 49, Steph. B.; *Ἀδρῦμας*, Appian, *Pun.* 33, 47; *Ἀδρῦμας* or *Ἀδρῦμας*, Ptol. iv. 3. §§ 9, 37, viii. 14. § 6; *Ἀδρῦμας*, *Stadiasma*, &c.; *Ἀδρῦμας*, Procop. B. V. i. 17, ii. 23; see, on the various forms of the name, Groenard's note to his translation of Strabo, vol. iii. p. 435: *Εἰς Ἀδρῦμας*, and sometimes also *Ἀδρῦμας* and *Ἀδρῦμας*, Steph. B.; *Hadrumentum*: *Susa*, Ru.), one of the chief cities of Africa Propria, and, after the division of the province, the capital of Byzacena, stood on the sea-coast, a little within the S. extremity of the *Sinus Neapolitanus* (*Gulf of Hammamet*). It was a Phoenician colony, older than Carthage (Sall. *Jug.* 19), under the dominion of which city it fell to the extent described under **CARTHAGO**. Pliny mentions it among the *oppida libera* of Byzacium (v. 4. a. 3; comp. Mela, i. 7. § 2). Trajan made it a colony, and its full name is found on inscriptions as **COL. CONCORDIA ULPIA TRAJANA AUGUSTA FRUGIFERA HADRUMETINA**, and on coins as **COLONIA CONCORDIA JULIA HADRUMETINA PIA**. (Gruter, p. 369; Eckhel, vol. iv. p. 134.) It stood in a very fertile district, as one of the above titles denotes, and was one of the chief sea-ports for

the great corn-producing country of Byzacium. Its site formed an amphitheatre overlooking the sea, and surrounded by strong walls, which did not, however, enclose its harbour (Cotbus), which by means below it. (*Bell. Afr.* 3, 5, 63, 63; *Rom.*; the monument of the *Periphras*, that it was blown down, does not prove that its harbour was at a distance, but only that it had been choked up by the sands which were always encroaching on this coast.) It is also mentioned in the Punic and Civil Wars. (*Polyb. Ap. R. cc.*; *Liv.* xxx. 29; *Nep. Hann.* 6; *Cass. B.* 28; *Bell. Afr.* R. cc.) Having shared the fate which so many other cities of Africa suffered from the Vandals, it was restored by Justinian, and was **JUSTINIANA** or **JUSTINIANOPOLIS** (Procop. *Fortiger*, vol. ii. p. 845, *namque*, without precise authority, that it was afterwards named *Hierid* after the emperor Heraclius, and on this point follows Shaw in placing it at *Hertid*, or higher up along the coast; but the distance Itinerary, pp. 52, 53, 56, clearly shows the distance of *Susa* with Hadrumetum, and of *Hertid* with *HERRERA COLIA*: the name of the latter suggests that it was a great depot for the natural produce which formed the staple of the commerce of Hadrumetum. The conjecture it deserves notice, that the name *Susa* may be representative of *ἡ Ἰσῶνα*, as we know it in case with Apollonia on the Cyrenaic coast. It was the native place of the Caesar *Clothes* (Capitolin. *Clod. Afr.* 1.) It is one of the points of recorded astronomical observation: 14 hrs. 12 min. in its longest day, and long. 35 min. W. of Alexandria (viii. 14. § 6).

Extensive ruins were still to be seen at the time of the Arabian geographer *Abu Bekri* of Cordova, who describes, among the ruins of many other great ancient buildings, two particular: the one, which he calls *Mela*, as a building of light volcanic stone from *Eryx*, with arched galleries, appears to have been a theatre or amphitheatre; and the other, which he calls *Kubbas*, was a temple on an enormous base, four steps high, of which a quadrangle of masonry still in existence, and called the *Kubbas*, is a fallen, is supposed by Barth to be the site. At the present time, however, the ruins are of magnitude; consisting of some remains of which formed a part of the ancient harbour: traces of the walls, chiefly on the SW., eight reservoirs lying parallel to one another, and fragments of pillars, a few inscriptions, and a short distance from the city, a few names seem to mark the site of the villas of the citizens. (Shaw, *Travels in Barbary*, &c. p. 12nd ed.; Barth, *Wanderungen durch die Pflanz- und Kyrenäische Küstenland*, pp. 152, 153, full worth while to correct Dr. Barth's estimate in making the ship of *Adramyttium* in v. 1 Paul sailed, *Acts*, xxvii. 2, a ship of *Babylon* for the position, see the map on p. 532.) [L. S.]

HAEBRIDES. [HERCULES.]

HAEMIMONTUS, the name of a province comprising the country about mount *Haemus*, from which it derived its name. This province, of which *Anopolis* and *Anchialus* were the principal towns, not mentioned until a late period of the Roman empire, when it is described by *Amianus Marcellinus* as a distinct province in the north-west of Thrace. (Comp. Hierocl. p. 635; *Notit. Imp.* c. 1, with Boecking's note, 145.) [L. S.]

HAEMODAE.

[HEBUDAE.]

HAEMUS or AEMUS (ἡ Ἄμος, τὸ Ἄμωσ ἕως, ἡμος: Balkan), a large range of mountains in the N. of Thracæ, which in its widest sense is said to end from the Adriatic in the west to the Euxine in the east. (Anonym. *Peripl. Pont. Eux.* p. 13; m. Marc. xxi. 10.) Herodotus (iv. 49) does not give the extent of the range, though he applies name to heights west of mount Rhodope, where river Cius, a tributary of the Ister, is represented dividing mount Haemus into two halves. But other writers apply the name Haemus, like the *ern* Balkan, only to the eastern part of this range from mount Scymnus in the west to the Euxine, where it terminated between the towns of Naucleus Mesembria. Its western beginning is about the mouth of the rivers Iakar and Maritza. (Strab. vii. 319, 320; Arrian, *Peripl.* p. 24; Plin. iv. 18.) range of Haemus is in no part particularly high, though there was a notion among the ancients, from its highest peak both the Adriatic and Euxine could be seen. (Pomp. Mel. ii. 2.) But Strabo (vii. pp. 313 and 317) has refuted this notion, which apparently originated with Theopompus Polybius, though the last author admitted that men might ascend the mountain in one day. (iv. 18), who estimates its height at 6000 ft., states that on its summit there existed a place called Aristæum. The highest parts of the mountain are described as covered with snow during greater part of the year. (Hom. *Il.* xiv. 227; Virg. *Eclog.* vii. 76.) Modern travellers estimate the height of the great Balkan, between Sofia and Koclik, at 3000 feet, and that of the little Balkan at 1000. The northern side of mount Haemus is less precipitous than the southern one. (Amm. Marc. xxi. 10.) The mountain has altogether six passes by which it may be crossed without much difficulty, the principal one, which was best known to the ancients, is the westernmost, between Philippopolis and Serdica, and is called by Amm. Marcellinus the *pass of Succor* or *Succororum angustia* (xxi. 10, xxii. 2, i. 10, xvii. 4, xxxi. 16); it now bears the name of *Souls Derbend*, and is sometimes called *the Trajan*. The people dwelling on and about mount Haemus were generally called Thracians, but the following names are particularly mentioned: the *Crobysi* (Herod. i. 318), the *Coralli* (Strab. vii. p. 318), the *Bessi*, and some less known tribes. All of them were regarded by the Romans as robbers, and the *Asii* in particular are described as pirates inhabiting the coasts of the Euxine, until they were expelled by Philip of Macedonia. The name *Haemus* seems to be connected with the Greek *αἰμός*, and the Sanscrit *haima* and *haiman*, meaning to which it would signify the cold or my mountain; but it is possible also that the name is of Thracian origin. (Comp. Boed in Bergstr. *Geogr. Anecdota*, 1838, pp. 26, foll., and by same author *La Turquie d'Europe*, Paris, 1840, vols. 8vo.) [L. S.]

LAGNUS. [ATTICA, p. 327.]

LALAE (Λαλαί), a town situated upon the Opuntian gulf, but belonging to Boeotia in the time of Boeotians. It is described by Pausanias as situated to the right of the river Plataneus, and the last town of Boeotia. It probably derived its name from some salt springs which are still found in its neighbourhood. Leake places it on the cape which projects to the northward beyond *Malesina* or *St. L.*

and *Proskyn*, where some ruins are said to exist at a church of St. John Theologus. (Strab. ix. pp. 406, 425; Paus. ix. 24. § 5; Steph. B. s. v.; Leake, *Northern Greece*, vol. ii. p. 288.)

HALAE ARAPHENIDES. [ATTICA, p. 332, a.]

HALAE AXONIDES. [ATTICA, p. 327, b.]

HALAESIA. [ALAKIA.]

HALES or HALE'SUS (ἡ Ἄλεις, gen. Ἄλειος), a small river of Ionia in Asia Minor, descending from Mount Cercaphus, and emptying itself, after a short course, into the Aegean near Colophon. (Plin. v. 31; Liv. xxxvii. 36.) Its water is said to have been colder than that of any river in Asia Minor. (Paus. vii. 5. § 5, vii. 28. § 2; Tzet. *ad Lycoph.* 424.) Some suppose that this river is spoken of in a fragment of Mimnermus, quoted by Strabo (xiv. p. 634), where, however, the common reading is *Aetheros* (see Cramer's note). Arundell (*Visit to the Seven Churches*, p. 306) believes this river to be the same as the *Havogichay*, while others identify it with the *Tartarus*. [L. S.]

HALESION (ἡ Ἄλεις ὁ ὠκεῖος) "the salt-plain," a small district in the south-west of Thracæ, south of the river Saitoneis. (Strab. xiii. p. 605.) It derived its name from the circumstance that, during a part of the year, the country was overflowed by the sea, which, on withdrawing, left behind a sediment of salt. Salt-works accordingly existed there at a place called the Thracæan Salines (τὸ Θρακικὸν ἄλας ἕως). There was a story that Lysimachus levied a duty on the collectors of the salt, and that thereupon the salt disappeared altogether, but reappeared on the withdrawal of the tax. (Athen. iii. p. 73; comp. Pollux, vi. 10; Plin. xxxi. 41; Galen, *de Temp. Med. Simplic.* ii. p. 151; Hesych. s. v. *Θρακικὸν ἄλας*; Steph. B. s. v. Ἄλεις and *Τράγασα*, who, however, by mistake transfers the plain to Epirus.) According to Leake, the neighbouring hills are composed of salt rock; and the salt-works, which are still in existence, are called by the Turks *Tuzla*. (*Asia Minor*, pp. 273, foll.) [L. S.]

HALEX or ALEX (ἡ Ἄλεις or ἡ Ἄλεις), there is much discrepancy with regard to the aspirate, a small stream in the S. of Bruttium between Locri and Rhegium, which, according to Strabo (vi. p. 260), formed the boundary between the territories of the two cities. Thucydides tells us that the Locrians had a small fort or out-post (*ἐκπύριον*) on its banks, which was taken by the Athenians under Laches (iii. 99). This has been magnified by geographers into a town of the name of Peripolium; but was evidently nothing more than a fortified post to guard the frontier. (See Arnold's note.) Strabo relates of the Halex the peculiarity assigned by other writers to the Caecinus, another river of Bruttium, that the cicadae on the one side of it were silent, and those on the other musical; and he cites from Timæus a mythical explanation of the phenomenon. (Strab. vi. p. 260; Timæus, *ap. Antig. Cypriat.* i.; Conon. *Narrat.* 5.) Diodorus gives another version of its origin, but describes the silence as extending to both countries (iv. 22). The river Halex still retains its name with little variation as the *Alce*: its mouth is about 8 miles E. of the *Cape dell' Armi*, the ancient *Leucopetra*, and 15 miles W. of *Cape Spar-tivento*. [E. H. B.]

HALIACMON FL. (ἡ Ἀλδίακων, Hemod. *Th.* 341; Herod. vii. 127; Scyl. p. 26; Strab. vii. p. 330; Ptol. iii. 13. §§ 15, 18; Caesar, *B. C.* iii. 36; Liv. xli. 53; Plin. iv. 10; Claud. *B. Get.* 179; *Vitaris*; Turkish, *Inje-Kara*), a river of Macedonia,

rising in the chain of mountains to which Ptolemy (*l. c.*) gave the name of Canalovii. According to Caesar (*l. c.*), it formed the line of demarcation between Macedonia and Thessaly.

In the upper part of its course it takes a SE. direction through Elymiotia, which it watered; and then, continuing to the NE., formed the boundary between Pharis, Eordæa, and Emathia, till it discharged itself into the Thermaic gulf. In the time of Herodotus the Haliacmon was joined by the Lydias, or discharge of the lake of Pella; but a change has now taken place in the course of the latter, which joins not the Haliacmon, but the Axius. The Haliacmon itself appears to have moved its lower course to the E. of late, so that, in time, perhaps all the three rivers may unite before they join the sea.

The *Vistritas*, although betraying a Slavonic modification in its termination, may possibly be a corruption of *ASTRAUTUS* (Aelian, *H. A.* xv. 1), which was perhaps the ordinary appellation of the river below the gorges of Beroea, as Haliacmon was that above them; in the same manner as *Isjshora* and *Vistritas* are used in the present day.

Its banks are now confined by artificial dykes to restrain its destructive inundations, and the river itself is noted at *Verris* for *galeias* of immense size: the same fish grows to enormous dimensions in the lake at *Kastoria* [*ΚΑΣΤΕΡΙΟΝ*], which is one of the sources of the *Vistritas*. (Leake, *Northern Greece*, vol. i. pp. 303, 316, vol. iii. pp. 292, 437.) [E. B. J.]

HALIARTUS (*Ἁλάρτος*; *Εἰς Ἁλάρτους*), a town of Boeotia, and one of the cities of the confederation, was situated on the southern side of the lake Copais in a pass between the mountain and the lake. (Strab. ix. p. 411.) It is mentioned by Homer, who gives it the epithet *ναῖφες* in consequence of its well-watered meadows. (Hom. *Il.* ii. 503, *Hymn. in Apoll.* 243.) In the invasion of Greece by Xerxes (B. C. 484) it was the only town that remained true to the cause of Greece, and was in consequence destroyed by the Persians. (Paus. ix. 32. § 5.) It was, however, soon rebuilt, and in the Peloponnesian War appears as one of the chief cities of Boeotia. (Thuc. iv. 95.) It is chiefly memorable in history on account of the battle fought under its walls between Lysander and the Thebans, in which the former was slain, B. C. 395. (Xen. *Hell.* iii. 5. § 17, seq.; Diod. xiv. 81; Plut. *Lys.* 28, 29; Paus. iii. 8. § 3, ix. 32. § 5.) In B. C. 171 Haliartus was destroyed a second time. Having espoused the cause of Persians, it was taken by the Roman prætor Lucrotius, who sold the inhabitants as slaves, carried off its statues, paintings, and other works of art, and raised it to the ground. Its territory was afterwards given to the Athenians, and it never recovered its former prosperity. (Polyb. xxx. 18; Liv. xlii. 63; Strab. ix. p. 411.) Strabo speaks of it as no longer in existence in his time, and Pausanias, in his account of the place, mentions only a heroon of Lysander, and some ruined temples which had been burnt by the Persians and had been purposely left in that state. (Paus. ix. 33. §§ 1, 3, x. 35. § 2.)

The **HALIARTIA** (*Ἁλάρτις*), or territory of Haliartus, was a very fertile plain, watered by numerous streams flowing into the lake Copais, which in this part was hence called the Haliartian marsh. (Strab. ix. pp. 407, 411.) These streams, which bore the names of Ocalæ, Lophis, Hoplites, Permessus, and Olmeius, have been spoken of elsewhere. [See p. 412, a.] The territory of Haliartus

extended westward to Mt. Tiphonia, and Pausanias says that the Haliartians had a sanctuary of the goddesses called *Praxidæ* situated near the mountain. (Paus. ix. 32. § 3.) The town *Præm*, *Medon*, *Ocalæ*, and *Oncastæ* was situated in its territory of Haliartus.

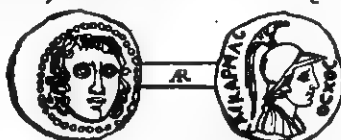

The remains of Haliartus are situated about a mile from the village of *Mei*, a distance from Thebes to Lebadeia, and at the distance about 15 miles from either place. The site of Haliartus is not more than 50 feet above the sea. Leake says, "that towards the lake the site of Haliartus terminates in rocky cliffs, but on the other sides has a gradual acclivity. Some parts of the walls of the Acropolis, chiefly of polygonal masonry, are found on the summit of the hill; there are several sepulchral crypts in the cliff below which, to the north, issues a copious spring of water, flowing to the marsh, like all the streams near the site of Haliartus. Although the walls of the exterior town are scarcely anywhere traceable, its extent is naturally marked out by and west by two small rivers, of which the western issues from the foot of the hill of *Mei*, the eastern, called the *Kefalari*, has its origin in Mt. Helicon. Near the left bank of this source, at a distance of 500 yards from the Acropolis, are the ruins of a mosque and two ruined churches, and the site of a village which, though long since abandoned, is shown by these remains to have been once inhabited by both Greeks and Turks. Here are fragments of architecture and of inscribed stones collected formerly from the ruins of Haliartus. At this spot there is a distance of about three-quarters of a mile to a tumulus westward of the Acropolis, where are several sarcophagi and ancient inscriptions near some sources of water, marking the site of the western entrance of the city."

The stream which flowed on the western side of the city is the one called *Hoplites* by Pausanias, where Lysander fell, and is apparently the same as the *Lophis* of Pausanias. (Plut. *Lys.* 29; Paus. ix. 33. § 4.) The stream on the eastern side is the *Kefalari*, in formed by the union of two rivers, which appear to be the *Permessus* and *Olmeius*, which are described by Strabo as flowing into Helicon, and after their union entering the lake Copais near Haliartus. (Strab. ix. p. 411; see BOEOTIA, p. 413, a.) The tumulus of which Leake speaks, perhaps covers those who were slain along with Lysander, since it was near this that the battle was fought. (Leake, *Northern Greece*, vol. ii. p. 206, seq.)

HALICARNASSUS (*Ἁλικαρνασσός*; *Εἰς Ἁλικαρνασσόν*), *Halicarnassensis*: *Bodrum* in the Roman times), a Greek city on the coast of Asia Minor, the Carian gulf. It was a colony of *Tralles* in Argolis established on the slope of a precipitous rock, and one of the six towns constituting the *hexapolis* in Asia Minor, the five other towns being *Cnidus*, *Cos*, and the three *Rhodian* towns *Lindus*, *Lindus*, and *Camirus*. (Herod. vii. 99; E. B. J. Strab. xiv. pp. 653, 656; Paus. ii. 30. § 3; Plut. 2. § 10; Pomp. Mel. i. 16; Pfla. v. 29. Strab. x. 5.) The isthmus on which it was situated was called *Zephyrium*, whence the city at first bore the name of *Zephyria*. *Halicarnassus* was the second and strongest city in all Caria (Diod. Sic. xv. 4) and had two or even three very important rivers, the principal one, called *Salmoneis*, was situated on a precipitous rock at the northern extremity of the city.

an, *Ann.* i. 23; Vitruv. ii. 8; Diod. xvii. 23, and received its name from the well Salmacis, which gushed forth near a temple of Aphrodite at the foot of the rock, and the water of which was believed to exercise an enervating influence (*Ov. Met.* iv. 302). Strabo justly controverts this belief, intimating the sensual enjoyments and the delicious character of the climate must rather be considered to have produced the effects ascribed to the Salmacis. Her art was formerly believed to have been an island of *Arconesus* in front of the great harbour, which is now called *Orak Ada*; but this was founded upon an incorrect reading in Strabo. (*Strab.* l. c.; *Arrian.* *Anab.* i. 23; *Hann.* *Researches*, ii. p. 34.) Besides the great harbour, the entrance to which was narrowed by piers on each side, there was a smaller one to the south of it. Halicarnassus, as already remarked, only belonged to the Doric hexapolis; but in consequence of some dispute which had arisen, it was excluded from the confederacy. (*Herod.* i. 144.) During Persian conquests it was, like all the other Greek cities, compelled to submit to Persia, but does not appear to have been less prosperous, or to have lost its Greek character. While the city was under the dominion of the Persians, Lygdamis set himself up as tyrant, and his descendants, as vassals of the king of Persia, gradually acquired the dominion of the island. Artemisia, the widow of Lygdamis, fought bravely in the fleet of Xerxes. The most celebrated among their successors are Mausolus and his sister Artemisia, who, on the death of Mausolus, erected in his honour a sepulchral monument of such magnificence that it was regarded as one of the seven wonders of the ancient world. This Carian city, though subject to Persia, had preserved its Greek manners and the Greek language, and a taste for the arts of Greece. But notwithstanding this, Halicarnassus was faithful to Persia, and was one of the great strongholds of the Persians on the coast, and a chief station of the Persian navy. This, and the gallant defence with which

the Halicarnassians defended themselves against Alexander, induced that conqueror, after a protracted siege, to destroy the city by fire. He was, however, unable to take the acropolis Salmacis, in which the inhabitants had taken refuge. (*Strab.* and *Arrian.* l. c.; *Diod.* Sic. xvii. 23, foll.; *Curtius*, ii. 9, foll.) From this blow Halicarnassus never recovered, though the town was rebuilt. (*Cic. ad Quint. Frat.* i. 1.) In the time of Tiberius it no longer boasted of its greatness, but of its safety and freedom from earthquakes. (*Tac. Ann.* iv. 55.) Afterwards the town is scarcely mentioned at all, although the Mausoleum continued to enjoy its former renown. (*Const. Porphyrius de Them.* i. 14; see the descriptions of it in *Plin.* xxxvi. 9, and *Vitruv.* ii. 8.) The course of the ancient walls can still be distinctly traced, and remains of the Mausoleum, situated on the slope of the rock east of Salmacis, and of the art, as well as the spring Salmacis, still exist. (*Hamilton's Researches*, ii. pp. 34, foll.) Among the numerous temples of Halicarnassus, one of Aphrodite was particularly beautiful. (*Diod.*; *Vitruv.* l. c.) To us the city is especially interesting as the birthplace of two historians, Herodotus and Dionsysius. Some interesting sculptures, brought from *Boudroom*, and supposed to have originally decorated the Mausoleum, are now in the British Museum. (*Ross, Reisen auf den Griech. Inseln*, vol. iv. pp. 30, foll., from which the accompanying plan is taken.) [L. S.]

COIN OF HALICARNASSUS.

HALICE. [HALICARNASSUS.]

HALICYÆ ('Αλικυαί: *Et.* 'Αλικυαίος, Halicyensis: *Salerni*), a city in the west of Sicily, about midway between the two seas, and 10 miles S. of Segesta. Stephanus of Byzantium correctly describes it as situated between Entella and Lilybaeum. (*Steph.* B. s. v.) Its name frequently occurs in history, and generally in connection with the adjacent cities of Entella and Segesta, but we have no account of its origin: it was probably a Sicilian town, and followed the fortunes of its more powerful neighbours. Hence, when it first appears in history* we find it subject to, or at least dependent on, Carthage, the power of which was at that time predominant in the W. of Sicily. In B. C. 397, when the great expedition of Dionysius caused the greater part of the Carthaginian allies and subjects to revolt, Halicyæ was one of the five cities which remained faithful to them, on which account its territory was ravaged by Dionysius. (*Diod.* xiv. 48.) But the next year the Halicyans were so alarmed at his progress that they concluded a treaty of alliance with him, which, however, they soon broke on the appearance of Himilco in Sicily at the head of a large army, and rejoined the Carthaginian alliance. (*Id.* xiv. 54, 55.) They are not again mentioned till B. C. 276, during the expedition of Pyrrhus to Sicily, when they followed the example of the Salinnuntines and Segestans, and

* The name of the 'Αλικυαίος is first found in Thucydides (vii. 33) at the time of the Athenian expedition in Sicily; but is generally considered corrupt: it is certainly difficult to conceive that Halicyæ is really the place there meant.

BOUDROOM, OR HALICARNASSUS.

- A. Salmacis, the acropolis.
- B. Tombs in the rock.
- C. Theatre.
- D. Spring Salmacis.
- E. The Mausoleum.
- F. Gate leading to Mylasa.
- G. Hill of the Windmills.
- H. Gate leading to Myndus.
- I. Palace of the ancient kings.

declared themselves in favour of that monarch. (Id. xxii. 10, Exc. H. p. 498.) Again, in the First Punic War they were among the first to imitate the conduct of the Segestans, and, throwing off the Carthaginian yoke, declared themselves on the side of Rome. (Id. xxiii. 5, p. 502.) For this signal service Halicyrae was rewarded by the grant of peculiar privileges, which we find its citizens still enjoying in the time of Cicero, who reckons it among the five cities of Sicily which were "sine foedere immunes ac liberæ." (Verr. iii. 7, 40.) But even this privileged condition did not preserve them from the exactions of Verres. (Ib. ii. 28, iii. 40, v. 7.) From this time we hear little of Halicyrae, which appears to have lost its peculiar privileges, and had sunk in the time of Pliny into an ordinary stipendiary town. (Plin. iii. 8, s. 14.) That author is the last who mentions its name. The passage already cited from Stephanus is the only direct authority for the position of Halicyrae, but agrees well with what we may gather from Diodorus; and there seems no reason to doubt that the site has been correctly identified by Fazello and Cluverius with that of the modern town of Salemi. It stands on a hill in a commanding position, and must have been a place of considerable strength. There are no ancient remains; but the modern, as well as the ancient name, appears to have reference to the salt springs in the neighbourhood. It is distant about 20 miles E. from *Merania* (the ancient Lilybaeum) and 16 N. from the site of Selinus.

It is not improbable that we should read 'Αλικυρνα in Diodorus (xxvi. 3, p. 531), where he speaks of a Servile outbreak taking place, — *σπάρτη Ἀλυκυρναίων*, — a name otherwise unknown. In a previous passage of the same author already cited (xiv. 48) the MSS. have 'Αλυκυρναίαν, but there seems no doubt that here the true reading, as suggested by Wesseling, is 'Αλικυρναίαν. Cluverius, however, contends for the correctness of the old reading, and admits the existence of a city named Ancyræ, which he identifies with the 'Αγκυρναίαν of Ptolemy (iii. 4, § 15). [E. H. B.]

HALICYRNA ('Αλικυρνα: Eth. 'Αλικυρναίος), a village of Aetolia, described by Strabo as situated 30 stadia below Calydon towards the sea. Pliny places it near Pleuron. Leake discovered some ruins, midway between *Kart-aga* (the site of Calydon) and the eastern termination of the lagoon of *Mesolonghi*, which he supposes to be the remains of Halicyrna. (Strab. x. p. 459, sub fin. where the common text has the false reading *Αλικυρνα*; Scyl. p. 14; Plin. iv. 3; Steph. B. s. v., where it is erroneously called a village in Acarnania; Leake, *Northern Greece*, vol. iii. p. 533.)

HALIEIS (Ἠλιεύς), the name of a sea-faring people on the coast of Hermione, who derived their name from their fisheries. (Strab. viii. p. 373.) They gave their name to a town on the coast of Hermione, where the Tyrinthians and Hermionians took refuge when they were expelled from their own cities by the Argives. (Ephor. ap. Byz. s. v. 'Ἠλιεύς; Strab. viii. p. 373.) This town was taken about Ol. 80 by Aneristas, the son of Sperthias, and made subject to Sparta (ὡς εἶλε 'Ἀλιέας [not Ἠλιέας] τοὺς ἐκ Τίρυνθος, Herod. vii. 137). The district was afterwards ravaged on more than one occasion by the Athenians. (Thuc. i. 105, ii. 56, iv. 45; Diod. xi. 73.) After the Peloponnesian War the Halieis are mentioned by Xenophon as an autonomous people. (Xen. *Hell.* iv. 2, § 6, vi. 2, § 3.)

The district is called ἡ Ἀλὴ by Thucydides (ii. 56, iv. 45), who also calls the people of the town 'Ἀλιεῖς; for, in i. 105, the true reading is 'Ἀλιεῖς, i. e. 'Ἀλιέας. (See Meiner, ad Steph. B. s. v. 'Ἀλιεῖς.) In an inscription we find ὁ Ἀλιονόσιος. (Böckh, *Inscr.* no. 165.)

Scylax (p. 30) speaks of HALIA (Ἠλία) as lying at the mouth of the Argolic gulf. Callimachus calls the town ΑΛΥΤΤΑ ('Αλυντος, Steph. B. s. v.), and Pausanias it is named HALICE ('Ἠλίαι), and its inhabitants Halici. (Paus. ii. 36, § 1.) The town was no longer inhabited in the time of Ptolemy, and its position is not fixed by that writer. He says that, seven stadia from Hermione, the road to Halice separated from that to Massæ, and that the former led between the mountains *Procyon* and *Corymbus*, of which the ancient name was *Tarax*. In the peninsula of *Kriondiki*, the French Commission observed the remains of two Halice: one on the southern shore, about three miles from Hermione and the same distance from *Massæ*; the other on the south-western side, at the head of a deep bay called *Kaloti* or *Bianiti*: the former is supposed to represent Halice, and the latter Massæ, and, accordingly, these two places are so placed in Kiepert's map. But Leake, who is followed by Curtius, observes that the ruins which the French Commission have named Halice are probably the dependency of Hermione of which the name has not been recorded, since the position is too near to Hermione to have been that of Halice, and the name is too inconvenient for a people who were of considerable maritime importance. It is far more likely that such a people possessed the port of *Kaloti*, a situation of which at the mouth of the Argolic gulf agrees exactly with the description of *Sigæ*. Massæ probably stood at the head of the bay of *Kaloti*. [Massæ.] (Leake, *Mores*, vol. ii. p. 26; *Peloponnesiaca*, p. 286, seq.; Boileau, *Recherches*, p. 61; Curtius, *Peloponnesica*, vol. ii. p. 579.)

HALIMUS. [ATTICA, p. 327, h.]

HALISARNA ('Ἀλίσαρνα or 'Ἀλίσαρνα), a town on the south coast of the island of Cos, near the *Lacterium*. (Strab. xiv. p. 657; comp. *Revue des Voyages en Grèce*, fasc. vol. iii. p. 136, seq. p. 22.) [L.]

HALIUSSA ('Ἀλίσσα), one of the three islands lying off the promontory *Encephalæ* in *Iozenia* in Argolis. (Paus. ii. 34, § 8; Leake, *Peloponnesiaca*, p. 283.)

HALMYRIS ('Ἀλμυρίς), a salt-lake, south of the southernmost mouth of the Danube. It was formerly a part of the Euxine, which is connected by a narrow channel. It extended from the river *Istrus* in the south, nearly as far as *Aegyrus* in the Danube. On its western coast existed a town of the name of Halmyris. (Plin. iv. 24; Propert. *de As.* iv. 7; Philostorg. x. 10; Nicoph. *Hist. Eccl.* ii. 29.) [L.]

HALONE ('Ἀλόνη: *Alona*), an island in the Propontis, south of *Proconnesus*. It was the name of the *Neuris* and *Prochone* (Steph. B. s. v.; Plin. i. 4) and is probably the same as the island *Ephesus* mentioned by Scylax (p. 35), who notices its excellent harbour, which still exists. [L.]

HALONNE'SUS ('Ἀλόννησος: Eth. Ἀλόννησιος), an island in the *Ægean* sea, lying at the southern extremity of the *Magnum* coast in *Thessaly*. The possession of this island gave rise to a dispute between Philip and the Athenians in 346 B.C.

is the subject of an oration which is included in the works of Demosthenes, but which was read, even by the ancients, to Hegesippus, who was the head of the embassy sent by the Athenians to demand restitution of Halonnesus. [See *of Biogr.* Vol. I. p. 989.] Halonnesus lies between Sciathus and Peparethus, and appears to be the same island as the one called SCORPELUS (*Σκόπελος*) by Ptolemy (iii. 13. § 47) and Hierocles (43, Wesel.), which name the central one of three islands still bears. Strabo (ix. p. 436) speaks of Sciathus, Halonnesus, and Peparethus but mentions Scopelus; while in the lists of my and Hierocles the names of Sciathus, Scopelus, and Peparethus occur without that of Halonnesus. Halonnesus is also mentioned by Pliny (12. s. 23), Mela (ii. 7), and Stephanus B. (1); but they do not speak of Scopelus. The island of *Skopelo* is one of the most flourishing in the Aegean, in consequence of its wines, which it exports in large quantities. (Leake, *North-Greece*, vol. iii. p. 111, seq.; Fiedler, *Reise in Griechenland*, vol. ii. p. 13, seq.)

ALUS or ALUS (*ἄλος* or *ἄλος* "ἄλος": *ἔθνος*), a town of Phthiotis in Thessaly, mentioned by Homer. (*Il.* ii. 682.) It is described by Strabo as situated near the sea, at the extremity of Mount Othrys, above the plain called Crocium, of which it is the centre. Around Halus was called Athamantium, from its founder, the reputed founder of Halus. (Strabo, p. 432, 433.) Strabo also says that the river Acheron, on the banks of which Apollo is said to have fed the oxen of Admetus, flowed near the foot of Halus. [AMPHRYSSA.] Halus is likewise mentioned by a few other writers. (Herod. vii. 122, *de Fals. Leg.* p. 392; Mela, ii. 3; Pliny, s. 14.) Leake places Halus at *Kefaloni*, which is situated at a short distance from the sea, projecting extremity of Mt. Othrys above the plain, exactly as Strabo has described. Hellenic citadel occupied the summit of the steep height; and remains of the walls are seen on the northern slope of the hill, having short walls at intervals, and formed of masonry which, though massive, is not so accurately united as generally find it in the southern provinces of Greece. The walls may be traced also on the descent to the south-east, and seem to have been built at the foot of the hill to a quadrangular area situated entirely in the plain, and of which the northern side followed the course of the stream, the western the foot of the height. The walls of the lower inclosure are nine feet and a half high, are flanked with towers, and their masonry, everywhere traceable, is of the most accurate and solid kind; two or three courses of it still exist in some places." (Leake, *Northern Greece*, vol. iv. p. 16.)

ALUS, a small place in Assyria, probably in the neighbourhood of Artamita, mentioned only by Strabo. (*Asi.* vi. 41).

[V.]

ALYCUS (*ἄλκυος*: *Platanus*), a considerable river of Sicily, which rises nearly in the centre of the island, and flows towards the SW. till it enters the sea close to the site of Heracleia Minora. Its source was evidently derived from the salt or brackish water of its waters, a circumstance common to the river of the *Platanus* and of the *Fiume Salso* (the river Himera), and arising from the salt springs which abound in this part of Sicily. It obtained considerable historical importance from the circum-

stance that it long formed the eastern boundary of the Carthaginian dominions in Sicily. This was first established by the treaty concluded, in B.C. 383, between that people and Dionysius of Syracuse (Diod. xv. 17); and the same limit was again fixed by the treaty between them and Timoleon (Id. xvi. 82). It would appear, however, that the city of Heracleia, situated at its mouth, but on the left bank, was in both instances retained by the Carthaginians. The Halycus is again mentioned by Diodorus in the First Punic War (B.C. 249), as the station to which the Carthaginian fleet under Carthago retired after its unsuccessful attack on that of the Romans near Phintias, and where they awaited the approach of a second Roman fleet under the consul L. Junius. (Diod. xxiv. 1; Exe. Hoesch. p. 508.) Polybius, who relates the same events, does not mention the name of the river (Polyb. i. 53); but there is certainly no reason to suppose (as Mannert and Forbiger have done) that the river here meant was any other than the well-known Halycus, and that there must therefore have been two rivers of the name. Heracleides Ponticus, who mentions the landing of Minos in this part of Sicily, and his alleged foundation of Minos, writes the name Lycus, which is probably a mere false reading for Halycus. (Herac. Pont. § 29, ed. Schneidewin.) Though a stream of considerable magnitude and importance, it is singular that its name is not mentioned by any of the geographers. [E. H. B.]

HALYS ("ἄλως, sometimes ἄλως: *Kizil Irmak*, i. e. the "red river"), the principal river of Asia Minor, has its sources in the Armenian mountains which form the boundary between Pontus and Armenia Minor, that is, at the point where the heights of Scodices and Antitaurus meet. (Herod. i. 72; Strabo, xii. p. 544; Dionys. Perieg. 786; Or. *as Pont.* iv. 10. 48.) At first its course has a south-western direction, traversing Pontus and Cappadocia; but in the latter country it turns to the north, and, continuing in a north-eastern direction, discharges itself by several mouths into the Euxine, the latter part of its course forming the boundary between Paphlagonia in the west, and Galatia and Pontus in the east. (Strabo, xii. p. 544; Ptol. v. 4. § 3; Arrian, *Periplus* 16.) According to Strabo, the river Halys received its name from the salt-works in its vicinity (pp. 546, 561); but this is probably incorrect, as the name is often written, without the aspiration, Alya (Eustath. *ad Dionys. Per.* 784). Pliny (vi. 2), making this river come down from Mount Taurus and flow at once from south to north, appears to confound the Halys with one of its tributaries (*Ischelus Irmak*). According to Xenophon (*Anab.* v. 6. § 9), the breadth of the Halys is at least 2 stadia. At the time of the greatness of the Lydian empire the Halys formed the boundary between it and Persia, and on its banks Cyrus gained the decisive victory over Croesus. (Herod. i. 53, 75, 84; Justin, i. 7; Cic. *de Div.* ii. 56; Lucan, iii. 272.) The importance of the river is attested by the fact that Asia is frequently divided by it into two parts, *Asia cis* and *Asia trans Halys*. (Strabo, xii. p. 534, xvii. p. 840.) Respecting the present condition of the river, see Hamilton's *Researches*, vol. i. pp. 297, 324, 411, vol. ii. p. 240.

[L. S.]

HAMAE, a place in Campania, between Capua and Cumae, where the Capuani were in the habit of assembling annually for a solemn religious festival; an occasion of which they endeavoured to make use during the Second Punic War (B.C. 215) to reduce

the Cumaeans under their subjection, but their plans were frustrated and they themselves put to the sword by the Roman consul Sempromius Gracchus. (Liv. xxiii. 35.) Livy, who is the only author that mentions Hamax, tells us that it was 3 miles from Cumae; but the exact site cannot be determined. [E. H. B.]

HAMAXIA (*Ἀμαξία*), a small town in the western part of Cilicia Aspera. (Strab. xiv. p. 669.) It had a good roadstead for ships, and excellent cedars for ship-building. (Lucan. viii. 259.) Hamaxia is perhaps the same place as Anaxium (*Stadiasm. Mar. Magna*, § 188), which, however, is placed west of Coracesium, so that it would belong to Pamphylia. (Comp. Leake, *Asia Minor*, p. 197.) [L. S.]

HAMAXITUS (*Ἀμαξιτός*), a town on the southwestern coast of Troas, 50 stadia south of Larissa, and close to the plain of Halesion. It was probably an Aeolian colony, but had ceased to exist as early as the time of Strabo. (Scyl. p. 36; Theophr. viii. 101; Xenoph. *Hellen.* iii. 1. § 13; Strab. x. p. 473, xiii. pp. 604, 612, 613.) According to Aelian (*Hist. An.* xii. 5), its inhabitants worshipped mice, and for this reason called Apollo, their chief divinity, Smintheus (from the Aeolian *σμήθη*, a mouse). Strabo relates the occasion of this as follows: When the Teucrians fled from Crete, the oracle of Apollo advised them to settle on the spot where their enemies issued from the earth. One night a number of field-mice destroyed all their shields, and, recognising in this occurrence the hint of the oracle, they established themselves there, and called Apollo Smintheus, representing him with a mouse at his feet. During the Macedonian period, the inhabitants were compelled by Lysimachus to quit their town and remove to the neighbouring Alexandria. (Comp. Steph. B. s. v.; Plin. v. 33.) No ruins of this town have yet been discovered (Leake, *Asia Minor*, p. 273); but Prokosh (*Dunkelwärdig* iii. p. 362) states that architectural remains are still seen near Cape Baba, which he is inclined to regard as belonging to Hamaxia.

Another town of the same name is mentioned by Pliny (v. 29) as situated in Caria, on the north coast of the Cnidian Chersonesus. [L. S.]

HAMAXOBI (*Ἀμαξόβιοι*, Ptol. iii. 5. § 19; Iamblich. *de Aetia* iii. 15; Pomp. Mel. ii. 1. § 2; Plin. vi. 12; Steph. B. s. v. *Ἀσσοί*), a people of Sarmatia, situated to the E. of the Scythian Alanni, who wandered with their waggons along the banks of the Volga, and belonged to the Sarmatian stock. (Schafarik, *Slav. Alt.* vol. i. p. 304.) [E. H. B.]

HAMAXOECI (*Ἀμαξοῖκες*, Eustath. ad *Hom. Il.* xiii. 5; Hesiod. *op. Strab.* vii. p. 302; Herod. iv. 46; Ansch. *Prom.* 709; Strab. ii. p. 87, vii. p. 209, xi. p. 492). This name was applied by the ancients to the Nomadic hordes who roamed over the N. E. of Europe, neither sowing nor planting, — but living on food derived from animals, especially mares' milk, and cheese, — and moved from place to place, carrying their families in waggons covered with wicker and leather, in the same manner as the Tartars of the present day. [E. H. B.]

HAMMANIENTES, a Libyan tribe beyond the Maesae, who dwelt 12 days' journey W. of the Greater Syrtis in an oasis of the sandy desert, and made their houses partly of stone, and partly of rock-salt cut from the hills by which they were surrounded. (Plin. v. 5.) Solinus (28) calls them *AMANTES*. Manner supposes them to be the *ATABANTES* of Herodotus. [P. S.]

HANNIBALIS CASTRA. [CAstra HANNIBALIS.]

HARENATIO. [ARENATIO.]

HARMA (*Ἄρμα*; *Ἑθ.* *Ἀρμαρὶ*). 1. An ancient town of Boeotia, mentioned by Homer, which is said to have been so called, either because the chariot of Adrastos broke down here, or because the deity of Amphiphraus disappeared in the arch at the place. (Didym. and Eustath. ad *Il.* i.; Scyl. p. 404; Paus. ix. 19. § 4, comp. i. 34. § 2; Steph. B. s. v.) Strabo describes it as a deserted village in the territory of Tanagra near Myraeum; and Neaesius speaks of the ruins of Harma and Myrae, as situated on the road from Thebes to Ono Aelian (*V. H.* iii. 45) speaks of a lake near Harma, which is probably the one now called *Nero* or *Paradisiaká*, to the east of Hyllis. (Strab. p. 413, b.) The exact site of Harma is uncertain. It is supposed by Leake to have occupied the important pass on the road from Thebes to Chios leading into the maritime plain. (Leake, *Notes Greece*, vol. ii. p. 251.)

2. A fortress in Attica. [ATTICA, p. 321.]

HARMATELLA (*Ἄρματella*, *Did.* v. 102), a place probably in the Paflagia, which Strabo describes as the best of the cities of the Sarmatians which fell into the hands of Alexander the Great. The people were a very warlike race, and made a gallant stand. They made use of pae- arrows. See also Strabo (xv. p. 725), who does it, however, mention this place by name, though it alludes to an incident which, according to Diodorus happened there. The exact position of the place has not been determined; but it was most likely in the territory of the Malli (now *Maldia*). [L.]

HARMATOBOPHI, one of several cities in Bactria who are mentioned by Pliny (vi. 16) as living on the foot of the Indian Caucasus between the Marus and Bactri. [L.]

HARMATHUS (*Ἀρμαθός*), a town on the west coast of the bay of Adranthyrium, on the Cape Lectra; it is mentioned only by Theophrastus (viii. 101) as opposite to the town of Melivria in Lesbos. It cannot have had any connection with Cape Amathus, which was situated much further south (Strab. xiii. p. 622), and is probably the same as Cape Canae. [CANAE.] [L.]

HARMOZEA (*Ἀρμωζία*, *Arrina*, *Ind.* i. 3; *Armuzia*, Plin. vi. 23. s. 27), the district surrounding Harmana, the port at which Naucrates arrived on their return from India, and what is situated in the SE. corner of Carmania. There can be no doubt that the name of the district Harmana of the port Harmana, and of the promontory Harmozon at the entrance of the harbour, are all derived from the name of the Persian god spirit *Harman* or *Auramazda*, which name has been preserved in the present *Ormazd*, the name of an island of the former port. The neighbouring land is called *Moghistan*. The *Arman* or *Arman* sea through Harmozon into the sea at Harman is present name is *Ibrahim Red*. [L.]

HARMOZIGA. [ARAGOS.]

HARMOZOON PROM. (*Ἀρμωζων Πρὸς*, *Pa.* 8. § 5; Strab. xvi. p. 763), a promontory at the entrance of the Persian gulf, on the N. or Caucasian side of it, just at the part where the sea leaves Arabia and Asia is most narrow. *Harmozon* (cp. Strab. l. c.) and *Armozonia* (xviii. 6) but not that the coast of Arabia can be plainly seen from this point. The promontory may perhaps be the

anted by the modern *C. Bombareek*, nearly opposite to *C. Messemoudon*. [V.]

HARMUZA (*Ἀρμουζα πόλις*, Ptol. vi. 8. § 5), the capital of the district which Arrian has called *Harmoseia*. There seems to be some doubt whether there is any present representative of this place along the coast. The only place which now bears the name of *Ormus* is an island off the mouth of the *Anania*, to which it has been conjectured by D'Anville that the inhabitants of the coast must have fled shortly after the time of Timūr. The modern history of this island is well known. It was taken by Albuquerque in 1507, and held with great commercial prosperity by the Portuguese till Shah Abbās, aided by the English, took it from them in 1623. While *Ormus* lasted, the Portuguese had an emporium second to none but Goa. Shah Abbās built on the opposite coast *Bandar-Abbāsī*, and tried to win for it the commerce which *Ormus* had possessed. In this, however, he signally failed, and both places are now utterly ruined and abandoned. (Vincent, *Voy. of Nezirius*, vol. i. pp. 324—334.) [V.]

HAROSHETH (*Ἀροσὲθ*), mentioned only in *Judges* (iv. 2, 13, 16) as the royal garrison of Jabin king of Canaan. In all these passages it is called *Harosheth of the Gentiles*, and was obviously situated in the northern part of Palestine, called "Galilee of the nations" (*Is. ix. 1*). It was probably situated in the tribe of Naphtali, between Kadesh Naphtali, and HAZOR, the capital of Jabin [HAZOR]. As the name signifies wood in the Aramaean, the fortress is supposed by some to have been situated in a woody district. The name is regarded as an appellative by the Chaldee paraphrast, whose translation for "Harosheth of the Gentiles" is equivalent to "in fortitudine (in munitione) arcium gentium." (Rosenmüller in *Jud. iv. 2*.) [G. W.]

HARPAGIA (*ἡ Ἀρπαγία*), a district between Priapus and Cynicus, about the mouth of the river Granicus in Mysia, whence Ganymede is said to have been carried off. (Strab. xiii. p. 587.) Thucydides (viii. 107) also mentions a town Harpagion, which is otherwise unknown. (Comp. Steph. B. s. v. *Ἀρπαγία*.) [L. S.]

HARPASA (*Ἀρπασα*: *Ἑκ. Ἀρπασεύς*), a town in Caria, on the eastern bank of the river Harpasus, a tributary of the Maeander. (Ptol. v. 2. § 19; Steph. B. s. v.; Plin. v. 29; Hierocl. p. 689.) The ruins found opposite to *Nasli*, at a place called *Arpas Kaleisi*, undoubtedly belong to Harpasa. (Fellows, *Diocesi in Lyc.* p. 51; Leake, *Asia Minor*, p. 249; Richter, *Wallfahrten*, p. 540.) Pliny mentions a wonderful rock in its neighbourhood, which moved on being pressed with a finger, but did not yield to the pressure of the whole body. [L. S.]

HARPASUS (*Ἀρπασος*: *Ἑκ. Ἑρπας*), a river of Caria, flowing from south to north, and emptying itself into the Maeander. (Plin. v. 29; Steph. B. s. v. *Ἀρπασος*; Quint. Smyrn. *Posthom.* x. 144.) In the war against Antiochus the Romans encamped on its banks. (Liv. xxxviii. 13.) [L. S.]

HARPASUS (*Ἀρπασος*: the reading *Ἀρπασεύς*, in *Diod. Sic. xiv. 29*, is faulty), a river which the Ten Thousand crossed (400 feet broad) from the territory of the Chalybes, who were separated from the Scythini by this river. (Xen. *Anab.* iv. 7. § 17.) This river, which has been identified by several writers with the *Arpa-Chai*, a northern affluent of the Araxes, and forming the E. boundary of *Kare*, is more probably represented by the *Tchokruk-Sai* (*Jordh*), as Colonel Chesney (*Exped. Exuprat.*

vol. ii. p. 231) and Mr. Grote (*Hist. of Greece*, vol. ix. p. 161) suppose. [E. B. J.]

HARPINA or **HARPINNA** (*Ἀρπιννα*: *Ἑκ. Ἀρπιννός*), a town of Pisatis (Eli) situated on the right bank of the Alpheus, on the road to Heraclea, at the distance of 20 stadia from the hippodrome of Olympia. (Lucian, *de Mort. Peregr.* 35.) Harpina is said to have been founded by Oenomaus, who gave it the name of his mother. The ruins of the town were seen by Pausanias. According to Strabo, Harpina stood upon the stream Parthenias; according to Pausanias, upon one called Harpinates. The ruins of the town stand upon a ridge a little northward of the village of *Mirdia*; there are two small rivulets on either side of the ridge, of which the eastern one appears to be the Parthenias, and the western the Harpinates. (Strab. viii. pp. 356, 357*; Paus. vi. 20. § 8; Steph. B. s. v.; Leake, *Morea*, vol. ii. p. 211, *Peloponneseica*, p. 218.)

HARPIS FL. (*Ἀρπυίης*, Ptol. iii. 10. § 14), a river of Sarmatia Europaea, probably the same as the *Kwafnik* in *Bessarabia*. There was a people called the *HARPII* (*Ἀρπυίαι*, Ptol. iii. 10. § 13) in the district about this river. [E. B. J.]

HARPLEIA (*Ἀρπληία*), a place in Laconia upon the slopes of Mt. Taygetus, but at the entrance of the plain. Leake places it at the village of *Xerokambi*. (Paus. iii. 20. § 7; Leake, *Peloponneseica*, p. 361.)

HARUDES, a German tribe in the army of Ariovistus in his war with Caesar, of whom 24,000 had crossed over into Gaul and established themselves there. (Caes. *B. G.* i. 31, 37, 51.) Some writers suppose that these Harudes are the same as the *Charudes* (*Χαρούδαι*) mentioned by Ptolemy (ii. 11. § 12) among the inhabitants of the Chersonesus Cimbrica. If this be admitted, the army of Ariovistus would have consisted of tribes from the most distant parts of Germany, and its great numbers would cease to be matter of surprise. [SOEVL.] The Harudes are also mentioned in the Monumentum Ancyranum. (Comp. Wessels, *Die Völker u. Völkerverbindnisse*, p. 230.) [L. S.]

HASSI. In Pliny (iv. 17) some texts place after the Bellovacii, a people of Belgica, another people named Hassi, or, as some editions have it, Bassi. Harduin omits the name, and he does not say that any MS. has it. D'Anville mentions a forest named *Hais*, or *Hes*, in a canton of the diocese of *Beauvois*, or the country of the Bellovacii; and he would therefore keep Hassi in Pliny's text. [G. L.]

HASTA. [*Ἀστα*.]

HATERA, a station on the road from Dium to Beroea, 12 M. P. from the former (*Peut. Tab.*), and identified with *Katerina*, to the S. of Pydna. (Leake, *Northern Greece*, vol. iii. p. 424.) [E. B. J.]

HAURAN, **AURANI'TIS** (*Ἀρπυρίης*, *Ἀρπυρίης*), the name given by Josephus to the country called Ituraea by St. Luke (iii. 1), as is evident from the fact that, neither in his description of the tetrarchy of Philip, nor elsewhere, does Josephus make any mention of Ituraea, but substitutes Aurania. Thus he states that Augustus granted Aurania, together with Batanaea and Trachon to Herod the Great, on whose death he assigned them to Philip. (*Ant.* xv. p. 10. § 1, xvii. 13. § 4; B. J. ii. 6. § 3.) It describes the great desert tract south of Damascus, still called *the Hauran*, and comprehended by Ptolemy under the names of

* Strabo in this passage confounds *Ἐρπας* with *Ἑρπας*.

Arabia Petraea and Deserta (v. 17. § 19), the Palestina Tertia of the Ecclesiastical annals (Beland, pp. 205, 212). Ptolemy, however, makes Auranitis a district of Babylonia, contiguous to the Euphrates. (Id. 20.)

The district is more correctly described by Strabo, as lying to the south of the two Trachons (*ἡ ἀγρονομία Τραχωνίων*), consisting of inaccessible mountains, inhabited by a mixed people of Ituraeans and Arabs, a wild and predatory race of villains, a terror to the agricultural inhabitants of the plains. They dwell in deep caves of such extent, that one could hold 4000 men, in their incursions on the Damascenes, and in their ambuscades against the caravans of merchants from Arabia Felix. But the most formidable band under the noted chief Zenodorus, had been dispersed by the good government of the Romans, and by the security afforded by the garrisons maintained in Syria. (Strabo, xvi. p. 756.) A comparison of this description of Ituraea by the classical geographer, with Josephus's account of Trachonitis and the doings of the robber-chief Zenodorus and his Arabs (*Ant. xv. 10. § 1, 2*), exhibits many striking points of resemblance; and there is an amusing account given by William of Tyre of these very caves between Adraa and Bosra, into whose narrow mouths the thirsty travellers would let down their water-skins, in the hope of finding a supply of water; but drew back the curtailed rope, minus the skins, which had been seized and appropriated by the robbers concealed in the caves. (*Hist. xv. 10*.) The marauding inhabitants of this wild country at the present day keep up the character of their predecessors; and their daring attacks upon the caravans of pilgrims on the annual Haj, are scarcely repressed by a numerous escort of regular troops. The extent of the modern Hauran is thus described by Burckhardt: "The *Hauran* comprises part of Trachonitis and Ituraea, the whole of Auranitis, and the northern districts of Batanea. . . . The flat country, south of *Jebel Kasous*, east of *Jebel el Sheikh*, and west of the *Hadj* road, as far as *Kasem*, or *Noua*, is called *Djedour*. The greater part of Ituraea appears to be comprised within the limits of *Djedour*." (*Travels in Syria*.) The whole district abounds in ruins; and the frequent Greek inscriptions, not only at Bosra, its ancient capital, but in numerous other towns and villages, prove it to have been thickly inhabited in former times, and well garrisoned by Roman soldiers; thereby illustrating and confirming the remark of Strabo above cited, concerning the greater security of the country while under imperial rule. Many of the inscriptions were copied by Burckhardt. (*Syria*, pp. 59—118. 215—234.) The name Hauran (of which Auranitis is only the classical form) is supposed to be derived from the town mentioned by the prophet Ezekiel as in the vicinity of Damascus (*xlvii. 16, 18*), where the LXX. write *Ἀουρίτιδες*.

The name Ituraea is supposed to be derived from the Ishmaelite patriarch Jetur, or Itur (*1 Chron. i. 31*); and the Alexandrine version of the LXX. reads *Ἰτροπαία*, in *1 Chron. v. 19*, a passage which, as Beland remarks, enables us to fix the position of Ituraea to the east of the land of Israel; for the Hagarites, to whom Jetur belonged, were dispossessed by the Benbenites who "dwelt in their tents throughout all the east of the land of Gilead" (*v. 10*) "unto the entering in at the wilderness from the river Euphrates" (*v. 9*).

(Beland, *Palæstina*, p. 106.) Penter (*Arabia*, vol. i. pp. 309—311) further identifies the modern name *Jedour* with the patriarchal Jetur. (S. V.)

HAVILAH (*Ἡβηλ*), the land compassed by the Pison, the first-armed of the four rivers of Eden, abounding in gold of the quality, in Ishmaelism and the *onyx stone*.* (*Gen. ii. 11, 12*.) Its situation is further fixed as the eastern limit of the Ishmaelite Redonias, as Shinar was their western limit. (*Gen. xxv. 18*.) They seem to have been subsequently dispossessed by the Amalekites, who have the same limits assigned to them in *Isa. xv. 7*. [*AMALEKITAR*.] It doubtless derived a name from Havilah the son of Cush (*Gen. i. 7*), by whose descendants the district was first peopled, not from the later Ishmaelite patriarch of the same name (*x. 29*).

"The land of Havilah mentioned in *Gen.* and there described as encompassed, or inclosed rather, by the river Pison, has been named by consent of the learned, as the first and chief settlement of the son of Cush, and identified with a province, on the Persian Gulf, now denominated *Hager* or *Bahrein*; a district anciently vast as we gather from the concurrent testimony of Pliny, and the Portuguese traveller Pessier, a branch of the Euphrates, which, diverging from the course of its other channels, ran southward parallel with the gulf, and fell into it nearly opposite to the *Bahrein* islands. A direct proof, unsolicited by preceding writers, that this region once bore the name of Havilah, is furnished by the fact, that the principal of the *Bahrein* islands retains to this day its original name of that of *Avil*." (*Penter, Geog. Arabia*, vol. i. pp. 40, 41.) Mr. Penter traces this patriarchal name through its various modifications (as Dr. Wells had done before, but not so fully) in the classical geography; it shows clear examples of it, under its several nomenclatic changes, from the head of the Persian Gulf to its mouth, both in Ptolemy and Pliny, and in the modern geography of the country; and the great tribe or people intended under these designations, formed in the time of those geographers, continue to compose at the present day a chief part of the population of the Havilah of Scripture, the modern province of *Hager* or *Bahrein*. (*Id.* pp. 41—54.) He accounts for the modern name of the district of Havilah, by the fact already noted, that the Ishmaelite Arabs had dispossessed the ancient Cushite race, and imposed on the conquered nation the name of their mother Hagar. (*Id.* pp. 42, 200.)

HAZEZON-TAMAR. [*Ἡζων*.] **HAZOR** (*Ἥζωρ*), the royal city of the most powerful Canaanitish nation in the north of Palestine at the period of the entrance of the Israelites; it was the capital of king Jabin, and head of a confederacy against Joshua; on which account he made it an example of it, exterminating its inhabitants, and destroying it along with fire. (*Josh. xi. 1—14*.) It recovered its independence and importance at the commencement of the period of the Judges, two centuries and a half later, when we find it the royal residence of the Canaanite king, Jabin—a name signifying wise, which seems to have been the common designation of the sheikhs of *Har*, or *righteous* was of the Jebusite king. It has appeared that Hazor was again taken on this account after the defeat of Sisera by Deborah and Barak. (*Judges, iv. v.*) Nor is it all clear that the text

of that name mentioned in the later books of Holy Scripture is identical with the Canaanitish capital, the site of which was recovered by the writer in 1843, still called by the same name, and situated on a hill above Baniyas, a little to the east of the ruins of the Castle of Baniyas, commanding the Damascus road.

[G. W.]

HEBOSO. [HEBUDÆ.]

HEBRAEI. [PALESTINA.]

HEBROMAGUS, a place in Southern Gallia, which the Jerusalem Itinerary places on the road from Tolosa (*Toulouse*) to Carcaso (*Carcassonne*), and 14 M.P. short of *Carcassonne*. The Table gives the same distance, or some critics read the same distance in the Table by changing xvii. to xiii. D'Anville supposes Hebrumagus to be a place called *Bram*. Hebrumagus is mentioned in the Epistolæ of Ausonius to Paulinus (xxii. 35; xxiv. 124); and if there was only one Hebrumagus, it is the place mentioned in the Itinerary. [G. L.]

HEBRON (Ἡβρων, LXX., Joseph.), a very ancient city of Palestine, situated in a mountainous district, 22 Roman miles south of Jerusalem. (Euseb. c. v. *Apud*.) Its original name was Kirjath-Arba, or the city of Arba, so called from Arba, a chief of the Anakim, who dwelt in this neighbourhood. (*Gen.* xxiii. 2; *Josh.* xiv. 15; *Judg.* i. 10; *Joseph. Ant.* xiv. 15.) It was frequently the residence of Abraham, Isaac, and Jacob, who were buried here in the cave of Macpelah, which Abraham purchased of the sons of Heth. (*Gen.* xxiii. 2, seq.) Upon the conquest of Palestine by the Israelites, Hebron was given by Joshua to Caleb, who expelled the Anakim from the district. (*Josh.* xiv. 13—15, xv. 13, 14; *Judg.* i. 30.) It was afterwards appointed one of the cities of refuge. (*Josh.* xx. 7.) Hebron was the residence of David, as king of Judah, for seven years and a half. (*2 Sam.* ii. 1, v. 5.) It was fortified by Rehoboam (*2 Chron.* xi. 10); and was occupied by the Jews after their return from captivity (*Nehem.* xi. 35). It afterwards fell into the hands of the Idumeans, from whom it was recovered by Judas Maccabæus. (*1 Macc.* v. 65; *Joseph. Ant.* xii. 8. § 6, B. J. iv. 9. § 7.) It was taken and burnt by the Romans in the great Jewish War. (*Joseph. B. J.* iv. 9. § 9.) The modern town is called *El Khulî*, "the friend" of God, the name given by the Moslems to Abraham. Here are shown the tombs of the patriarchs, of which an account is given by modern travellers. Outside the town are two reservoirs for rain-water, evidently of great antiquity, one of which is probably the "pool in Hebron" mentioned in the history of David. (*2 Sam.* iv. 12.)

HEBRUS (Ἡβρος; *Μαύρινα*), the principal river of Thrace, has its sources near the point where mount Scamius joins mount Rhodope, in the north-western corner of Thrace. Its course at first has a south-eastern direction; but below Adrianopolis it takes a south-western turn, and continues to flow in that direction until it reaches the Ægean near Aenos. (*Thucyd.* ii. 96; *Plin.* iv. 18; *Aristot. Meteor.* i. 13.) The tributaries of the Hebrus are so numerous and important, that it becomes navigable even at Philippolis, while near its mouth it becomes really a large river. (*Herod.* vii. 59.) Near its mouth it divides itself into two branches, the eastern one of which forms lake Stentoria. (*Herod.* vii. 58; *Acropolis*, p. 64.) The most important among its tributaries are the Sæmus, Arda, Articusus, Tonusus, and Agrianus. About Adrianople the basin

of the Hebrus is very extensive; but south of that city it becomes narrower, the mountains on both sides approaching more closely to the river. During the winter the Hebrus is sometimes frozen over. (*Comp. Herod.* iv. 90; *Polyb.* xxxiv. 13; *Enrip. Herc. Fur.* 386; *Strab.* vii. pp. 322, 329, xiii. p. 590; *Ptol.* iii. 11. § 2; *Arrian, Anab.* i. 11; *Mela*, ii. 2; *Virg. Ecl.* x. 65, *Georg.* iv. 463, 524; *Val. Flac.* ii. 515, iv. 463, viii. 228.) [L. S.]

HEBUDÆ, the *Hebrides* off Britain, mentioned by Pliny, Solinus, and in the Cosmography ascribed to Anthonius. The notices are as follows:—"Sunt autem xl. Orcades modicis inter se discretæ spatiis. Septem Æmødæ et xxx. Hebudæ." (*Plin.* iv. 30.) "À Caledoniæ promontorio Thylen petentibus, bidui navigatione perfecta, excipiunt Hebrides insulæ, quinque numero, quarum incolæ nesciunt fruges, piscibus tantum et lacte vivunt. Secundan a continenti stationem Orcades præbent; sed Orcades ab Hebudibus porro sunt septem dierum, totidemque noctium curas, numero tres. Vacant homine; non habent silvas: tantum junceis herbis inhorrescent. Ab Orcadibus Thylen usque v. dierum et noctium navigatio est." (*Solin.* c. 23.) The Cosmography merely gives the form Hebosæ, as applied to an island or archipelago off Britain. The difficulties raised by the text of Solinus apply to the geography of the *Orkneys*, *Shetlands*, and *Færoe* Isles, to some of which he has transferred the name Hebrides. [For this, see ORCADES.] The difficulties in the text of Pliny lie in the difference between the Æmødæ and the Hebudæ. It is only clear that one word means the islands west, the other, the islands east, of the Minch. Now either group will give us seven larger and twenty-three smaller islands, neither having so many as thirty islands of any considerable magnitude, and neither having so few as seven, if the smaller members of the group are included. Without deciding which are the Hebrides, and which the Æmødæ, we may say that, on one side, we have *Lewis* (with *Harris*), *North Uist*, *Bembecula*, *South Uist*, *Barra*, &c.—on the other, *Skye*, *Rùm*, *Tiree*, *Coll*, *Mull*, *Jura*, *Islay*, &c. [R. G. L.]

HECALE. [ATTICA, p. 330, b.]

HECATOMPEDUM (Ἡκατόμπεδον, *Ptol.* iii. 14. § 7), a town in the interior of Chæonia in Epeirus; probably situated in the vale of the Sukka, above *Lidokhovo*. (*Leake, Travels in Northern Greece*, vol. iv. p. 120.) [E. B. J.]

HECATOMPYLOS (Ἡκατόμυλος, *Strab.* xi. p. 514; *Ptol.* i. 12. § 5, viii. 21. § 16; *Ἡκατόμυλον βασιλειον*, *Ptol.* vi. 5. § 2; *Steph. B.*), a town of some importance in Parthia, and one of the capitals of the Arsacidæ princes. There is, however, great doubt where it was situated, the distances recorded by ancient writers not corresponding accurately with any known ruins. According to Strabo (xi. p. 514), it was 1960 stadia (about 224 miles) from the *Pylæ Caspiæ*, and, as we may infer from the passage, in the direction of India, eastward; while Ptolemy places it on the same parallel of latitude (N. 37°) as Rhodes. Again, Pliny makes the same distance to be only 133 Roman (or about 122 English) miles. It has been supposed that *Damgham* corresponds best with this place; but *Damgham* is too near the *Pylæ Caspiæ*: on the whole, it is probable that any remains of Hecatompylos ought to be sought in the neighbourhood of a place now called *Jah Jirm*. (*Cf. Burns, Travels*, vol. ii. p. 129; *Frazer, Khorasan*, Append. p. 118; *Wilson, Ariana*, p. 171.) The place itself was of

ancient date, and is stated to have been a distinguished city when Alexander marched through Parthia (Curtius, vi. 2; cf. Diod. xvii. c. 75), though it is clear that it was not, as Curtius states, founded by the Greeks. Polybius affirms that it derived its name from its position in a locality where many roads met (x. 25). Appian asserts that Hecatompyria, in common with many other cities in Asia, derived its Greek name from Seleucus. (*Syr.* c. 57.) In the second century A. D., when Isidorus of Charax wrote his *Itinerary*, Hecatompylos had apparently ceased to exist, or perhaps, as Mammert (v. 2. p. 76) has conjectured, had given up its Greek name. Isidore calls Sauto the chief place of Parthia in his day; hence Mammert has suggested, though we think without much reason, that this was the native form of the Greek Hecatompylos. [V.]

HECATOMPYLOS AFRIACA. [CAPRA.]

HECATONNESI ('Εκατοννησί: *Μακρονήσι*), a group of islands in the bay of Adramyttium, between Lesbos and the mainland. Their name, apparently from *ἑκατὶ*, a hundred, seems only in a general way to allude to the great number of islands, which is stated by some to have been twenty, and by others forty. (Diod. Sic. xiii. 77; Steph. B. a. v.) According to Strabo (xiii. p. 618), however, the name Hecatonnesi signified "the islands of Apollo," from his surname *ἑκατόν*, "the far-darter." [L. S.]

HEDUL. [AEDUL.]

HEDYLUM. [BOROTIA, p. 412, a.]

HEDYPHON (Ἠδύφων, Strab. xvi. p. 744), a river of Susiana, which flowed into the Eulæus, on which stood a town called Selenucia. It is probably that now called the *Djerrahi*. Pliny (vi. 27. a. 31.) speaks of a river which he calls the Hedypnus, and which is most likely the same as the Hedypnon. [V.]

HELCEBUS ('Ελκεβός, or 'Ελκεβός). Ptolemy (ii. 9. § 18) mentions Elcebus as one of the two towns of the Tribocci on the Rhine: the other is Brocomagus [BROCOMAGUS], which he places north of Elcebus. The Antonine Itinerary has Helvetum, on the road from Augusta Bauracorum (*August*) to Moguntiacum (*Mainz*); and it places Helvetum between August and Argentoratum (*Strasbourg*), and 18 M.P. short of *Strasbourg*. The Table places Helium 18 M.P. from *Strasbourg*, and Brocomagus north of Argentoratum, which is consistent with Ptolemy's position of Elcebus and Brocomagus; but Ptolemy has incorrectly placed Argentoratum in the country of the Vangiones instead of the Tribocci. Helcebus, Helvetum, Helium, seem to be *Ell*, a small place on the right bank of the river *Ill*, opposite to *Beaufeld*. It is said that Roman remains have been found there. [G. L.]

HELELLUM. [HELCEBUS.]

HELENA ('Ελένη; *Ἑλ. Ἑλενός*, 'Ελενός, 'Ελένης; *Μακρονήσι*), a long narrow island, extending along the eastern coast of Attica from Thorica to Sunium, and distant from two to four miles from the shore. It was also called MACRIS (*Μάκρης*), from its length. (Steph. B. a. v. 'Ελένη.) Strabo (ix. p. 399) describes it as 60 stadia in length; but its real length is seven geographical miles. It was uninhabited in antiquity, as it is at the present day; and it was probably only used then, as it is now, for the pasture of cattle. Both Strabo and Pausanias derive its name from Helena, the wife of Menelaus: the latter writer supposes that it was so called because Helena landed here after the capture of Troy; but Strabo identifies it with the Homeric *Cranaë*, to which Paris fled with Helena (*Il.* iii.

445), and supposes that its name was hence changed into Helena. There cannot, however, be any doubt that the Homeric *Cranaë* was opposite Gythium in Laconia. [CRANAË.] (Strab. ix. p. 399, x. p. 485; Paus. i. 85. § 1, viii. 14. § 12; Steph. B. a. v.; Meib. ii. 7; Plin. iv. 19. a. 20; Leake, *Demon of Attica*, p. 66; Brøndsted, *Voyage*, vol. i. p. 77; Ross, *Reisen auf dem Griech. Inseln*, vol. ii. p. 8.)

HELENA. [ILIBERRIA.]

HELIGAS. [GERMANICOPOLIS.]

HELIADAE ('Ηλιάδαι), a people said to have succeeded the Teichines as inhabitants of the island of Rhodes, and to have been produced from the earth by the agency of the solar heat, whence their name, from *ἥλιος*. (Strab. xiv. p. 654.) They are farther said to have been skilled in all the arts, especially in astronomy, to have advanced navigation, and to have divided the year into days and hours. (Diod. Sic. v. 57.) In consequence of the Heliadae the whole island of Rhodes was sacred to the sun, who favoured it so much that not a day passed in the whole course of a year during which the island was not warmed by his rays. (Plin. ii. 62; comp. RHODUS.) [L. S.]

HELICE ('Ελίκη; *Ἑλ. Ἑλιανός*, Steph. B. a. v.; 'Ελιανός, Strab. viii. p. 385), a town in Achaia, and one of the 12 Achaean cities, was situated on the coast between the rivers Selinus and Cerynites, and 40 stadia E. of Aegium. It seems to have been the most ancient of all the cities in Achaia. Its foundation is ascribed to Ion, who is said to have made it his residence, and to have called it after his wife Helice, the daughter of Selinus. It possessed a celebrated temple of Poseidon, who was hence called Heliconius; and here the Ionians were accustomed to hold those periodical meetings which were continued in Asia Minor under the name of *Panion*. After the conquest of the country by the Achaeans, the latter likewise made Helice the place of meeting of their League, and it continued to be their capital till the destruction of the city by an earthquake = A. C. 373, two years before the battle of Leuctra. This earthquake happened in the night. The city and a space of 12 stadia below it sank into the earth, and were covered over by the sea. All the inhabitants perished, and not a vestige of Helice remained, except a few fragments projecting from the sea. Its territory was taken possession of by Aegium. The neighbouring city of Bura was destroyed by the same earthquake. The catastrophe was attributed to the vengeance of Poseidon, whose wrath was excited because the inhabitants of Helice had refused to give their statue of Poseidon to the Ionian colonists in Asia, or even to supply them with a model. According to some authorities, the inhabitants of Helice and Bura had even murdered the Ionian deputies. (Hom. *Il.* ii. 575, viii. 303, xx. 404. Herod. i. 145, 148; Paus. vii. i. § 3, viii. 24. 25. Strab. viii. pp. 384, seq. 387; Diod. xv. 48; Or. *Met.* xv. 299; Plin. ii. 94, iv. 6; Steph. B. a. v.)

"On the 23rd of August, 1817, the same spot was again the scene of a similar disaster. The earthquake was preceded by a sudden explosion, which was compared to that of a battery of cannon. The shock which immediately succeeded was said to have lasted a minute and a half, during which the sea rose at the mouth of the Selinus, and extended so far as to inundate all the level immediately below *Vostitza* (the ancient Aegium). After its retreat not a trace was left of some magazines which had stood on the shore, and the sand which had covered

the beach was all carried away. In *Postiles* 65 persons lost their lives, and two-thirds of the buildings were entirely ruined. Five villages in the plain were destroyed." (Leake, *Morae*, vol. iii. p. 402.)

HELICE or ILIGA (Ἠλίκα), a town in Moesia, in the corner formed by mounts Scamius and Haemus, is identified with the modern *Ikliman* or *Itchimian*. (*Itin. Ant.* 136; *Sanc. Herc. Oct.* 1539; *Itin. Hier.* 567.) [L. S.]

HELICE, an *Étang* or sea-lake, mentioned by Avienus (*Or. Marit.* v. 588) at the outlet of the Attagus, which is the Atax (*Awde*), the river of *Narbonne*. D'Anville assumes the Helice to be the *Étang de Vendres*. The name Helice suggested to Walckenaer that this may show where the Heliyci of Herodotus (vii. 165) came from, who are mentioned with Ligyes and Sardoni and Cynni. Hecataeus, also (Steph. B. s. v. Ἠλίκα), mentions the Eliysi or Heliysi (for the aspirate may be doubtful) as a Ligurian tribe. As there is no place for these Heliysi within the limits of Italy, we may with some probability fix them on the Gallic shore of the Mediterranean. Niebuhr's notion that they — Volsci is very absurd. [G. L.]

HELICON (Ἠλικὸν), a mountain in Boeotia lying between lake Copais and the Corinthian gulf, and which may be regarded as a continuation of the range of Parnassus. It is celebrated as the favourite haunt of the Muses, to whom the epithet of Heliconian is frequently given by both the Greek and Roman poets (al. Ἠλικονίαις *παρθέναι*, Plin. i. 7. 57; al. Ἠλικονίδες, Hes. *Theog.* 1; Soph. *Oed. Tyr.* 1008; Heliconiades, Lucret. iii. 1050; Heliconides, Pers. *proem.* 4). Its poetical celebrity is owing to the fact of its having been the seat of the earliest school of poetry in Greece Proper; for at its foot was situated Ascrea, the residence of Hesiod, the most eminent poet of this school.

Helicon is a range of mountains with several summits, of which the loftiest is a round mountain now called *Paleovouni*. Helicon is described by Strabo as equal to Parnassus, both in height and circumference (ix. p. 409); but this is a mistake as far as height is concerned, since the loftiest summit of Helicon is barely 5000 feet high, while that of Parnassus is upwards of 8000 feet. Pausanias says that of all the mountains in Greece Helicon is the most fertile, and produces the greatest number of trees and shrubs, though none of a poisonous character, while several of them are useful in counteracting the bites of venomous serpents. (Paus. ix. 28.) There is, however, a considerable difference between the eastern and western sides of the mountain; for while the eastern slopes abounded in springs, groves, and fertile valleys, the western side was more rugged and less susceptible of cultivation. It was the eastern or Boeotian side of Helicon which was especially sacred to the Muses, and contained many objects connected with their worship, of which Pausanias has left us an account. On Helicon was a sacred grove of the Muses, to which Pausanias ascended from Ascrea. On the left of the road, before reaching the grove of the Muses, was the celebrated fountain of Aganippe (Ἀγανίππη), which was believed to inspire those who drank of it, and from which the Muses were called Aganippides. (Paus. ix. 25. § 5; Catull. lxi. 36; Virg. *Ecl.* x. 12.)

Placing Ascrea at *Pyrgaki*, there is little doubt that Aganippe is the fountain which issues from the left bank of the torrent, flowing midway between *Paleo-pamphila* and *Pyrgaki*. Around this foun-

tain Leake observed numerous squared blocks, and in the neighbouring fields stones and remains or habitations. The position of the Grove of the Muses is fixed at *St. Nicholas* by an inscription which Leake discovered there relating to the Museia, of games of the Muses, which were celebrated there under the presidency of the Thespians. (Paus. ix. 31. § 3.) *St. Nicholas* is a church and small convent beautifully situated in a theatre-shaped hollow at the foot of Mt. *Maronddi*, which is one of the summits of Helicon. In the time of Pausanias the grove of the Muses contained a larger number of statues than any other place in Boeotia; and this writer has given an account of many of them. The statues of the Muses were removed by Constantine from this place to his new capital, where they were destroyed by fire in A.D. 404. (Euseb. *Vit. Const.* iii. 54; Socr. ii. 5; Zosim. ii. 21, v. 24, quoted by Leake.)

Twenty stadia above the Grove of the Muses was the fountain *HIPOCRENE* (Ἰπποκρήνη), which was said to have been produced by the horse Pegasus striking the ground with his feet. (Paus. ix. 31. § 3; Strab. ix. p. 410.) Hippocrene was probably at *Makrothrona*, which is noted for a fine spring of water, although, as Leake remarks, the twenty stadia of Pausanias accord better with the direct distance than with that by the road. The two fountains of Aganippe and Hippocrene supplied the streams called Olmeius and Permessus, which, after uniting their waters, flowed by Haliartus into the lake Copais. (Hes. *Theog.* 5, seq.; see *BOEOTIA*, p. 413, a.)

Another part of Helicon, also sacred to the Muses, bore the name of Mount *LEIBETHRIUM* (Λειβηθρίον). It is described by Pausanias (ix. 34. § 4) as distant 40 stadia from Coroneia, and is therefore probably the mountain of *Zagard*, which is completely separated from the great heights of Helicon by an elevated valley, in which are two villages named *Zagard*, and above them, on the rugged mountain, a monastery. This is Leake's opinion; but Dodwell and Gell identify it with *Grádia*, which is, however, more probably Laphystium. [*BOEOTIA*, p. 412, b.] On Mount Leibethrium there were statues of the Muses and of the Leibethrian nymphs, and two fountains called Leibethrias and Petra, resembling the breasts of a woman, and pouring forth water like milk. (Paus. ix. 34. § 4.) There was a grotto of the Leibethrian nymphs. (Strab. ix. p. 410, x. p. 471; Serv. ad *Virg. Ecl.* vii. 21.) (See Leake, *Northern Greece*, vol. ii. pp. 141, 205, 489—500, 526.)

HELICYSL [HELICE.]

HELIOPOLIS AEGYPTI (Ἡλιόπολις, Steph. B. s. v.; Ptol. iv. 5. § 54; Herod. ii. 3, 7, 59; Strab. xvii. p. 805; Diod. i. 84, v. 57; Arrian, *Exp. Alex.* iii. 1; Aelian, *H. A.* vi. 58, xii. 7; Plut. *Solon.* 26, *Is.* et *Oeir.* 33; Diog. Laert. xviii. 8. § 6; Joseph. *Ant. Jud.* xiii. 3, *C. Apion.* i. 26; Cic. *Nat. Deor.* iii. 21; Plin. v. 9. § 11; Tac. *Ann.* vi. 28; Meli. iii. 8 : *Eck. Hæroclitus*; the Semitic names BETH-SCHERACH and *On*, Gen. xli. 45, *Ezech.* xxx. 17., as well as the Arabic *Ainshems* or Fountain of Light, corresponded with the Greek appellation in signifying the City of the Sun). Heliopolis was a city of Lower Egypt, 19 miles from the Egyptian Babylon (*It. Anton.* p. 169), on the verge of the eastern desert, and at the S.E. point of the Delta, a little N.E. of its apex at Cercasorum, lat. 30° N. It stood on the eastern side of the Pelusiac arm of the Nile, and near the right bank of the Great Canal, which, passing through the Bitter Lakes, connected the river with the Red Sea. In Roman times it

belonged to the Regio Augustamnica. Its population probably contained a considerable Arabian element. (Plin. vi. 34.) Heliopolis, however, the On, Rameses, or Beth-Schemesch of the Hebrew Scriptures,—for it has claims to be regarded as any one of the three,—was long anterior even to the Pharaonic portion of this canal, and was, indeed, one of the most ancient of Egyptian cities. Its obelisks were probably seen by Abraham when he first migrated from Syria to the Delta, 1600 years a. c.; and here the father-in-law of Joseph filled the office of high priest. It may be regarded as the University of the land of Misraim: its priests, from the most remote epochs, were the great depositaries of theological and historical learning; and it was of sufficient political importance to furnish ten deputies, or one-third of the whole number, to the great council which assisted the Pharaohs in the administration of justice. At Heliopolis Moses probably acquired the learning of the Egyptians, and the prophet Jeremiah wrote his Lamentations over the decline of the Hebrew people. From Ichnouphya, who was lecturing there in a. c. 308, and who numbered Endorus among his pupils, the Greek mathematician learned the true length of the year and month, upon which he formed his "octaeterid," or period of eight years or ninety-nine months. Solon, Thales, and Plato, were reputed each to have visited its schools,—the halls, indeed, in which the latter studied were pointed out to Strabo: while in the reign of the second Ptolemy, Manethon, the chief priest of Heliopolis, collected from its archives his history of the ancient kings of Egypt. Alexander the Great, on his march from Pelusium to Memphis, halted at this city (Arrian, iii. 1); and, according to Macrobius (*Satura*. i. 23), Baalbek, or the Syrian City of the Sun, was a priest-colony from its Egyptian nameake.

The Heliopolite nome, of which this city was the capital, contained, after the decline and dispersion of the kingdoms of Israel and Judah, a Hebrew population almost equal in numbers to that of the native Egyptians. (Joseph. *Antiq. Jud.* xiii. 3.) But, even so early as the invasion of Cambysses, a. c. 525, Heliopolis had much declined; and in the time of Strabo, who visited it during the prefecture of Aelius Gallus, a. c. 24, its ruins had nearly vanished.

The sun, as the name of the city proves, was the principal object of worship at Heliopolis; and the legends of the Phoenix, the emblem of the solar year, centred around its temples. It was also the seat of the worship of the bull Mnevis, the rival of Apis in this region of Aegypt. In all respects, indeed, it merited the distinction ascribed to it by Diodorus of Sicily, who calls Heliopolis *πόλις ἡλιοπολίς*.

The ruins of Heliopolis occupy a quadrangular area of nearly 3 miles in extent, and were described by Abd-Allatif, an Arabian physician, who wrote his account of Egypt about the close of the 12th century A. D. He speaks of its surprising colossal figures cut in stone more than 30 cubits high, of which some were standing on pedestals and others were in sitting postures. He saw the two famous obelisks called Pharaoh's Needles, one standing and the other fallen and broken in two by its own enormous weight. The name of Osirtosen I., king of Thebes, of the xiith dynasty, who was lord of both the Upper and Lower country, was inscribed on them. The standing obelisk is still erect, and is even now studied as the earliest known specimen of Egyptian architecture. (Plin. xxxvi. 9.) Zoega (*de Obeliscis*, p. 642) supposes that the obelisk which was transported to

Rome and set up in the Campus Martius, by order of Augustus, came also from Heliopolis. (Comp. Ammian. xvii. 4.) The obelisks of Gizeh were each 60 feet high, and consisted of a quadrangular column or cone, rising out of a square base 10 feet high. The pointed top of the column was once covered with a copper cap, shaped like a funnel, and 3 cubits in length. These structures formed the most conspicuous figures in the centre of towering avenues of smaller obelisks.

The hamlet of Metairie, about 6 miles N.E. of Cairo, covers a portion of the ancient site of Heliopolis, and is still distinguished by its solitary pile of red granite, and contains—as common prices in Egypt—a spring of sweet and fresh water. Six remains of sphinxes, with fragments of a colossus statue, indicate the ancient approaches to the Temple of the Sun. Heliopolis, from its position on the verge of the desert, must have been contiguous to what we have overlooked, the pastures of Goshen, where the Children of Israel were allowed to settle by the priest-kings of Memphis; and earlier still, the site if not indeed Aharis itself, was probably one of the last fortresses held by the Shepherd Kings before their final evacuation of Egypt. [W.B.D.]

HELIOPOLIS SYRIÆ (*Βαλβηκ*, *Strab.* xvi. p. 753; *Ptol.* v. 15. § 23; *Steph. B. v. 1. Malala, Chronica*. xi. p. 119; *Chron. Paschic.* p. 513; *Solin. Oppidum*, Plin. v. 18), the *Βαλβηκ*, was a city of Coele-Syria, situated on lat. 34° 1' 30" N. and long. 36° 11' E. (*Beauclerc, Compar. Geogr. of Western Asia*, vol. i. p. 7). Baalbek, which in the Syrian language means City of the Sun, was probably the original appellation of this celebrated place. Its Hellenic equivalent—Heliopolis—was imposed by the Seleucid sources of Syria, and continued by the Romans. After conquest of Syria by the Arabs in the seventh century A. D. the city regained its Semitic, or as it is an Aramean name. (See Ammian. Marcell. xi. 4.) Heliopolis was seated upon a gentle elevation at the N.E. extremity of the plain of Bebek or Baal, which stretches from the western slope of Mt. Libanus nearly to the shores of the Mediterranean. Three rivers—the Litani, the Baradus, and the Aab (Orontes?)—flow through this plain, which the spring season is also watered by numerous cisterns formed by the melting of the snows of Antilibanus. Heliopolis itself is supplied with water from a cistern close to the N.E. angle of its walls.—*Βαλβηκ* or the Spring Head. The whole region of Baal was in ancient times one of singular fertility, and even now, under Mohammedan oppression, is remarkable for the number and beauty of its orchards.

At what epoch or by whom Heliopolis was founded is unknown. According to Macrobius (*Satura*. 23), it was a priest-colony from Egypt, or rather from Assyria. The sun, the basis of the Egyptian religion, was in all ages the principal object of worship even to the Greeks, however, indifferently attributed to temple to Zeus and Apollo. As a natural result, Heliopolis may have found room for a plurality of deities. Atergatis or Astarté, the Syrian Aphrodite, had certainly a temple there.

The city, however, was probably indebted for its greatness to the advantages it afforded as anemporium of the trade between Tyre, Palmyra, and Western India. It was 184 geographical miles from Palmyra, and 11½ from Tyre. (Hassell, l. c.) It was made a Roman colonia by Julius Caesar, and veterans from the 5th and 6th Legions were esta-

blished there by Augustus, on the coins of whose reign it is entitled "COL. JULIA AVGVSTA FELIX HELIOPOLIS." In the second century A. D. its oracle was in such repute that it was consulted by the emperor Trajan previous to his second campaign with Parthia. The emperor at first tested the science of the oracle by sending a blank sheet of paper inclosed in a sealed envelope (*diplome*); and on receiving a similar blank reply, he conceived a high opinion of the prescience of the god, and again consulted him in earnest. The second time the response was symbolically conveyed by the dead twigs of an ancient vine wrapped in a cloth. The interpretation was found in the decease of Trajan, and in the transmission of his bones or remains to Rome in a coffin. From John Malala (*Chronicon*, l. c.) we learn that Antoninus Pius built, or more probably repaired and enlarged, the great temple of Zeus, which became a wonder of the world then, and of many generations of travellers afterwards (e. g. Maundrell, Pococke, Volney, Duke of Ragusa, &c.). From Septimius Severus Heliopolis received the *Jus Italicum* (Ulpian, *de Censibus*, 9), and its temple appears for the first time upon the reverse of the coins of that reign (Akerman, *Rom. Coins*, vol. i. p. 339). The moneymen of Julia Domna and Caracalla inscribe the legend Heliopolis upon their coins, and vows in honour of that emperor and his mother are still partially legible on the pedestals of the portico of the great temple. Its name occurs also on the money of Philip the Arabian, and of his wife Otacilia. The great temple contained, according to Macrobius, a golden statue of Apollo or Zeus, represented as a beardless youth, in the garb of a charioteer, holding in his right hand a scourge, and in his left thunderbolts and ears of corn. On certain annual festivals this statue was borne on the shoulders of the principal citizens of Heliopolis, who prepared themselves for such solemnities by a species of Nazarene discipline, by shaving the head, and by vows of abstinence and chastity. Macrobius compares these ceremonies with the rites practised in the worship of Diva Fortuna at Antium. At Heliopolis also were revered the Baetylia, or black conical stones sacred to the sun, one of which was brought to Rome by the emperor Elagabalus, and placed in a temple erected upon the Palatine Mount. (Comp. Damascius, *ap. Phot. Biblioth.* p. 342, B., ed. Bekker; and Gibbon, vol. i. ch. 6.)

Heliopolis is mentioned by the church historians Sozomen (*Hist. Eccles.* v. 10) and Theodoret (*Hist. Eccles.* iii. 7, iv. 23), but little is known of its fortunes under the Byzantine emperors, beyond the names of some Heliopolitan martyrs and bishops. Abulpharagius indeed (*Hist. Compend. Dynast.* p. 75) says that Constantine I. erected a church at Heliopolis, and abolished a custom which had obtained there of plurality of wives. According to the *Chronicon Paschale* (col. xxxix. p. 303, ed. Bonn), the emperor Theodosius converted the Temple of the Sun into a Christian church, at the same time that he proscribed Paganism, and destroyed the inferior chapels and shrines of the city. Under the Caliphs of the Ommiad House, *Baalbec* gradually declined, although its natural and commercial advantages long retained their influence. (D'Herbelot, *Bibliothèque Orient. a. v. Baalbec*.) Whatever may have been its origin, or the circumstances which favoured its growth, there is no doubt that Heliopolis was for many centuries the most conspicuous city in the region of Libanus, and second to Damascus and

Antioch alone in the whole kingdom or province of Syria, whether under Greek or Roman sovereigns.

The walls of Heliopolis, so far as they have been traced, occupy a space of somewhat less than four miles in compass. But this circuit will hardly afford an accurate measure of the population or greatness of Heliopolis. For it is probable that the greater portion of it was occupied by public edifices and gardens alone, and that the private dwellings of the city were either extemporary, or made of very light and perishable materials. Such at least was the case with many of the great Eastern emporia. At certain seasons of the year, when the caravans passed through on their route to the East, or on their return, the cities resembled a great fair, and were filled with streets and squares of booths, which were taken down as soon as the caravans moved onward. The religious structures alone were permanent, and around them were grouped the Fora, the Basilicæ, and the corridors, in which, under the sultry sun of Syria, the business of the fair was carried on. The population of Heliopolis, therefore, may have varied much at different seasons of the year. In the autumn it would be filled with merchants making up their cargoes for the Eastern markets: in the spring it would again overflow with purchasers of Indian wares: in the winter and summer seasons this city was probably little more than a colony of priests with their numerous assistants in the temple-worship.

The ruins of Heliopolis favour this supposition. They consist of the great Temple; of a smaller temple, or perhaps a Basilica; and of a circular temple of singular form and style. On the highest elevation within the walls, and in the SW. portion of the city, stood a column which may possibly have served for a clepsydra or water-dial.

The great Temple consisted, so far as we can ascertain, of the Propylææ or portico; of an Hexagonal court or Forum; of an inner quadrangular court; and finally of the Shrine of the Sun itself. The courts were probably the exchange of Heliopolis: the Propylææ was its custom-house, and so to speak its wharf, where the caravans received their loadings.

No ruins of antiquity have attracted more attention than those of Heliopolis, or been more frequently or accurately measured and described. They were visited by Thevet in 1550; by Pococke in 1739-40; by Maundrell in 1745; by Wood and Dawkins in 1751; by Volney in 1785; and by many subsequent travellers, including the Duke of Ragusa, in 1834. That more recently they have attracted less notice is owing to the more important discoveries of much higher antiquity on the banks of the Nile and the Tigris. Heliopolis, indeed, so far as it has been known to modern travellers, is a Roman city, of the second century A. D. The Corinthian order of architecture—the favourite order with the Romans—prevails, with few exceptions, in its edifices. A Doric column, the supposed clepsydra, is, indeed, mentioned by Wood and Dawkins; and the Ionic style is found in the interior of the circular temple. For the particular descriptions, measurement, and plans of the structures of Heliopolis, we must refer to the works already cited, as without diagrams they would be unintelligible. The walls of Heliopolis, however, require and deserve a short notice.

As they at present exist they cannot have been the original walls of the city; and would seem to have been constructed in haste under the pressure of some danger; and, like the long-walls between Athens and its haven, to have been built of the

first materials that came to hand. They are from ten to twelve feet in height, with large square towers at certain intervals. The gate on the north side alone exhibits any beauty or magnificence, or indeed any remote antiquity. The other entrances to the city are as rude as the general texture of the walls. The latter are, indeed, a rough congeries of shapeless stones, mingled with broken columns, capitals, and reversed Greek inscriptions. One feature in Heliopolitan masonry is remarkable—the enormous bulk of some of the stones employed in the construction of the temples. Twenty of these stones have especially attracted the wonder of travellers. (See Pococke, Wood and Dawkins, &c.) They are from 24 to 37 feet in length and 9 feet thick, and these form the second layer of the basement of the great Temple. At the NW. angle of this building, and about 20 feet from the ground, there are three stones which alone occupy 182 feet 9 inches in length, and these are about 12 feet thick: two are 60 feet, and a third 62 feet 9 inches, in length. The Arabs, with some pretext for their belief, point to them as the work of the Jin.

The materials from which the structures of Heliopolis were built were obtained from the hills close at hand. They consist principally of white granite. The more ornamental portions of the buildings were carved out of a coarse white marble obtained from more distant quarries westward of the city. The buildings of Heliopolis have suffered greatly from violence. They have served as a stone-quarry to the Turks; and as the columns of the temples were cramped together with iron, the Pashas of Damascus have overthrown many of these pillars merely for the sake of the metallic axes contained in them. The progress of this devastation may in some measure be traced in the accounts of the travellers who at different periods have visited Heliopolis. Thus, in 1550, Thoret (*Cosmographie Universelle*, liv. 6. ch. 14) saw 27 columns in the great Temple. Pococke, Wood, &c. mention only nine; and, in 1785, Volney says that only six were standing. The Turks have also contributed to the work of ruin by converting the temples of Heliopolis into Mohammedan buildings. In 1748, they had turned the Propylæa into a fortress called, according to Maandrell, "The Castle;" and on the road to Damascus there is a Mohammedan sepulchre of octagonal form, supported by granite columns, brought apparently from the great Temple. The circular temple, mentioned above, is now a Greek church called *St. Barba*.

Volney (*Voyage en Syrie*, vol. ii. p. 215) describes the fine groves of walnut trees which screen the approaches to Heliopolis from the west. But although the soil of the plain of *Bokah* would undoubtedly well repay cultivation, a little cotton and maize, with a few leguminous plants, are all its produce under its Mohammedan governors. The population also has rapidly declined within a century. In 1751 the number of inhabitants amounted to about 5000; in 1785 Volney estimates them at about 1800; and in 1834 they had been still further reduced. An earthquake in 1759, an oppressive government, the absence of all trade and manufactures, and frequent wars between the Turks and the mountain tribes of the region of Libanus, have each in turn contributed to the decay of the City of the Sun. (Volney, *Voyage en Syrie et Egypte*, tom. ii. pp. 215–230; Maandrell, *Journey from Aleppo to Jerusalem*, pp. 134, 139; Pococke, *Description of the East*, vol. ii. pp. 106–113.) [W. B. D.]

HELISSON ('Ελισσός, Pans.; 'Ελισσός, Diod.), a town of Arcadia in the district *Maenalia*, situated on Mt. *Maenalia* near the territory of *Mantineia*. The town was taken by the *Lacedæmonians* in one of their wars with the *Arcadians*, *n. c.* 352; but most of its inhabitants had been previously removed to *Megalopolis* upon the foundation of the latter city in 371. Near it rose the river *Helisson*, which flowed through *Maenalia* into the *Alpheian*. The site of *Helisson* is doubtful. *Leake* places it at the village *Alonistena*, from which the river takes its modern name, and near which it rises; but as there are no ancient remains at this village, *Ross* conjectures that its site is represented by the *Palæobastro* near the village *Pisno*, lower down the mountain. (Pans. viii. 3. § 3, 27. § 3, 7, 30. § 1; Diod. xvi. 39; *Leake*, *Mores*, vol. ii. p. 54; *Ross*, *Reise in Peloponnes*, vol. i. p. 117.) The *Elisphaui* mentioned by *Polychus* (xi. 11. § 6) are conjectured by some modern writers to be a corrupt form of *Helsontii*. For details, see *MANTINEIA*.

HELISSON. 1. A river in *Arcadia*, and a tributary of the *Alpheian*. [See above.]

2. A river near *Sicyon*. [SICYON.]

HELIUM OSTIUM. [MOEA.]

HELLAS, HELLÈNES. [GRÆCIA.]

HELLENOPOLIS ('Ελληνόπολις), a town on the coast of the *Propontia*, on the south side of the *Sinus Atacene*, and near the little river *Draco*. Its original name, which it bore until the time of the emperor *Constantine*, was *Drepanum* or *Drepane* (*Ἀπέρων*, *Ἀπέρων*; *Steph. B. s. v.* *Ἀπέρων*; *Etym. M. s. v.*; *Amm. Marc.* xxvi. 8), and it was probably a place of little note; but, as it was the birthplace of *Helena*, the mother of *Constantine*, he changed its name into *Hellenopolis*, and enlarged the place by inducing many people of the neighbourhood to settle in it. (*Hierocl.* p. 691; *Nicéph. Callist.* vii. 49; *Socrat. Hist. Eccles.* i. 4, 18; *Philostorg. Hist. Eccles.* ii. 13.) Afterwards the emperor *Justinian* also did much to increase the prosperity of the town (*Procop. de Aed.* v. 2); but it became, nevertheless, so reduced that it was called in mockery *ἑλεσιπὸς πόλις* (*Glyc. Ann.* p. 327). In its vicinity there existed mineral springs, in consequence of which *Constantine* often resided there during the latter years of his reign. (*Socrat. Hist. Eccles.* v. 34; *Euseb. Vit. Const.* iv. 61.) The modern place called *Hersel* probably occupies the same site as the ancient *Hellenopolis*, and the ancient mineral springs seem to be those of *Jalaibahad*. (*Leake, Asia Minor*, pp. 9, foll.) [L. S.]

HELLESPONTUS (δ' Ἑλλήσποντος, *Hom. Il.* ii. 845, *Odys.* xxiv. 82; δ' Ἑλλὰς πόντος, *Steph. Byzant.*, *Aesch. Pers.* 722; *Hellespontus*, *Pontus Helles*, *Hellespontum*, *Palagus*, *Fretum Helleponticum*; *Εἰλᾶ*, *Ἑλλησπόντιος*, *Ἑλλησποντικός*, *Ἑλλήσποντος*, *Steph. B.*; *The Dardanelles*; *Golfo di Gallipoli*; *Saniabul Daghia*), the strait which divides Europe from Asia and unites the *Propontia* with the *Ægean* sea.

The Greeks explained the origin of the name by the well-known legend of *Phryxus* and *Helle*, and in the later poets (*Ovid, Her.* xviii. 117, 137; *Prop.* i. 20, 19; *Lucan.* v. 56; *Avien.* 692) frequent allusion is made to this tradition.

The "broad Hellespont" of the Homeric poems (*Il.* vii. 86)—for the interpretation of Mr. Walpole and Dr. Clarke (*Trav.* vol. iii. p. 91) of *πλάτος* 'Ελλήσποντος by "salt Hellespont" is too picturesque to be adopted—was probably conceived to

be a wide river flowing through thickly wooded banks into the sea. (Comp. Herod. vii. 35; Walpole, *Turkey and Greece*, vol. i. p. 101; Schlichthorst, *Geogr. Homer*, p. 127.)

Herodotus (iv. 85), Strabo (xiii. p. 591), and Pliny (iv. 12, vi. 1) give 7 stadia as the breadth of the Hellespont in its narrowest part. Tournesfort (vol. ii. lett. iv.) and Hobhouse (*Albania*, vol. ii. p. 805) allow about a mile. Some modern French admeasurements give the distance as much greater. The Duc de Raguse (*Voyage en Turquie*, vol. ii. p. 164) nearly coincides with Herodotus.

The bridge, or rather two separate bridges, which Xerxes threw across the Hellespont, stretched from the neighbourhood of Abydos, on the Asiatic coast, to the coast between Sestos and Madytus, on the European side; and consisted of 360 vessels in the bridge higher up the stream, and 314 in the lower one. If the breadth be estimated at a mile or 5280 feet, 360 vessels, at an average of 14½ feet each, would exactly fill up the space. (Grote, *Hist. of Greece*, vol. v. p. 26; comp. Rennell, *Geog. of Herod.* vol. i. p. 158; Kruse, *Über die Schiffbrücken der Perser*, Breslau, 1820; Choiseul-Gouffier, *Voyage Pittoresque*, vol. ii. p. 449; Bähr, *ad Herod.* vii. 36.) The length of the strait was estimated by Herodotus (iv. 85) at 400 stadia. This admeasurement of course depends upon the point assigned by the ancients to the extremity of the Hellespont, a point which is discussed by Hobhouse (*Albania*, vol. ii. p. 791). In the later years of the Peloponnesian War the Hellespont was the scene of the memorable battles of CYNOSSEMA and ARGOSFOTAMI.

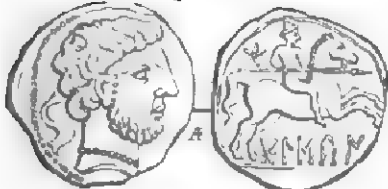

In B.C. 334 the Hellespont was crossed by Alexander, with an army of about 35,000 men. (Arrian, *Anab.* i. 11; Diod. Sic. xvii. 1.)

The Hellespont issues from the Propontis near Gallipoli [*CALLIPOLIS*], the road of which is the anchorage for the Ottoman fleet. A little lower, on the Asiatic side, is *Lampeaki* [*LAMPACUS*], close to which the current sweeps as before, nearly SW. to the bay of Sestos, a distance of about 20 miles, with an ordinary width of from 2½ to 3 miles. At SESTOS the stream becomes narrower, and takes a SSE. direction as it passes ABYDOS, and proceeds to the town of *Charnak Kal'eh-Si*; from the last point it flows SW. for 3 miles to *Point Berber*, and from thence onward in the same direction, but rather increasing in width, for a distance of 9½ miles to the Aegæan sea.

About 1½ miles below the W. point of the bay of Madytus are the famous castles of the Dardanelles, which give their name to the straits; or the old castles of *Anatoli* and *Rum-Ul*: *Tchannak-Kal'eh-Si*, on the Asiatic side, and *Küldu-I-Bahr*, on the European. (Chesney, *Expéd. Euphrat*, vol. i. p. 318.) [E. B. J.]

HELLI, HELLOPIA. [DODONA; GRÆCIA, p. 1011a.]

HELMANTICA. [SALMANTICA.]

COIN OF HELMANTICA.

HELO'URUM, HELO'RUS, or ELO'RUS (*Ἑλωρος* or *Ἐλωρος*, Ptol., Steph. B.; *Ἐλωρος*, Scyl.; *Ἑλῶρις*, Helorinus), a city of Sicily, situated near the E. coast, about 25 miles S. of Syracuse, and on the banks of the river of the same name. (Steph. B. s. v.; Vib. Seq. p. 11.) We have no account of its origin, but it was probably a colony of Syracuse, of which it appears to have continued always a dependency. The name is first found in Scylax (§ 13. p. 168); for, though Thucydides repeatedly mentions "the road leading to Helorus" from Syracuse (*τὴν Ἑλωρίην ὁδόν*, vi. 66, 70, vii. 80), which was that followed by the Athenians in their disastrous retreat, he never speaks of the town itself. It was one of the cities which remained under the government of Hieron II. by the treaty concluded with him by the Romans, in B.C. 263. (Diod. xliii. Exc. H. p. 50, where the name is corruptly written *Ἀλῶρος*); and, having during the Second Punic War declared in favour of the Carthaginians, was recovered by Marcellus in B.C. 214 (Liv. xiv. 35). Under the Romans it appears to have been dependent on Syracuse, and had perhaps no separate municipal existence, though in a passage of Cicero (*Verr.* iii. 48) it appears to be noticed as a "civitas." Its name is again mentioned by the orator (*ib.* v. 34) as a maritime town where the squadron fitted out by Verres was attacked by pirates: but it does not occur in Pliny's list of the towns of Sicily; though he elsewhere (xxxii. 2), mentions it as a "castellum" on the river of the same name: and Ptolemy (iii. 4. § 15) speaks of a city of Helorus. Its ruins were still visible in the days of Fazello; a little to the N. of the river Helorus, and about a mile from the sea-coast. The most conspicuous of them were the remains of a theatre, called by the country people *Coliseo*; but great part of the walls and other buildings could be traced. The extent of them was, however, inconsiderable. These are now said to have disappeared, but there still remains between this site and the sea a curious column or monument, built of large stones, rising on a square pedestal. This is commonly regarded as a kind of trophy, erected by the Syracusans to commemorate their victory over the Athenians. But there is no foundation for this belief: had it been so designed, it would certainly have been erected on the banks of the river Asinarus, which the Athenians never succeeded in crossing. (Fazell. iv. 2. p. 215; Cluver. *Sicil.* p. 186; Smyth, *Sicily*, p. 179; Hoare, *Classical Tour*, vol. ii. p. 136.) [E.H.B.]

HELO'RUS or ELO'RUS (*Ἑλωρος* or *Ἐλωρος*), a river in the SE. of Sicily, the most considerable which occurs between Syracuse and Cape Pachynum. It is now called the *Abisso*, but in the upper part of its course is known as the *Tellaro* or *Telloro*, evidently a corruption of Helorus. It rises in the hills near *Palazzolo* (Acrae), and flows at first to the S., then turns eastward, and enters the sea about 25 miles S. of Syracuse. Near its mouth stood the town of the same name. [HELO'URUM.] In the upper part of its course it is a mountain stream, flowing over a rugged and rocky bed, whence Silius Italicus calls it "undæ clamosus Helorus" (xiv. 269); but near its mouth it becomes almost perfectly stagnant, and liable to frequent inundations. Hence Virgil justly speaks of "præpingue solum stagnantis Helori" (*Aen.* iii. 698). Ovid praises the beauty of the valley through which it flows, which he terms "Heloria Tempe" (*Fast.* iv. 476). Several ancient

authors mention that the stagnant pools at the mouth of the river abounded in fish, which were said to be so tame that they would eat out of the hand, in the same manner as was afterwards not uncommon in the fishponds of the Romans. (Apollodor. *ap. Steph. Byz.* v. *Ἐλαίος*; Athenaeus, viii. p. 331; Plin. xxxii. 2. s. 7.)

It was on the banks of the Helorus, at a spot called *Ἀγλαὴ ῥάπης*, the precise locality of which cannot be determined, that the Syracusans were defeated by Hippocrates, tyrant of Gela, in a great battle. (Herod. vii. 154; Pind. *Non.* ix. 95; and Schol. *ad loc.*) [E.H.B.]

HELOS (Ἡλος), the name of several towns in Greece, so called from their vicinity to marakes.

1. A town of Laconia, situated east of the mouth of the Eurotas, close to the sea, in a plain which, though marshy near the coast, is described by Polybius as the most fertile part of Laconia. (Polyb. v. 19.) In the earliest times it appears to have been the chief town on the coast, as Amyclae was in the interior; for these two places are mentioned together by Homer (*Il.* ii. 584, *Hymn. in Apoll.* 410). Helos is said to have been founded by Heleius, the youngest son of Perseus. On its conquest by the Dorians its inhabitants were reduced to slavery; and, according to a common opinion in antiquity, their name became the general designation of the Spartan bondsmen, but the name of these slaves (*ἐλάερες*) probably signified captives, and was derived from the root of *ἔλαω*. (Paus. iii. 20. § 6: the account differs a little in Strab. viii. p. 365, and Athen. vi. p. 265, c.; but on the etymology of the word Helota, see *Dict. of Ant.* p. 591.) In the time of Strabo Helos was only a village; and when it was visited by Pausanias, it was in ruins. (Strab. viii. p. 363; Paus. iii. 22. § 3: Helos is also mentioned by Thuc. iv. 54; Xen. *Hell.* vi. 5. § 32; Steph. B. s. v.) Leake conjectures that Helos may have stood at *Prineio*, since this place is distant from *Trinacia*, the ancient Trinaxia, about 80 stadia, which, according to Pausanias, was the distance between these two places; but we learn from the French Commission that *Prineio* contains only ruins of the middle ages, and that there are some Hellenic remains a little more to the east near *Bianoti*, which is therefore probably the site of Helos. The name of Helos is still given to the plain of the lower Eurotas. (Leake, *Morea*, vol. i. p. 230; Boblaye, *Recherches*, p. 94; Curtius, *Peloponnesos*, vol. ii. p. 289.)

2. A town belonging to Nestor, mentioned by Homer, was placed by some ancient critics on the Alpheius, and by others on the Alorian marsh, where was a sanctuary dedicated by the Arcadians to Artemis; but its position is quite uncertain. (Hom. *Il.* ii. 594; Strab. viii. p. 350; Plin. iv. 5. s. 7.)

3. Near Megalopolis. [MEGALOPOLIS.]

HELVECONAE (*Ἀδελφοναῖος*, Ptol. ii. 11. § 17), a tribe of the north of Germany, on the west of the Vistula, between the Rugii and Burgundiones. According to Tacitus (*German.* 43), the Helveconae were one of the bravest tribes of the Lygii. [L.S.]

HELVETHI (Ἑλβετῆρις, *Ἑλβετῆρις*), a Celtic people who in Caesar's time occupied the country between the Jura on the west, the Rhone and Leman lake on the south, and the Rhine on the east and north. Caesar (*B. G.* i. 2) gives the dimensions of their country, as they were reported to him, and probably the dimensions are not far wrong if we take the measurements in the right directions. [GALLIA, p. 951.] Cluverius and others would correct these

numbers, which shows a want of judgment. Caesar says nothing, for he knew nothing of the southern limit of the Helvetii east of the Leman lake. There is no evidence in his work that the Helvetii in his time occupied any of the mountainous part of Switzerland. They seem to have occupied hilly lands and plains, but not mountains or high mountain valleys. Strabo (p. 292) makes the Rhine here on a small part of the lake of Constance, not the Helvetii and the Vindebori on the larger part. The words are ambiguous, and may apply to the south or Swiss side of the lake, and to the German or German side; and so some people interpret. Strabo observes that the Helvetii and Vindebori habit mountain plains (*ἀγρῶν*), by which means elevated levels and hilly tracts, not mountains. The part which Strabo (p. 292) calls the Helvetian plains is the country north of the Leman lake. The Eboraci and the Norici in his time dwell right up to the mountain passes, and send them into Italy. There was a tradition that the Helvetii were once in Germany. Tacitus (*German.* c. 28) thinks that this is probable; and he has the German residence of the Helvetii between the Eboraci, the Rhine, and the Moselle. (See supposed the Boii to have occupied the parts further north and east. But it seems that the Germans had driven the Helvetii back, for at that time the Rhine was the frontier, and the Boii were continually fighting on it. If we suppose that Caesar's Helvetii extended to the south side of the lake of Constance, from the eastern extremity of the lake, we may suppose their country at that time comprised any part south of the lakes of Lake Lucerne. This will leave room enough for them.

The Jura, which Ptolemy (ii. 5. § 5) called *Ἰουρα* (*Ιουρα*), and Strabo names *Τετραπύρα*, has separated the Helvetii from the Sequani. The limit of Caesar extends from the north bank of the lake in a N.E. direction, leaving on the east the lake of Leman lake and the lakes of Neuchâtel and Geneva. That part of the Jura which is bounded on the west by the basins of the lakes of Neuchâtel and Geneva has for its western boundary the valley of the Doubs. From the neighbourhood of Salève (*Soleure*) a branch of the Jura runs in a N.W. angle between the junction of the Rhone and the Aar. The Jura is a mass of limestone consisting of parallel ranges, which form longitudinal hills. The *Dôle*, north of Geneva, is about 3500 feet high. The *Reculet*, which lies further south, is still higher. Caesar (*B. G.* i. 6) knew of only one pass into the country of the Helvetii into the country of the Sequani, which pass is SW. of Geneva, where the Jura abuts on the Rhone, leaving only a narrow space between the mountains and the river. At present there are several passes over the Jura: one is the *Dôle*, leads from Nyon on the lake of Geneva to Besançon on the Doubs; the *Orbigny* leads from Yverdon to Pontarlier in France; the *La Clusette*, the pass of the *Pierre Perre* and the pass of the *Immenthal*. Ptolemy's description of the position of the Helvetii is not correct. After fixing the position of the Lingones in the north and after the mountain which lies next to it which is called Jurassus, are the Helvetii and the river Rhine. The Lingones bordered on the Jura.

The country of the Helvetii was divided into districts or *Pagi* (*pagi*), and they had more than 400 villages. (Caes. *B. G.* i. 12, 27.) Caesar has mentioned the names of two *pagi*, the *Agones*

the Verbigenus. The critics are not quite agreed whether we should write Urbigenus or Verbigenus Caesar's text; but there is the better MS. author for Verbigenus. (Schneid. ed. Caesar, *Bell. Gall.*) see who write Urbigenus have identified "Urb" with the town of Orbe, on the river Orbe, SW. of Yverdon, a place on the site of Urba. [URBA.] an altar was found at Salodurum (*Solothurn*), Schoepfelin, with the inscription GENIO VERBIG.; this discovery is supposed to determine Salodurum to be in the pagus Verbigenus. The letters on this inscription are said to be joined together; some authorities still say that the true reading is VERBIG. The inscription, however, belongs to the century of our era, and it is no authority for orthography of Caesar's time. Whether the name is Urbigenus or Verbigenus, we may assume that the inscription belongs to the place where it was found, and therefore we may conclude that Salodurum was a town of the Verbigenus pagus. We may also suppose that the pagus extended north to the Rhine; and as far as *Baden* on the west, a branch of the *Aar*, if it be true that there is an inscription with the words Aquæ Verbigenæ; for these Aquæ are probably the same as Aquæ Helveticæ, which are proved by inscriptions to be the baths of *Baden* on the *Limmat*. One of these Baden inscriptions, in honour of M. Annius, contains the words near. aq. *Baden* is supposed to be the place which Tacitus (*Hist.* i. 58) does not mention mentioning the name. An inscription has been found near *Avenches* [VERVICUM], with the words GENIO PAGI TIGOR.; so far as this evidence goes, we must place the *urini* south of the Verbigeni. Their *Pagi*, then, bounded by the *Jura* on the west as far south as *Fort l'Ecluse*, and on the south by the *Rhone* as far south as *Fort l'Ecluse* to the Lake, and then by the *Aar*. The northern boundary would be about the *Monte Morat*. We cannot determine the eastern boundary of the *Tigurini*. There is no authority connecting the name of *Zürich* with the *Tigurini* pagus, for an inscription which has been found there shows that the name was different: the inscription is *urini*, that is *Statio*, *TURICUM*; and in middle age documents *Zürich* is named *Turicum* or *Turegum*. D'Anville (*Notices*, &c.) states his authority for affirming that an inscription "Genio i. Tigur." with some others, was found near *Zürich*. If this were so, it would weaken the testimony of *Avenches* inscription, for we cannot suppose that this pagus comprehended both *Avenches* and *Zürich*. But Walckenaer solves the difficulty by saying that such an inscription has not been found at *Zürich*. The opinion of B. Rhenanus, not rejected by D'Anville, that the name of the *urini* may represent the name *Tigurini*, need not be mentioned to be rejected. The names of the two other Helvetic *Pagi* are known; but it is a fair conjecture that one of them may have been the pagus of the *Tugeni*. Strabo (p. 298) mentions the *Tugeni* with the *urini*, when he is giving Ptolemy's opinion of the *Cimbri*. Ptolemy says that "the *Boii* once inhabited the Hercynian forest; and that the *Cimbri*, having invaded their country, being repelled by them, came down upon the Danube and the *Scorodiscus*, and then to the *Taurisci* and [read *Taurisci*] *Taurisci*, who were also *Galatæ*; and after that they came to the *Helvetii*, who were rich in gold and a peaceable people; but when the *Helvetii*

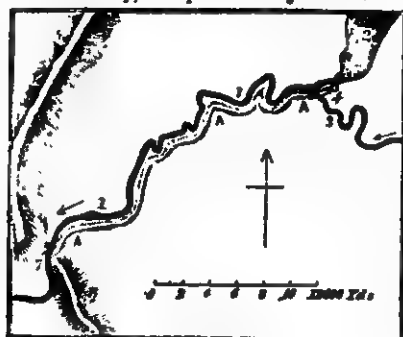

saw that the wealth got by plunder was greater than their own, they were induced, and chiefly the *Tigurini* and *Tougeni*, to join the *Cimbri*; but they were all defeated by the *Romans*, both the *Cimbri* and those who joined them." It seems then that there was an Helvetic people named *Tugeni*; and Walckenaer (*Geog.*, &c. vol. i. p. 311) has no difficulty in finding a place for them. He says: "The name of the modern village of *Tugen*, at the eastern extremity of the lake of *Zürich*, and that of the valley formed by the river *Thur*, which is *Toggenburg* or *Tuggenbury*, do not permit us to doubt that the *Tugeni* inhabited the neighbourhood of these places; and in the time of Caesar it is probable that this people occupied the country between the lake of *Constance*, the *Limmat*, the lake of *Wallenstadt*, and the two parts of the course of the *Rhone* to the west and to the east of the lake." Within the limits of the *Tugeni*, if this conjecture is true, we find *Zürich*, *Vitodurum* (*Oberwinterthur* near *Winterthur*), *Arbor Felix* (*Arbon*) on the lake of *Constance*, and *Vindonissa* (*Windisch*).

The name of the fourth pagus is unknown; but as there was a people named *Ambrones*, who were with the *Teutones* when *Marinus* defeated them at *Aquæ Sextiæ*, Walckenaer supposes that they may have formed the fourth canton. Strabo (p. 183), in speaking of this campaign of *Marinus*, mentions only the *Ambrones* and *Tugeni*. Eutropius, who of course was copying some authority, says (v. 1) that "the Roman consul *Manilius* and *Cæpio* were defeated by the *Cimbri* and *Teutones*, and *Tigurini* and *Ambrones*, which were German and Gallic nations, near the *Rhone*." As the *Cimbri* and *Teutones* are here supposed to be Germans, and as the *Tigurini* were certainly Galli, it is plain that the writer, or the authority which he followed, took the *Ambrones* also to be Galli. The Epitome of *Livy* (Ep. 68) mentions the *Teutones* and *Ambrones* as the names of the barbarians whom *Marinus* defeated east of the *Rhone*; and also *Plutarch* (*Mar.* c. 19), who adds that *Ambrones* is also a name of the *Ligures*. If the *Ambrones* were a Gallic people there is no place for them except in Switzerland; and if the position of the three other *Pagi* is rightly determined, the *Ambrones* occupied the part south of the Verbigeni and *Tugeni*; and they would extend from the eastern extremity of the lake of *Geneva*, in the upper valleys of the *Aar* and the *Rhone*, as far east as the course of the *Rhone* above the lake of *Constance*. But all this is only a conjecture, founded on no very strong probabilities; and it is not likely that the inhabitants of the high valleys of Switzerland joined the Helvetic emigration.

The story of the migration of the four Helvetic *Pagi* is told by Caesar (*B. G.* i. 2). *Orgetorix* (B. G. 61), a rich Helvetic, persuaded the nobles to leave their country with all their people and movables; for he argued that, as they were the bravest of the Galli, it would be easy to make themselves masters of all the country. They did not, however, intend to attack either their neighbours the *Sequani*, or the *Aedui*, or the *Allobroges* on the south side of the *Rhone*; but to make terms with the *Allobroges*, in order to secure a free passage through their country, *Orgetorix* prevailed on the Helvetii to get ready as many waggons and beasts of draught as they could, and to sow largely, in order to have a stock of provisions for their journey. Two years were considered enough for preparations, and the third was to be the year of emigration. *Orgetorix*, in the meantime,

visited the Sequani, and persuaded Casticus, whose father Catmantaledon had held for many years the kingly power there, to seize the place which his father once had. He also persuaded Dumnorix, the brother of Divitiacus, to do the same among the Aedui, and he gave Dumnorix his daughter to wife. He told them that they might easily do what he advised, for he was going to have the supreme power among the Helvetii, that the Helvetii were the most powerful Gallic people, and that he would help to secure their royal power with the Helvetian army. This was agreed: the three conspirators were to make themselves kings, and then they had good hopes of mastering all Gallia. This conspiracy being known to the Helvetii by some informer, Orgetorix was summoned to trial. The punishment for treason among the Helvetii was burning. The man came on the day fixed for the trial, but he had a train of 10,000 slaves and dependents about him, and there was no trial. Orgetorix was in open rebellion, and while the magistrates were getting together a force from the country to maintain the law and put him down, he died, or, as the Helvetii supposed, he put an end to himself. Though usurpation was a common thing in the Gallic states, the people were never long pleased with it, and a usurper had generally a short reign.

The Helvetii still determined to leave their country. They burnt their 12 towns, their 400 villages, and all the private buildings. They burnt also all the corn which they did not want; and they were directed by their leaders to take meal and flour enough to last three months. They persuaded the Rauraci to join them, a tribe who were situated on the Rhine about *Bâle*, but probably within the territory of the Sequani; and also Tulingi and Latobrigi, who were on the east side of the Rhine, and either a German people or a remnant of those Helvetii who once occupied the country. They also got some Boii to join them, whom Caesar describes as Boii "who had settled beyond the Rhine and had passed into the Noric territory, and had attacked Norica." This is very obscure. The simplest explanation is, that some of the Boii who had been long settled in Germany, and who happened now to be on the eastern borders of the Helvetic country, were persuaded to join them.

MAP SHOWING THE POSITION OF CAESAR'S MURUS ON THE RHONE.

- A. A. Caesar's earthwork or wall.
1. The Rhone.
2. The Arve.
3. The Arve.
4. Geneva.
5. Mt. Jura.
6. Mt. aux Vaches.
7. Fort l'Eluse.

The Helvetii, says Caesar, could only get out of their country by two ways; an expression which implies that the direction of their route was determined, for they could certainly have got out by the north as well as by the south. One of these two ways led along the Rhone, on the right bank, to the place where the Jura abuts on the river, leaving only room for a single waggon. This is the place where *Fort l'Eluse* stands. The other road was over the Rhine at Geneva, and through the country of the Allobroges and the Provincia. The route of the Helvetii was therefore to the south-west. At the point where the Rhone flows out of the lake of Geneva is an island, on which stood the town of Geneva, which belonged to the Allobroges. The modern town is on the island and on both sides of the Rhone. There was a bridge from Geneva to the territory of the Helvetii, and we assume that there was another bridge from the island to the south side. All the Helvetii were to meet at Geneva on the 28th of March of the unformed calendar, expecting to prevail on the Allobroges to allow them a passage, and intending to force a passage if it was not granted. Caesar, who was now proconsul of Gallia Cisalpina and of the Provincia, was at Rome; and, hearing of this preparation, he hurried from the city and arrived at Geneva. He does not tell us where he crossed the Alps. He mustered as many men as he could in the Provincia, for he had only one legion with him, and he ordered the bridge at Geneva to be destroyed,—the bridge which connected the island with the north bank of the Rhone, if he only destroyed one bridge. The Helvetii sent to say that they intended to pass through the Provincia without doing any harm, and begged that he would give them permission. Caesar, recollecting what had happened to L. Cassius and his army, whom the Helvetii had sent under the yoke [GALLIA, p. 955], resolved not to allow them to pass through the Provincia. He told them that he would consider about it, and they must come again on the 13th of April. (a. c. 58.)

In the mean time Caesar employed his legions and the troops that he had raised in the Provincia, the number of which is not mentioned, in building a wall (murus), probably an earthen rampart, on the south side of the Rhone, from the place where it flows out of the Lake to the Jura. The wall was 19 Roman miles long and 16 feet high, with a ditch; which may mean that it was 16 feet high from the bottom of the ditch. The wall was manned, and at intervals there were towers (castella). When the day came for Caesar's answer, he refused to allow the Helvetii to pass through the Provincia, and told them, that if they made the attempt, he should prevent them. The Helvetii tried to break through the wall. Some crossed the river by bridges of boats and planks fastened together, and others forded the Rhone where it was shallowest; sometimes they attacked the wall by day, and sometimes by night; but the Roman troops drove them back, and they failed to break through the Roman lines. Some persons who have explained Caesar's operations before Geneva, or rather have found fault with his story, begin by supposing that his wall was made on the north side of the Rhone. If men can make such a blunder as this, there is no need to waste any words on them. The wall began on the south side of the river, close to the lake, and was made along the river to the point where the Arve enters the Rhone, just below Geneva; and it was continued along the Rhone to the point where the Rhone passes through the Jura. On the next

side of the river, at the base of the mountain named *Credo*, is now *Fort l'Ecluse*, or *Fort la Cluse*, as it is sometimes written. On the south side is the range of high land, which is a continuation of the Jura; and here the wall ended. As the Rhone cannot be forded below this point, and is indeed hardly fordable above, if Caesar kept the Helvetii from crossing between Geneva and *Fort l'Ecluse*, his enemies must go some other way. The length of Caesar's wall, measured from a point a little above Geneva along the Rhone to a point opposite to *Fort l'Ecluse*, agrees with Caesar's length; and we may suppose that the text is right as to the numbers, which has only been doubted by those editors who have supposed that his wall was made from the lake on the north side of the Rhone to the Jura, which would be a manifest absurdity, and is contrary to Caesar's narrative. Appian (*Gall. Excerpt. xiii.*) found the same length of wall, either in Caesar's text or elsewhere; for he makes it 150 stadia, which, at 8 stadia to a Roman mile, is 18½ M.P. Another objection to Caesar's narrative is, that the Rhone below the junction of the *Arve* is not fordable now; it is rapid, and sunk in a deep bed between rocks, which circumstances would render the passage of the river either by bridges of boats, rafts, or wading impossible. But it has been maintained, even in modern times, that such a passage over the Rhone would not be impossible. Caesar says that in his time it was done; and it is certain that some change must have taken place in the bed of such a river, through which a rapid stream has been running for 2000 years.

There now only remained the other way for the Helvetii, which they could not take if the Sequani opposed them (*B. G. l. 9*)—the narrow pass between the Jura and the Rhone. Dumnorix managed this for the Helvetii, and the two peoples gave hostages to one another; the Helvetii promising to do no mischief, and the Sequani undertaking not to molest them. Now the objectors say there were many other roads that the Helvetii could have taken, and particularly the road from *Orbe* in the *Pays de Vaud* to *Pontarlier* on the *Doubs*; and General Warnery, a great authority in this matter, for he places Caesar's wall on the wrong side of the river, really believes they did go this way; to which the answer is, that Caesar says they did not. The road to *Pontarlier*, says Warnery, is the most open, easy, and practicable of all the roads through the Jura. The general should have proved that it was so in Caesar's time, and the best road for waggons early in spring; but, even if he had done that, he would not have confuted the author of the *Commentarii*. Caesar was told that the Helvetii intended to pass through the territory of the Sequani and the Aedui, and that their purpose was to reach the country of the *Santonnes* on the north side of the *Lower Garonne*. The route by *Pontarlier* was quite out of their way. They wanted to cross the Rhone, and pass through the territory of the Allobroges; and if they could not do this, their best road, their only road, was past *Fort l'Ecluse*. Besides, if the Sequani were willing to let the Helvetii pass through their country, they would let them pass along the southern border rather than through the middle of their lands; and, as the Allobroges had some lands north of the Rhone below *Fort l'Ecluse*, which lands the Helvetii plundered, there is a very good reason for the Sequani allowing the Helvetii to take this road, and no other, if there was at that time, and at that season of the year, another wagon-road, which

cannot be proved. Caesar left Labienus to take care of his wall, while he went to North Italy for fresh troops. He raised two legions, took three more from their winter quarters about Aquileia, and again crossing the Alps came into the territory of the Vocetii, and thence crossed the *Isara* (*Isère*) into the country of the Allobroges. From the territory of the Allobroges he crossed the Rhone, into the territory of the Segusiani. The Segusiani, whose chief place was afterwards Lugdunum (*Lyon*), had also a part of the country in the angle between the *Saône* and the Rhone. Caesar crossed the Rhone above the junction of the Rhone and *Saône*.

Labienus had let the Helvetii move through the pass at *Fort l'Ecluse*. It was enough for him to defend his wall. When Caesar was coming up with the Helvetii, some of them were in the country of the Aedui, having crossed the *Arar* (*Saône*). They got across with boats and rafts, some of which they would find on the river, for it was much used at that time for navigation; but we may suppose that they would also have to make rafts to carry across so many people and so much baggage. Caesar waited till three parts of the Helvetii had got over the river, when he attacked the remaining fourth part, the Tigurini. These were the people who had defeated L. Cassius and killed L. Piso, the grandfather of Caesar's father-in-law. A great part of the Tigurini were cut to pieces, and the rest took to flight and hid themselves in the woods. Plutarch and Appian say that Labienus defeated the Tigurini, which may be true. It is not said where the Helvetii were crossing the *Saône*; and there is no authority for placing the passage at *Mâcon*, as some people will place it, though *Mâcon* cannot be much out of the way. The march of the Helvetii from *Fort l'Ecluse* to *Mâcon* could not be direct; and by the nearest road it would be about 90 or 100 miles. This was the distance that they had travelled with their women, children, carts, and baggage while Caesar went to Italy, returned, and overtook them on the *Saône*. The Helvetii, with such roads as they had, or no roads at all, and the immense number of people and waggons, would not travel at that season more than a few miles a day. The Helvetii had also some cavalry. The roads, such as they were, would be all mud, and full of ruts. Caesar made a bridge over the *Arar*, and followed those who had crossed the river. He got over in one day, and the Helvetii had taken twenty days to do it, a length of time not at all unreasonable, if we consider that there were about 300,000 of them and many waggons. If we add these twenty days to the time of the march from *Fort l'Ecluse* to the passage of the *Saône*, there will be plenty of time for Caesar's hasty march into Italy and back. Divico, who had commanded the Tigurini (n. c. 107) in the war against Cassius, came with other Helvetii to Caesar after he had crossed the *Saône*, to propose terms of peace; but he and the proconsul could not agree. Though Divico had commanded an army in n. c. 107, that would not prove that he was too old to be a counsellor fifty years after; as some suppose who find fault with Caesar's narrative. Caesar followed the Helvetii for about fifteen days, keeping five or six miles in their rear; easy work for his men, for the Helvetii could not move quickly. The route was up the valley of the *Saône* on the west side, but not close to the river. (*B. G. l. 10.*) Caesar's supplies were brought up the *Arar* in boats, and it caused

him inconvenience to be at a distance from them: but he would not leave the rear of the Helvetii. When Caesar was within 18 M. P. of Bibracte (*Aulun*), he left the rear of the Helvetii, and moved towards the town to get supplies, for the Aedui had not kept their promise to send him corn. The Helvetii were of course about the same distance from the place, and probably nearly due south of *Aulun*; for this position would be on their march towards the *Loire* through *Bourbon L'Ancol*. They were thus on the road to the *Santonas*.

The Helvetii, perceiving Caesar's movement, faced about and were upon his rear. This brought on a general battle. The Helvetii fought desperately: though the battle lasted from about mid-day to night-fall, no one saw an Helvetian turn his back on the Romans. The fight was continued till late in the night, at the place where the Helvetii had their baggage, for they had put their carts (*carri*) as a fence all round. The Romans at last got possession of the baggage and the camp, as Caesar calls it; and we know what took place, though he does not tell us. Women and children were massacred without mercy. A daughter and son of Orgetorix were taken prisoners. About 130,000 men (*hominum*, a term which may include women), who survived the battle, moved from the field, and without halting in the night reached the country of the Lingones. Caesar was employed for three days in burying his dead and looking after his wounded men, and could not follow immediately. But he sent a threatening message to the Lingones, if they should venture to assist his enemies; and after the third day he marched in pursuit of them. On his road he was met by a deputation of the Helvetii, who prayed for mercy. The proconsul ordered them to tell their people to stay where they were, and wait for him. On his arrival he demanded their arms, hostages, and the slaves who had run away to join them. During the night 6000 men of the *Pagus Verbigenus* ran away towards the Rhine and the borders of the Germans. Caesar sent an order to the people through whose territory they were moving to bring them back; and they brought them back — 6000 men with arms in their hands, but dispirited, and probably perishing of hunger. Caesar treated these men as enemies: they were all massacred. *Dion Cassius* (xxxviii. 33) speaks of the 6000 being destroyed, but his narrative does not quite agree with Caesar's. The rest of the Helvetii were sent home, to the places they came from, and told to rebuild their towns and villages. They had lost all their corn, and the Allobroges were required to supply them. Caesar would not allow the Helvetic territory to be unoccupied, for fear of the Germans from the other side of the Rhine coming over and seizing it, and so becoming neighbours of the Provincia and the Allobroges. But the Germans now occupy the largest part of Switzerland, and it is very probable that they did come over and occupy many of the parts which had been depopulated. It does not appear that Caesar ever went into the country to see what was going on. [BOLL.]

Tablets were found in the Helvetic camp, written in Greek characters, and were brought to Caesar; in which tablets were registered the whole number of the Helvetii able to bear arms who had left their women, and there was a separate register of children, old men, and women. The numbers were as follows: Tulingi, 36,000; Latobrigi, 14,000; Bauraci, 23,000; Rati, 32,000; Helvetii, 263,000: in all 368,000. The fighters were 92,000, about one fourth of the

whole number. A census was taken of all who returned, and the number was found to be 119,000. If all the numbers are right in Caesar, we find an inconsistency here; for 130,000 escaped in the country of the Lingones, of whom 6000 was massacred: the remainder would be 124,000. Of this number, however, many might be taken who reached their home, and some might run away. We can hardly suppose that all the children and women perished in the camp near Bibracte, though it is possible they might get hard treatment from the Aedui, whose lands the Helvetii had ploughed. However, the result was that less than a third of the whole number returned home, and the number of women that perished must have been as large as to leave very few for the men who survived the calamity.

Most of the Gallic states sent to congratulate Caesar on his victory, which they effected to consider as much for their own interest as that of the Romans; for the Helvetii, they said, as Caesar makes them say, though prosperous at home, had left their country to conquer all Gallia, to chase their residence such part as they should find, and to make all the states tributary. Great revolutions had taken place in Gallia before; as a whole nation, who possessed towns and villages, quitting their home to look out for a new one, and to have been moved by some strong motive. In proximity to the Germans, who were business neighbours, and the want of the wish for no room, are reasons for the migration which we deduce from Caesar. The Helvetii were a warlike people, and their men wanted a wider field for a country which was shut in by natural borders. The restlessness of the wealthy Helvetii, and exaggerated notions among the people of a better camp in the south and west of Gallia, were probably the strongest motive for the emigration. A few centuries earlier they might have taken the road to Italy, and have got there: but that country had been closed against adventurers by the Romans; and if the Helvetii did emigrate, there is no country we can name to which they were more likely to go than that which they set out for.

Caesar does not mention the name of a single town in the Helvetic country. A few names of towns appear later, and the names seem to be *Noviodunum* or *Colonia Equestris* [*Colonia Equestris*]; *Salodurum*; *Eboracum*; *Avinionum*; *Minopodunum*. *Augusta Eboracorum* (*Agedun*) was founded in the time of Augustus; the name is not Roman, and it is not within the limits of Caesar's Helvetii. *Basilia* (*Basle*) is also a late foundation. *Vitodurum*, in the east part of Switzerland, may be a Gallic name also; but Switzerland does not contain a great many names of Gallic origin. It seems that the boundary between the country of the Helvetii on the east, and *Rhaetia* under the late empire, was not the Rhine above the falls of *Constantin*, but the boundary was west of the lake. [TOM. No. 15.] The name *Helvetia* belongs to a late period, though Caesar uses the expression "*Helvetia Civitas*."

The Romans made several roads in the Helvetic territory. That which was made over the *Jura* [*GALLIA*, p. 966] is probably the road from *Orbe* (*Orbe*) to *Arlodica* [*ARLONICA*]. There was a road from *Orbe*, through *Lacus Lemano* (*Lemano*) and *Equestris*, to *Geneva*. There was a road from *Vibiscum* (*Vevay*), through *Bourgon* (*Bourgon*).

and Minnodunum, to Aventicum (*Avenches*); and thence through Salodurum to Augusta Rauracorum. There was also a road from Augusta Rauracorum eastward through Vindonissa (*Wädch*) to Ad Fines (*Pfyn*), Arbor Felix, and Brigantia (*Bregenz*) on the lake of Constanz.

A work by J. F. Roesch, *Commentar über die Commentarien*, &c., Halle, 1783, contains some good remarks on General Wernery's *Remarques sur César*. Roesch was an officer and lecturer on military science. There is a map in his book of the country between Geneva and Fort l'Écluse. [G. L.]

HELVETUM. [HELCEDUA.]

HELVII, a people of the Provincia or Gallia Narbonensis, who bordered on the Arverni, but were within the limits of the Provincia. The Cevenna formed the boundary between the Helvi and the Arverni. (Caes. B. G. vii. 7, 8.) The Helvi were east of the Cevennes, and occupied the old French division of the *Vivernis*. When, however, Caesar speaks of the Helvi as bordering on the Arverni, he means the Arverni and their dependencies; for the Gabelli, and Vellauni or Vellavi, were between the Helvi and the Arverni [GABALI], and they were dependent on the Arverni. (B. G. vii. 75.) The name is written *Ἑλαυοί* in the texts of Strabo, who makes their territory commence on the east, at the bank of the Rhone, which is no doubt correct. He places them in Aquitania, which is generally supposed to be a mistake; but Augustus, who enlarged the Provincia of Aquitania, may have attached the Helvi to it. In Pliny (iii. 4) they appear in Narbonensis, and their chief town is Alba. [ALBA HELVORUM.] It is generally supposed that Ptolemy's Elyocci (*Ἐλαύοι*, ii. 10. § 18), whose chief town was Alba Augusta, are the Helvi. But Ptolemy's Elyocci are east of the Rhone, and Alba Augusta is a different name from Alba Helvorum. Pliny (xiv. 3) mentions a vine that was discovered, seven years before he was writing, at Alba Helvia in the Narbonensis, which vine flowered and lost its flower in a single day, and for that reason was the safest to plant. It was named Narbonica, and when he wrote was planted all over the Provincia. [G. L.]

HELVILLUM, a town of Umbria, on the Via Flaminia, known only from the Itineraries, which place it 27 M. P. from Forum Flaminii, or 15 M. P. from Nuceria. These distances coincide with the position of *Sigillo*, a village that still forms one of the stages on the modern road which follows the line of the Flaminian Way. (*Itin. Ant.* p. 125; *Tab. Peut.*) At the same time, the name of *Sigillo* suggests a relation with the *Suillum* of Pliny, who enumerates the *Suillates* among the towns of Umbria (iii. 14. a. 19); and it is not improbable that the *Helvillum* of the Itineraries is either identical with the *Suillum* of Pliny, or was situated in its immediate neighbourhood. [E. H. B.]

HEMEROSCOPIUM. [DIANTUM.]

HE'NETI. [VENETI.]

HENIOCHI (*Ἡνίοχοι*, *Diouys.* 687; *Arrian.* *Periplus* p. 11; *Anon. Periplus* p. 15), a Colchian tribe, who appear in geography as early as Hellanicus (p. 91, ed. Sturz). Strabo (xi. p. 498), who derives their name from the legendary charioteers of the Dioscuri, describes them as a sea-faring, piratical race, using small boats, called *καράβες* by the Greeks, and containing from twenty-five to thirty men.

From the account of the escape of Mithridates Eupator, from Pontus to the Bosphorus, they appear occupying the country between the W. edge of Cau-

casus and the Euxine, with an area of 1000 stadia. (Strab. l. c.; comp. Plin. vi. 4; Scyl. p. 31; Ptol. v. 10.) [E. B. J.]

HENNA. [ENNA.]

HEPHAESTIA. [LEUKOIA.]

HEPHAESTIA, the ancient name of the small island now called *Comino*, between Malta and Gozo. [MELITA; GAULOS.] (See Wesseling, *Itiner.* p. 518.) The island is about two miles long from NE. to SW., with a good channel on each side. It has always been, with Gozo, a dependency of Malta. To the SW. is a small rocky islet called *Cominotto*, of which the ancient name is unknown. [J. S. H.]

HEPHAESTIADAE. [ATTICA, p. 326, b.]

HEPHAESTIAE INSULAE. [ABOLIAN ISULAE.]

HEPHAESTION (*Ἡφαίστιον*), a district near Phaselis, in the south of Lycia; it derived its name from the fact that fire constantly was issuing from the loose soil. (*Ctesias*, ap. *Phot. Cod.* 73, p. 146; *Senec. Ep.* 79.) According to Pliny (ii. 110) these fires appear to have arisen from springs of burning naphtha. (Comp. Plin. v. 28; Solin. 39.) [L. S.]

HEPTACOMETAE (*Ἑπτακομήται*), a barbarous tribe of the Moynocci on the coast of Pontus, inhabiting Mount Scodices, and living on cheamuts and game. From their houses, which are said to have resembled towers, they attacked and robbed travellers. (Strab. xii. p. 549; Steph. B.; s. e.; comp. *Μοϋνοκκί*.) [L. S.]

HEPTANOMIS (Ἑπτανόμις, Ptol. iv. 6. § 55; more properly *Ἑπτά Νομί* or *Ἑπτανόμις*, *Dionys. Perieg.* 251; sometimes ἡ *μεταῖος* [ἡ]), the modern *Mer-Wehani* of the Arabian geographers, or Middle Egypt, may be described generally as the district which separates the Thebaid from the Delta. Inasmuch, however, as the appellation of the Seven Nomes is political rather than territorial, it is not easy to define the actual boundaries of this region. The northern portion belonged to the kingdom of Lower Egypt, of which it contained the capital, Memphis; the southern appertained to the elder kingdom of Thebes, so long at least as there continued to be two monarchies in the Nile valley. It is not possible to determine at what period, if indeed at any, the Heptanomis was regarded as an integral third of Egypt. About the number of its nomes there can be no question; but which, at any given era, were the seven principal nomes, it is less easy to decide. They probably varied with the vicissitudes of local prosperity—war, commerce, or migration, from time to time, causing a superior nome to decline, and, on the contrary, raising an inferior nome to eminence. According to Ptolemy and Agatharchides (*de Rubr. Mar.* ap. *Phot. Biblioth.* p. 1339. R.), both of whom wrote long after the original divisions had been modified, the Seven Nomes were the following: (1.) Memphis. (2.) Hieracleopolites. (3.) Crocodilopolites or Arsinoites. (4.) Aphroditopolites. (5.) Oxyrhynchites. (6.) Cyrenopolites. (7.) Hermopolites. The Greater and Lesser Oases were always reckoned portions of the Heptanomis, and hence it must apparently have sent nine, and not seven, monarchs to the general assembly in the Labyrinth. The capitals of the Nomes, whose names are sufficiently indicated by the respective appellations of the divisions themselves—e. g. Hermopolis of the Nome Hermopolites, &c.—were also the chief towns of the Middle Land. This district comprised the three greatest works of Egyptian art and enterprise, a. g., the Pyramids, the Labyrinth

and the artificial district formed by the canal *Bahr-Jawf*, the Nomos Arinoites or the *Fyome*. These, as well as the chief cities of the Heptanomis, are described under their separate designations. [*Ἀρηνιτοπολίς, Ὀξυρυγχίτις, &c.*].

The Heptanomis extended from lat. N. 27° 4' to 30° N.: its boundary to E. was the castle of Hermopolis (*Ἡρμωπολίς, Ὡλεαρά*); to N. the apex of the Delta and the town of Cercasorum; W. the irregular line of the Libyan Desert; and E. the hills which confine the Nile, or the sinuous outline, the recesses and projections of the Arabian mountains. Thus, near Hermopolis at the S. extremity of this region, the eastern hills approach very near the river, while those on the western or left bank recede to a considerable distance from it. Again, in lat. 29°, the Libyan hills retire from the vicinity of the Nile, bend toward NW., and sharply return to it by a curve to E., embracing the province of Arinoi (*Ἐλ-Ἰϋομα*). Between the hills on which the Pyramids stand and the corresponding elevation of *Gebel-el-Mohattam* on the eastern bank of the river, the Heptanomis expands, until near Cercasorum it acquires almost the breadth of the subjacent Delta.

The Heptanomis is remarkable for its quarries of stone and its rock-grottoes. Besides the Alabastrites, already described, we find to N. of Antioch the grottoes of Benihasan, — the Speces Artemidos of the Greeks. Nine miles lower down are the grottoes of *Koum-el-Akmar*, and in the Arabian desert, on the east, quarries of the beautiful veined and white alabastrer, which the Egyptians employed in their sarcophagi, and in the more delicate portions of their architecture. From the quarries of Tourah and Massarah, in the hills of *Gebel-el-Mohattam*, east of Memphis, they obtained the limestone used in casing the pyramids. The roads from these quarries may still be traced across the intervening plain.

Under the Ptolemies the Heptanomis was governed by an *ἐπιστράτης*, and by an officer of corresponding designation, — procurator, — under the Roman Caesars. We find him described in inscriptions (Orelli, *Insar. Lat.* n. 516) as “procurator Augusti epistrategus Septem Nomorum.” Under the later Caesars in the 3rd century A. D. the five northern Nomos, Memphites, Heracleopolites, Arinoites, Aphroditopolites, and Oxyrhynchites, together with the Nomos Leptopolites, constituted the provinces of Arcadia, which subsequently became a metropolitan episcopal see. The natural productions of the Heptanomis resemble those of Upper Egypt generally, and present a more tropical Fauna and Flora than those of the Delta. Its population also was less modified by Greek or Nubian admixture than that of either Lower or Upper Egypt; although, after the 4th century A. D., the Heptanomis was overrun by Arabian marauders, who considerably affected the native races. [W. B. D.]

HERACLEIA (*Ἡράκλεια*). I. In Europe.

HERACLEIA, a town or fortress of Athamania of uncertain site. (Liv. xxxviii. 2.)

HERACLEIA, an ancient place of Pisatis in Elis, but a village in the time of Pausanias, was distant 40 or 50 stadia from Olympia. It contained medicinal waters issuing from a fountain sacred to the Ionic nymphs, and flowing into the neighbouring stream called Cytherus or Cytheria, which is the brook near the modern village of *Bruma*. (Strab. viii. p. 356; Paus. vi. 22. § 7; Boblaye, *Recherches*, &c. p. 129; Curtius, *Peloponnesos*, vol. ii. p. 72.)

HERACLEIA LYNCESTIS (*Ἡράκλεια*, Polyb.

xxviii. 11, 15, xxxiv. 12; Strab. vii. p. 319; Ptol. iii. 13. § 33; Liv. xvi. 25, xxi. 39; *Ism. Antea*; *Pent. Tab.*; *Ἡράκλεια Ἀδριακῶν*, Hierocl.; Const. Porph. *de Them.* ii. 2), the chief town of the province of Upper Macedonia, called Lyncestis, at a distance of 46 M. P. from Lychnidus and 64 M. P. from Edessa. According to the proportional distances, Heracleia stood not far from the modern town of *Filárina*, at about 10 geog. miles direct to the S. of *Bistolia*, nearly in the centre of the Egnatia Way.

Calpurnius narrowly escaped being intercepted by the Pompeians on his rear, after having fallen back upon Heracleia, which Caesar (*B. C.* iii. 79) rightly places at the foot of the Candavian mountains, though his transcribers have interpolated the passage, and confounded it with the Heracleia Siatica of Thracian Macedonia.

The writer of a geographical fragment (ap. Hudson, *Geog. Min.* vol. iv. p. 43; comp. Joann. Cinnam. p. 127, ed. Bonn) has identified this city with Pelagonia (*Πελαγονία*), but incorrectly. (Leake, *Northern Greece*, vol. iii. pp. 281, 311, 318; Tafel, *de Fine Egnat. Part. Occid.* p. 39.) [E. B. J.]

HERACLEIA SINTICA (*Ἡράκλεια Σιντικής*, Ptol. iii. 13. § 30; Steph. B.; Const. Porph. *de Them.* ii. 2; *Ἡράκλεια Σιντικής*, Hierocles; Heracleia e Sintiis, Liv. xiii. 51), the principal town of Sintice, a district on the right bank of the Strymon, in Thracian Macedonia. It was distant from Philippi, by the Roman road which passed round the N. side of the lake, 55 M. P., and by that which passed on the S. side, 52 M. P. (*Pent. Tab.*)

Demetrius, son of Philip V. king of Macedonia, was murdered and put to death here. (Liv. xl. 24.) It stood on the site of the modern *Zerzikhori*, a small village where the peasants find in ploughing the ground great numbers of ancient coins. (Leake, *Northern Greece*, vol. iii. p. 226.) The coins of this place are very numerous. (Sestini, *Moss. Vet.* p. 37; Eckhel, vol. ii. p. 71.) [E. B. J.]

COIN OF HERACLEIA IN MACEDONIA.

HERACLEIA TRACHINIA. [TRACHIN.]

HERACLEIA (*Ἡράκλεια*; *Ἐδὴ Ἡρακλῆας*, Hierocles or Heracleensis; *Policoro*), a city of Magna Græcia, situated in Lucania on the gulf of Tarentum, but a short distance from the sea, and between the rivers Aciris and Siris. It was a Greek colony, but founded at a period considerably later than most of the other Greek cities in this part of Italy. The territory in which it was established had previously belonged to the Ionic colony of Siris, and after the fall of that city [Siris] seems to have become the subject of contention between the neighbouring states. The Athenians, we know, had a claim upon the territory of Siris (Hærod. viii. 62), and it was probably in virtue of this that their colonists the Thurians, almost immediately after their establishment in Italy, advanced similar pretensions.

These were, however, resisted by the Tarentines, and war ensued between the two states, which was at length terminated by an arrangement that they should found a new colony in the disputed district, which, though in fact a joint settlement, should be designated as a colony of Tarentum. The few remaining inhabitants of Siris were added to the new colonists, and it would appear that the settlement was first established on the ancient site of Siris itself, but was subsequently transferred from thence, and a new city founded about 24 stadia from the former, and nearer the river Aciris, to which the name of Heracleia was given. Siris did not cease to exist, but lapsed into the subordinate condition of the port or emporium of Heracleia. (Strab. vi. p. 264.) The foundation of the new city is placed by Diodorus in B. C. 432, fourteen years after the settlement of Thurii; a statement which appears to agree well with the above narrative, cited by Strabo from Antiochus. (Antiochus, *op. Scrob.* l. c.; Diod. xii. 36; Liv. viii. 24.) Diodorus, as well as Livy, calls it simply a colony of Tarentum: Antiochus is the only writer who mentions the share taken by the Thurians in its original foundation. Pliny erroneously regards Heracleia as identical with Siris, to which it had succeeded; and it was perhaps a similar misconception that led Livy, by a strange anachronism, to include Heracleia among the cities of Magna Græcia where Pythagoras established his institutions. (Liv. i. 18; Plin. iii. 11. s. 15.) The new colony appears to have risen rapidly to power and prosperity, protected by the fostering care of the Tarentines, who were at one time engaged in war with the Messapians for its defence. (Strab. vi. p. 281.) It was probably owing to the predominant influence of Tarentum also that Heracleia was selected as the place of meeting of the general assembly (*συνέλευσις*) of the Italiot Greeks; a meeting apparently originally of a religious character, but of course easily applicable to political objects, and which for that reason Alexander, king of Epirus, sought to transfer to the Thurians for the purpose of weakening the influence of Tarentum. (Strab. vi. p. 280.)

But beyond the general fact that it enjoyed great wealth and prosperity,—advantages which it doubtless owed to the noted fertility of its territory,—we have scarcely any information concerning the history of Heracleia until we reach a period when it was already beginning to decline. We cannot doubt that it took part with the Tarentines in their wars against the Messapians and Lucanians, and it appears to have fallen gradually into a state of almost dependence upon that city, though without ever ceasing to be, in name at least, an independent state. Hence, when Alexander, king of Epirus, who had been invited to Italy by the Tarentines, subsequently became hostile to that people [*TARENTUM*], he avenged himself by taking Heracleia, and, as already mentioned, transferred to the Thurians the general assemblies that had previously been held there. (Liv. viii. 24; Strab. vi. p. 280.) During the war of Pyrrhus with the Romans, Heracleia was the scene of the first conflict between the two powers, the consul Lævinus being totally defeated by the Epirot king in a battle fought between the city of Heracleia and the river Siris, B. C. 280. (Plut. *Pyrrh.* 16, 17; Flor. i. 18. § 7*; Zonar. viii. 4; Oros. iv. 1.)

* It is a striking instance of the carelessness of the Roman epitomisers, and their consequent worthlessness as geographical authorities, that Florus

Heracleia was certainly at this time in alliance with the Tarentines and Lucanians against Rome; and it was doubtless with the view of detaching it from this alliance that the Romans were induced shortly afterwards (B. C. 278) to grant to the Heracleians a treaty of alliance on such favourable terms that it is called by Cicero "*prope singulare foedus*." (Cic. *pro Balb.* 22, *pro Arch.* 4.) Heracleia preserved this privileged condition throughout the period of the Roman republic; and hence, even when in B. C. 89 the Lex Plantia Papiria conferred upon its inhabitants, in common with the other cities of Italy, the rights of Roman citizens, they hesitated long whether they would accept the proffered boon. (Cic. *pro Balb.* 8.) We have no account of the part taken by Heracleia in the Social War; but from an incidental notice in Cicero, that all the public records of the city had been destroyed by fire at that period, it would seem to have suffered severely. (Cic. *pro Arch.* 4.) Cicero nevertheless speaks of it, in his defence of Archias (who had been adopted as a citizen of Heracleia), as still a flourishing and important town, and it appears to have been one of the few Greek cities in the S. of Italy that still preserved their consideration under the Roman dominion. (Strab. vi. p. 264; Cic. *L. c.* 4, 5; Mel. ii. 4. § 8; Plin. iii. 11. s. 15.) Its name is unaccountably omitted by Ptolemy; but its existence at a much later period is attested by the Itineraries. (*Itin. Ant.* p. 113; *Tab. Peut.*) The time and circumstances of its final extinction are wholly unknown; but the site is now desolate, and the whole neighbouring district, once celebrated as one of the most fertile in Italy, is now almost wholly uninhabited.

The position of the ancient city may nevertheless be clearly identified; and though no ruins worthy of the name are still extant, large heaps of rubbish and foundations of ancient buildings mark the site of Heracleia near a farm called *Poliooro*, about three miles from the sea, and a short distance from the right bank of the Aciris or *Agri*. Numerous coins, bronzes, and other relics of antiquity have been discovered on the spot; and within a short distance of the site were found the bronze tables commonly known as the *Tabulae Heracleenses*, one of the most interesting monuments of antiquity still remaining. They contain a long Latin inscription relating to the municipal regulations of Heracleia, but which is in fact only a copy of a more general law, the Lex Julia Municipalis, issued in B. C. 45 for the regulation of the municipal institutions of the towns throughout Italy. This curious and important document, which is one of our chief authorities for the municipal law of ancient Italy, is engraved on two tables of bronze, at the back of which is found a long Greek inscription of much earlier date, but of very inferior interest. The Latin one has been repeatedly published (Murat. *Inscr.* vol. ii. p. 582; Haubold, *Bon. Legal.* pp. 98—133, &c.), and copiously illustrated with legal commentaries by Dirksen (8vo. Berlin, 1817—1820) and Savigny (in his *Vermischte Schriften*, vol. iii.). Both inscriptions were published, with very elaborate commentaries and disquisitions on all

places this battle "*apud Heracleam et Campaniae flumen Lirim*," mistaking the river Siris for the Liris; and the same blunder occurs in Orosius, who says, "*apud Heracleam Campaniae nrbem, fluviumque Lirim*"; for which last the editors substitute "*Sirim*," though the mistake is evidently that of the author, and not of the copyist.

points connected with Heracleia, by Mazocchi (2 vols. fol. Naples, 1754, 1755).

Heracleia is generally regarded as the native country of the celebrated painter Zeuxis, though there is much doubt to which of the numerous cities of the name that distinguished artist really owed his birth. [*Biogr. Diet. art. ΖΕΥΞΙΣ*.] But the flourishing state of the arts in the Lucanian Heracleia (in common with most of the neighbouring cities of Magna Græcia) is attested by the beauty and variety of its coins, some of which may deservedly be reckoned among the choicest specimens of Greek art; while their number sufficiently proves the opulence and commercial activity of the city to which they belong. (Eckhel, vol. i. p. 153; Millingen, *Numismatique de l'Anc. Italie*, p. 111.) [E. H. B.]

COIN OF HERACLEIA IN LUCANIA.

HERACLEIA, surnamed MINOA (*Ἡράκλεια Μίνωα*; *Ἡράκλεια*, *Ἡρακλειensis*), in Sicily, an ancient Greek city, situated on the south coast of the island, at the mouth of the river Halycus, between Agrigentum and Selinus. Its two names were connected with two separate mythological legends in regard to its origin. The first of these related that Hercules, having vanquished the local hero Eryx in a wrestling match, obtained thereby the right to the whole western portion of Sicily, which he expressly reserved for his descendants. (Diod. iv. 23; Herod. v. 43; Paus. iii. 16. § 5.) He did not, however, found a town or settlement; but, somewhat later, Minoas, king of Crete, having come to Sicily in pursuit of Daedalus, landed at the mouth of the river Halycus, and founded there a city, to which he gave the name of Minoas; or, according to another version of the story, the city was first established by his followers, after the death of Minoas himself. Heracles Ponticus adds, that there was previously a native city on the spot, the name of which was Macara. (Diod. iv. 79, xvi. 9; Herod. Pont. § 29.) The two legends are so distinct that no intimation is given by Diodorus of their relating to the same spot, and we only learn their connection from the combination in later times of the two names. The first notice of the city which we find in historical times represents it as a small town and a colony of Selinus, bearing the name of Minoas (Herod. v. 46); but we have no account of its settlement. It was in this state when Darius the Spartan (brother of Cleomenes I.) came to Sicily, with a large body of followers, with the express view of reclaiming the territory which had belonged to his ancestor Hercules. But having engaged in hostilities with the Carthaginians and Segestans, he was defeated and slain in a battle in which almost all his leading companions also perished. Euryleon, the only one of the chiefs who escaped, made himself master of Minoas, which now, in all probability, obtained for the first time the name of Heracleia. (Herod. v. 42—46.) This is not, indeed, expressly stated by Herodotus, who gives the preceding narrative, but is evidently im-

plied in his statement at the beginning of it, that Darius set out for the purpose of finding Heracleia, combined with the fact that Diodorus represents him as having been its actual founder. (Diod. iv. 23.) Hence there seems no reason to suppose (as has been suggested) that Heracleia and Minoas were originally distinct cities, and that the name of the one was subsequently transferred to the other. From the period of this new settlement (a.c. 510) it seems to have commonly borne the name of Heracleia, though coupled with that of Minoas for the sake of distinction (*Ἡράκλεια τῆς Μίνωας*, Pol. i. 25; *Ἡρακλ. quam vocant Minoas*, Liv. xxiv. 35.)

Diodorus tells us that the newly founded city of Heracleia rose rapidly to prosperity, having been aided by the Carthaginians, through jealousy of its increasing power. (Id. iv. 23.) The period at which this place is uncertain. It was probably raised by Darius in his 10th book, which is now lost; at least it makes no mention of any such event on the occasion of the great expedition of Hamilcar, in a.c. 480, to which epoch we might otherwise have referred it; viz. from the absence of all notice of Heracleia during the subsequent century, and the wars of Darius with the Carthaginians, it seems certain that it did not then exist, or must have been in a very ruined condition. Indeed, the next notice we find of it (under the name of Minoas), in a.c. 357, when it landed there, represents it as a small town in the Agrigentine territory, but at that time subject to Carthage. (Diod. xvi. 9; Plat. Diss. 25.) Hence it is probable that the treaty between Darius and the Carthaginians which had fixed the Halycus as the boundary of the latter, had left Heracleia, though on its left bank, still in their hands, in accordance with this, we find it stipulated in the similar treaty concluded with them by Agathocles (a.c. 314), that *Heracleia, Selinus, and Minoas* should continue subject to Carthage, as they had been before. (Diod. xix. 71.) From this time Heracleia reappears in history, and assumes the position of an important city; though we have no explanation of the circumstances that had raised it from its previous insignificance. Thus we find it soon after, joining in the movement organized by Xenodocus of Agrigentum, a.c. 307, and declaring itself free both from the Carthaginians and Agathocles; though it was soon recovered by the latter, on his return from Africa. (Id. xx. 56.) At the time of the expedition of Pyrrhus it was once more in the hands of the Carthaginians, and was the first or taken from them by that monarch as he advanced westward from Agrigentum. (Diod. xxii. 10. *Ἡράκλ. p. 497.*) In like manner, in the First Punic War, when advancing to the relief of Agrigentum, it was besieged by the Roman armies, a.c. 260. (Id. xxiii. 8. p. 502; Pol. i. 18.) Again, in a.c. 254 it was at Heracleia that the Carthaginian fleet of 350 ships was posted for the purpose of preventing the passage of the Roman fleet to Africa, and when it sustained a great defeat from the consuls Regulus and Manlius. (Pol. i. 25—28, 30; Zonar. vii. 12.) It appears, indeed, at this time to have been one of the principal naval stations of the Carthaginians in Sicily; and hence in a.c. 249 we again find the admiral, Carthago, taking his post there to watch for the Roman fleet which was approaching to the relief of Lilybæum. (Id. i. 53.) At the close of the war Heracleia, of course, passed, with the rest of Sicily, under the Roman dominion; but in the Second Punic

it again fell into the hands of the Carthaginians, was one of the last places that still held out against Marcellus, even after the fall of Syracuse. . xxiv. 35, xxv. 27, 40, 41.)

We hear but little of it under the Roman dominion; it appears to have suffered severely in the Servile (B. C. 134—133), and in consequence received many of fresh colonists, who were established there by praetor P. Rupilius; and at the same time relations of the old and new citizens were regulated by a municipal law, which still subsisted in times of Cicero. (Cic. Verr. ii. 50.) In the days of the great orator, Heracleia appears to have been a flourishing place (Ib. v. 35); but it must soon have fallen into decay, in common with most of the towns on the southern coast of Sicily. (Strab. vi. 72.) But though not noticed by Strabo among the few places still subsisting on this coast, it is one of three mentioned by Mela; and its continued existence is attested by Pliny and Ptolemy. The last author is the last who mentions the name of Heracleia: it appears to have disappeared before the time of the Itineraries. (Mel. ii. 7. § 16; Plin. iii. 14; Ptol. iii. 4. § 6.)

The site of Heracleia is now wholly deserted, and only a few ruins remain to mark the spot; but the location of the ancient city may still be clearly traced, as situated a few hundred yards to the south of the river *Platanus* (the ancient *Halycon*), extending from thence to the promontory of *Capo Icco*. In Fausto's time the foundations of the city could be distinctly traced, and, though no ruins indeed standing, the whole site abounded with fragments of pottery and brickwork. An aqueduct then also still visible between the city and the lake of the river; but its remains have since disappeared. The site does not appear to have been improved by any modern traveller. (Faust. *et Sic.* vi. 2; Smyth's *Sicily*, p. 216; Biscari, *giro in Sicilia*, p. 188.)

At *Capo Bianco*, a conspicuous headland in the diastate neighbourhood of Heracleia, is evidently the place called by Strabo, in his description of the island of Sicily, the Heracleian promontory (vi. p. 1), which he correctly reckons 20 miles distant from the port of Agrigento. [E. H. B.]

HERACLEIA PERINTHUS. [PERINTHUS.] **HERACLEIA**, in Gallia Narbonensis. Pliny (iii. 5) preserved a tradition of a town named Heracleia, 20 miles from the Rhone; but he knew no more of it, and we can add nothing to what he knew. (Gallien, p. 418) has a few words on this

subject (s. v. *Hephelessa*) in his list of towns of Heracleia mentions one in Celtica. The Itinerary, proceeding west from Forum Julii (s. v.), places "Sambrocatanus Plagiæ" 25 M. P. from Forum Julii, and Heracleia Caccabaria 16 M. P. from the Sinus Sambrocatanus. D'Anville follows Buffon in placing Heracleia at *S. Tropes*; in order to do this he suppresses the number 25 between Forum Julii and Sinus Sambrocatanus, and states that 16 is the whole distance between Forum Julii and Heracleia. This is a very bad way of proceeding; for, unless he can prove some error in the Itinerary, he ought to assume that the distances from the coast are most correctly measured in the Itinerary, as they doubtless were. Walckenaer fixes Heracleia at the *Pointe Cavalaire*. *S. Tropes* is at the Sinus Sambrocatanus. A complete map of the coast is necessary for the purposes of com-

parative geography. This Heracleia is one of the Greek towns on the south coast of France. [G. L.]

HERACLEIA (*Hephelessa*). II. In Asia.

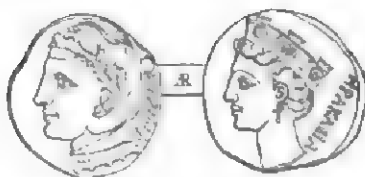

HERACLEIA (*Hephelessa*). 1. A town of Caria of uncertain site. (Strab. xiv. p. 658; Steph. B. s. v.) Ptolemy (v. 2. § 19) describes it by the addition of *epos* *Alasarp*. (Comp. Plin. v. 39; Suid. and Eudoc. s. v., where the town has the surname *Alasarp*.) This town should not be confounded with the following.

2. A town on the confines between Caria and Ionia, which is generally described as *epos* *Adrius*, or *epos* *Adrius*, from its situation at the western foot of mount Latmus, on the Sinus Latmicus. It was a small place in the south-east of Miletus, and south-west of Amazon, and was sometimes designated simply by the name Latmus. In its neighbourhood a cave was shown with the tomb of Endymion. (Scylax, p. 39; Strab. xiv. p. 635; Ptol. v. 2. § 9; Plin. v. 31; Polyam. vii. 23; Paus. v. 1. § 4; Schol. ad Apollon. Rhod. iv. 57.) Ruins of this town still exist at the foot of mount Latmus on the borders of lake Baffi, which is probably a portion of the ancient Sinus Latmicus, formed by the deposits of the river Maeander. (Comp. Leake, *Asia Minor*, p. 239; Fellows, *Exc. in As. Min.* p. 263, who, confounding the lake of Baffi with that of Myra, considers the ruins of Heracleia to be those of Myra.)

3. A town on the coast of Aetolia, opposite to Hecatonnesus. This town and the neighbouring Coryphæntis are called villages of the Mytilenæans. (Strab. xiii. p. 607; Plin. v. 32, who speaks only of a *Heracleotes tractus*; Steph. B. s. v.)

4. Surnamed *Pontica*, on the coast of Phrygia, in the country of the Mariandyni, was a colony of the Megarians, in conjunction with Tanagraeans from Boeotia. (Paus. v. 26. § 6; Justin. xvi. 2.) Strabo (xii. p. 542) erroneously calls the town a colony of Miletus. It was situated a few miles to the north of the river Lycus, and had two excellent harbours, the smaller of which was made artificially. (Xen. Anab. vi. 2. § 1; Diod. xiv. 31; Arrian, *Periplus*, p. 15; Mannon, p. 52.) Owing to its excellent situation, the town soon rose to a high degree of prosperity, and not only reduced the Mariandyni to subjection, but acquired the supremacy of several other Greek towns in its neighbourhood; so that, at the time of its highest prosperity, it ruled over the whole territory extending from the Sangarius in the west to the Parthenius in the east. A protracted struggle between the aristocracy and the demos (Aristot. Polit. v. 5) at last obliged the inhabitants to submit to a tyranny. In the reign of Dionysius, one of these tyrants, who was married to a relation of Darius Codomannus, Heracleia reached the zenith of its prosperity. But this state of things did not last long; for the rising power of the Bithynian princes, who tried to reduce that prosperous maritime city, and the arrival of the Galatians in Asia, who were instigated by the kings of Bithynia against Heracleia, deprived the town gradually of a considerable part of its territory. Still, however, it continued to maintain a very prominent place among the Greek colonies in those parts, until, in the war of the Romans against Mithridates, it received its death blow; for Aurelius Cotta plundered and partly destroyed the town (Mannon, c. 54). It was afterwards indeed restored, but remained a town of no importance ("oppidum," Plin. vi. 1; comp. Strab. xii. p. 543; Scylax, p. 34; Ptol. v. 1. § 7; Marcian. pp. 70, 73; Schol. ad Apollon. Rhod. ii. 748, ad Nicomed. Alex. 13; Eusebius, *ad Dionys. Per.* 791).

Heracleia, which was the birthplace of Heraclides Ponticus and his disciple Dionysius Metasthemenus, still exists under the name of *Herakle* or *Erekli*. For the history of this important colony see Justin, xvi. 3-5; Polabew, *de Robus Heracleas*, Brandenburg, 1833, 8vo. (Niebuhr, *Lect. on Anc. Hist.* iii. pp. 113, fol.)

COIN OF HERACLEIA IN BITHYNIA.

5. A town of uncertain site in Lydia, perhaps not far from Magnesia at the foot of mount Sipylus. From this town the magnet derived its name of *Heracleus lapis*. (Steph. B. s. v.; Hesyeh. s. v.; Zenob. Prov. ii. 22, p. 90, ed. Leutsch.) [L. S.]

HERACLEIA (*Ἡράκλεια*, Strab. xvi. p. 751; Plin. v. 20), a small town on the coast of N. Syria to the N. of Laodicea-ad-Mare (*Laodikeia*). Pococke (*Trav. vol. ii. pt. i. p. 194*) has identified it with *Meimet Borja*, the small town and half-ruined port from which salt and wheat are brought from Cyprus (comp. Chesney, *Exped. Ephrat*, vol. i. p. 453), and found, on the small flat point that makes out into the sea, several graves cut into the rock, some stone coffins, and pieces of marble pillars; to the N. he saw some remains of piers built into the sea, of foundations of walls of large heavy stones, and signs of a strong building at the end of the pier. (Ritter, *Erldkunde*, vol. xv. pt. i. p. 99.) [E. B. J.]

HERACLEIA PARTHIAE (*Ἡράκλεια*, Strab. xi. p. 514). Strabo mentions a town of this name, which he places, together with Apameia, in the direction of Rhagae. Nothing certain is known about it; but it has been conjectured by Forbiger that it is the same as a town of the same name mentioned by Pliny, which was founded by Alexander the Great, and subsequently, when destroyed, was named by Antiochus, Achai (vi. 16. s. 18). [V.]

HERACLEIUM (*Ἡράκλειον*). 1. A town on the north coast of the Chersonesus Taurica; it was situated on the coast of the Palus Maeotis, near Parthenium, but its exact site is unknown. (Strab. xi. p. 494; Ptol. iii. 6. § 4.)

2. A promontory on the east coast of the Euxine, south of cape Toretica, and 150 stadia north of the mouth of the river Achaeus. (Arrian, *Periplus* p. 79.)

3. A cape and town on the same coast of the Euxine, 150 stadia south of the mouth of the Achaeus. (Arrian, *Periplus* p. 78.) Pliny (vi. 5) mentions Heracleium on this coast as 70 miles distant from Sebastopolis; but, although we have no means of ascertaining whether this or the other Heracleium be meant, the distance renders it probable that Pliny is speaking of the Heracleium south of the Achaeus.

4. A promontory and river on the same coast of the Euxine, between the rivers Phasis in the north and the Bathy in the south. (Plin. vi. 4.)

5. A promontory and port-town on the coast of Pontus, between Amisus and Polemonium. (Strab. xii. p. 548; *Ἡράκλειον Ἰσπρι*; Ptol. ii. 3. § 3; *Ἡράκλειον Ἰσπρι*; Arrian, *Periplus* p. 73; Apollon. Rhod. ii. 969). The modern name is *Thermak*.

6. The name of the city of the town of Canis in Caria, which was taken and destroyed by Ptolemy of Egypt in his expedition against Ars. (Diod. Sic. xii. 27.)

7. A small town in the district Cynnaia, between mount Amanus and the Euphrates; see the place the Parthian Pacorus was defeated by the Roman general Ventidius. (Strab. xvi. 31.) [L. S.]

HERACLEIUM (*Ἡράκλειον*, Ptol. ii. 17. § 4), a place in Crete, which Strabo (x. p. 474, 494) calls the port of Cnossus, was situated, according to the anonymous coast-describer (*Stadiasmus*), at a distance of 20 stadia from that city. The name HERACLEIA (*Ἡράκλεια*, comp. Plin. iv. 20) is mentioned by Stephanus of Byzantium as the 11th of the 23 Heracleias he enumerates. Although ecclesiastical notices make no mention of the place as a bishop's see, yet there is found among the descriptions to the proceedings of the General Synod Council held at Nicaea, along with other Cretan prelates, Theodoros, bishop of Heracleopolis. (*Acta Creta Sacra*, vol. i. p. 254.) Mr. Pashley (*Trav. vol. i. p. 263*) has fixed the site at a little to the hill to the W. of *Kakiss-Gro*. There are remains of buildings, probably of no earlier date than the Venetian conquest, but the position agrees with indications of the ancients. [E. B. J.]

HERACLEIUS, river. [Brusa.]

HERACLEOPOLIS MAGNA (*Ἡράκλειο πόλις μεγάλη* or *ἡ Ἡράκλεια*, Ptol. iv. 5. § 7; Steph. B. s. v.; Strab. xvii. pp. 789, 808, 813; Heracleis *Ἡράκλεια*, Plin. v. 9. § 9, 11; *Ἡράκλειο πόλις*, the capital of the Nomos Heracleotis in Egypt. It was situated at the entrance of the lake of the Fyoom (Nomos Arinoites), on a point formed by the Nile, the *Bahr Jauf*, and the *Bahr el Jebel*. After Memphis and Heliopolis it was probably the most important city south of the Thebais. In the eighth dynasty of kings Memphis appears to have lost its pre-eminence, the Egyptian monarchs, however, in the first instance, to Heracleopolis, but was established at Thebes. The Lists of Kings exhibit two dynasties of Heracleopolis kings, the ixth and xth, each containing nineteen names. We know the appellation of the founder of the first, Achthoes, a ferocious tyrant, who went and was destroyed by a crocodile. Centuries afterward the neumeon was worshipped at Heracleopolis, for we may infer that the hostility to the crocodile was handed down. (Agatharch. ap. Photius, p. 272 R.; Aelian, *Hist. An.* x. 47.) It is probable that under these dynasties commenced at least the great works which tradition connected with the name of Moeris, and that the canal and works of the Arinoite nome were their works. The Heracleote nome partook, indeed, of the eminent fertility of the Fyoom district. Under the Romans it formed part of the Roman prefecture of Aegyptus (*Not. Dign. Imp.*) Its ruins are incorporated in the modern hamlet of *Atassich* covers a part of them. (Ritter, *Erldkunde*, vol. i. p. 789.) [W. B.]

HERACLEOPOLIS PARVA (*ἡ Ἡράκλειο πόλις μικρά*, Ptol. iv. 5. § 56; Joseph. *Jud.* iv. 11. § 5; Steph. B. s. v.; Heracleia *Ἡράκλεια*, Antom. p. 152; Heracleum, *Tok. Ptol.* mentioned only in the later times of Egyptian history. It stood near Pelusium, in the Sathura nome, beyond the westernmost branch of the Delta. It appears to have been sometimes designated Sathrum (*Σάθρως*, Steph. B. s. v.), and regarded as the capital of the nome. It was about 21 miles

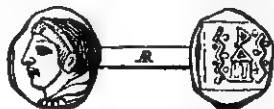

Tanis. Its ruins are now covered by the lake *aleh*, near whose western border it was situated. (Champollion, *L'Égypte*, vol. ii. p. 130; *Mém. sur l'Égypte*, p. 96.) [W. B. D.] HERACLEUSTIBUS, the name of a station in Jerusalem Itinerary, 11 M. P. from Apollonia. (*de Vitis Egnat. Part. Orient.* p. 6) has been noted that it is equivalent to *Ἡρακλεῖος οἰκ.* [E. B. J.]

HERAEA (*Ἡραία*; *Eth.* *Ἡραεῖς*, *Ἡραεῖς*, in an inscription *Ἡραεῖος*: the territory *Ἡραεῖα*—the most important Arcadian town on the Alpheius, was situated near the frontiers of Arcadia on the high road from Arcadia to Olympia. It is said to have been founded by Heraeus, a son of Alpheus, and to have been called originally Solos. (Paus. viii. 26. § 1; Steph. B. s. v. *Ἡραία*.) In an early period the Heraeans concluded a treaty with the Eleians for mutual protection and support for a hundred years; the original of which treaty, written on a bronze tablet in the old Peloponnesian dialect, was brought from Olympia by Gell, and is now in the Payne Knight collection in the British Museum. This treaty is placed about the Olympiad, or B. C. 580, since it belongs to a time when the Eleians exercised an undisputed suzerainty over the dependent districts of Pisatis and Elis; and the Heraeans consequently were obliged to avail themselves of their support. (For the inscription see Leake, *Peloponnesiaca*, Böckh, *Inscr.* no. 11, vol. i. p. 26.) Heraea at that time, the chief village among eight others which lay scattered upon the banks of the Alpheius and its tributaries the Ladon and Erymanthus; but the inhabitants of these separate villages were transferred to Heraea, and a city there founded by the Spartan king Cleombrotus or Cleomenes. (Strab. viii. p. 337.) In consequence of its close connection with Sparta, the Heraeans shared the hostility of the other Arcadians, who expelled their territory in B. C. 370. (Xen. *Hell.* § 22.) At a later time Heraea was a member of the Achaean League; and, as Elis was one of the founders of the Aetolian League, it is frequently mentioned in the contests between these two powers. (Liv. ii. 54, iv. 77, seq.) It was afterwards in the hands of Philip, but it was restored to the Romans. (Liv. xxviii. 8, xxxii. 5, xxxiii. 34; Ptolemy, iii. 25, 30.) Heraea is mentioned by Strabo (p. 388) as one of the deserted cities of Arcadia, and when it was visited by Pausanias, it was in place of some importance. The latter writer describes its temples, baths, plantations of myrtles, and her trees along the banks of the Alpheius; its temples he mentions two sacred to Dionysus and Pan, and another to Hera, of the latter of which only some ruins were left. (Paus. viii. 26. §§

1-4.) The site of Heraea is fixed by its distance from the mouth of the Ladon, which, according to Pausanias, was 15 stadia. The same writer says that a part of the city lay upon a gently sloping hill, and the remainder upon the banks of the river. The remains of Heraea are visible on a hill at the village of *Aidmāi* (St. John), and on either side by a ravine, and sloping towards the river. These ruins extend along the summit of the hill and the slope towards the river, but they are inconsiderable, and have for the most part been cleared away in consequence of the sterility of the land. A sweetish red wine is grown

upon the spot, which Leake says has more flavour and body than almost any other he met with in the Morea. This wine was also celebrated in antiquity, and was said to make women fruitful. (Theophr. *H. Pl.* ix. 20; Athen. i. p. 31; Plin. xiv. 18. a. 22; Aelian, V. H. xiii. 6.)

Heraea was favourably situated in several respects. Its territory was fertile, and it was situated, as we have already said, on the high road from Olympia into the interior of Arcadia. From the north of Arcadia a road led into the valley of the Alpheius, near Heraea; and two roads led into the Heraeatis, one from Megalopolis, and the other from Messene and Phigalia, which joined the former close to the town. There was a bridge over the Alpheius close to Heraea, which Philip restored in B. C. 219. (Polyb. iv. 77, 78.) The Heraeatis was separated from Pisatis by the river Erymanthus, and from the territory of Megalopolis by the river Buphagus. (Gell, *Itiner. of the Morea*, p. 113; Leake, *Morea*, vol. ii. p. 91; Boblaye, *Recherches*, &c. p. 159; Curtius *Peloponnesos*, vol. i. p. 363, seq.)

COIN OF HERAEA.

HERAEI MONTES (*τὰ Ἡραία ὄρη*), a group or range of mountains in Sicily, mentioned by Diodorus (iv. 84), who describes in glowing colours the pleasant shaded valleys in which they abounded, the rich forests with which they were covered, and the abundance of wild fruits they produced. He gives no clue to their position, and they are not mentioned by any of the geographers in their descriptions of the island: but Vibius Sequester tells us (p. 8) that the river Chrysaas had its source in the Heraean mountains; and this shows that they must have formed part of the range which occupies the whole north of Sicily, from the neighbourhood of Messina to that of Panormus. The natural beauties of this mountain tract accord well with the description of Diodorus, whence the name of *Cale Acta*, "the beautiful shore," was given to the N. coast of Sicily, which extends along the foot of the range: and Fazello describes the fertility and pleasantness of their southern slopes in terms which fully justify the rhetorical praises of Diodorus (Fazell. ix. 4. p. 385). The great contrast presented by the whole of this range of mountains, to the dry and bare calcareous hills of the centre and south of Sicily, can indeed leave no doubt as to their being those intended by that author. It is impossible, however, to fix the precise limits within which the term was applied. The lofty mass of the *Monte Madonia*, the *Mons Neptodes* of the ancients, is in fact only a portion of the same chain, while on the E. the continuation of the range, towards Messina and the promontory of Pelorus, appears to have been designated as the *Mons Neptunus*. The central portion of the range, between *Caronia* and *Trasina*, is still covered with an immense forest, now called the *Bosco di Caronia*: the highest summit of this group, *Monte Sorì*, attains an elevation of nearly 3000 feet above the sea.

It is certainly erroneous to extend the name of the Heraei Montes, as has been done by Cluver and

Partney, not only to the mountains about Enna, but to the great calcareous hills which extend from thence to the S.E. and fill up the greater part of the *Val di Noto*. The natural characters of that part of Sicily must always have been essentially different from those of the mountainous region of the north. [E. H. B.]

HERAEUM (*Ἡραῖον*; *Karand*), a town on the Thracian coast of the Propontis, a little to the east of Bisantha. (Herod. iv. 90; Steph. B. s. v.) In some of the Itineraria, the place is called *Hieracum* or *Ereum*. [L. S.]

HERAEUM. [CANTUARUS, p. 683, b.]

HERATEMIS (*Ἡράτειος*; Arrian, *Ind. c. 39*), a canal in Persia, mentioned by Arrian as cut from a larger river at no great distance. This river was probably the Padargus mentioned in the same chapter by the Greek historian. The canal terminated at the sea; but we are not aware that any traces of it now remain, unless the *Khor-e-aseri* of D'Anville's map represents it, which is possible. [V.]

HERBANUM, a town of Etruria, the name of which is found only in Pliny's list of the towns in the interior of that country. (Plin. iii. 5. s. 8.) It has been generally assumed, but entirely without authority, to be the place called *Urbs Vetus* by Paulus Diaconus (iv. 33), a name which has been probably corrupted into that of the modern city of *Orvieto*. The *Urbivanzum* of Procopius (*Obsequies*, B. G. ii. 20), which he describes as a strong fortress, very difficult of access, is probably the same place with the *Urbs Vetus* of Paulus. *Orvieto* certainly occupies the site of an ancient Etruscan town, as is proved by tombs and antiquities discovered there, and the name of *Urbs Vetus* could obviously not have been the original one; but the identification of *Urbs Vetus* with *Herbanum* is mere conjecture. (Dennis, *Etruria*, vol. i. p. 536.) [E. H. B.]

HERBESSUS. [RANESSUS.]

HERBITA (*Ἡρβίτα*; Steph. B., *Pol.*: *Ἡρβίτα*, *Herbitensis*), a city of the interior of Sicily, in the northern part of the island, and on the southern slope of the Heracian mountains. It was a city of the Siculians, and is first mentioned about 445 B.C., when it was subject to the rule of a prince, or despot, named Archonides, who co-operated with Dacotus, chief of the Siculi, in founding his new settlement at *Cale Acte*. (Diod. xii. 8.) [CALACTE.] In A.C. 403, it was besieged by Dionysius of Syracuse, but without effect; and several years after we find it still maintaining its independence against that monarch. Meanwhile Archonides, who was still ruler of the city, proceeded to extend his power by founding the colony of *Alaesa*, on the north coast of the island. (Diod. xiv. 15, 16, 78.) Diodorus tells us that the citizens of *Alaesa*, having subsequently attained to great prosperity [*ALAESIA*], disdained to acknowledge their descent from so inferior a city as *Herbita*; but the latter seems to have been by no means an unimportant place. Its name does not again occur in history, but Cicero calls it "*honesta et copiosa civitas*" (*Verr. iii. 59*); it had a fertile and extensive territory, which was cultivated with great care, and produced abundance of corn; the inhabitants were diligent and active agriculturists (*summi aratores*), and a quiet, frugal race. They, however, suffered severely from the exactions of *Verrus*; so that the number of the cultivators (*aratores*) was reduced from 257 to 120, and their territory rendered almost desolate. (Cic. *Verr. iii. 18, 32—34, 51*.) *Herbita* is still mentioned among the towns of

Sicily both by Pliny and Ptolemy; but after this trace of its disappearance, and the data being in position are sufficiently vague. Ptolemy appears to place it between Agrigium and Lania; but the other towns with which it is associated by *Strabo*, *Diodorus* would point to a more westerly position; and *Cluverius* is probably right in placing it at *N. cosmic*, a town about 10 miles N.W. of *S. Fige d'Argiro* (Agrigium), or rather at a place called *S. Iuliano*, about 2 miles W. of it, in a more elevated position, and now uninhabited. (Plin. iii. s. 11; P. iii. 4. § 13; *Cluver. Scil. p. 223*.) [E. H.]

HERCULANEUM (the first *Herculanum* appears to be erroneous: in the passage of *Cass. d. At. vii. 3. § 1*) generally cited in support of the true reading seems to be "*Arculanum*," *Orell. ad loc.* *Hephaestus*, *Strab.*; *Hephaestus* *Dion. Cass.*; *Ἡρὰς*, *Herculanensis*; *Ἡρὰς*, *Bay of Naples*, and at the foot of *St. Vesa*. The circumstances attending its discovery rendered its name far more celebrated in modern times than it ever was in antiquity, when it certainly rose above the condition of a second-class town; was, however, a place of great antiquity; it was ascribed by Greek tradition to *Hercules*, who was supposed to have founded a small city at which he gave his own name. (Dionys. i. 44.) It is called by *Ovid* "*Hercules urbs*" (*Afr. vi*). But this was doubtless a mere inference from its name itself, and we have no account of its colony there in historical times, though it is probable that it must have received a considerable number at least of a Greek population, from the settlement of *Neapolis* or *Comae*; and there is a trace of the extent to which Greek influence had reached the manners and institutions of its citizens common with those of all this part of *Campania*. *Strabo's* account of its early history is rather curious: he tells us it was at first occupied (as well as *St. Vesa*, *Pompeii*) by *Oscan*, afterwards by *Tyrrhenians* and *Pelagians*, and after this by the *Sannites*. (p. 247.) It is doubtful whether he has not confused the *Tyrrhenians* the *Etruscans*, or rather the names of *Tyrrhenians* and *Pelagians* are synonymous; but there seems no reason to doubt that *Herculanum* may have been at one time a Pelagic settlement, and that its population prior to its conquest by the *Sannites* was partly Pelagic and partly of *Oscan* extraction. It is not the legends which connected it with *Hercules* may in this case have been originally Pelagic, subsequently adopted by the Greeks. It is not the hands of the *Sannites* in common with those of *Campania* (*Strab. l. c.*); and this is all we know of its history previous to its passing under Roman dominion. Nor have we any precise account of the time at which this took place: *Herculanum* mentioned by *Livy* (x. 45) is not been taken by the consul *Carvilius* from the *Sannites* in A.C. 293, must certainly be another town of the name situated in the interior of *Campania*; we have no further clue to its position. It is on occasion on which it plays any part in history during the Social War, when it took up arms with the Romans, but was besieged and taken by *Julius* supported by a *Hydruntine* legion under *M. Magius*. (Vall. *Pat. ii. 16*.) It has been supposed that a body of Roman colonists was afterwards established there by *Sulla* (*Zumpt, de Col. p. 251*); there is no proof of this. It seems, however, to be

certainly a place of some importance at this it enjoyed the rights of a municipium and ap- to have been well fortified, whence Strabo calls it *stremum* (*σπορυς*): he describes it as enjoying a healthy situation, an advantage which led to its slightly elevated position, on a pro- gress headland. (Strab. v. p. 246.) The historian also, in a fragment preserved by Nonius (p. 207. a. v. Flavius), describes it as situated on elevated ground between two rivers. Its ports were among the best on this line of coast. (Strab. i. 44.) It is probable that, when the shores of the beautiful bay of Naples became so much coveted by the Romans, many of them would have been at Herculaneum, or in its immediate neighbourhood, and its municipal opulence is sufficiently shown by the results of recent discoveries; but its name is mentioned by Mela and Florus, and as by Pliny, among the cities of the coast of Campania, it is evident that it never rose to a par with the more flourishing and splendid cities of that region. (Mela, ii. 4. § 9; Flor. i. 16. § 6; iii. 5. a. 9.) It is important to bear this in mind in estimating the value of the discoveries which have been made upon the site.

The reign of Nero (A. D. 63) Herculaneum suffered severely from an earthquake, which laid part of the city in ruins, and seriously damaged buildings that remained standing. (Senec. *N. i.* 1.) This was the same earthquake which destroyed Pompeii, though it is referred by us to the preceding year. (Ann. xv. 22.) Ten years later, in the reign of Titus (A. D. 79), a more serious calamity befell both cities at the memorable eruption of Vesuvius in that having buried them both under the vast accumulations of ashes, cinders, and volcanic sand poured by that mountain. (Dion Cass. lvi. 24.) Herculaneum, from its position at the very foot of the mountain, would naturally be the first to suffer; his is evident from the celebrated letter of the emperor Pliny describing the catastrophe, which does not even mention either Herculaneum or Pompeii. (Plin. *Ep.* vi. 16, 20.) But Retina, where Pliny first attempted to land, but was pre- vented by the violence of the eruption, was in the immediate neighbourhood of the former city. Its proximity to Vesuvius was also the cause that led to the ejected materials under which Herculaneum was buried assumed a more compact and firm form than that which covered Pompeii, though a mistake to suppose, as has been stated by writers, that the former city was overwhelmed by a stream of lava. The substance with which it was covered is only a kind of volcanic tuff, formed of molated sand and ashes, but partially consolidated by the agency of water, which is often poured in large quantities during volcanic eruptions. (See *Ann. Volcanicæ*, p. 223, 2nd edit.) The action of the unfortunate city was so complete that no attempt could be made to restore or rebuild it; it appears that a small population gradually died once more upon the site where it was buried, hence we again meet with the name of Herculaneum in the Itineraries of the 4th century. (Tab. 1.) This later settlement is supposed to have been again destroyed by the eruption of Vesuvius in 472; and no trace is subsequently found of the

though the position of Herculaneum was clearly by the ancient authorities on the coast between

Neapolis and Pompeii, and at the foot of Vesuvius, its exact site remained long unknown; it was placed by Cluverius at *Torre del Greco*, nearly two miles too far to the E. (Cluver. *Ital.* p. 1154.) But in 1738 the remains of the theatre were accidentally discovered in sinking a well, in the village of *Rosone*; and excavations, being from this time systematically carried on, have brought to light a considerable portion of the ancient city, including the Forum, with two adjacent temples and a Basilica. Unfortunately, the circumstance that the ground above the site of the buried city is almost wholly occupied by the large and populous villages of *Rosone* and *Portici* has thrown great difficulties in the way of these excavations, which have been carried on wholly by subterranean galleries; and even the portions thus explored have been for the most part filled up again with earth and rubbish, after they had been examined, and the portable objects found carried off. The consequence is, that while the works of art discovered here far exceed in value and interest those found at Pompeii, and the bronze statues especially form some of the choicest ornaments of the Museum at Naples, the remains of the city itself possess comparatively little interest. The only portion that remains accessible is the theatre, a noble edifice, built of solid stone, in a very massive style; it has 18 rows of seats, and is calculated to have been capable of containing 8000 persons. Fragments discovered in it prove that it was adorned with equestrian statues of bronze, as well as with two chariots or bigas in gilt bronze; and several statues both in bronze and marble have been extracted from it. For this splendid edifice, as we learn from an inscription over the entrance, the citizens of Herculaneum were indebted to the munificence of a private individual, L. Annius Mammianus Rufus; the date of its erection is unknown; but it could not have been earlier than the period of the Roman empire, and the building had consequently existed but a short time previous to its destruction. From the theatre a handsome street, 36 feet in breadth, and bordered on both sides by porticoes, led to a large open space or forum, on the N. side of which stood a Basilica of a noble style of architecture. An inscription informs us that this was erected at his own cost by M. Nonius Balbus, prætor and proconsul, who at the same time rebuilt the gates and walls of the city. No part of these has as yet been discovered, and the plan and extent of the ancient city therefore remain almost unknown. Not far from the Basilica were discovered two temples, one of which, as we learn from an inscription, was dedicated to the Mother of the Gods (*Mater Deum*), and had been restored by Vespasian after the earthquake of A. D. 63. Another small temple, at a short distance from the theatre, apparently dedicated to Hercules, was remarkable for the number and beauty of the paintings with which the walls were adorned, and which have been from thence transported to the Museum at Naples. At some distance from these buildings, towards the W., and on the opposite side of a small ravine or water-course, was found a villa or private house of a most sumptuous description; and it was from hence that many of the most beautiful statues which now adorn the Neapolitan Museum were extracted. Still more interest was at first excited by the discovery in one of the rooms of this villa of a small library or cabinet of MSS. on rolls of papyrus, which, though charred and blackened so as to be converted into a substance resembling charcoal, were found to be

still legible. But the hopes at first entertained that we should have recovered some of the lost literary treasures of antiquity have been signally disappointed, the works discovered being principally treatises on the Epicurean philosophy of very little interest.

A full account of the early excavations and discoveries at Herculaneum will be found in Venuti (*Prime Scavi di Ercolano*, 4to. Roma, 1748), and in the more recent work of Iorio (*Notizie sugli Scavi di Ercolano*, 8vo. Naples, 1827). The works of art and other monuments discovered on the site, are figured and described in the magnificent work of *La Antichità di Ercolano*, in 8 vols. folio, published at Naples, from 1757 to 1792. The inscriptions are given by Mommsen (*Inscr. Regni. Neap.* pp. 122—127); and an account of the papyri will be found prefixed to the work entitled *Herculaneum Volcanicum quæ superavit*, of which only two volumes have been published, in 1793 and 1809. A summary account of the general results will be found in Romanelli (*Viaggio ad Ercolano*, 8vo. Naples, 1811), and in Murray's *Handbook for Southern Italy*. It is much to be regretted that the superior facilities afforded by Pompeii have for many years caused Herculaneum to be almost wholly neglected; even the excavations previously carried on were conducted without system, and no regular plans were ever taken of the edifices and portions of the city then explored.

The modern village of *Rossano*, which now covers a large part of the ruins of Herculaneum, has evidently retained the name of *REPINA*, a place mentioned only in the letter of Pliny describing the great eruption of Vesuvius in A. D. 79. (Plin. Ep. vi. 16.) It appears to have been a naval station, where a body of troops belonging to the fleet at Misenum (Classarii) were at that time posted, who applied in great terror to Pliny to extricate them from their perilous position. Hence, it is clear that it must have been close to the sea-coast, and probably served as the port of Herculaneum. The exact position of this cannot now be traced, for the whole of this line of coast has undergone considerable alterations from volcanic action. The point of the promontory on which the ancient city was situated is said to be 95 feet within the present line of coast; and the difference at other points is much more considerable. We learn from Columella (*R. R.* x. 136) that Herculaneum possessed salt-works, which he calls "*Salinae Herculeæ*," on the coast to the E., immediately adjoining the territory of Pompeii. The *Tabula* marks a station, which it calls "*Oplontis*," between Herculaneum and Pompeii, 6 miles from the former town; but the name, which is otherwise unknown, is probably corrupt. [E. H. B.]

HERCULEUM FRETUM. [GADITANUM FRETUM.]

HERCULIS ARENAE (*αι τοῦ Ἡρακλέους ἄρες*), a range of sand-hills in the NW. of Cyrenaica, behind *Hesperides*, containing the source of the river *Lathon*. (Ptol. iv. 4. §§ 8, 10.) They form the N. part of the *Jebel Barak*, its S. part being the *VELPE* M. of Ptolemy. [P. S.]

HERCULIS COLUMNÆ (*αι Ἡρακλέους στῆλαι*, *αι Ἡρακλέους στῆλαι*, Strab. &c.; *Ἡρακλέους στῆλαι*, *Ἡρακλέους κίονες*, Pind.; *Herculeæ Columnæ*, Mel. Plin., &c.; *Herculis Speculæ*, Flor. iv. 2; also simply *Στῆλαι* and *Columnæ*; the *Pillars of Hercules*), is a name commonly understood now, as it was generally among the ancients, in one particular sense, namely, as denoting the twin rocks

which guard the entrance of the Mediterranean (Mare Internum, &c.) at the E. extremity of the *Straits of Gibraltar* [*GADITANUM FRETUM*]; of which the one on the N. or European side was called *CALPE*, that on the S. or African side *ABYLA*. But this simple statement is far from containing a sufficient account of the meaning attached to the name by the Greeks and Romans.

Its origin goes back into the legendary period, and we are here again involved in the oft-recurring difficulty as to whether the legend was founded on a certain amount of knowledge, or whether, the legend being purely imaginary at first, a positive sense was given to it as geographical discovery advanced. It should be borne in mind that *columns*, as well as *altars*, were erected to mark the furthest point reached by conquerors and discoverers [ALEXANDER ARAB]; and hence, in connection with the mythical expedition of Hercules to the extreme west, such memorials would be sought. In accordance with this view, we find *Pillars of Hercules* mentioned in other distant regions of the earth to which Hercules was supposed to have penetrated, namely, in the N. of Germany, and the W. extremity of Gaul. (Is. Germ. 3, 34; Scymn. Ch. 188; Serv. ad Virg. *Æn.* xi. 263, where we have a parallel case in "*the Pillars of Proteus*" for the borders of Egypt.) Other examples are mentioned in the interesting discussion on this use of columns by Strabo (iii. pp. 170, 171). But there was also another reason to look for columns in those regions; for Æschylus tells us of the "*Pillar of Heaven and Earth*," that is, the pillar which, resting on earth, supported the vault of heaven, and which was upborne by Atlas (*Prom.* 349, 426). That the *Pillars of Hercules* were identified by sea with those of Atlas is proved by the fact that the former are also called the *Pillars of Prometheus* and *Briareus*, deities, like Atlas, of the Titan race. (Aristot. *ap. Aelian*, V. H. v. 3; Hesych. s. v. *Βριάρης* στῆλαι; Eustath. *ad Dion.* Per. 564; Schol. Apoll. Rhod. i. 185; the Scholiast to Pindar, *Nem.* iii. 37, calls them the *Pillars of Aegæon*, which is another name of Briareus; and elsewhere Briareus himself is called Hercules, Zenob. *Procr.* Cent. v. 46.)

But when the ancient writers began to investigate the matter more closely, they were greatly divided in opinion as to where the *Pillars* were to be sought, what they were, and why they were called by the name of Hercules.

1. The name is not found in Homer, although in manner in which he speaks of Ulysses's passage out of the sea into the ocean and back again, seems to imply that he had some knowledge of the Straits.

The earliest distinct mention of the *Pillars of Hercules* in Greek poetry is by Pindar, who more than once names them as the point to which the fame of his heroes reached, but beyond which a mortal could advance, whether he were wise or foolish; and in one passage he speaks of Gades in the same terms, thus evidently regarding the two positions as closely connected. (Pind. *Ol.* ii. 7; *Nem.* iii. 35, iv. 112, *Isthm.* iv. 20.) Herodotus, whose knowledge was derived from the records of Phœnician navigation, speaks of the *Pillars* with perfect familiarity, as of a well-known position, and the tenour of his remarks on those regions leaves little, if any doubt, that he placed them at the Straits. (Herod. iv. 42, 181, 185.) Scylax assigns to them the same position, at the mouth of the Mediterranean, and near Gades. He places them at the distance of a day's journey from one another, and distinguishes

seen the *Columna in Europa* and the *Columna ibyæ*, using the plural by a kind of attraction, when he describes them more particularly, he calls each in the singular. (Scylax, pp. 1, 51, Hudson; pp. 1, 120, 126, ed. Gronov.) From testimonies, as well as from the numerous opinions of other writers, it appears that the common one had become pretty well established from the time of Herodotus. (Comp. Polyb. iii. 35; Diod. Sic. 3; Dion. Per. 64, 454, and Eustath. *ad loc.*; ph. 52; Philostr. *Vit. Apollon.* v. 1, 5, &c.) The same thing is evident from numerous passages in Strabo, who, in the course of a very interesting discussion on the whole subject, accounts for the various positions assigned to the Pillars as follows (pp. 169—172). An oracle had commanded the Greeks to found a colony at the Pillars of Hercules. Settlers sent out for this purpose, on arriving at the Straits, thought they had reached the term both of the inhabited world, and of the expedition of Ulysses; and, taking the rocks of Calpe and Abyla as the Pillars of which they were in search, they fixed at a spot within the Straits, where stood, in Ulysses's time, the city of the Exitani [ΣΑΚΤΑΝΙΟΝ]; finding the sacrifices inauspicious, they returned. Their party, sent out some time afterwards, proceeded 1500 stadia beyond the Straits, as far as an island sacred to Hercules, opposite to the spot on the coast where the city of Ombra afterwards stood; but, again finding the sacrifices inauspicious, they also returned home. A third attempt had for its object the foundation of Gades. Hence it came about that some sought the Pillars in the headlands of the Straits, others at Gades, and others at some place even beyond Gades in the Ocean. The general opinion was in favour of Calpe and Abyla; but some, among whom was Artemidorus, took the Pillars to be small islands near each, of which one was called the *Island of Hera*, by which he seems to mean the islands off *C. Trovialgar*, the ancient *Jus Prom.*, which headland the authors of this work seem to have confounded with Calpe. (Comp. Note to Groenink's translation, l.c.) Some even ascribed the celebrated rocks called *Planetæ* and *plegades* to the Straits, and identified them with the Pillars of Hercules. Scymnus Chius, who, like Artemidorus, took the Pillars for islands, places them within the Straits, at *ΜΑΧΗΑ*, near the city of Exitani, above mentioned. (Vv. 142—146).

As to what the pillars were believed to be, Strabo also gives some interesting information. Some considered them for rocky headlands, others for islands; former rising up from the land, the latter out of the sea, like gigantic columns. But others, regarding the custom previously referred to, or even taking the word *στῆλαι* literally, looked for cities, or artificial mounds, or columns, or statues, erected either by Hercules himself, to mark the term of his conquests, or dedicated by Phœnician navigators to this tutelary deity, to record the extent of their voyages. (Comp. Hesych. s.v. *στῆλαι διορύχους*.) The literal interpretation, he tells us, prevailed among the Iberians and Libyans, who denied that there was anything at the Straits resembling columns, but pointed out, as the Pillars of Hercules, the two columns in the temple of the god at Gades, which the expenses of building the temple were defrayed. He adds that this opinion was held by Strabo, in opposition to the Greeks in general, who considered the pillars to mean *promontories*. Strabo's refutation of this opinion is an interesting

effort of ancient criticism. (Comp. Strab. i. pp. 21, 32, 47, 49, 51, 53, 56, 58, 64, ii. pp. 67, 68, 71, 78, 79, 84, 86, 89, 90, 93, 101, 105, 108, &c. &c.) Not only the nature, but also the number, of the Pillars was disputed; the common opinion making them two, while others gave the number as one, or three, or four. (Hesych. l.c.)

3. The true reason of the name must be sought for in the fact that Melcarth, whom the Greeks identified with Hercules, was the tutelary god of the Phœnicians, as well as in the Greek legends respecting Hercules: how far these legends originated in the Phœnician worship, this is not the place to inquire. The view generally taken by the Greeks may be collected from the passages of Strabo just quoted. But the later writers sought for an interpretation from their physical views of the legends of Hercules. One story was that he tore asunder the rocks which had before entirely divided the Mediterranean Sea from the ocean. (Mela, i. 5. § 3, ii. 6. § 6.) Pliny assigns both reasons (iii. proœm. "Abiis Africæ, Europæ Calpe, laborum Hercules meta: quam ob causam indigenæ columnas ejus Dei vocant, creduntque perfonas exclusas antea admittisse mariæ, et rerum naturæ mutasse faciem.") The interesting speculations of the ancients, respecting the physical changes resulting from the supposed disruption, especially the opinion, disowned by Strabo, that the Mediterranean had previously been connected with the Red Sea, and that the *Isthmus of Sues* was formed by the lowering of the Mediterranean through its new outlet, belong rather to other places in this work [ENTRANCE OF THE MARE INTERNUM]: but it may be worth while to point out here that Mela (l.c.) indicates just the opposite opinion, namely, that the Mediterranean was elevated by the influx of the Atlantic; and the same idea is conveyed by Pliny's phrase of "*admissio mariæ*." Another legend was that Hercules forced the two rocks into temporary union to make a bridge for the safe conveyance of the herds of Geryon to Libya (Avien. *Ors Marit.* 326); and another, that he narrowed the Strait, so as to shut out the sea-monsters which had previously made their way in from the Ocean and infested the Mediterranean (Diod. Sic. iv. 18). It only remains to notice that one of the principal parallels of latitude, by which Eratosthenes and other ancient geographers divided the earth into *κλίματα*, was drawn through the Pillars, passing also through the Straits of Messina, Athens, Rhodes, and the Taurus, to Thinae. (Strab. ii. pp. 67, 68, 79, &c. &c.; Schwartz, *Dis. de Columnis Herculis*, Altorf, 1749, 4to; Gosselin, *Rech. sur la Geogr. Syst. des Anc.* tome iv. pp. 1—10, Paris, 1813; Humboldt, *Kritische Untersuchungen*, vol. i. pp. 451, foll.; Ukert, vol. ii. pp. 248, b. foll.) [P. S.]

HERCULIS INSULA. [CARTHAGO NOVA: OMBRA].

HERCULIS LIBURNI PORTUS [LIBURNUM].

HERCULIS MONOECI PORTUS. [MONOECIA].

HERCULIS PORTUS. 1. A small port on the coast of Etruria, on the S. side of the promontory of *Monte Argentario*. [ARGENTARIUS MORA.]

2. (ὁ *Ἡρακλέους λιμήν*, Strab. vi. p. 356; *Portus Herculis*, Plin. iii. 5. s. 10), a port on the W. coast of Brutium, placed by Pliny between Hipponium and the mouth of the Metaurus. Strabo tells us that it was between Hipponium and the *Portus Herculis* that the coast began to curve round towards the Sicilian Strait. Hence, it is probable that the name was

the Brivates Portus and the Vindana or Vidana Portus. Ptolemy's latitude of the mouth of the Herius (49½°) makes it nearly as far north as the outlet of the Seine. D'Anville [DURETTE] supposes the Herius to be the *Vilaine*, the first large river north of the *Loire*. He adds (*Notice, &c.*, Herius Flav.) that the passage of the *Vilaine* between *Roche-Bernard* and the mouth of the river is now called *Treig-hier*, and that we may readily believe *Treig-hier* to be a corruption of Trajectum Herii. This may be so; or *Treig-hier* may be the old Celtic name. Some geographers assume the Herius to be the small river *Aray* north of the *Vilaine*; but this is only a guess like the other. [G. L.]

HERMAEUM PROM. (*Ἡρμαίου Ἰσθμὸς*, Ptol. iii. 17. § 3), a point on the S. coast of Crete, which has been identified with *Ponta Trividi*. (Höck, *Kreta*, vol. i. p. 388.) [E. B. J.]

HERMAEUM PROM. (*Ἡρμαίου Ἰσθμὸς*). 1. A headland on the coast of Marmarica, between Phoenicia and Paratonium. (Ptol. iv. 5. § 7; *Stadiasm.* p. 437). 2. In Africa Propria. [MERCURIUS PROM.] [P. S.]

HERMI'NIUS MONS (*Ἡρμιῶνος ὄρος*, *Epulorum*; *Sierra de la Estrella*), a mountain range of Lusitania, S. of the river *Durius* (*Douro*), a position of some importance in Caesar's campaign in Lusitania. (Dion Cass. xlvii. 52; Hirt. *Bell. Alex.* 48; *Suet. Caes.* 54.) In the middle ages it was still called *Hermeno* and *Arminna* (Rosendius, *Antiq. Lusit.* p. 58; Link, *Reise durch Portugal*, vol. ii. p. 142; Floren, *Exp. S.* vol. xiii. p. 166; Ukert, vol. ii. pt. 1. p. 177). [P. S.]

HERMIONE or HERMION (*Ἡρμιόνη*, Herod., Xen., Strab.; *Ἡρμιόνη*, Eurip. *Herc. Fur.* 615; Polyb. ii. 52; *Ἡρμιόνη*, Scylax, p. 30; *Eth.* *Ἡρμιόνη*; fem. *Ἡρμιόνη*; Adj. *Ἡρμιόνιος*, *Hermionius*, *Hermionicus*; the territory *Ἡρμιονία*, a town at the southern extremity of Argolis, the wider use of this term, but an independent city during the flourishing period of Grecian history, not possessing a territory named *Hermionia*. The name between the southern coast of Argolis and the land of Hydrea was called after it the *Ἡρμιονικὸν Σάκος* (*Ἡρμιονικὸν σάκος*, Strab. viii. p. 335), which was regarded as distinct from the Argolic and aronic gulfs.

Hermione was founded by the Dryopes, who are said to have been driven out of their original abodes: Mount Oeta and its adjacent valleys by Heracles, and to have settled in the Peloponnesus, where their three chief towns were Hermione, Asine, and Eion. (Herod. viii. 43, 47; Diod. iv. 37.) Hermione is mentioned by Homer along with its kindred city Asine. (Hom. *Il.* ii. 560.) Asine and Eion were conquered at an early period by the Dorians, but Hermione continued to exist as an independent Dryopian state long afterwards. Hermione appears to have been the most important of the Dryopian towns, and to have been in possession at one time of a larger portion of the adjacent coast, as well as of several of the neighbouring islands. Strabo, following ancient authorities, places the promontory Scyllaeum *Hermionia* (Strab. viii. p. 373), and the *Hermionia* if extended along the coast of Troezen as far as is promontory. Hermione is mentioned first among the cities of the Amphictyony, the representatives of which were accustomed to meet in the adjacent land of Calauria (Strab. viii. p. 374), from which has been inferred that Hermione had the pre-eminence of the confederacy, and that the island be-

longed to this city. It is expressly stated that Hydrea belonged to the Hermionians, and that they surrendered this island to the Samian pirates, who gave it into the charge of the Troezenians. (Herod. iii. 59.) The Hermionians are mentioned as Dryopes at the time of the Persian wars: they sent three ships to Salamis, and 300 men to Plataea. (Herod. viii. 43, ix. 28.) Subsequently the Argives took possession of Hermione, and settled there an Argive colony. There is no account of its conquest, and Pausanias supposes that the Argives obtained peaceable possession of the town; but it probably came into their power about the same time that they subdued Mycenae and Tiryns, a. c. 464. Some of the expelled Hermionians took refuge at Haliæ, where the Tirynthians had also settled; and it was perhaps at this time that the lower city was deserted. (Paus. ii. 34. § 5; Strab. viii. p. 373; comp. Steph. B. s. v. *Tyros*; Müller, *Dor.* vol. i. p. 199, Engl. trans.) Hermione now became a Doric city; but the inhabitants still retained some of the ancient Dryopian customs. Thus it continued to be the chief seat of the worship of Demeter Chthonia, who appears to have been the principal deity of the Dryopians; and we learn from a remarkable inscription that the Asineans, who had settled in Memeia after their expulsion from Argolis, continued to send offerings to Demeter Chthonia at Hermione. (Böckh, *Inscr.* no. 1193.) Although Hermione had fallen into the hands of the Argives, it did not continue permanently subject to Argos, and it is mentioned subsequently as an independent town and an ally of Sparta. (Thuc. ii. 56, viii. 3.) After the capture of the Acrocorinthus by Aratus, the tyrant who governed Hermione voluntarily surrendered his power, and the city joined the Achaean league. (Polyb. ii. 44.) Hermione continued to exist long afterwards, as is proved by its numerous coins and inscriptions.

Pausanias describes Hermione at considerable length. The old city, which was no longer inhabited in his time, stood upon a promontory seven stadia in length, and three in breadth at its widest part; and on either side of this promontory there was a convenient harbour. There were still several temples standing on this promontory in the time of Pausanias, of which the most remarkable was one sacred to Poseidon. The later town, which Pausanias visited, stood at the distance of four stadia from this temple upon the slopes of the hill Pron. It was entirely surrounded by walls, and was in earlier times the Acropolis of the city. Among its ruins lies the modern village of *Kastri*. Of the numerous temples mentioned by Pausanias the most important was the ancient Dryopian sanctuary of Demeter Chthonia, situated on a height of Mount Pron, said to have been founded by Chthonia, daughter of Phoroneus, and Clymenus her brother. (Eur. *Herc. Fur.* 615.) It was an inviolable sanctuary; but it was plundered by the Cilician pirates. (Phot. *Lex.* s. v. *Ἡρμιόνη*; Plut. *Pomp.* 24.) Opposite this temple was one sacred to Clymenus; and to the right was the Stoa of Echo, which repeated the voice three times. In the same neighbourhood there were three sacred places surrounded with stone fences; one named the sanctuary of Clymenus, the second that of Pluto, and the third that of the Acherusian lake. In the sanctuary of Clymenus there was an opening in the earth which the Hermionians believed to be the shortest road to Hades, and consequently they put no money in the mouths of their dead to pay

the ferryman of the lower world. (Paus. ii. 35; Strab. viii. p. 373.)

From Hermione a peninsula, now called *Kroniada*, extends towards the south and west. It contains two promontories, on each of which there are Hellenic remains. Pausanias names two ancient places, called Halice and Mases, on the road from Hermione to Asine, both of which must have been situated in this peninsula, but he gives no further indication of their position. It has been conjectured that the Hellenic remains near *C. Moudi*, on the more easterly of the two promontories above mentioned, are those of Halice; and that the remains on the more westerly promontory at Port *Khalis* represent Mases: but there are good reasons for believing that the ruins near *C. Moudi* are those of some town the name of which has not been recorded; that Halice, or, as it is also called, Halina, stood at Port *Khalis*; and that Mases was situated more to the north, on the western coast, at Port *Khalis*. In the time of Pausanias, Mases served as the harbour of Hermione. [HALICE; MASES.] Towards the east the frontier of the Hermionis and Troezenia was marked by a temple of Demeter Thermania, close to the sea, 80 stadia westward of Cape Scyllaeum, the name of which has been preserved in that of *Thérmei*. (Paus. ii. 34. § 6.) Near this temple, on the road from Troezen to Hermione, was a small place called *Eliai* (Ελαι), the name of which has been preserved in the modern *Ilio*. Westward the Hermionis seems to have extended as far as the territory of Asine. On the road from Mases to Asine, Pausanias mentions the promontory *Strutius* (Στυτιάς); at the distance of 250 stadia from which, by a mountain path, were *Phylawonium* (Φυλαώνιον) and *Bolei* (Βολαι), the latter being the name of a heap of stones: 20 stadia beyond Bolei was a place called *Didymi* [Διδυμι]. (Leake, *Mores*, vol. ii. p. 457, seq.; *Poloponnesos*, p. 281, seq.; Boblaye, *Recherches*, &c. p. 60; Curtius, *Poloponnesos*, vol. ii. p. 454, seq.)

HERMIONES, one of the three great divisions into which, according to Tacitus (*Germania* 2), the German nation was divided. These divisions were the *Ingaevones*, inhabiting the country near the ocean; the *Hermiones*, occupying the central parts of Germany; and the rest were called *Istaeones*. All three were said to have received their names from the three sons of Mannus; and as the one after whom the Hermiones were called, bore the name of *Hermio*, *Irmio*, or *Irmis*, Grimm (*Deutsche Mythol.* i. p. 290, 2nd ed.) suggests that their name should be written *Hermionones*, which is actually the reading of one of the MSS. of Tacitus. Pliny (iv. 28), instead of three, mentions five great divisions of the Germans, and makes the Hermiones the fourth, adding that they included the Suevi, Hermunduri, Chatti, and Cherusci. Modern writers have hazarded numerous conjectures as to the different tribes contained in these three or five groups; but it will ever remain impossible to arrive at any satisfactory result. (See also Mela, iii. 3; Orph. *Argos*. 1134.) [L. S.]

HERMIONICUS SINUS. [HERMIONIA.]

HERMIONIS. [HERMIONIA.]

HERMISUM (Pomp. Mela, ii. 1. § 3; Plin. iv. 12), a town on the W. coast of the Tauric Chersonesus. [E. B. J.]

HERMON. [ANTILIBANUS.]

HERMONACTIS VICUS (Ἐρμονακτῆς Ὀπίς, Strab. vii. p. 306; Ptol. iii. 10. § 14), a place in Sarmatia Europaea, near the mouth of the Tyras,

where was the tower of Neophemus (Strab. l. c. comp. Anon. *Periplus*. p. 10), perhaps a light-house. In this neighbourhood, not long since, the remains of an old tower were found. (Klitzsch, *Mon. de l'Ant. de St. Petersb.* vol. x. p. 580.) [E. B. J.]

HERMONACUM or HERMONACH, one of the many names of towns ending in *acum* in East Gallic, is placed by the Table between Camerac and Bagacum (Camberg, and Basing), and the Bagacum, which is 8 Gallic leagues from the place *Bermoravia*, between *Cambreg* and *Basing*, vice he supposes to represent *Hermonacum*. [E. B. J.]

HERMONASSA (Ἐρμονάσσα, Dimp. 35. Scymn. Fr. 153; Pomp. Mela, ii. 18. § 5; Ptol. 9; Steph. B. a. v.), a place lying between Gal. and Phanagoria, which Rasmell (*Compos.* 69, vol. ii. p. 331) fixes at the opening of the lake in which the Kaban river flows. [E. B. J.]

HERMONTIS (Ἐρμοντίς, Steph. B. a. v.; Strab. xvii. p. 817; Aristid. *Agrippina*, p. 508; Strab. xviii. p. 160; Ptol. v. 9. § 11; Marc. Sedona. i. 21), the modern *Erment*, was the town of the Hermontian nome in the Thebaid. Thebais Superior of the Hieracaria. It is about eight miles SW. of Thebes, and 34 E. Latopolis, in lat. 25° 10' N. A little above Hermontis the sandstone rocks which had confined the Nile like a wall disappear, and limestone hills come leaving, especially on the western bank of the wider margins of cultivable land. In a part of this expanding character, and on the left side of Nile, stood Hermontis. In the Pharaonic times it was celebrated for the worship of Isis. Isis, at their son Horus. Its ruins still attest the splendour of its buildings; but the lion, of which remains are extant, was built in the reign of Isis at Cleopatra (a. c. 51–29), and the sculptor appears to allude to the birth of Caesar, her son by Julius Caesar, symbolised as that of the god Egypt the son of Memphis and Rhea. Its ancient ceiling is probably gnostical, relating to the aspect of the heavens at the time of Caesar's activity. Adjacent to the temple are the ruins of a tank, which probably served as a Nile reservoir. Its sides exhibit the grooves used in and between the later Caesars, Hermontis was the headquarters of the Legio IIIda Valentiana. (Cappellon, *L'Egypte*, vol. i. p. 195.) [W. B. J.]

HERMOPOLIS MAGNA (Ἐρμωπόλις μεγάλη, Steph. B. a. v.; Ptol. iv. 5. § 60; Herodotus, i. 16; Strab. xviii. p. 154; Marc. Mercurii Oppidum, Ptol. v. 9. § 11; *Et. Gen.* *Ἐρμωπόλις* or *Ἐρμωπολίτης*), the modern *Elmas* was situated on the left bank of the Nile about 27° 4' N., and was the capital of the Hermapolite nome in the Heptanomia. It is sometimes named by Pliny, reckoned among the cities of Egypt and not of Middle Egypt. Hermopolis stood on the borders of these divisions of Egypt, and, for ages, the Thebaid or upper country extended as far as the N. than in more recent periods. The border town, Hermopolis was a place of great resort and opulence, ranking second to Thebes. A little to S. of the city was the castle of Ermentopolis, at which point the river craft from the country paid toll (*Ἐρμωπολίτης ὁρίων*, Strab. xvii. p. 813; Ptol. l. c.; the *Bahr Jung* is a Arabian). The groves of Beni-hassan, near Hermopolis, upon the opposite bank of the Nile were the common cemetery of the Hermopolites; although the river divided the city from the necropolis.

polls, yet, from the wide curve of the western hills at this point, it was easier to ferry the dead over the water than to transport them by land to the hills. The principal deities worshipped at Hermopolis were Typhon and Thoth. The former was represented by an hippopotamus, on which sat a hawk fighting with a serpent. (Plut. *Is. et Osir.* p. 371. D.) Thoth or Tauti, the Greek Hermes, the inventor of the pen and of letters, the Ibis-headed god, was, with his accompanying emblems, the Ibis and the Cynocephalus or ape, the most conspicuous among the sculptures upon the great portico of the temple of Hermopolis. His designation in inscriptions was "The Lord of Kahmoon." This portico was a work of the Pharaonic era; but the erections of the Ptolemies at Hermopolis were upon a scale of great extent and magnificence, and, although raised by Grecian monarchs, are essentially Egyptian in their conception and execution. The portico, the only remnant of the temple, consists of a double row of pillars, six in each row. The architraves are formed of five stones; each passes from the centre of one pillar to that of the next, according to a well-known usage with Aegyptian builders. The intercolumniation of the centre pillars is wider than that of the others; and the stone over the centre is twenty-five feet and six inches long. These columns were painted yellow, red, and blue in alternate bands, and the brilliancy of the colours is well represented in Miniot's 14th plate. There is also a peculiarity in the pillars of the Hermopolitan portico peculiar to themselves, or, at least, discovered only again in the temple of Gournou. (Dénon, *L'Égypte*, plate 41.) Instead of being formed of large masses placed horizontally above each other, they are composed of irregular pieces, so artfully adjusted that it is difficult to detect the lines of junction. The bases of these columns represent the lower leaves of the lotus; next come a number of concentric rings, like the hoops of a cask; and above these the pillars appear like bunches of reeds held together by horizontal bonds. Including the capital, each column is about 40 feet in height; the greatest circumference is about 33½ feet, about five feet from the ground, for they diminish in thickness both towards the base and towards the capital. The widest part of the intercolumniation is 17 feet; the other pillars are 13 feet apart. Hermopolis comparatively escaped the frequent wars which, in the decline both of the Pharaonic and Roman eras, devastated the Heptanomis; but, on the other hand, its structures have suffered severely from the ignorance and cupidity of its Mohammedan rulers, who have burned its stones for lime or carried them away for building materials. [W. B. D.]

HERMOPOLIS PARVA (*Ἡρμόπολις μικρά*, Steph. B. s. v.; Strab. xvii. p. 802; Ptol. iv. § 46; *s. Anton.* p. 154), the modern *Damanhur*, was a city of the Egyptian Delta, in the nome of Alexandria, or, as it was sometimes described, the chief town of a Deltaic Hermopolite nome. It stood in *s. 31° N.* on the banks of a canal which connected the lake Mareotis with the Canopic or most westerly arm of the Nile. It was 44 miles S.E. of Alexandria. *Thamnopoli*, *L'Égypte*, vol. ii. p. 249.) There were, besides, two other towns of the same name: 1. on an island near the city Butos (Strab. xvii. p. 802); another a little below Thmuis (Strab. l. c.; Steph. s. v.). [W. B. D.]

HERMUNDURI (*Ἡρμουνδοί* or *Ἡρμουνδοί*), large and powerful tribe of Germany, occupying

the extensive country between the mountains in the north-west of Bohemia and the Roman wall in the south-west, which formed the boundary of the Agri Decumates. On the east they bordered on the Nariaci, in the north-east on the Cherusci, and in the north-west on the Chatti. The accounts of the ancients about the Hermunduri are very contradictory. They belonged no doubt to the Suevi; but respecting their earliest place of abode, and the reasons which induced them to quit their homes, nothing is known. They first appear in history at the time of Domitian. *Ahenobarbus*, as a host expelled from their country and wandering about, until *Ahenobarbus* assigned to them a part of the territory of the Marcomanni, between the Main and the Danube. That district had been abandoned by the Marcomanni, and continued to be inhabited by the Hermunduri at the time of Tacitus, who describes them as friends of the Romans. (*Dien. Cass. Fragm.* 32, ed. Morel; *Tac. Germ.* 41.) Their original country was, according to some, in the north of Bohemia and the neighbouring mountains; for Tacitus places the sources of the Albis in the country of the Hermunduri, while Strabo (vii. p. 290) places them beyond the Albis. At all events, however, they were always hostile to the Marcomanni. (*Tac. Ann.* ii. 63, xii. 39, xiii. 57.) After the overthrow of Maroboduus and Catualda, which they themselves had assisted to effect (*Tac. Ann.* ii. 63), they spread in a north-eastern direction, taking possession of the north-western part of Bohemia and the country about the sources of the *Mæis* and *Saale*, that is, the part of Franconia as far as *Kiesingen*, and the south-western part of the kingdom of Saxony. (*Vell. Pat.* ii. 106; *Tac. Ann.* xiii. 57.) Henceforth they continued to occupy that extensive country, and soon after we find them allied with their old enemies, the Marcomanni, in their war against the Romans. (*Jul. Capitol. M. Anton.* 32; *Europ.* viii. 13.) After this war they are no longer mentioned, but seem to be comprised under the general name of the Suevi; for *Jul. Capitolinus* expressly mentions the Hermunduri on the same occasion, where others, such as *Europsius* and *Orosius* (vii. 15), speak only of Suevi. Even Ptolemy appears not to have known them, for, in ii. 11. § 24, he enumerates in their country quite different tribes, which are otherwise unknown to us. The name Hermunduri is believed by some to signify highlanders, and to be a compound of *Her=Ar*, that is "high," and *Mund=Man*. (Wilhelm, *Germanien*, pp. 208, fol.) [L. S.]

HERMUS. [ATTICA, p. 335, b.]

HERNICI (*Ἡρνικοί*, Strab.; *Ἡρνικες*, Dionys.), a people of Central Italy, whose territory was in later times included in Latium, but who appear in the early history of Rome as a separate and independent nation. They inhabited the upper valley of the Tiber or Sacco, together with the mountain district N. of that river; and bordered on the Aequians towards the N., and on the Volscians to the S. and E. We are told that their name was derived from an old Sabine or Maric word "herne," signifying a rock, as appellation well suited to the character of their country, the "Hernica saxa" of Virgil. (*Virg. Aen.* vii. 684; *Serv. ad loc.*; *Festus, s. Hernici*.) This derivation would seem to point to their being a race akin to the Sabines; and *Servius* distinctly calls them a Sabine colony (*Serv. ad Aen.* l. c.); nor does there seem to be any reason to reject this statement, although the authority of that commentator is in itself of little weight (*Niebuhr* vol. i.

p. 102). An older commentator on Virgil assigns them a Marsic origin (Schol. Veron. ad *Æn.* l. c.), which comes to much the same thing, as the Marsi were certainly closely related to the Sabines. [MARS.] On the other hand, Julius Hyginus (*ep. Macrob.* v. 16) affirmed that the Hernicans were a Pelasgic race; and Macrobius regards the description of their arm and attire given by Virgil as pointing to the same conclusion. No value can, however, be attached to this inference: and the former tradition seems to be the best attested, as well as in itself the most probable. The peculiarly close relation which we find subsisting between the Hernicans and Latins, probably arose from their common interest in opposing their formidable neighbours, the Aequians and Volscians, rather than from any community of origin.

The Hernicans first appear in Roman history in the reign of Tarquinius Superbus, when, according to Dionysius, they concluded a treaty of alliance with that monarch, who sought to unite the Hernicans and Latins into one common league with Rome. (Dionys. iv. 49.) This fact is not noticed by Livy, but is not in itself improbable; and the alliance thus concluded may have been only the forerunner of that which we know to have existed at a later period. An ancient tradition, indeed, not noticed by the historians, but preserved to us by Festus (*s. v. Septimontium*), represents the Hernican chief, Laevius Clapius of Anagnin, as conducting a body of auxiliaries to Rome at a still earlier period. But it is probable that this legend, as so often happens in the early history of Rome, is chronologically misplaced. After the expulsion of the Tarquins, the Hernicans appear for a short time on terms of hostility with Rome (Liv. ii. 22, 40; Dionys. vi. 5, 50): but this state of things was soon terminated by a treaty, which established between the two nations those relations of amicable alliance which from this time subsisted for a long period without interruption (Liv. ii. 41; Dionys. viii. 69). It is true that this treaty, which was concluded by Sp. Cassius in a. c. 486, is represented by the Roman historians as granted to the Hernicans after they had been vanquished in war; and Livy even tells us that they were deprived by it of two-thirds of their territory, but this appears wholly inconsistent with the position in which we afterwards find them: and there is every probability that Dionysius is correct in stating that the treaty with the Hernicans was a counterpart of that concluded seven years before, by the same Sp. Cassius, with the Latins. (Niebuhr, vol. ii. p. 87.) The motive for both treaties was indeed obviously the same—the necessity of combining their forces against the increasing power of the Aequians and Volscians. The latter people had already made themselves masters of the Hernican town of Ferentinum, and were threatening to drive the Hernicans from the whole valley of the *Troas*. The statement of Livy already alluded to, may possibly, as suggested by Niebuhr, have arisen from a misconception of the fact that a third of all conquered lands, as well as of the booty taken in war, was thenceforth to be assigned to the Hernicans: a condition which is expressly stated by Dionysius (viii. 71, 77), and which shows that they entered into the league as an equal and independent power. From this time forth, during a period of more than a century, they continued, in pursuance of the terms of their alliance, to take part with the Romans and Latins in their long and continuous

struggle against the Aequians and Volscians, and they were even, from their position, often the first to bear the brunt of hostilities. (Liv. iii. 6; Dionys. ix. 5, 67, x. 20.)

But the relations which had so long subsisted between the Hernicans and Rome, appear to have been broken up by the great Gaulish invasion; and soon after the capture of the city, in a. c. 387, we find the Hernicans as well as the Latins appearing in arms against the republic, and even lending assistance to their old enemies the Volscians. (Liv. vi. 2, 6, 8, 11, 17, &c.) From this time they appear to have been sometimes in open hostility; at others a suspension of arms at least must have taken place; but in a. c. 361, after an interval of some years, during which a precarious peace seems to have existed, the whole Hernican nation took up arms, and engaged with all their forces in the struggle with Rome. (Id. vii. 6—9.) Though at first successful, they were afterwards twice defeated by the Romans, and the strong city of Ferentinum taken; but still the war seems to have lingered on, till, in a. c. 358, we are told that the Hernicans were defeated and subdued (*"devicti subactique sunt"*) by the consul C. Plautius. (Liv. vii. 15; Fast. Capit.) The exact force of these expressions, and the terms on which they were now reduced to submission, we are left to conjecture; but it seems certain that they were either effectually humbled, or again admitted to such favourable terms as secured them to the Roman alliance, for, even on occasion of the great outbreak of the Latins in a. c. 340, the Hernicans did not follow their example, but were steadfast to the Roman cause. At a later period they were less faithful: in a. c. 306, it was discovered that Hernican auxiliaries had fought in the ranks of the Samnites against Rome; and an investigation being ordered by the senate, the Hernicans resented this interference, and declared war against Rome. Their counsels were, however, divided; and though Anagnin, their chief city, put itself at the head of the warlike party, the three powerful cities of Alatrium, Ferentinum, and Verulae refused to take part in hostilities. The consequence was that the war was carried on with little spirit, and the consul Q. Marcius in a single campaign was able to reduce the whole people to subjection. (Liv. ix. 42, 43; Fast. Capit.) Their relations to the conquerors were now established on a permanent footing: the three cities that had taken no part in the war were allowed to retain their own laws and magistrates, with the privileges of mutual intercourse, while Anagnin, and the other towns that had taken arms against Rome, received the nominal boon of the Roman civitas, but without the right of suffrage; their magistrates were deprived of all civil jurisdiction, and they were reduced to the subordinate and degraded condition of *praefecturae*. (Liv. l. c.; Festus, *v. Praefectura*.)

From this time the Hernicans disappear from history. They must have obtained the full rights of Roman citizens by the *Lex Julia* in a. c. 90, and became gradually merged in that condition, in common with the Latins and Volscians. But though their territory was included in Latium, in the sense in which that term was understood in the days of Augustus, the Hernicans were still distinguishable as a separate people, and are mentioned even at a later time as retaining many characteristics of their rude and simple forefathers. (Juv. Sat. xiv. 180.) The exact limits of their territory

cannot be fixed with any certainty, and they probably varied at different times, as did those of the neighbouring Volscians. The only cities which we can assign to them with certainty are, ANAGNIA, the capital or chief city of the league, FERENTINUM, LATIUM, and VERULAN, to which may be added the small town of CAPITULUM, and probably also NEBBIA. FERENTINUM appears to have been a Volscian rather than a Hernican town, though it may have originally belonged to the latter people. But it is evident from a passage of Livy, in which he tells us that all the states of the Hernicans ("omnes Hernici nominis populi," ix. 43), besides the four above mentioned, joined in the war against Rome, that there must have been several other towns of sufficient importance to have taken part in the war, and the assembly which preceded it, as independent states. And it is at least a plausible inference of Niebuhr's, that, of the 47 cities stated by Dionysius to have taken part in the sacrifices on the Alban Mount, 16 must have belonged to the Hernicans. It is however probable that these were for the most part merely little mountain towns, of which we are able to point out either the names or localities. Niebuhr's statement (v. p. 231) that the Hernicans settled near to Lanuvium and Alba and Rome itself, utterly unintelligible, and is probably nothing more than a mere mistake.

The country of the Hernicans is well characterised by Virgil in a single line, where he speaks of the "occidua rivis Hernica saxa" (*Æn.* vii. 684; *Sil.* i. iv. 226, viii. 393). The mountains on the N. the valley of the Tiberis are everywhere watered by beautiful streams, and clothed with magnificent woods of oak and chestnut, which render them some of the most beautiful regions of the Apennines. They are separated from the range of the Volscian mountains, the Montes Lepini, by the broad and fertile valley of the Sacco, which communicates with the plains of Latium by the pass or opening below Ferentino. Towards the interior the Hernican mountains rise in a lofty group or range which separates the valley of the Sacco and the upper course of the Anio from the waters of the Liris. Besides the TIBERIS or Sacco, the only other stream in the district of the Hernici of which the ancient name is preserved to us, is the Cosas (*Kōsas*, Strab. v. 37), still called the *Cosa*, which flows beneath the walls of *Alatri* and *Frosinone*, and joins the sea about 5 miles below the latter city. [E.H.B.] HERODEIUM. (*Ἡροδείου*, *Ἡροδίων*, *Ἡροδία*, l. a. v.) 1. A city and fortress of Palestine, founded by Herod the Great, and situated about 12 stadia from Jerusalem, and not far from Tekoa. *Joseph. Antig.* xv. 9. § 4, *B. J.* i. 21. § 10, *B. J.* i. 5. § 5.) Here on a hill of moderate height having the form of a woman's breast, and which he raised higher, or at least fashioned by artificial means, he erected a fortress with rounded towers, having apartments of great strength and splendour. The difficult ascent was overcome by a flight of two broad steps of hewn stone. At the foot of the mountain he built other palaces for himself and his family, and caused water to be brought thither from a distance in large quantity and at great expense. The whole plain around was also covered with vineyards, forming a large city, of which the hill fortresses constituted the acropolis. (*Joseph. l. c.*) as to this place apparently, that the body of Herod was brought for burial, 200 stadia from Tekoa, where he died. (*Joseph. Antig.* xvii. 8. § 3,

B. J. i. 32. § 9.) This city was so important that one of the toparchies afterwards took the same name, and Pliny ("Herodium cum oppido illustri ejusdem nominis," v. 16) mentions it as a town of great note. It does not occur either in Ptolemy or Eusebius and Jerome.

The "Frank Mountain," with which Herodium has been identified, bears in Arabic the name of *el-Furaidle*, a diminutive of the word signifying Paradise. The mountain has not been usually ascended by travellers; among those who speak of having been upon it are, Von Troilo, Nau, Le Brun, Pococke, Irby and Mangles, and some others. Dr. Robinson (*Researches*, vol. ii. pp. 169—175), whose account has been here followed, describes it as rising steep and round, precisely like a volcanic cone, but truncated. The height above the base cannot be less than from 300 to 400 feet, and the base itself has at least an equal elevation above the bottom of *Wady Urdis* in the SW., towards which there is a more general descent. There are traces of terraces around the foot of the mountain, but not higher up; nor is there any road to the top or fence upon the S., as described by Pococke (*Trav.* vol. ii. pt. i. pp. 43, fol.). The top of the mountain, constituting a circle of 750 feet in circumference, is inclosed by the ruined walls of a circular fortress, built of hewn stones of a good size, with four massive round towers standing at each one of the cardinal points. Either the ruins have formed a mound round the circumference, or the middle part of the inclosure was once excavated; it is now considerably deeper than the circumference. The tower upon the E. is not so thoroughly destroyed as the rest, and in it a magazine or cistern may still be seen. The present name of the "Frank Mountain" is known only among the Franks, and is founded on a report that this post was maintained by the Crusaders for 40 years after the fall of Jerusalem; but the silence of the historians of the Crusades, and the small size of the position, lead to the conclusion that this was a legend of the fifteenth century, when, in A.D. 1483, the story first appears, in Felix Fabri (*Evagatorium: de Monte Rama et ejus Oppido fortissimo*, vol. ii. pp. 335—337), and has been repeated under different forms by subsequent travellers.

An earlier mention of this mountain than the times of Herod, or indeed any mention of it in the Scriptures, cannot be assumed with any certainty. Pococke has suggested that it may have been the Beth-Haccerem of the prophet Jeremiah (vi. 1), where the children of Benjamin were "to set up a sign of fire," while they blew the trumpets in Tekoa. Jerome (*Comment. in Jer.* vi. 1) also says that there was a village called Bethsacharna, situated on a mountain between Tekoa and Jerusalem. If BETH-HACEREM was indeed succeeded by the fortress and city of Herod, it is difficult to see why Jerome, who usually employs the Greek names by preference; should here and elsewhere make no allusion to the more important Herodium. (Rehnd, *Palæstina*, vol. ii. p. 820; Von Raumer, *Palæstina*, pp. 220—464; Ritter, *Erdbkunde*, vol. xv. pt. i. pp. 617—624; Hirt, *Ueber die Ruine Herodes des Grossen. Abhandl. der Berl. Akad.* 1816-1817, p. 5.)

2. Another fortress of the same name was built by Herod on a mountain towards the Arabian frontier (τῆς πρὸς Ἀραβίαν ὁρίης: *Joseph. B. J.* i. 21. § 10), not "of Arabia," as Dr. Robinson (*Researches*, vol. ii. p. 173) says. [E. B. J.] HEROOPOLIS (*Ἡεροπόλις* or *Ἡρόδ.*, Strab.

xxi. 26; *Deut.* ii. 9; *Josh.* iii. 10.) It belonged to the tribe of Benben (*Numbers*, xxiii. 37; *Josh.* xiii. 17); but, as it was on the confines of Gad, is sometimes assigned to the latter tribe (*Josh.* xxi. 39; 1 *Chron.* vi. 81). When the ten tribes were carried off, Hesbon fell into the hands of the Moabites, and is mentioned by the prophets in their denunciations against that people. (*Is.* xv. 4; *Jer.* xlviii. 2, 3, 4, 45.) Under king Alexander Jannæus it was again reckoned as a Jewish city. (*Joseph. Ant.* xiii. 15. § 4.) Ptolemy (v. 17) mentions it under the name Eabus (*Ἐβούρα*), and the "Arabes Eabusitæ" of Pliny (v. 12) must be referred to this place. Eusebius and Jerome (*Onom.*) speak of it as a place of some consequence in their day, under the name of Eabus (*Ἐβούς*), at a distance of 20 M. P. from the river Jordan. There is a coin of the emperor Nero, with the epigraph HEBEA, the type a female figure with a crown and palm. (Mionnet, *Supplément*, vol. viii. p. 387.) But the best known are the coins of Caracalla, with the type a temple of Astarte, or a "Deus Lunus" with a Phrygian cap, and the epigraph ECBOT. (Eckhel, vol. iii. p. 503; Mionnet, vol. v. p. 585.) It occurs in the list of the Eparchies of Arabia under the name of *Ἐβούρα*. (Beland, *Notit. Vet. Eccles.* p. 218), but is not mentioned by Hierocles, though a *πόλις Ἐβούρων* occurs in the Acts of the Council of Chalcedon. Under the name of *Chosbæ* it became the metropolis of *El-Belka*. (*Abû-l-feldâ, Tab. Syr.* p. 11.)

The region of the *Wady Hesbin* was first visited in modern times by Seetzen (*Zach's Monatsh. Corr.* xviii. p. 431), then by Burkhardt (*Trav.* p. 365), and afterwards by Irby and Mangles (*Trav.* p. 471). These latter writers speak of the "ruins as uninteresting, and the only pool they saw too insignificant" for the "fish-ponds" famous in Hebrew poetry. (*Canst.* vii. 4.) Near the tent village of *Hesbon* are the ruins of ancient Hesbon, where there are some wells excavated in the rock, a ruined castle, and a large cistern, which only requires to be cleared of the rubbish to be still available. (Chesney, *Expedit. Esphrat.* vol. i. p. 516.)

(*Reland, Palæstina*, vol. ii. p. 720; Rosenmüller, *Handbuch der Bibl. Alt.* vol. ii. pt. i. p. 266; Von Raumer, *Palästina*, p. 253; Winer, *Biblisches Realwörterbuch*, a. v.; Ritter, *Erdbunde*, vol. xv. pp. 114, 143, 574, &c.) [E. B. J.]

HESPERIA. [ITALIA.]

HESPERIDES or HESPERIS (*Ἑσπερίδες*, *Ἑσπερίς*), afterwards BERENICE (*Βερενίκη*; *Ben Ghazi*, Ru.), the westernmost city of the Cyrenaic Pentapolis, stood just outside the E. extremity of the Great Syrtis, on a promontory called Pseudopenias, and near the river Lathon. It seems to have derived its name from the fancy which found the fabled Gardens of the Hesperides in the fertile terraces of Cyrenaica; and Strabo distinctly mentions the gardens and the lake of the Hesperides in this neighbourhood, where we also find a people called Hesperidae; or, as Herodotus names them, *Euesperidae*. Its historical importance dates from the reign of the Ptolemies and it was then named Berenice after the wife of Ptolemy III. Evergeter. It had a large population of Jews. (Strab. xvii. p. 836; Meis, i. 8; Plin. v. 5; Solin. 27, 54; Ammian. Marc. xxii. 16; Steph. B. a. v. *Ἑσπερίς*; Hierocles, p. 733, where the name is *Βερενίκη*; *Stadiasm.* p. 446, *Βερενίκη*; *Itin. Ant.* p. 67, *Berenice*; *Tab. Peut.*, *Bernicidæ*; Ptol. iv. 4. § 4, viii. 15. § 3.) Having been greatly reduced by that decline of commercial importance and those ravages

of the barbarians which were so severely felt by all the cities of the Pentapolis [CYRENAICA], it was fortified anew by Justinian, who also adorned it with baths. (Procop. *de Aedif.* vi. 12.) Its name is sometimes as an epithet for Cyrenaica, in the form of the adjective *Berenicæ*. (Sil. Ital. iii. 249; Lucan, ix. 524: Beechey, *Della Cella, Pacho, Barth.*) [P.S.]

HESPERIDUM HORTI. [HESPERIDES.]

HESPERIDUM LACUS. [HESPERIDES.]

HESPERIS. [HESPERIDES.]

HESPERIUM PROMONTORIUM. [LIBYA.]

HESSUS (*Ἡέσος*; *Ἡέθ*, *Hævis*), a town of the Locri Ozolæ, upon the coast of the Corinthian gulf, and on the road to Neapactus. Its exact site is uncertain, but it is probably represented by the Hellenic remains at *Vithari* or *Polyporta*. (Thuc. iii. 101; Steph. B. a. v.; Leake, *Northern Greece*, vol. ii. p. 620.)

HETRICULUM. [BRUTII.]

HETRURIA. [ETRURIA.]

HEXI. [SAXATANUM.]

HIBERNIA. [IKERNE.]

HICE'RIA. [ÆOLIAN INSULÆ.]

HIERA (*Ἱέρα*), the name of several islands.

1. One of the *Ægætes*. [ÆGÆTES, No. 1.]

2. One of the *Æolian* or *Liparian* islands. [ÆOLIAN INSULÆ.]

3. An island close to Calauria, to which it is now united. [CALAUREIA.]

4. A small island between Thera and Therasia. [THERA.]

HIERA SYCAMINUS (*Ἱέρα Συκμίνος*, Ptol. iv. 5. § 74; *Συκμίνος*, Philostrat. *Vit. Apoll.* vi. 2; Plin. vi. 29. a. 32; *It. Anton.* p. 163), the southern frontier town of the *Regio Dodecaschoenus*.

[ÆTHIOPIA.] The island *Tachompe* had been the original boundary; but the Romans extended it southward to Hierasycaminos. Here Apollonius of Tyana (Philostrat. l. c.) found one of those African markets in which wares,—gold, linen, ivory, and gums,—are exposed for sale, while the buyers and sellers kept apart from each other until each party had deposited a satisfactory equivalent. Hierasycaminos is now probably represented by *Wady Maharrakah*, where the ruins of a temple are still visible. The distance between Syene, the N. boundary of this district, and *Wady Maharrakah* (720 stades = 12 schoeni = 90 miles), favours this supposition. Lat. 22° N. [W. B. D.]

HIERA'CON (*Ἱέρακων*, *It. Anton.* p. 167) or THERA'CON (*Not. Imp.*), was a castle of Upper Egypt, situated on the right bank of the Nile. Here, in Roman times, was quartered the cohort prima of the *Lusitanian* auxiliaries. It stood nearly midway between the W. extremity of Mons Alabastrites and the city of Lycopolis, lat. 27° 15' N. Hieracon (*Ἱέρακων*, Ptol. vi. 7. § 36) is to be distinguished from Hieracompolis (*Ἱέρακων πόλις*, Strab. xvii. p. 817), which was S. of Thebes, lat. 25° 5' N., nearly opposite the town of Eleithia. [W. B. D.]

HIERAPOLIS (*Ἱεραπόλις*; *Ἡέθ*, *Ἱεραπολῆς*).

1. A considerable town in Phrygia, situated upon a height between the rivers Lycus and Maeander, about five miles north of Laodicea, and on the road from Apameia to Sardis. It was probably founded by the Greeks, though we have no record of the time or circumstances of its foundation. It was celebrated for its warm springs and its Platonium, to which two circumstances it appears to have owed its sanctity. The warm springs formed stalactites and incrustations. (Strab. xiii. p. 629; Vitruv. viii. 3.)

Some ruined mosques and square Saracenic towers, with the remains of its surrounding walls and ditches, mark the limits of the Muslim city, within which are four large cisterns, a fine sarcophagus, and, among other ancient remains, the scattered ruins of an acropolis and two temples.

Of the smaller, the inclosure and portions of seven columns remain; but it seems to possess little interest compared with the larger, which may have been that of the Syrian "Queen of Heaven." Among the remains of the latter are some fragments of massive architecture, not unlike the Aegyptian, and 11 arches form one side of a square paved court, over which are scattered the shafts of columns and capitals displaying the lotus.

A little way to the W. of the walls there is an extensive necropolis, which contains many Turkish, with some Pagan, Seljukian, and Syrian tombs; the last having none almost illegible inscriptions in the ancient character. (Chesney, *Exped. Euphrat.* vol. i. p. 516.) Hierapolis was the ecclesiastical metropolis of the province Euphratensis. (Neale, *Hist. of East. Church.* vol. i. p. 134.)

Eckhel (vol. iii. p. 261) has noticed the fact, that the coins of Hierapolis copy the type of those of Antioch: they are Seleucid, autonomous, and imperial, ranging from Trajan to the elder and younger Philip. [E. B. J.]

HIERAPYTNA (*Ἱερὰ πυτνα*, Strab. ix. p. 440, x. pp. 472, 475; Plin. iv. 20; *Ἱερὰ Πύρνα*, Ptol. iii. 17. § 4, where some MSS. have *Ἱερὰ Πέρνα*; Steph. B.; Inscr. ap. Gruter, p. 595; *Ἱερὰ πυτνα*, Dion Cass. xxxvi. 8; Hierocl. *Ἱερὰ Πύρνα, Stadium*; Hiera, *Pent. Tab.*), a town of Crete, of which Strabo (l. c.) says that it stood in the narrowest part of the island, opposite Minoa. Hierapytna, according to the Coast-describer, was 180 stadia from Biennus, which agrees with the distance of 20 M. P. assigned to it by the Peutinger Table. It was a town of great antiquity, and its foundation was ascribed to the Corybantes; it bore the successive names of Tynba, Pytna, Camirus, and Hierapytna. (Strab. p. 172; Steph. B. s. v.) From an inscription preserved among the Oxford marbles, it appears that the Hierapytnians were at one time allied with the neighbouring city of Priansus. (Böckh, *Corp. Inscr. Graec.* n. 2556; Böckh, *Kreta*, vol. iii. p. 72.) Traces of this city have been found at the *Kastile of Hierapetra*. (Pashley, *Trav.* vol. i. p. 71.) There are both autonomous and imperial coins belonging to Hierapytna; the symbol on the former is generally a palm tree. (Eckhel, vol. ii. p. 13.) [E. B. J.]

COIN OF HIERAPYTNA.

HIERASUS FL. (*Ἱέρασος*, Ptol. iii. 8. § 4), a river of Dacia, which has been identified with the IARANTUS (*Ἰαραντὸς*, Herod. iv. 48; Schafarik, *av. Alk.* vol. i. p. 506). Perhaps the river now called *met.* [E. H. B.]

HIERATIS (*Ἱέρατις*, Arrian, *Ind.* c. 39), a town

belonging to the province of Persis, on an island formed by a channel from a river in the neighbourhood. The whole country in its immediate neighbourhood appears to have been a peninsula, and to have borne the name in ancient times of Mesambria. It is not easy to fix its exact position; but it could not have been far from the modern *Abusker*. (Vincent, *Voy. of Nearchus*, vol. i. p. 390.) [V.]

HIERICUS. [JERICHO.]

HIEROMLAX. [JORDANEA.]

HIERON ACRON (*Ἱέρων ἄκρον*; Sacrum Promontorium), in Ireland, mentioned by Ptolemy (iii. 2. § 6) as the south-eastern point of the island = *Carnmore Point*. [R. G. L.]

HIERO'POLIS. [HIERAPOLIS.]

HIEROSOLYMA. [JERUSALEM.]

HILLEVION'ES, according to Pliny (iv. 27) the general name for all the inhabitants of Scandinavia. The name is not mentioned by Tacitus, who (*Germ.* 44, 45) divides all the inhabitants of Scandinavia into two groups, called *Suiones* and *Sitones*. The Hilleviones form one of the great groups into which all the German tribes were divided. (Comp. GERMANIA.) [L. S.]

HIMELLA, a river in the country of the Sabines, mentioned by Virgil in the same line with Casperia and Foruli. (*Aen.* vii. 714.) According to Vibius Sequester (p. 11. Oberlin), it was a river in the neighbourhood of Casperia; and if this is not a mere hasty inference from the line of Virgil, we may probably identify it with a small stream called *Ata* or *l'Atia*, which rises in the mountains to the N. of *Aspra*, and falls into the Tiber about 10 miles from that town. According to some authorities, this river is still called the *Imelle*, but this name appears to have been unknown to earlier topographers, and is perhaps merely a piece of classical learning. (Cluver. *Ital.* p. 675; Bunsen, in the *Ann. d. Inst.* vol. vi. p. 110.) [E. H. B.]

HIMERA (*Ἱμέρα*: *Ἑθ. Ἱμεραῖος*, Himerensis, but the adj. Himeræus: near *Termini*), an important Greek city of Sicily, situated on the N. coast of the island, at the mouth of the river of the same name, between Panormus and Cephaloedim. Thucydides says it was the only Greek city on this coast of Sicily (vi. 62, vii. 58), which must however be understood with reference only to *independent* cities; Mylae, which was also on the N. coast, and certainly of Greek origin, being a dependency of Zancle or Messana. All authorities agree that Himera was a colony of Zancle, but Thucydides tells us that, with the emigrants from Zancle, who were of Chalcidic origin, were mingled a number of Syracusan exiles, the consequence of which was, that, though the institutions (*νόμιμα*) of the new city were Chalcidic, its dialect had a mixture of Doric. The foundation of Himera is placed subsequent to that of Mylae (as, from their relative position, might naturally have been expected) both by Strabo and Scymnus Chius; its date is not mentioned by Thucydides, but Diodorus tells us that it had existed 240 years at the time of its destruction by the Carthaginians, which would fix its first settlement in B.C. 648. (Thuc. vi. 5; Strab. vi. p. 272; Scymn. Ch. 289; Diod. xiii. 62; Hecat. fr. 49; Seyl. p. 4. § 13.) We have very little information as to its early history: an obscure notice in Aristotle (*Rhet.* ii. 20), from which it appears to have at one time fallen under the dominion of the tyrant Phalaris, being the only mention we find of it, until about A.C. 490, when it afforded a temporary refuge to Scythas, tyrant of Zancle, after

his expulsion from the latter city (Herod. vi. 24). Not long after this event, Himera fell itself under the yoke of a despot named Terillus, who sought to fortify his power by contracting a close alliance with Anaxilas, at that time ruler both of Rhegium and Zancle. But Terillus was unable to resist the power of Theron, despot of Agrigentum, and, being expelled by him from Himera, had recourse to the assistance of the Carthaginians, a circumstance which became the immediate occasion of the first great expedition of that people to Sicily, *a.c.* 480. (Id. vii. 165.) The magnitude of the armament sent under Hamilcar, who is said to have landed in Sicily with an army of 300,000 men, in itself sufficiently proves that the conquest of Himera was rather the pretext, than the object, of the war: but it is likely that the growing power of that city, in the immediate neighbourhood of the Carthaginian settlements of Panormus and Selinus, had already given umbrage to the latter people. Hence it was against Himera that the first efforts of Hamilcar were directed: but Theron, who had thrown himself into the city with all the forces at his command, was able to maintain its defence till the arrival of Gelo of Syracuse, who, notwithstanding the numerical inferiority of his forces, defeated the vast army of the Carthaginians with such slaughter that the battle of Himera was regarded by the Greeks of Sicily as worthy of comparison with the contemporary victory of Salamis. (Herod. vii. 166, 167; Diod. xi. 30—33; Pind. *Pyth.* i. 153.) The same feeling probably gave rise to the tradition or belief, that both triumphs were achieved on the very same day. (Herod. l. c.)

This great victory left Theron in the undisputed possession of the sovereignty of Himera, as well as of that of Agrigentum; but he appears to have bestowed his principal attention upon the latter city, and assigned the government of Himera to his son Tharysaeus. But the young man, by his violent and oppressive rule, soon alienated the minds of the citizens, who in consequence applied for relief to Hieron of Syracuse, at that time on terms of hostility with Theron. The Syracusan despot, however, instead of lending assistance to the discontented party at Himera, betrayed their overtures to Theron, who took signal vengeance on the unfortunate Himeraeans, putting to death a large number of the disaffected citizens, and driving others into exile. (Diod. xi. 48.) Shortly after, seeing that the city had suffered greatly from their overtures, and that its population was much diminished, he sought to restore its prosperity by establishing there a new body of citizens, whom he collected from various quarters. The greater part of these new colonists were of Doric extraction; and though the two bodies of citizens were blended into one, and continued to live harmoniously together, we find that from this period Himera became a Doric city, and both adopted the institutions, and followed the policy, of the other Doric states of Sicily. (Id. xi. 49.) This settlement seems to have taken place in *a.c.* 476*, and Himera con-

* There is a confusion about this date; for, though Diodorus relates the circumstances in the year of Phaedon, *OL. LXXVI.* 1, which would place it in *a.c.* 476, he adds that the new colony subsisted 58 years, till its destruction by the Carthaginians, which would refer it to the year 466 *a.c.* This last date (which has been inadvertently adopted by Mr. Clinton, *F. H.* vol. i. p. 196) is clearly incompatible with the fact that Theron died in *a.c.* 473.

tinued subject to Theron till his death, in 473; but Tharysaeus retained possession of the sovereignty for a very short time after the death of his father, and his defeat by Hieron of Syracuse was speedily followed by his expulsion both from Agrigentum and Himera. (Id. xi. 53.) In *a.c.* 466 we find the Himeraeans, in their turn, sending a force to assist the Syracusans in throwing off the yoke of Tharysaeus; and, in the general settlement of affairs which followed soon after, the exiles were allowed to return to Himera, where they appear to have settled quietly together with the new citizens. (Id. xi. 68, 76.) From this period Diodorus expressly tells us that Himera was fortunate enough to escape from civil dissensions (xi. 49), and this good government may have secured to it no small share of the prosperity which was enjoyed by the Sicilian cities in general during the succeeding half-century.

But though we are told in general terms that the period which elapsed from this re-settlement of Himera till its destruction by the Carthaginians (*a.c.* 461—408), was one of peace and prosperity, the only notices we find of the city during this interval refer to the part it took at the time of the Athenian expedition to Sicily, *a.c.* 415. On this occasion, the Himeraeans were among the first to promise their support to Syracuse; hence, when Nicias presented himself before their port with an Athenian fleet, they altogether refused to receive him; and, shortly after, it was at Himera that Gylippus landed, and from whence he marched across the island to Syracuse, at the head of a force composed in great part of Himeraean citizens. (Tax. vi. 62, vii. 1, 58; Diod. xiii. 4, 12.) A few years after this the prosperity of the city was brought to a sudden and abrupt termination by the great Carthaginian expedition to Sicily, *a.c.* 408. Though the ostensible object of that armament, as it had been of the Athenian, was the support of the Sicilians against their neighbours, the Scythians, yet there can be no doubt that the Carthaginians, for the first, entertained more extensive designs; and immediately after the destruction of Selinus, Imbal, who commanded the expedition, hastened to turn his arms against Himera. That city was ill-prepared for defence; its fortifications were of little strength, but the citizens made a desperate resistance, and by a vigorous sally inflicted severe loss on the Carthaginians. They were at first assisted by a force of about 4000 auxiliaries from Syracuse under the command of Diocles; but that general became seized with a panic fear for the safety of Syracuse itself, and precipitately abandoned Himera, leaving the unfortunate citizens to contend unaided against the Carthaginian power. The result could not be doubtful, and the city was soon taken by storm: a large part of the citizens were put to the sword, and not less than 3000 of those, who had been taken prisoners, were put to death in cold blood by Imbal, as a sacrifice to the memory of his grandfather Hamilcar. (Diod. xiii. 59—63; *Ant. Hell.* i. 1. § 37.) The city itself was utterly destroyed, its buildings razed to the ground, and even the temples themselves were not spared; the Carthaginian general being evidently desirous to obliterate all trace of a city whose name was associated with the great defeat of his countrymen.

Diodorus, who relates the total destruction of Himera, tells us expressly that it was never rebuilt, and that the site remained uninhabited down to his own times (xi. 49). It seems at first in contradic-

tion with this statement, that he elsewhere includes the Himeraeans, as well as the Selinuntines and Agrigentines, among the exiled citizens that were allowed by the treaty concluded with Carthage, in a.c. 405, to return to their homes, and inhabit their own cities, on condition of paying tribute to Carthage and not restoring their fortifications. (Id. xiii. 114.) And it seems clear that many of them at least availed themselves of this permission, as we find the Himeraeans subsequently mentioned among the states that declared in favour of Dionysius, at the commencement of his great war with Carthage in a.c. 397; though they quickly returned to the Carthaginian alliance in the following year. (Id. xiv. 47, 56.) The explanation of this difficulty is furnished by Cicero, who tells us that, "after the destruction of Himera, those citizens who had survived the calamity of the war established themselves at Thermae, within the confines of the same territory, and not far from their old town." (Cic. *Verr.* ii. 35.) Diodorus indeed gives us a somewhat different account of the foundation of Thermae, which he represents as established by the Carthaginians themselves before the close of the war, in a.c. 407. (Diod. xiii. 79.) But it is probable that both statements are substantially correct, and that the Carthaginians founded the new town in the immediate neighbourhood of Himera, in order to prevent the old site being again occupied; while the Himeraean exiles, when they returned thither, though they settled in the new town, naturally regarded themselves as still the same people, and would continue to bear the name of Himeraeans. How completely, even at a much later period, the one city was regarded as the representative of the other, appears from the statement of Cicero, that when Scipio Africanus, after the capture of Carthage, restored to the Agrigentines and Gelenses the statues that had been carried off from their respective cities, he at the same time restored to the citizens of *Thermae* those that had been taken from *Himera*. (Cic. *Verr.* ii. 35, iv. 33.) Hence we cannot be surprised to find that, not only are the Himeraeans still spoken of as an existing people, but even that the name of Himera itself is sometimes inadvertently used as that of their city. Thus, in a.c. 314, Diodorus tells us that, by the treaty between Agathocles and the Carthaginians, it was stipulated that Heracleia, Selinus, and Himera should continue subject to Carthage as they had been before. (Diod. xix. 71.) It is much more strange that we find the name of Himera reappear both in Mela and Pliny, though we know from the distinct statements of Cicero and Strabo, as well as Diodorus, that it had ceased to exist centuries before. (Strab. vi. p. 272; Mel. ii. 7. 16; Plin. iii. 8. a. 14.)

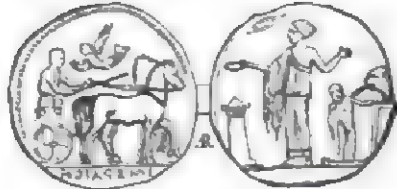

The new town of *THERMAE* or *THERMA*, called at the same of distinction *THERMAE HIMERENSES* *Θερμαὶ τῆς Ἡμερᾶς*, Pol.; *Θερμαὶ τῆς Ἡμερᾶς*, Ptol.; *Θερμαὶ τῆς Ἡμερᾶς*, Diod.; *Ἑθ. Θερμαῖς*, Thersitanus), which thus took the place of Himera, obviously derived its name from the hot springs for which it was celebrated, and the first discovery of which was connected by legends with the wanderings of Hercules. (Diod. iv. 93, v. 3; Pind. *Ol.* xii. 28.) It appears to have early become a considerable town, though it continued, with few and brief exceptions, to be subject to the Carthaginian rule. In the first Punic War its name is repeatedly mentioned. Thus, in a.c. 260, a body of Roman troops were camped in the neighbourhood, when they were

attacked by Hamilcar, and defeated with heavy loss. (Pol. i. 24; Diod. xxiii. 9. Exc. H. p. 503.) Before the close of the war, Thermae itself was besieged and taken by the Romans. (Pol. i. 39; Diod. xxiii. 30. Exc. H. p. 506.) We have, however, no clue to the circumstances which led to the peculiar favour which this city seems to have received at the hands of its Roman conquerors. Cicero tells us that the Roman government restored to the Thersitanians their city and territory, with the free use of their own laws, as a reward for their steady fidelity ("quod semper in amicitia fideque mansissent," Cic. *Verr.* ii. 37). As we see that they were on hostile terms with Rome during the First Punic War, it can only be to the subsequent period that these expressions apply; but the occasion to which they refer is unknown. In the time of Cicero, Thermae appears to have been a flourishing place, carrying on a considerable amount of trade, though the orator speaks of it as "oppidum non maximum." (Id. ii. 46, 75, iii. 43.) It seems to have received a colony in the time of Augustus, whence we find mention in inscriptions of the "Ordo et Populus splendidissimae Coloniae Augustae Himeracorum Thermitanorum" (Castell. *Inscr. Sicil.* p. 47; Gruter. *Inscr.* p. 433, no. 6.); and there can be very little doubt that the "Thermae colonia" of Pliny in reality refers to this town, though he evidently understood it to be Thermae Selinuntiae, as he places it on the S. coast between Agrigentum and Selinus. (Plin. iii. 8. a. 14.) We have little subsequent account of Thermae; but, as its name is found in Ptolemy and the Itineraries, it appears to have continued in existence throughout the period of the Roman Empire, and probably never ceased to be inhabited, as the modern town of *Termini* retains the ancient site as well as name. (Ptol. iii. 4. § 4; *Itin. Ant.* p. 92; *Tab. Peut.*) Considerable remains of the ancient city are still visible, but all of the Roman period; among these, the most interesting are those of the ancient Thermae, which are still applied to their original purpose, and are now known as the *Bagni di S. Calogero*: their form and construction is peculiar, being probably determined by the circumstances of the locality in which they were built. Besides these, the ruins of a theatre were still extant in the days of Fazello, but have been since destroyed; some portions of an aqueduct still remain, and the ruins of a large building of Roman date, but of uncertain destination; numerous inscriptions and fragments of ancient sculpture are also preserved in the modern city, (Fazell. *de Reb. Sic.* i. 1; Biscari, *Viaggio in Sicilia*, pp. 235—239.)

No doubt can therefore exist with regard to the site of Thermae, which would be, indeed, sufficiently marked by the hot springs themselves; but the exact position of the more ancient city of Himera is still a subject of controversy. The opinion of Cluverius, which has been followed by almost all subsequent writers, would place it on the left bank of the river which flows by *Termini* on the west, and is thence commonly known as the *Fiume di Termini*, though called in the upper part of its course *Fiume S. Leonardo*. On this supposition the inhabitants merely removed from one bank of the river to the other; and this would readily explain the passages in which Himera and Thermae appear to be regarded as identical, and where the river Himera (which unquestionably gave name to the older city) is represented at the same time as flowing by Thermae. (Sil. Ital. xiv. 232; Plin. iii. 8. a. 14; Vih. Sequent.

p. 11.) On the other hand, there is great difficulty in supposing that the *Fiume S. Leonardo* can be the river Himera (see the following article); and all our data with regard to the latter would seem to support the view of Fazello, who identifies it with the *Fiume Grande*, the mouth of which is distant just 8 miles from Termini. This distance can hardly be said to be too great to be reconciled with Cicero's expression, that the new settlement was established "non longe ab oppido antiquo" (Cic. Verr. ii. 35); while the addition that it was in the same territory ("in ejusdem agri finibus," L. c.) would rather seem to imply that it was not very near the old site. It may be added, that, in this case, the new site would have had the recommendation in the eyes of the Carthaginians of being nearer to their own settlements of Solus and Panormus, and, consequently, more within their command. But Fazello's view derives a strong confirmation from the circumstance, stated by him, that the site which he indicates, marked by the *Torre di Boiaforallo* on the sea-coast (on the left bank of the *Fiume Grande*, close to its mouth), though presenting no ruins, abandoned in ancient relic, such as vases, bronzes, &c.; and numerous sepulchres had also been brought to light. (Fazell. ix. 2.) On the other hand, neither Cluverius nor any other writer has noticed the existence of any ancient remains on the west bank of the Himera; nor does it appear that the site so fixed is one adapted for a city of importance. The localities do not appear to have been carefully investigated by any recent traveller, though such an examination would probably set the whole question at rest. In the mean time the probabilities seem strongly in favour of the views of Fazello.

Himera was celebrated in antiquity as the birthplace of the poet Stesichorus, who appears, from an anecdote preserved by Aristotle, to have taken considerable part in the political affairs of his native city. His statue was still preserved at Thermae in the days of Cicero, and regarded with the utmost veneration. (Arist. Rhet. ii. 20; Cic. Verr. ii. 35; Sil. Ital. xiv. 332; Paus. iii. 19. § 13; Suid. s. v. Στεσιχορος.) Ergoteles, whose victory at the Olympic games is celebrated by Pindar, was a citizen, but not a native, of Himera. (Pind. Ol. xii.; Paus. vi. 4. § 11.) On the other hand, Thermae had the honour of being the birthplace of the tyrant Agathocles. (Diod. xix. 2.) The magnificence of the ancient city, and the taste of its citizens for the encouragement of art, are attested by Cicero, who calls it "in primis Siciliae clarum et ornatum;" and some evidence of it remained, even in the days of that orator, in the statues preserved by the Thermitani, to whom they had been restored by Scipio, after the conquest of Carthage: and which were valuable, not only as relics of the past, but from their high merit as works of art. (Cic. Verr. ii. 33.) [E. H. B.]

COIN OF HIMERA.

HIMERA (*Ἥμερα*), the name of two rivers in Sicily, the one flowing to the N. into the Tyrrhenian

Sea, the other to the S. coast of its island, by which, by a strange confusion, was excused by many ancient writers as one and the same river, which is in consequence described as rising in the centre of the island, and flowing in two opposite directions, so as completely to divide Sicily into two parts. It is singular that, if we may believe Sesto Sequester, this absurd notion is as old as the time of Stesichorus, who was himself a native of Himera. Mele is, however, the only one of the most geographers who adopts it. (Mel. ii. 7. § 17; Sest. § 17; Vib. Sequest. p. 12; Sil. Ital. xiv. 332; Antig. Caryst. 133; Vitruv. viii. 3. § 7.)

1. The southern and most important river of this name, is certainly the one now called the *Fiume Salso*, one of the most considerable streams in Sicily, which rises in the *Monti di Madonia*, the Sacred Mons of the ancients, and flowing nearly due S. enters the sea at *Alicounta* (*Phintias*). In the upper part of its course it is composed of two branches, running nearly parallel with one another: the river now called the *Fiume Grande* rising near Gela; the other, called the *Fiume di Petralia*, from the town of the same name: it is only after the junction of the two that it obtains the name of *Fiume Salso*. It is impossible to say which of the two branches was regarded by the ancients as the true Himera; but in either case that river has a course of not 50 miles from N. to S., and its sources are not above 15 miles from the N. coast of the island. Hence the expression of Polybius and Livy that the Himera nearly divides the whole of Sicily into two parts, is by no means inaccurate. (Polyb. liv. xxiv. 6.) But it is evidently this circumstance coupled with the fact that there was another river of the same name flowing into the Tyrrhenian Sea, which gave rise to the fable above noticed. Scamander who does not notice the southern Himera, speaks (evidently by mistake) very nearly the same words as Polybius to the northern river of the name (Strab. vi. p. 266.) Diodorus notices the bad quality of the waters of the Himera, which gave rise to its modern name of *Fiume Salso*: this is caused by the junction of a small stream near *Caloniasteta*, that flows from the salt mines in the vicinity. (Diod. xix. 109; Sest. p. 110.) Solinus erroneously ascribes this quality to the northern Himera (Solin. v. § 17); while Varro rightly attributes it to the southern river only (viii. 3. § 7).

Historically, the southern Himera is remarkable for the great battle fought on its banks between Agathocles and the Carthaginians, in which the latter obtained a complete victory, B.C. 311. (Diod. xix. 107—110.) The scene of this action was at a short distance from the mouth of the river, the Carthaginians occupying the hill of *Economa*, while Agathocles was encamped on the left bank. (Diod. xix. 108.) At a much earlier period, B.C. 446, he witnessed a defeat of the Agrigentines by the Syracusans (Diod. xii. 8); and, again, in the Second Punic War, B.C. 212, became the scene of an action between Marcellus and the Carthaginian forces under Hanno and Epicydes of Syracuse, in which the latter were defeated and driven to take shelter within the walls of Agrigento. (Liv. xxv. 40, 41.) By the treaty concluded with Carthage by Hieronymus of Syracuse, it was agreed to divide the whole of Sicily between the two powers, so that the river Himera should be the boundary of their respective dominions. (Polyb. viii. 4; Liv. xxi. 6.

But this arrangement was never actually carried into effect. Ptolemy correctly places the mouth of the southern Himera to the E. of the emporium of Agrigentum (Ptol. iii. 4. § 7): he is the only one of the geographers who mentions both rivers of the name. An inscription recorded by Torremuzza, containing a dedication ΑΓΚΑΗΝΙΩ ΚΑΙ ΙΜΕΡΑ ΠΟΤΑΜΩ, must, from its being found at *Callanissetta*, refer to the southern Himera. (Castell. *Inscr. Sicil.* p. 4; Boeckh. *C. I.* no. 5747.)

2. The northern Himera, a much less considerable stream than the preceding, is uniformly described as flowing by the city to which it gave its name (Plin. iii. 8. s. 14; Steph. B. s. v. "Ασπιδεύς; Vib. Sequest. p. 11); and Pindar speaks of the great victory of Gelon (which we know to have been fought in the immediate vicinity of the city) as gained "upon the banks of the fair waters of the Himera" (Pind. i. 153). Hence its identification is necessarily connected with the determination of the site of that city, a question still the subject of dispute. Cluverius, and those who have followed him in placing Himera itself in the immediate neighbourhood of *Termini*, and on the left bank of the river which flows by that town, have, in consequence, assumed the stream just mentioned (now called the *Fiume di Termini*, or, in the upper part of its course, the *Fiume S. Leonardo*) to be the ancient Himera. Fazello, on the contrary, identifies the latter with the river now called the *Fiume Grande*, which rises in the *Madonia* mountains near *Polizzi*, and flows into the sea about 8 miles E. of *Termini*. The arguments in favour of the latter view are certainly very strong. 1. Strabo, in giving the distances along the N. coast of Sicily, reckons 18 miles from *Cephalaedion* (*Cefalù*) to the mouth of the Himera, and 35 from thence to Panormus. The first distance is overstated, the true distance to the mouth of the *F. Grande* being only 15 miles: the latter must about right if we follow the windings of the coast: whereas, if we place the Himera beyond *Termini*, both distances are equally wrong. 2. Ptolemy distinctly places the mouth of the river Himera between *Thermae* (*Termini*) and *Cephalaedion*, and, therefore, to the east of the former. (Ptol. iii. 4. § 3.) This is assumed by Cluverius to be a mistake of Ptolemy, and it must be admitted that many such mistakes occur in that author's description of Sicily; but still there is no casion to multiply them unnecessarily. Lastly,

the northern Himera be recognised in the *Fiume grande*, — the sources of which near *Polizzi* are in a very same group of mountains with, and a very short distance from, those of the *Fiume di Petralia*, a branch of the southern Himera, — the notion of its being one and the same river becomes in some degree intelligible; while it is difficult to conceive how such a notion should have arisen, if the heads of the two were separated by an interval of any miles. The other arguments connected with the site of the city, are considered in that article. *ecocritus* more than once alludes to the river Himera as a celebrated Sicilian stream; but in such general terms as to afford no indication which of the two rivers he means: the Scholiast, however, undertakes him to refer to the northern Himera. (Theocr. 124, vii. 75; Schol. ad loc.) [E. H. B.]

HINNOM. [JERUSALEM.]

HIPPANA (Ἱππῶνα, Pol.), a town of Sicily, mentioned by Polybius as being taken by assault from the Romans in the First Punic War, a. c. 260.

(Pol. i. 24.) Diodorus, in relating the events of the same campaign, mentions the capture of a town called Sittana, for which we should in all probability read Hippana. (Diod. xxiii. 9. Exc. Hoesch. p. 503; Wesseling, *ad loc.*; Cluver. *Sicil.* p. 392.) The correctness of the name found in Polybius is confirmed by Stephanus of Byzantium (s. v.), who, however, writes it "Ιρῶνα, but cites Polybius as his authority. No other author mentions the place, which appears to have been situated in the neighbourhood of Panormus, but of which nothing further is known. According to Sillig's recent edition of Pliny, it appears that some of the best MSS. give the name of "Ipanenses" in that author's list of Sicilian towns (iii. 8. s. 14. § 91), where the older editions have "Iohanenses." If this reading be adopted, it in all probability refers to the same place as the Hippana of Polybius: but as the reading Ichanenses is also supported by the authority of Stephanus (who notices Ichana as a town of Sicily), the point must be considered doubtful. [E. H. B.]

HYPARIS (Ἱπῶρις), a small river of Sicily, flowing by the city of Camarina, whence it is now called the *Fiume di Camarina*. It is mentioned by Pindar in connection with that city (Pind. Ol. v. 27), from its proximity to which it derives its celebrity. [CAMARINA.] Though but a small stream, and having a course of only 12 miles, it has a copious and perennial supply of clear water, a rare circumstance in Sicily: hence the expression of Silius Italicus, "panperis alvei Hipparis," is singularly inapplicable. (Sil. Ital. xiv. 230; Vib. Sequest. p. 12; Schol. ad Pind. l. c.; Nonnus. *Dionys.* xiii. 317.) It is evidently the same river of which the name is erroneously written in Ptolemy, Hipparus. (Ἱπῶρος, Ptol. iii. 4. § 7.) The tutelary divinity of the stream is represented on some of the coins of Camarina, accompanied by his name, HIPPAPIZ. (Eckhel, vol. i. p. 199.) [E. H. B.]

HIPPASII (Ἱπῶσσιοι, Strab. xv. p. 698), an Indian tribe who occupied the district between the Copbes and the Indus along the southern spurs of the Paropamisus. There seems good reason for supposing that they are one and the same tribe as the *Aspasii* or *Aspi* mentioned by Arrian (*Anab.* iv. 23—25). The name is derived from the Sanscrit *Aspa* or *Aswa*, "a horse," and is probably intended as a Greek translation of it. Lassen has conjectured that they are the same as the *Aswanilas* of ancient Hindoo geography. The name is variously written *Pasii* and *Hypasii*. (Wilson, *Ariana*, p. 187; Groskurd's *Strabo*, vol. iii. p. 119.) [V.]

HIPPEMOLGI (Ἱππημόλγοι), "mare-milkers," a general name applied by the Greeks to the nomad tribes who moved about with their tents and herds over the steppes of Northern Europe and Asia. Thus Zeus, in the *Iliad* (xiii. 4), when he turns away his eye from Troy towards Thrace, sees, besides the Thracians and Mysians, other tribes, whose names cannot be made out; but are known as milk-eaters, and mare-milkers. The same characteristic attributes appear in Hesiod (*Fr.* 63—64, ed. Markt-scheffel), connected with the Scythians. (Comp. Strab. vii. pp. 300—302; Niebuhr, *Kleine-Schrift.* vol. i. p. 365; Schafarik, *Slav. Alt.* vol. i. p. 272.) The mares' milk was made into cheese (Hippocrat. vol. i. p. 558, ed. Kühn), and, as Mr. Grote (*Hist. of Greece*, vol. iii. p. 323) remarks, probably served the same purpose of procuring the intoxicating drink called *kumiss*, as at present among the Bashkirs and the Kalmucks. [E. H. J.]

HIPPI PROM. [*Hippo Promus*].
HIPPICI MONTES (vā *Ἱππικὸν ὄρεα*, Ptol. v. 9), the N. continuation of the Ceraunii M., a chain of mountains on the W. bank of the Eux. [E. B. J.]
HIPPO, in Spain. 1. [*CARPETANI*]. S. H. NOVA. A town belonging to the province of Baetica and the conventus of Corduba, near Claiumbrum. (Plin. iii. 1. s. 3.) [P. S.]

HIPPOCORONIUM (*Ἱπποκόρωνιον*), a city in Crete mentioned by Strabo (x. p. 473), which Hick has placed near Hierapytna. Mr. Pashley (Trav. vol. i. p. 62) considers that the modern *Aphokrona* is a corruption of the ancient name. [E. B. J.]

HIPPOCRENE FONS. [*Hippocrene*].

HIPPOCURA (*Ἱπποκῦρα*, Ptol. vii. 1. § 4, viii. 26. § 15), a town of some importance in India intra Ganges, in the district called Aricca. It was situated on or near the Nanagana, and appears from another passage of Ptolemy to have been the seat of the palace of a king, whom he calls Balacurus (vii. 1. § 83). It has been conjectured by Forbiger that it is the same as the modern *Hydrabad*, and, with less probability by Ritter, that it is represented by *Bangalore* (v. p. 437). [V.]

HIPPO DIATREHYTUS or ZARITUS (*Ἱπποδιὰτρεϋτος*, Ptol. iv. 3. § 6; H. Zaritus, *Itin. Ant.* p. 31, V. R. H. Zaritus; Ippona Diaritus, *Tak. Post.*; and simply *Ἱπποδιὰτρεϋτος*, *Seyl.* p. 30; *Besicari* or *Bisaria*), a Tyrian colony in Zeugitana, close to the extreme N. headland of Africa [CANDIDUM PR.], 36 M. P. W. of Utica, and 126 M. P. E. of Hippo Regius. It stood on W. side of the entrance of a large lake which communicated with the sea, and which received the waters of another lake: the former was called **HIPPONITIS PALUS** (*Ἱππονίτις ἅλυσ*), and the latter **SAGARA** (*Σάραρα*). Its situation exposed it to frequent inundations, whence, as the Greeks said, the epithet *διὰτρεϋτος*. But it seems more probable that this is the remnant of some Phœnician title: the ancient writers were by no means agreed on the true form of the name, as is seen above, and of this uncertainty we have a farther proof in the expression of Pliny, who is apparently attempting an etymology: "oppidum quod Hipponem diarium vocant, Diarrhytmum a Græcis dictum." (Plin. v. 4. s. 3.) Polybius and Appian give the forms *Ἱπποκρίτιν πόλιν* (Polyb. l. 52), and *Ἱπποκρίτιν* (Appian, viii. 110).

The city was fortified and provided with a new harbour by Agathocles (Appian, l. c.): under the Romans it was a free city (Plin.); and it seems to have been raised to the rank of a colony, for the younger Pliny calls it *Hipponensis colonia*. (*Epist.* ix. 33; comp. Strab. xvii. p. 832; Meib. i. 7. § 2; Plin. ix. 8; Barth, *Wanderungen*, &c. pp. 202, 211.) [P. S.]

HIPPO REGIUS (*Ἱπποβασίλειος*: E. S. of *Bonæ*), a maritime city of Numidia, which received its surname from its being a residence of the Numidian kings, but is of higher fame as the see of St. Augustine. It was a colony of Tyre, and stood 5 M. P. NW. of the river Uaça, on the W. side of a large bay to which it gave its name (*HIPPONENSIS SINUS*: *Gulf of Bonæ*), as well as to the promontory above it, forming the W. headland of the bay (*HIPPI PROM.*, *Ἱπποβόα*: *Ros of Hemrah*). It grew into greater importance under the Romans, by whom it was made a colony; and it continued to be one of the most flourishing cities of N. Africa, till it was destroyed by the Vandals in A. D. 430. It was during the progress of this siege that the great

Augustine died. (*Sall. Jug.* 19; *Hist. Bell. Afr.* 96; Strab. xvii. p. 832; Meib. i. 7; Plin. v. 3. s. 3; *Itin. Ant.* p. 30; *Tak. Post.*; *Diod.* xx. 57; *Sil. Ital.* i. 3 iii. 259; Shaw, *Travels in Barbary*, p. 44; Barth, *Wanderungen*, &c. p. 70.) [P. S.]

HIPPOLA (*Ἱππόλα*: *Ἰθὴ*, *Ἱππολάρις*, *Ἰν.* *Ἱππολάρις*), a town of Laconia, a little north-west of the promontory of Tassarum, in ruins in the time of Pausanias. It contained a temple of Athena Hippoleitis. It stood either at *Kipolis*, which is apparently a corruption of the ancient name, or at the ruins called *Ἰππολῶν τῆς Ἰππολῆς* on the highest point of the peninsula of *Kævo Grossa*. (*Leak, Morea*, vol. i. p. 287, *Poloponnesiaica*, p. 173; *Bablay, Recherches*, &c. p. 91; Curtius, *Poloponnesiaica*, vol. ii. p. 382.)

HIPPONENSIS SINUS. [*HIPPO REGIUS*].

HIPPONIA TES SINUS (*Ἱππονίτις ἅλυσ*, Strab. vi. pp. 255, 261; Ptol. iii. 1. § 9), a gulf or bay on the W. side of the Bruttian peninsula, so called from the city of Hipponum, near its southern extremity. It was however known also by various other names: thus Theophrastus calls it the *Terinanus Gulf* (*Τερινανὸς ἅλυσ*, Theophr. vi. 104), and Pliny also names it the *SINUS TERINANUS*, though he mentions also, as if it were a different bay (which is certainly a mistake), the *SINUS VIBONENSIS* (Plin. iii. 5. s. 10). The latter name is used also by Cicero (*ad Att.* xvi. 6). But besides these, we find that it was called the *SINUS NAPETINUS* or *KARPETIVUS* by Antiochus of Syracuse (ap. Strab. vi. p. 255; Dionys. i. 35), and *LANCIETIVUS* by Aristotle (*Pol.* vii. 10). The last name was evidently derived from a town named *Lancetium* or *Lancini*, situated at the mouth of the river *Lancetus* (*Lameto*), which flows into the gulf in question [*LANCIETIVUS*]; and the name of *Napetinus* would seem to point in like manner to the existence of a town called *Napetium*, though we have no other authority for this fact. The gulf itself, which is now known as the *Golfo di Sta. Eufemia*, from a village of that name, deeply indents the coast of Bruttium on the W., as the *Golfo di Squillace*, or *Scyllacian Sinus*, does on the E.: the neck of land between them is composed only of low hills of tertiary strata, presenting a striking contrast to the lofty masses of the Apennines, which rise abruptly on the N. and S. of this isthmus. [BRUTTI.] The northern limit of the Gulf of *Sa. Eufemia* is formed by the point called *Capo Sovero*, probably the promontory called by Lycophron *Lampetes* [*CLAMPETIA*]: and its southern by the bold projecting headland now called *Capo Vasciano*; but there is no authority for supposing this name to be ancient. [E. H. E.]

HIPPONITIS PALUS. [*HIPPO DIATREHYTICA*].

HIPPONUM (*Ἱππόνομος*: *Ἰθὴ*, *Ἱππονόμος*, Steph. B.: but on coins, *Ἱππονόμος*, *Hipponistes*), or **HIPPO** (Meib., Plin.), called by the Romans **VIBO**, or **VIBO VALENTIA** (*Ὀυβίω Ὀυβανία*, Ptol.: *Ἰθὴ*, *Vibonensis*; *Bisone*), an important Greek city on the west coast of Bruttium, on the shores of the bay to which it gave the name of *SINUS HIPPONENSIS*, now the *Gulf of St. Eufemia*. It was undoubtedly of Greek origin, and we are told by Strabo that it was a colony from the Italian Locri, on the opposite side of the Bruttian peninsula. (Strab. vi. p. 256; Scymn. Ch. 308; *Seyl.* p. 4. § 12.) No mention of it is found in history, though it seems to have been a considerable town, till A. D. 389, when it was taken by Dionysius of Syracuse, who destroyed the city, removed the inhabitants to Syracuse, and gave up

its territory to the Locrisians. (Diod. xiv. 107; Dionys. xix. Fr. p. 2359, Reiske.) But 10 years afterwards (a. c. 379) the city was restored by the Carthaginians, and the exiled inhabitants re-established there. (Id. xv. 24.) It did not long, however, continue to enjoy its independence, having fallen into the hands of the Brutians, apparently soon after a. c. 356, the date given for the first rise of the Brutian people. (Diod. xvi. 15; Strab. vi. p. 256.) It was wrested from the latter nation for a time by Agathocles, in a. c. 294, who appears to have regarded the place as a stronghold of importance, and constructed a port or naval station (*trivector*) there; but after the departure of Agathocles himself the garrison he had left at Hipponium was put to the sword, and the city recovered by the Brutians. (Diod. xxi. 8. Erc. H. p. 491; Strab. l. c.) It now continued in their hands until it fell with the rest of the Brutian peninsula under the yoke of Rome; but no mention of it is again found, except that the "Vibonensis ager" was in a. c. 218 ravaged by a Carthaginian fleet (Liv. xxi. 51), until after the close of the Second Punic War: and it is remarkable that the name is not even once mentioned during the long-protracted operations of Hannibal in the Brutian territory. But shortly after the close of the war (in a. c. 192) a Roman colony was established there, consisting of not less than 4000 settlers, including 300 knights (Liv. xxxv. 40; Vell. Pat. l. 14), which was thenceforth known by the name of Vibo Valentia. Strabo tells us that the name of Hipponium was at this time changed into Vibo Valentia, or, as he writes it, *Vibona Valentia* (*Ὀὐβόνα Οὐαλεντία*, Strab. vi. p. 256); but this is not quite correct: the new colony, as we learn from its coins, having assumed the name of Valentia only; while that of Vibo (which is evidently only the Brutian or Oscan form of Hippon, and was very probably the original name of the city before it became a Greek colony at all) was retained with it in common usage, or was still employed without the addition of Valentia. Thus, Cicero twice uses the name of Vibo alone to designate the town, but in another passage calls the inhabitants "Valentini." (Cic. in Verr. ii. 40, v. 16, ad Att. xvi. 6.)

The Roman colony seems to have rapidly risen into importance, and became one of the most considerable towns in this part of Italy. Its port, constructed by Agathocles, served to export the timber from the forests of Sila; and, for the same reason, extensive dockyards for ship-building were established there. Cicero terms it a noble and illustrious municipal town (in Verr. v. 16), and Appian enumerates it among "the most flourishing cities of Italy" of which the possession was promised by the Triumvirs to their soldiers. (B. C. iv. 3.) During the Civil Wars, indeed, it plays no inconsiderable part in history. In the war between Caesar and Pompey, the former made Vibo the station of a part of his fleet, which was attacked there by Cassius (Caes. B. C. iii. 101); and in the war of Octavian against Sextus Pompey, it became the head-quarters and chief naval station of the Triumvir (Appian, B. C. v. 91, 99, 103, &c.). In order to secure its attachment at that period, Octavian had been compelled to exempt Vibo from the threatened distribution of its lands among the soldiery. (Id. B. C. iv. 86.) It is not clear whether it subsequently received a colony, for the "ager Vibonensis" is mentioned in the Liber Coloniarum (p. 209), but in a manner which leaves it doubtful whether it was colonised or not. But it is

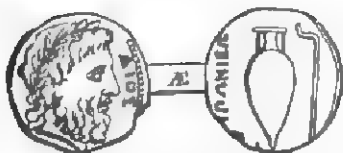

certain, from inscriptions, that it continued under the Roman empire to be a flourishing municipal town: its name is mentioned by all the geographers, and is still found in the Itineraries of the fourth century. (Plin. iii. 5. a. 10; Ptol. iii. 1. § 74; Mel. ii. 4; Itin. Ant. p. 111; Tab. Peut.; Orell. Inscr. 3703; Mommsen, Inscr. R. N. 16, 26, &c.) It was situated on the principal high road, leading down through Brutium to the Sicilian Strait, and is already noticed, under the name of Valentia only, in the inscription of the Via Popillia: according to that document, it was distant 57 M. P. from Consentia, and 51 from the column on the Straits. (Mommsen, l. c. 6276.) Its position also rendered it a convenient place to touch at for persons proceeding by sea to or from Sicily: thus, we find Cicero, in a. c. 44, proceeding from Velia to Vibo by sea, and thence to Rhegium. (Cic. in Verr. ii. 40, ad Att. xvi. 6.)

The plains near Vibo were celebrated for the variety and beauty of the flowers with which they were covered: hence the Greek colonists of Hipponium maintained it to be the place from whence Proserpine was carried off (Strab. vi. p. 256); and it would seem that that goddess had a celebrated temple here, as well as at the parent city of Locri. The ruins of this temple are said to have existed till the 11th century, when the columns were carried off by Roger, Count of Sicily, to adorn the cathedral of Mileto. The historian Duris also mentioned that near the city was a grove, watered with fountains, and of surpassing beauty, in which was a place called "the horn of Amalthæa," which had been adorned and arranged by Galon of Syracusa. (Duris, op. Athol. xii. p. 543.)

Considerable remains of the ancient port of Hipponium are visible at a place still called *Bivona*, on the shore about 3 miles from *Monte Leone*: they are of a very massive style of construction, which has been erroneously termed Cyclopean, but are probably of Greek rather than Roman date. The city of Hipponium itself, as well as the Roman colony of Vibo Valentia, probably occupied the same site with the modern city of *Monte Leone*, on an elevation of moderate height, commanding an extensive view over the sea and adjacent plain. No ruins, however, remain on this spot, and the modern town dates only from the 13th century; but it is said that the remains of the ancient walls were formerly visible, and could be traced through an extent of several miles, communicating with those at *Bivona*. (Romanelli, vol. i. pp. 51—56; Barrius, de Sit. Calabr. ii. 12; Guistiniani, Dis. Geogr. vol. vi. pp. 88—90; K. Craven, Travels, p. 321.)

The poet Archastratus, cited by Athenæus (vii. p. 302), praises the tunny-fish of Hipponium as surpassing all others in excellence; an eulogium which they are said by native writers still to merit.

[E. H. B.]

COIN OF HIPPONUM.

HIPPURIS (Ἱππούρις), a small island in the Aegean sea, one of the Sporades, lying between

Thera and Amorgos. (Schol. ad Apoll. Rhod. iv. 1711; Mela, ii. 7; Plin. iv. 12. s. 23; Steph. B. s. v. *Ἰερραπορεύς*.)

HIPPURUS (Plin. vi. 22. s. 24), a haven in the southern part of India, near or perhaps opposite to the island of Ceylon, to which Aunius Placcus, a freedman of Claudius, was driven in a gale of wind from the coast of Carmania. The present representative of it is not known. [V.]

HIPPUS (*Ἱππός*, Steph. B. Plin. v. 15; Euseb. *Onom.*: *Ἐκτ. Ἱερραπορεύς*), a town of the Decapolis and "Palæstina Secunda." It was situated to the E. of the sea of Galilee, 30 stadia from Tiberias (*Ῥάββα*). (Joseph. *Vita*, § 65.) Augustus presented it to Herod (Joseph. *Antiq.* xv. 7. § 3). After his death it was annexed to Syria (*Antiq.* xvii. 2. § 4; comp. Marquardt, *Handbuch der Röm. Alt.* p. 201). It was sacked in the Jewish War by the Jews (*E. J.* ii. 18. § 1), but the people afterwards revolted, and slew many of the Jews (*E. J.* ii. 18. § 5).

The district HIPPIRUS (*Ἱππύρις*, *E. J.* iii. 3. § 1; comp. *Vita*, § 31) lay to the E. of Galilee. There were bishops of Hippus at the councils of Seleucia A. D. 359, and of Jerusalem A. D. 536. Burkhardt (*Trav.* p. 378) has the merit of having discovered the site of the ancient Hippus, which he fixes at *Kharbat es-Samrah*, an hour from Samakh. (Comp. Robinson, *Researches*, vol. iii. p. 264, nota.)

(Beland, *Palæstina*, vol. ii. p. 821; Von Baum, *Palæstina*, p. 242.) [E. B. J.]

HIPPUS, a town in Caria, mentioned only by Pomponius Mela (i. 17), who places it near the mouth of the Maeander, whence some have inferred that the name is a mere mistake for Myus; it must, however, be observed that Pliny (v. 29) speaks of a people in Caria called Hippini or Halydenes, though he places them in a different part of the country. [L. S.]

HIPPUS (*Ἱππός*, Ptol. v. 9; Plin. vi. 4), a river of Colchia, the embouchure of which the Periplos of Arrian (p. 10) fixes at 150 stadia from that of the Tanais. Bunnell (*Compar. Geog.* vol. ii. p. 322) has identified it with the *Ilori*. [E. B. J.]

HIRPINI (*Ἱρπῖνοι*, Pol.; *Ἱρπῖναι*, Strab. App.), a people of Central Italy, of Samnite race, and who were often regarded as constituting only a portion of the Samnite people, while at other times they are treated as a distinct and independent nation. They inhabited the southern portion of Samnium, in the more extensive sense of that name, — a wild and mountainous region bordering on Lucania towards the S., on Apulia to the E., and on Campania towards the W. No marked natural boundary separated them from any one of these neighbouring nations; but they occupied the lofty masses and groups of the central Apennines, while the plains on each side, and the lower ranges that bounded them, belonged to their more fortunate neighbours. The mountain basin formed by the three tributaries of the Volturnus, — the Tamarus (*Tamara*), the Calor (*Calore*), and the Sabatus (*Sabbato*), which unite their waters near Beneventum, with the valleys of these rivers themselves, surrounded on all sides by lofty and rugged ranges of mountains, — may be regarded as constituting the centre and heart of their territory; while its more southern portion comprised the upper valley of the Aufidus and the lofty group of mountains in which that river takes its rise. Their name was derived, according to the statement of ancient writers, from "*hirpin*," the Sabine or Samnite

name of a wolf; and, in accordance with this derivation, their first ancestors were supposed a long, guided to their new settlements by a wolf. (Strab. v. p. 250; Serv. ad *Aen.* xi. 785.) The latter appears to indicate that the Hirpini were so called as having migrated, like the other Sabines, in the S. of Italy, from some northern source; we have an indication of the period, a recent period, of this migration, and, from their position in the fastnesses of the central Apennines, it is probable that they were established from a very early time in the region which we find them occupying when they first appear in history.

The early history of the Hirpini cannot be separated from that of the Samnites in general. Indeed it is remarkable that their name does not occur in history during the long pastoral wars between the Romans and the Samnites, although their territory was often the theatre of the war, and several of their cities, especially Beneventum, are repeatedly mentioned as being so important parts in the military operations of the powers. Hence it is evident that the Hirpini at this time formed an integral part of the Samnite army and were included by the Roman annals on such points Livy follows with scrupulous fidelity under the general name of Samnites without attempting to distinguish between the several tribes of that people. For the same reason we are unable to fix the exact period at which the subjugation was effected; but it is evident that must have been completed before the year 343 B. C., when the Roman colony was established at Beneventum (Liv. *Epit.* xv.; Vell. Pat. i. 14), a place that must always have been, in a military point of view, the key to the possession of their country.

In the Second Punic War, on the contrary, the Hirpini appear as an independent people, separated apart from the rest of the Samnites; Livy expressly uses the name of Samnites in distinction to the band of the Hirpini. (Liv. xx. i. xxiii. 43.) The latter people were one of those which declared in favour of Hannibal immediately after the battle of Cannæ, a. c. 216 (Liv. xx. i. xxiii. 1); but the Roman colony of Beneventum never fell into the hands of the Carthaginians, and as early as the following year three of the smaller towns of the Hirpini were recovered by the Roman praetor M. Valerius (Liv. xxii. 3). a. c. 214 their territory was the scene of the operations of Hanno against Tiberius Gracchus, and in a. c. 212 of those of the same Carthaginian general with a view to the relief of Capua. (Liv. xx. 14—16, xxv. 13, 14.) It was not till a. c. 211 when Hannibal had lost all footing in the rest of Italy, that the Hirpini were induced to make their submission to Rome, and purchased favourable terms by betraying the Carthaginian garrisons in their towns. (Liv. xxvii. 15.)

The next occasion on which the Hirpini figure in history is in the Social War (a. c. 90), when they were among the first to take up arms against Rome in the campaign of the following year (a. c. 89). Sulla having taken by assault Asculum, one of their strongest cities, the blow struck and sent into the rest as led them to make offers of submission, and they were admitted to favourable terms (Appian, *B. C.* i. 39, 51.) Even before this time appears to have been a party in the action favourable to Rome, as we are told that Minucius Regillus, ancestor of the historian Velleius, who was a noble

of Aeculanum, was not only himself faithful to the Roman cause, but was able to raise an auxiliary legion among his countrymen, with which he supported the Roman generals in Campania. (Vell. Pat. ii. 16.) The Hirpini were undoubtedly admitted to the Roman franchise at the close of the war, and from this time their national existence was at an end. They appear to have suffered less than their neighbours the Samnites from the ravages of the war, but considerable portions of their territory were confiscated, and it would seem, from a passage in Cicero, that a large part of it had passed into the hands of wealthy Roman nobles. (Cic. *de Leg. Agr.* iii. 2; Zumpt, *de Colos.* p. 258.)

By the division of Italy under Augustus, the Hirpini were separated from the other Samnites, and placed in the 2nd Region together with Apulia and Calabria, while Samnium itself was included in the 4th Region. (Plin. iii. 11. s. 16, 12. s. 17.) The same separation was retained also in the later divisions of Italy under the Empire, according to which Samnium, in the more confined sense of the name, formed a small separate province, while Beneventum and the greater part, if not the whole, of the other towns of the Hirpini, were included in the province of Campania. The Liber Coloniarum, indeed, includes all the towns of Samnium, as well as those of the Hirpini, among the "Civitates Campaniae;" but this is probably a mistake. (Lüb. *Col.* pp. 239—239; Mommsen, *ad Lüb. Col.* pp. 159, 205, 206; Marquardt, *Handb. d. Röm. Alterthümer.* vol. iii. pp. 62, 63.)

The national characteristics of the Hirpini cannot be separated from those of the other Samnites, which are described under the general article of SAMNIUM. Under the same head is given a more particular description of the physical geography of their country: the mountain chains and groups by which it is intersected being so closely connected with those of the more northern districts of Samnium, that it is convenient to consider them both together. Nor is it always easy to separate the limits of the Hirpini from those of the neighbouring Samnite tribes; more especially as our authorities upon this point relate almost exclusively to the Imperial times, when the original distinctions of the tribes had been in great measure obliterated. The rivers and valleys which constitute the main features of the Hirpinian territory, have been already briefly noticed. Pliny's list of the towns in the 2nd Region is more than usually obscure, and those of the Hirpini and of Apulia are mixed up together in a most perplexing manner. The towns which may be assigned with certainty to the Hirpini are: BENEVENTUM, by far the most important city in this part of Italy, and which is often referred to Samnium, but must have properly been included in the Hirpini, and is expressly called by Pliny the only Roman colony in their territory (Plin. iii. 11. s. 16); AECULANUM, also a flourishing and important town, nearly in the east of their territory; ABELLINUM, on the confines of Campania, and near the sources of the Sabaus; COMPSA, near the head waters of the Aufidus and ordering on Lucania; AQUILONIA and ROMULEA, near the frontiers of Apulia, in the SE. portion of the Hirpinian territory; TRIVICUM and EQUUS VITICUS, also adjoining the Apulian frontiers; and, of the last-mentioned city, MURGANTIA, near the sources of the Frente, which seems to have been the northernmost of the Hirpinian towns towards the NE., if at least it be correctly placed at *Baselice*. In the

valley of the Tamarus, N. of the territory of Beneventum, were situated the LIGURES BARBIANI ET CORNELLIANI, a colony of Ligurians transplanted to the heart of these mountain regions in B.C. 180 (Liv. xl. 38, 41), and which still continued to exist as a separate community in the days of Pliny. (Plin. iii. 11. s. 16; Lüb. *Col.* p. 255.) Of the minor towns of the Hirpini, three are mentioned by Livy (xxiii. 37) as retaken by the praetor M. Valerius in B.C. 215; but the names given in the MSS. (see Alschefski, *ad loc.*), "Vescellium, Vercellium, and Sicilinum," are probably corrupt: they are all otherwise unknown, except that the "Vescellani" are also found in Pliny's list of towns. (Plin. l.c.) Ferentinum, mentioned also by Livy (x. 17), in connection with Romulea, is also wholly unknown. Fratulum (*Φερουλόων*, Ptol. iii. 1. § 71), of which the name is found only in Ptolemy, is equally uncertain. TAURASIA, mentioned as a town only in the celebrated epitaph of Scipio Barbatus, had left its name to the Taurasini Campi not far from Beneventum, and must therefore have been itself situated in that neighbourhood. Aletrium, of which the name is found in Pliny (Aletrini, iii. 11. s. 16), has been conjectured to be *Calitri*, a village in the upper valley of the Aufidus, not far from Coma. Of the other obscure names given by the same author, it is impossible (as already observed) to determine which belong to the Hirpini.

The most remarkable natural curiosity in the land of the Hirpini was the valley and lake, or rather pool, of AMMANCTUS, celebrated by Virgil in a manner that abows its fame to have been widely spread through Italy. (Virg. *Aen.* vii. 563.) It is remarkable as the only trace of volcanic action remaining in the central chain of the Apennines. (Daubeny on *Volcanoes*, p. 191.)

The country of the Hirpini, notwithstanding its rugged and mountainous character, was traversed by several Roman roads, all of which may be regarded as connected with the Via Appia. The main line of that celebrated road was carried in the first instance direct from Capua to Beneventum: here it branched into two, the one leading directly by Aeculanum, Romulea, and Aquilonia, to Venusia, and thence to Tarentum: this was the proper VIA APPIA; the other known from the time of the emperor Trajan (who first rendered it practicable throughout for carriages) as the VIA TRAJANA, which proceeded from Beneventum by Forum Novum (*Buonalbergo*), and Equus Viticus (*S. Eleuterio*), to Aecae in Apulia, and thence by Herdonia and Canusium to Brundisium. The fuller consideration of these two great lines of highway is reserved for the article VIA APPIA. Their course through the country of the Hirpini has been traced with great care by Mommsen. (*Topografia degli Irpini* in the *Bullettino dell' Inst. Archeol.* 1848, pp. 6—13.) [E. B. J.]

HIRRI, a people mentioned by Pliny (iv. 13) along with the Venedae, and who were connected with the Heruli. They appear to have come from Scandinavia, and occupied that part of the coast of *Esthonia*, which was called in the Middle Ages *Harria*, after them. Thus, it seems that the coasts of the Baltic, as far as the mouth of the Oder, were exposed to the piratical attacks of the Goths, in very early times, as in later ages other European shores were devastated by the Normans. (Comp. Schafarik, *Slav. Alt.* vol. i. p. 116.) [E. B. J.]

HIRROS, a river of Asiatic Sarmatia, with a

town of the same name, 136 M. P. from Heracleum, and 67 M. P. from Saldica (Plin. vi. 5). It is, probably, the same place as the *HIMOS PORTUS* of the Periplus, which Rennell (*Comper. Geog.* vol. ii. p. 335) identifies with the deep inlet or small gulf of *Suezah-bah* in the Russian chart. [E. B. J.]

HISPALIS (*Ἰσπαλία*; also *HISPAL*, *Mela*, ii. 6, *Sil. Ital.* iii. 393; *Etā. Hispalensis*, Adj. *Hispalensis*; *Sevilla*), one of the chief cities of Hispania Baetica, stood on the left bank of the Bætis (*Guadaluquivir*), about 500 stadia from its mouth; but still within the tidal part of the river, which was navigable for large vessels up to the city: so that it had, to a great extent, the advantages of a sea-port. It was made a colony by Julius Cæsar; and although an attempt seems to have been made to exalt the neighbouring colony of Bætis above it, the very site of which is now doubtful, it ranked, in Strabo's time, among the first cities of Turdetania, next after Corduba and Gades; and afterwards even advanced in dignity: so that, in the time of Ptolemy, it had the title of *ὑπερβόλαια*, and under the Vandals and Goths it ranked above Corduba, and became the capital of Southern Spain. In the Roman empire it was the seat of a *conventus juridicus*, and bore the titles of *JULIA ROMULA* and *COLONIA ROMULENSIS*. (Strab. iii. pp. 141, 142; *Hirt. Bell. Alex.* 51, 56; *Dion. Cass.* xliii. 39; *Plin.* iii. 3; *Itin. Ant.* pp. 410, 415, 416; *Gorg. Rav.* iv. 45; *Philostr. Vit. Apoll.* v. 3, 6; *Auson. Clar. Urb.* 8; *Isidor. Etym.* xv. 1; *Inscr.* ap. Gruter, pp. 201, 257, Orelli, vol. ii. p. 396; *Flores, Esp. 8.* vol. ix. pp. 89, 90; *Coins* ap. *Flores, Med. de Esp.* vol. ii. p. 543; *Münner*, vol. i. p. 24, *Suppl.* vol. i. p. 42; *Eckhel*, vol. i. p. 36.) [P. S.]

HISPANIA (*Ἰσπανία*, *Ἰσπρία*), and **IBERIA** (*Ἰβηρία*), and, with reference to its division into two parts, very frequently **HISPANIAE** (so also *Ἰσπανίαι*, *Steph. B.*), the ancient names of the great peninsula now divided into the countries of Spain and Portugal. In this article, for convenience, the whole peninsula will be often called simply **SPAIN**.

I. ANCIENT NAMES.

As in the case of other countries, which only became known to the Greeks and Romans by portions, there was at first no general name for the whole peninsula. Polybius states that the part of the land on the Mediterranean, as far as the Pillars of Hercules, was called **IBERIA** (*Ἰβηρία*), while the portion onwards from that point along the ocean had no general name, as it had not long been known, and was entirely occupied by numerous barbarian peoples. (*Polyb.* iii. 37.)

1. The name in general use among the Greeks, during the historical period, was **IBERIA**, which was understood to be derived from the river **IBERUS** (*Plin.* iii. 3. s. 4; *Justin.* xlv. 1; *Steph. B.* s. v.; *Avien. Or. Mar.* 248): whence it was applied to the surrounding country, first vaguely, as will presently appear, and afterwards more exactly, as they gradually became acquainted with those physical features which so strikingly define its limits. (*Herod. Fr.* 11—13; *Herod.* i. 163, vii. 165; *Scyl.* pp. 1, 2; *Strab.* iii. p. 166; *Eustath.* ad *Dion. Per.* 281; *Hor. Carm.* iv. 528. (comp. below on the boundaries.)

2. The other and still more familiar name, **HISPANIA** (*Ἰσπανία*, *Strab.* iii. p. 166; *Agathem.* i. 2), came into use after the Romans began to have a direct connection with the country; and has remained the prevailing appellative ever since. There is little doubt that the genuine form of the name is **SPAN** or

SAPAN, the vowel sound being preferred for easier pronunciation, as is common in southern as well as eastern languages when an initial *s* is followed by another consonant (of this usage examples may be seen in the Arabic and Turkish names of Greek cities); and the name is used without the prefix (*Ἰσπανία*; *Artemidor. ap. Steph. B.* s. v. *Ἰσπανία*; *Plut. de Flom.* p. 32, *Hædæ.* vol. x. p. 774, *Reich;* *Paul. Epist. ad Rom.* xv. 28, *Sen.*) The origin of the name is not known with any certainty, nor whether it was used by the inhabitants themselves. *Reichert* derives it from the Phœnician and Hebrew word **ḲY** (*tapan*), which means a rabbit; and arguments are adduced in favour of this etymology from the numerous testimonies of the ancients to the abundance of these animals in the country (*Strab.* iii. pp. 144, 166; *Adrian.* *N. A.* xiii. 15; *Varro.* *R. R.* iii. 12; *Catull.* xlv. 18; *Plin.* viii. 56. s. 83, xi. 87. s. 76), as well as from a medal of Hadrian, on the reverse of which is seen a female figure, as the personification of Spain, with a rabbit at her feet. (*Flora. Not. de Esp.* vol. i. p. 109.) Others explain the Phœnician word to mean concealed, that is, the country little known; but this seems to be a new fancy. (*Maltebrun. Précis de la Géogr.* vol. vi. p. 21.) On the other hand, W. von Humboldt, in his invaluable essay on the primitive history of Spain, maintains that it was a native name, and that its genuine form, vowel prefix and all, is preserved almost unaltered in the modern native name *España*, which he derives from the Basque *Espania*, a border, margin, or edge, denoting that the peninsula was the margin of Europe towards the ocean. (*Humboldt. Prüfung der Unternehm. über die Urbevölkerung Hispaniens*, Berlin, 1821; comp. on the etymology of both names, *Plut. de Flom.* l. c.; *Solin.* 23; *Amian. Marc.* xliii. 6; *Const. Porph. de Adm. Imp.* ii. 23. *Eustath.* ad *Dion. Per.* 282; *Reichert.* *Chen.* i. 35. *Phalag.* iii. 7; *Oberlin.* ad *Vib. Seq.* p. 397; *Græc. ad Mart. Cap.* p. 201; *Wesseling.* ad *Itin.* p. 268. *Tschucke.* ad *Med.* ii. 6.)

3. **HESPERIA** was an old Greek name, chiefly used by the poets, in connection with the notion that the world consisted of four parts, of which **LENT** was the southern, **ASIA** the eastern, **EUROPA** the northern, and **HESPERIA** the western: and, according to this idea, Spain was the westernmost part of Hesperia. (*Niebuhr. Lectures on Ancient Ethnography and Geography*, vol. ii. p. 279.) Hence the country is sometimes called simply **Hesperia** (*Macrob.* i. 3; *Serv.* ad *Virg. Aen.* i. 530; *Isid.* *Orig.* xiv. 4; and sometimes, in contradistinction to Italy, **Hesperia Ultima** (*Horat. Carm.* i. 36. 4; comp. *Diefenbach. Cætion* iii. 32).

4. **CELTICA** (*ἡ Κελτική*) was also a general name for the West of Europe, and was used specifically for the interior of Spain, which was originally peopled, or believed to have been peopled, by Celts (*Aristot. de Mundo*, vol. i. p. 830, *De Val.*; *Scymn.* 173.) Ephorus (*ap. Strab.* iv. p. 199; *Marc.* ad *loc.* p. 142) extended Celtica to Gades, and applied the name of Iberia only to the W. part of the peninsula. So too Eratosthenes (*ap. Strab.* ii. p. 107) extended the Galatae (i. e. Celts) to Gadeira. This usage is, however, uncommon, the name being generally confined to those parts of the peninsula in which fragments of the old Celtic population held their ground. [**CELTAE**; **CELTICA**.]

5. **TANTERIS** was a name applied to the S. portion of the peninsula, and especially to the part beyond the Straits, in contradistinction to the name

Iberia, in its narrower sense, that is, the maritime district from the Straits to the Pyrenees. (Polyb. *loc. sup. cit.*): but this is a subject which needs a separate discussion under its proper head. [TARTESSUS.]

6. *Ethnic and Affective Forms.*—(1.) From *IBERIA*: *Εἰς Ἰβήρας*, gen. *Ἰβήρας*, pl. *οἱ Ἰβήρας*, fem. *Ἰβήρας*; Lat. *Iber*, *Lucan.* vi. 255, *Hor. Carm.* ii. 20. 20, pl. *Iberes*, *Catull.* ix. 6, also *Hiber*, *Hiberes*; and *Iberi* or *Hiberi*, *Virg. Georg.* iii. 406, fem. *Iberina*, *Juv.* vi. 53: *Ἀδὴ Ἰβήρας*, whence *ἡ Ἰβήρας* for the country itself; fem. *ἡ Ἰβήρας*, -ιδες; Lat. *Iberus*, *Ibericus*, and rarely *Iberiacus* (*Sil. Ital.* xiii. 510). (2.) Connected with *HISPANIA*: *Εἰς Ἀδὴ Ἰσπανίαν*, *Const. Porph. de Admin. Imp.* ii. 23; *Zonar.* iii. p. 406; *Ἰσπανία*, *Ἰσπανί*, *Ἀδὴ Ἰσπανί*; also *Spanus*, *Schol. Juv.* xiv. 279; *Amelius* 6; and *Spanicus*, *Geogr. Rav.* iv. sub fin.; *Ἀδὴ Ἰσπανίαν* (the distinction between this and the ethnic being nicely drawn in the following examples: *Vell.* ii. 51, *Balbus Cornelianus non Hispaniensis natus, sed Hispanus*, that is, not merely belonging to Spain, like, for example, a Roman born in Spain, but a true Spaniard; and *Mart.* xii. *Præf.*: *Ne Romanus, si ita decreverit, non Hispanensem librum mittamus, sed Hispanum*), and rarely *Hispanicus*. (*Sust. Aug.* 82, *Vitruv.* vii. 3.)

II. SPAIN AS KNOWN TO THE GREEKS.

The west of Europe was to the early Greeks a land of fancy as well as mystery. Vague reports had reached them, probably through the Phœnicians, from which they at first learnt little more than the bare existence of lands, so far distant from their own country as to reach the region of the setting sun and the banks of the all-encompassing river Ocean. According to the very natural tendency which led them to place the happiest regions and the choicest productions of the earth at its extreme ends, confirmed perhaps by exaggerated accounts of her fertility and beauty which some of these regions (Andalucía, for instance) actually enjoy, they fancied them as happy plains or as enchanted islands, and copied them with the divine nymphs, Circe and Calypso, who there detained in sweet bondage the hero whom fate had cast upon their shores, with the airy spirits of departed heroes, with the primitive and pastoral Cyclopes, and the wealthy maritime Phœnicians, or with the exiled dynasty of gods,

"Who with Saturn old,
Fled over Adria to the Hesperian fields,
Or o'er the Celtic roamed the utmost isles."

These poetic fancies were succeeded by historical inquiries, and then came all the difficulties of reconciling meagre and conflicting testimonies with the facts and with each other; mistakes arising from not assigning positions vaguely and variously, and then, instead of the discovery of such errors, the attempt to reconcile them by supposed migrations and her arbitrary devices: so that such names as *Βερυγες*, *Χαλθιες*, *Κίμμερι*, and *Ιβηρες*, scarcely even associated with any exact locality, and are freely transferred backwards and forwards between the shores of the Atlantic and those of the Euxine. To this was added the polemical spirit, which we find so rampant among the old geographers (as among the African and Arctic critics now), which "by decision are embroiled the fray;" while all the time the older poets were adding to the confusion by imitating the legends of the ancients, and inventing others of their own. Amidst all these elements of uncertainty

it is no wonder that we generally find no sure basis of information concerning the more distant countries of the world until the arms of Rome had cleared the way for the inquiries of the learned Greek.

But yet the neglect of this period would deprive the science of ancient geography of a great portion of its interest, and of its use, too, in throwing light on the progress of our race. And in no case is this period more attractive than in that of the remotest country towards the West, one which is invested with the double interest of having been familiar to the Phœnicians, as a principal scene of their commerce and colonisation, while the Greeks were still making it a favourite theatre for the creations of their fancy.

1. Of the purely *Mythical Period* little is to be said, and that little more properly belongs to other articles. [*Κίμμερι*, *Οὐρανός*; *Fortunæarum Insulæ*; *Ἡερακλίδες*, *Αἰνὰς*; *Ἡερακλὶς Κολυμβάριον*, &c.; and the articles *Ἡερακλὶς*, *Ἡερακλὶς*, &c. in the *Dictionary of Greek and Roman Mythology and Biography*.]

2. Advancing to the *Semi-Mythical Period* of *Hesiod* and the *Lyric Poets*, we begin to meet with names which have at least the appearance of a specific geographical significance, though still most uncertain as to their position; such as *Tartessus*. In connection with the legends of the Hyperboreans, the Rhipæan mountains appear as a great range intersecting Europe from W. to E. The *Λεῖρα* and *Κριδάριος* were known by name to *Hesiod* (*Theog.* 338, 339) as rivers of W. Europe; and his island *Erytheia*, the abode of Geryon, is so described as to prepare the way for its subsequent identification with *GADES*.

3. The transition to the period of more real, though still most imperfect knowledge, marked by the age of the *Logographers* and *Tragic Poets*, is extremely gradual, for while the avowed writers of fiction are seen to invest their scenes with only an appearance of fact, the investigators of facts are found recording under that guise the strangest fictions. But yet there is no doubt that both give us what is meant to be objective knowledge; and no reader of the *Prometheus*, for example, can doubt that *Aeschylus* expends all the resources of his geographical knowledge, be they less or more, on his description of the wanderings of Io. Indeed, with reference to our present subject, we have now reached a period when the maritime enterprises of the Phœnicians had placed the Greeks in direct connection with the shores of the W. part of the Mediterranean; and had made them acquainted with *Tyrrhænia*, *Iberia*, and *Tartessus*. (*Herod.* i. 168.) Accordingly we find the logographer *Pherecydes* and the poet *Stesichorus* not only acquainted with the name *Tartessus*; but the latter making it a river, in such a manner as to suggest its identification with the *Guadalquivir* [*BARTUS*], while the former accurately represents it as a city on the straits which divide *Libya* from Europe [*TARTESSUS*]. *Stesichorus* mentions also the island of *Erytheia*, and an island *Sarpedonia* in the Atlantic. (*Strab.* iii. p. 148; *Schol. Apoll. Rhod.* i. 211.) *Pindar* seems well acquainted with the *Pillars of Hercules*, as the limit of the known world [*Ἡερακλὶς Κολυμβάριον*]; and *Aeschylus*, besides some other interesting allusions, too doubtful, however, to be discussed here, seeks for the sources of the *Ister* in the Rhipæan mountains, a fact of which the importance will be more clearly seen when the views of *Herodotus* have been discussed. (*Schol. Apoll. Rhod.* iv. 28; *Ukert*, vol. ii. pt. 1, pp. 238—243.)

From these fragmentary notices we pass on to the first writer who gives us a systematic account of any portion of the country,—namely **HECATEAEUS** of Miletus (about B.C. 500); for we have no remains of the earlier work of Choron of Lampasacra, which contained a Periplus of the coast outside of the Pillars of Hercules. (Eudae, *Violar.* p. 435.) The Greeks of this period seem to have been acquainted with the S. coast so far as to know the names of a number of places along it, but not so as to form any accurate idea of it as a whole. From the few extant fragments of Hecataeus, and from the passages in which Festus Avienus follows his authority, Ukert deduces the following results:—West of the Straits, which he makes scarcely 7 stadia in width, dwelt the **TARTESI** (Avien. *Or. Mar.* 370), among whom was the town of **ELISYRGE** (Steph. B. s. v. *Ἐλίσυργε*), which no other ancient writer names, but which the moderns have sought to identify, on account of the resemblance in the names only, with **ILLIBERRIS** or **ILITURUM**. East of the Pillars dwelt the **MANTIANI**, with the capital, **MANTIA**: a people and city long after mentioned also by Polybius (iii. 24): they had also the cities of **Syalis** [**ΣΥΛΙΣ**], **Mainobora** [**ΜΑΙΝΟΒΟΡΑ**], **Sixos** [**ΣΑΞΕΤΑΝΟΝ**], **Molybdane**, and **Calathie** (Steph. B. s. v.). Further to the E. the country began to be called **Iberia**, and was inhabited by numerous peoples; among whom were the **Baragathae**, on a river of the same name (Steph. B. s. v. *Ἰαπερύγας*), who seem to be the **Ilurgathae** or **ILURGETAE** of later writers; and the **Mingetae** (Steph. B. s. v. *Μινγγεῖται*). Among the cities of Iberia are mentioned **Crabasia** and **Hyope**, with a river **Lesyros** near the latter. (Steph. B. s. v. *Ῥέβ.*) Hecataeus also mentions the town of **Scirane** (Steph. B. s. v. *Σκίρνε*), a name of much interest, as showing the existence of Scythians in Spain, which is also asserted by Thucydides, who makes them dwell upon a river **Sciranus**, next the **Ligyae** who expelled them thence to Sicily. (Thuc. vi. 2; Strab. iii. p. 270; **SCIRANI**.) Two islands, **Cronyus** and **Melissa**, are mentioned by Hecataeus as belonging to Iberia. (Steph. B. s. v.)

5. **HERODOTUS** touches on the W. of Europe only incidentally, as but very distantly related to his main subject. In one passage, when speaking of the extreme regions of the earth, he plainly states that he has nothing certain to say of the western parts of Europe: and he even doubts the existence of the river **Eridanus** and the islands **Cassiterides** (iii. 115); and elsewhere he mentions the belief of the Persians that there were no countries of any great importance W. of Greece (vii. 8). His views may be summed up as follows:—Beyond the Pillars of Hercules lay **Gadeira**, and near it the island of **Erytheia** (iv. 8). Elsewhere he mentions the **CYRINI** or **CYRNETES** as the westernmost people of Europe (ii. 33; iv. 49); and next to them the great nation of the **Celtae**, whose country is remarkable for its precious metals, and for the long life of the inhabitants (i. 163; iv. 49, 152, 193: comp. Strab. iii. pp. 150, 151; Lucian, *Macrob.* 10; Ptolemy, *de Longae.* 4; Cic. *de Senect.* 19; Plin. vii. 48; Val. Max. viii. 13). Among the **Celtae** were the sources of the river **ISTRA**, in the neighbourhood of a city called **PRAXIA**. (Herod. ii. 33; iv. 49.) It is important to remember that this statement respecting the source of the **Ister** is connected with a theory entertained by Herodotus,—that the two great rivers of Libya and Europe, the Nile and the **Ister**, followed courses right through the respective continents, from W. to E., almost ex-

actly parallel and equal to each other: the introduction of the name **Pyrene** is discussed in proper place. [**PYRENEAN MOUNTS**.] The name of **Iberia** is mentioned by him twice. The one passage is that already cited respecting the discovery of the Phoenicians, where the relation in which it stands to **Tyrrhenia** suggests that it signifies the peninsula of Spain, so far as it was known by maritime discovery (i. 163). In the other passage he refers to Iberians in the army of **Hamilcar** in Sicily, and connects them with the **Ligyae** in such a manner to suggest the inference, that the name was given to the whole Mediterranean coast, from the Straits to the Gulf of Lyon (vii. 165). In the former of these passages, again, he mentions **TARTESI** in connection with Iberia, and describes the Phoenicians as holding most friendly intercourse with **Argemina**, the king of the **Tartesi** (i. 163), and speaks elsewhere of the wealth and commercial importance of **Tartessus** [**TARTISSUS**]. These views seem to have had little more connexion in the mind of the historian than the passages which them have in his works; but, on comparing them with the actual facts, and having regard to the probable sources of information, something clearer may be made out. On the S. coast, he has derived from Phoenician and Phoenician sources to have extended as far as the SW. part of the peninsula, the **SACRUM PROMONTORIUM** (*Sp. Vincenti*), which long remained the westernmost of ancient maritime discovery; if, at least, the **aeetes** are the **COXII** of other writers—that the inhabitants of the southern projection of **Hispania** called **CURTES**. Justin (xlv. 43) mentions them in the mountains of the **Tartessi**; a confirmation of the hint given under **COXII**, that the name is ethnic, and that its resemblance to the **East** name which so well describes the name of the **aeetes** is merely an accidental coincidence. But the great colony of **GADIBES** was a subject of which he would hear much from the Phoenicians: separate accounts respecting **Tartessus** as a flourishing country would be obtained from its people, who had long traded to it under the name of **Tarshish**, and from the Phoenicians, as well as seen. The name **Iberia** seems to have been derived exclusively from the Phoenicians. Lastly, from these results of maritime discovery, he had derived from the Phoenicians and other sources the impression that the great Celtic race overspread pretty nearly the whole interior of Western Europe; a region some of which he possessed scarcely one detail of actual knowledge.

6. The historians, geographers of the country of Herodotus had obtained a larger amount of materials, but without a corresponding improvement in the accuracy of their knowledge. The name of the Celtic race, and the confusion between **Celti** and **Iberians**, are found still prevalent; and the names of the great rivers of W. Europe are very imperfectly known. Thus, **EUDOXUS** of Cnidus (about B.C. 380—360), of whose geographical writings little made great use, mentions the mountain **Pyrene** in **Celtica**, towards the W. extremity of the continental line (*ὑπὸς ὁρῶντος ἰσχυροῦς*), as marking the sources of the rivers **Ister** and **Taraxos**, which the latter flowed outside of the **Pyrene**—the former through all Europe. (Arist. *Metaph.* i. 13.) He places **Iberia** S. of **Celtica**, and describes its shores towards the ocean as high and rocky promontories running far out into the sea.

HL. p. 153.) About the same time, EPHORUS, who devoted the 4th book of his work on geography to the W. of Europe, assigns a vast extent of country to the Celts, and carries them on the W. as far as Gades; while he confines the name of Iberia to the region W. of Gades, and, if we are to believe Josephus, even fell into the error of making Iberia a city with a comparatively small territory. He relates some absurd fables about these regions. (Strab. iii. p. 153, iv. p. 199, vii. p. 302; Joseph. c. Apion. i. 12; Marx, *ad Ephor. Frag.* p. 142.) The *Periplus* of SCYLAX, which also belongs to about the same period, is very vague as to the shores of Spain. He makes special mention of the commercial settlements of the Carthaginians outside the Pillars, and of the tides and shoals which characterise that sea: a great sandbank stretches across from the Sacred Promontory (C. S. Vincent) to the promontory of Hermæum in Libya. The Iberians are the first people in Europe; and there is the river Iber, and two islands called Gadeira [GADES]; and then comes the Greek city EMPORIUM. Probably there is here a gap in the text; for he passes over the whole coast from the Pillars to the Pyrenees, the voyage along which, he says, occupies 7 days and nights. (Scylax, pp. 1, 51, ed. Hudson, pp. 1—3, 123, ed. Gronov.) Next to the Iberians, he places the Ligurians (*Altyes*) and the "mixed Iberians" (*Ἰσπερ μυκίδες*) as far as the Rhone.

In the Pseudo-Aristotelian work *de Mirab. Auscult.* (86), the peoples of Western Europe are mentioned in the following order, from W. to E.: Iberes, Celtoligyes, Celtes, as far as Italy. HERODOTUS tells us that the Iberians, who dwell on the shores of the Straits, though belonging to one race, have various names, according to their several tribes. (Fr. op. Const. Porphyr. *de Adm. Imp.* ii. 23.) Those most to the W. are called CYRNES (Steph. B. s. v. *Κυρναίους*); N. of them are the GLETTES (Steph. B. s. v. *Γαίτες*; comp. Strab. iii. p. 166, who says that the country E. of the Iberus was formerly called after the IGLETTES, a great and powerful nation, who dwelt in it); then the TARESSAI; then the ELAYSINI; then the MASTIANI and the CALPIANI, as far as the Rhone. (This nomenclature, and the order of it, might be made to throw much light on the names and positions of the Spanish peoples, if the argument were not somewhat too speculative for this article).

We likewise find a vast amount of error and confusion among the geographers of this age respecting the distances and bearings of the shores of the W. Mediterranean. ENDORUS states that a person sailing through the Straits into the Inner Sea has immediately on his left hand the Sardon, Galatian Gallic, and Adriatic Sea, on the right the bay of the Syrtis (Arist. *de Mund.* 3); and DICARCHUS estimates the distance from the Sicilian Strait (Straits of Messina) to the Pillars of Hercules (Straits of Gibraltar) at only 7000 stadia. (Strab. ii. p. 105.)

7. *Age of Alexander and the Ptolemies.*—The reign of Alexander the Great forms an epoch in the geography of W. Europe. While his followers were doing by their own direct observations to the knowledge of the extreme East, we are told that from the opposite end of the known world his fame attracted envoys of numerous nations, and among the rest from the Celts and the Iberians, whose dress was new for the first time seen, and their language first heard, by the Greeks and Macedonians. (Arrian, *Isab.* vii. 15.) From these and other sources, the

learned men of Alexandria, under the Ptolemies, obtained the information which is recorded in the works of ERATOSTHENES, his contemporaries, and his followers. It appears that Eratosthenes was indebted for much of his knowledge to Timosthenes, the admiral of Ptolemy Philadelphus, and the author of a large geographical work; but the views of both on the W. of Europe in general, and on Iberia in particular, are severely criticised by Strabo and Marcian. (Strab. ii. pp. 92—94.)

Eratosthenes describes 3 peninsulas as running out S. from the mainland of Europe; the one that which ends with the Peloponnese, the second the Italian, and the third the Ligurian (*Αργοντική*); and these contain between them the Adriatic and Tyrrhenian gulfs. (Strab. vii. p. 92.) In another passage, the westernmost of these 3 peninsulas is described as that which extends to the Pillars, and to which Iberia belongs. (Strab. ii. p. 108.) Of this peninsula he assigns a large part to the Celts (*Γαλαίαι*), whom he makes to reach as far as Gadeira. (Strab. ii. pp. 107, 108.) He places the Columns of Hercules on the Straits [HERCULES COLUMNÆ], to the W. of which he represents the peninsula as running out into several large promontories. Of these, the first is the Sacred Promontory (C. S. Vincent), which he placed at the greatly exaggerated distance of 5 days' voyage from Gades. (Strab. ii. p. 148.) The other chief promontory is that of CALBIUM, about which dwelt the OSTIDAMNI; and opposite to it lay several islands, of which UXISAMA, the farthest so the W., was distant 3 days' voyage from Calbium: in this part of his description he follows Pytheas. (Strab. i. p. 64.) The region adjacent to Calpe he calls Tartessus, and places there the "happy island" of Erytheia. Besides GADES, he mentions the town of TARRACO (Tarragona), and adds that it has a good roadstead, a statement contradicted by Artemidorus and Strabo. (Strab. iii. p. 159.) He makes the Pyrenees the E. boundary. [PYRENEAI.] In general, his knowledge seems not to have extended beyond the coast.

8. We are now brought down to the time of the First Punic War, and to the eve of the period when the imperfect, and often merely speculative, notions of the Greeks respecting Spain were superseded by the direct information which the Romans gained by their military operations in the country. But before passing on to the Roman period, a few words are necessary on the extent of Iberia, as understood by the Greek geographers.

While, as we have already seen, many of them gave the greater part of the peninsula to the Celts, and confined the Iberians either to the part W. of the Straits, or to the Mediterranean shore; others extend the name of Iberia as far E. as the Rhone, and even as far N.E. as the Rhine, and so as to include the peoples on both sides of the Alps. Thus Aeschylus, if we are to believe Pliny, took the Eridanus to be another name for the Rhodanus, which he placed in Iberia. (Plin. xxxvii. 2. s. 11.) Nonnus applies the epithet *Iberian* to the Rhine. (Dionys. xxiii. p. 397, xliii. p. 747.) Plutarch places Iberian tribes in the Alps. (Marcell. 3.) In fine, Strabo sums up these opinions as follows:—"The name of Iberia, as used by the earlier writers, includes all the country beyond the Rhone and the Isthmus which is confined between the Gallic Gulfs (i. e. the Bay of Biscay, and the Gulf of Lyon): but those of the present age assign M. Pyrene as its boundary, and called it indifferently Iberia and His-

pania, [whereas by these of old the name of Iberia] was applied only to the part within the Iberus. (Strab. iii. p. 164; the words within brackets are supplied as the most probable restoration of a gap in the text.)

It must be observed that such statements as these express something more than a confusion in the minds of the Greek writers between the territories of the Celts and of the Iberians: they express the fact in ethnography, that the Iberian race extended beyond the boundaries of Spain as defined by the Pyrenees, and that they were to a great extent intermixed with the Celts in W. Europe. (See below, on the earliest inhabitants of Spain: No. VII.)

III. SPAIN AS KNOWN TO THE CARTHAGINIANS AND THE ROMANS.

1. *Down to the End of the First Punic War.*—The internal state of the peninsula, down to the period at which we have now arrived, will be spoken of below; but, in order to estimate the knowledge of the country possessed by the Romans, we must first glance at its relations to the other great power of the Mediterranean. From the earliest known period of antiquity the Phœnicians had held commercial intercourse with Spain; and there is more than a probability that Tyre had established a sort of dominion over the part adjacent to the S. coast, the TARRHENE of Scripture, and the TARTESIUS of the Greeks. (*Isaiah*, xxiii. 16, where the prophet compares the liberty of Tarrhish, consequent on the fall of Tyre, to the free course of a river, — such, for example, as her own *Guadalquivir*, — when a mighty obstacle is removed.) The phrase “ships of Tarrhish” appears to have been as familiar to the mercantile marines of Tyre as “Indians” in our own (*2 Chron.* ix. 21, xi. 36, 37; *Ps.* xlviii. 7; *Is.* lx. 9; *Ezek.* xxvii. 25); and the products of the Spanish mines, “silver, iron, tin, and lead,” are mentioned by *Ezekiel* as among “the multitude of all kind of riches, by reason of which Tarrhish was her merchant.” (*Ezek.* xxvii. 12.) Phœnician settlements were numerous on the S. coast of the peninsula, within the Straits, and beyond them there was the great commercial colony of GADIZ, theemporium for the traffic of Tyre with the shores of the Atlantic. But this was not all. From the very physical nature of the country, it was scarcely possible that the Phœnicians should have abstained from extending their power up the navigable stream of the BÆTIS, of which Gades may be regarded as the port, over the fertile plains of Bætica (*Andalucía*), as far N. as the *Sierra Morena*, which at once contained the mineral wealth in quest of which they came, and formed a barrier against the natives of the centre. Be this as it may, we know for certain that in the narrower tract between the sea-shore and the *Sierra Nevada* [*ILIPULA*] the people were a mixed race of Iberian and Phœnician blood, called *Mcōpōlōvares* (Strab. iii. p. 149: *BASTULI*). The power which the Carthaginians obtained during this period over the natives cannot be positively defined; but they received many of them into their armies by voluntary enlistment.

2. *The Vicinity of the House of Barca.*—Such were the relations of Spain to Carthage; and as to Rome, she had as yet nothing to do with the peninsula, when the First Punic War was brought to an end, B.C. 241. Carthage seemed to have expended all her resources in the vain effort to secure Sicily; and, when the revolt of her African mercenaries gave Rome an opportunity of striking

away from her her oldest province, Sicily and Corsica (B.C. 236), the contest might well be thought to have concluded. “I believe,” says Niebuhr, “that there were fellows at Carthage, such as Hanno, who, partly from envy of Rome, and partly from their own stupidity, said as they could not see that, after the loss of Sicily and Sardinia, there were yet other quarters from which the republic might derive great benefit. When, after the American War, it was thought that the ruinous peace of Paris had put an end to the pretences of England, Pitt undertook with dash and courage the restoration of his country, and displayed extraordinary powers. It was in the same spirit that Hamilcar acted: he turned his eyes to Spain . . . he formed the plan of making Spain a province, which should compensate for the loss of Sicily and Sardinia. The latter island was then still very unhealthy, and its interior was inaccessible. Sicily had an effeminate and over-luxurious population, and, rich as it was, it might not have increased the maritime power of Carthage: it would not have given her any additional naval strength. The weakness of Carthage consisted: her having no armies; and it was a grand conception of Hamilcar’s to transform Spain into a Carthaginian country, from which national arms might be obtained. His object, therefore, was, on the one hand, to subdue the Spaniards, and on the other, to win their sympathy, and to change them into a Punic nation under the dominion of Carthage” (*Polyb.* ii. 1; *Diod. Fr. Lib. xxi.*; *Eclog.* ii. 510.) The conduct of the Romans towards their subjects was haughty, and always made them feel that they were despised. The highly refined Greeks who were themselves wont to look with contempt on all foreigners, must have felt that laughter was heaped on them by the Spaniards and Celts who were less respected. Common soldiers in the best armies not unfrequently, especially in the time of the emperors, married native women of the countries in which they were stationed. Such marriages were regarded as concubinage, and from them grew a class of men who were very dangerous to the Romans. The Carthaginians acted more wisely by making no restrictions in regard to marriages. Hannibal himself married a Spanish princess of Castulo (*Liv.* xxiv. 41; comp. *Diod. Fr.* ii. 510; *Eclog.* ii. p. 510, foll.), and the practice must have been very common among the Carthaginians. This was an excellent way to gain the good will of the natives. The whole of the southern part of Spain had resources of no ordinary kind: it furnished all the productions of Sicily and Sardinia, and in addition to them it had very rich mines, the working of which has been recorded in our own days. Hamilcar was the first who introduced there a regular and systematic mode of mining, and this led him, or his son-in-law, to the town of New Carthage (*Carthago Nova*). From the Carthaginians thus gained the sympathy of the nation, they acquired a population of millions who relieved them from the necessity of hiring foreign mercenaries, as they had been obliged to do in the First Punic War; they were enabled to raise armies in Spain just as if it had been their own country. The Romans no doubt observed these practices with feelings of jealousy, but could not prevent them, as long as the Alpine Gash stood as the frontier, ready to avenge the defeats of the *Senones* and *Boians*.” (Niebuhr, *Lectures on Roman History*.)

vol. ii. p. 69.) It was in the year B. C. 237 that Hamilcar commenced this mighty work, not without an ultimate design, unless he is grossly misrepresented by Polybius and Livy, of founding for his house an empire in Spain, in case the Anti-Barchine faction should prevail at Carthage. [CARTHAGO NOVA.] For eight years he carried on his plan with great success, and he appears to have extended the Carthaginian empire as far N. as the *Sierra Morena*, so that it included the whole of *Andalucía*, and pretty well all *Murcia*. On his death, B. C. 239, he left his power and his schemes as an inheritance to Hasdrubal, his son-in-law, who carried on the plan for nearly nine years, till he was cut off by an assassin, B. C. 231, and left its fulfilment to the mighty genius of Hannibal. Meanwhile the Romans, occupied with the war in Cisalpine Gaul, had no power to interfere. Just, however, before that war began, they had done the best they could by making a separate treaty, not with Carthage, but with Hasdrubal himself (as a sort of supplement to the existing treaty with Carthage), by which the river Iberus (*Ebro*) was fixed as a limit beyond which the Carthaginians were not to extend their conquests (as Polybius states), or (according to Livy) as the boundary between the two states, B. C. 238. (Polyb. iii. 27; Liv. xxi. 2; xxiv. 13.) That the latter expression, even if used in the treaty (which seems from Polybius to be more than doubtful) does not imply that the Roman arms had actually extended to the Iberus, is shown by Livy himself in the second passage quoted, where he says that Spain was then in the hands of the Carthaginians, held by their generals and armies, while Rome had not a single general nor any soldiers in the country. The previous treaty itself, made at the close of the First Punic War, had provided that the allies of each state should be safe from molestation by the other; and now, if we are to believe Livy (Polybius being silent on the point), an express stipulation to the same effect was introduced on behalf of Saguntum, a city lying within the portion assigned to the Carthaginians, but in alliance with the Romans. [SAGUNTUM.] The dispute upon this question, and its bearing upon the rights of the two parties in the Second Punic War, are of little consequence here, except as throwing light on the connection of the Romans with the peninsula. Thus much is certain, that Saguntum was in alliance with Rome when Hannibal laid siege to it, and it is also probable that the Romans had some footing in TARRAGO.

3. *The Second Punic War.*—When Hannibal, on his march to Italy, had effected the passage of the Rhone, and turned the flank of Scipio, B. C. 218, the bold resolution, by which that general sent the bulk of his army into Spain under his brother Cneius, to oppose Hasdrubal, while it perhaps determined, however remotely, the issue of the war, began a struggle, first with the Carthaginians, and then with the Spaniards themselves, which lasted almost 200 years, and only ended with the subjugation of the northern mountaineers, the CANTABRI and ASTURES, by Augustus, B. C. 25. It is needless to dwell on these details, which are familiar to every reader as a part of the Second Punic War: the successes of Cn. and P. Scipio, and their unfortunate end, B. C. 218—212; the almost romantic expedition of young P. Scipio, 211, his capture of New Carthage, 210 [CARTHAGO NOVA], and the final expulsion of the Carthaginians from Spain, B. C.

206, which was followed by its erection into a Roman province. From this time the Romans had to deal with the natives, a people always willing to make use of foreigners against each other, but never ready to yield them obedience.

4. *Conquest of the country by the Romans.*—Neither the dominion of Hannibal, nor that acquired by the Romans in the Second Punic War, extended over so much as one half of the peninsula. The part which they had entirely subdued, seems to have comprehended *Catalonia*, *Valencia*, *Murcia*, and *Andalucía*, or the country between the sea and the great chain which runs parallel to the E. coast, and on the S. the country between the *Sierra Morena* and the sea. The province (its division will be spoken of presently) was governed by praetors; there being sometimes one, and sometimes two; and two legions were kept stationary in Spain. This arrangement, besides its effects on the Roman constitution, with which we are not here concerned, had a most important influence on Spain. "The legions remained there for a number of years, married Spanish women, and became estranged from Italy. When, therefore, such legions were disbanded, many soldiers would remain in Spain, unwilling to return to a country to which they had become strangers." (Niebuhr, *Lectures on Roman History*, vol. ii. p. 308.)

The central tribes, forming the great Celtiberian nation, retained their own government, which seems to have been of a republican form, in nominal alliance with the Romans, to whom the independent tribes of the N. and W. were as yet scarcely known by name. (Liv. xxiii. 21, xxix. 3; Flor. ii. 17.) The Roman settlements were continually exposed to the attacks which the natives, as provocation was given or opportunity offered, made upon them from their strongholds in the mountains. (Liv. xxviii. 4.) To abate the evil Cato the Elder, when consul, undertook an expedition against the Celtiberians and some smaller tribes, whom he induced, by a stratagem, to demolish the defences of their towns, and so to place themselves in his power, which, it must be added, he used with such justice and moderation as to win their hearts, B. C. 184. (Appian, *Hisp.* 41; Liv. xxiv. 17; Plutarch, *Cat.* 10; Flor. ii. 17.) Indeed, as Niebuhr has more than once observed in his *Lectures*, the wars of Rome in Spain give constant illustrations of that point which (like most others) is still conspicuous in the national character, their great susceptibility of personal influence, which often proved a corrective to their bitter jealousy of foreigners. "It is indeed surprising" (he says, vol. ii. p. 209) "to see how a Roman general with humane feelings was always able to win the affections and confidence of those tribes [in central Spain], and to establish the authority of Rome for a time, until fresh acts of injustice provoked their resentment." Of this we have another striking example in the success of Tib. Sempronius Gracchus, the father of the celebrated brothers, who concluded a fierce war, in which the Romans had been for some time engaged with the Celtiberians, by an honourable peace, which at once secured the Roman supremacy and won the hearts of the natives. By this peace the Roman power became established in *Catalonia*, *Valencia*, *Arragon*, and the E. part of *Castile*, and the tribes who were parties to it bound themselves to build no more towns, B. C. 179. (Polyb. *ap. Strab.* iii. pp. 111, 170; Liv. xl. 49, et seq., xli. 3; Appian,

Hisp. 43; *Fler. l. c.* CANTABRI.] From this time it becomes difficult, from the paucity of materials, to give a consecutive account of the progress of the Roman arms; nor would the details be very interesting. The war seems to have been more or less constant, in the valleys of the Tagus and the Durus, with various tribes, among which the most conspicuous are the VACCANI and the LUSITANI; what was gained by the skill and wisdom of one general being generally put to hazard by the cupidity and oppressions of another. On the whole it seems probable that, before the epoch of the Macedonian War (B.C. 171), the domination of Rome had been extended over the whole peninsula, except the mountainous regions of the north, and the mountain fastnesses of the centre. In B.C. 153, some new provocation, the exact nature of which is obscure [CELTIBERIA], drove the Celtiberians into open revolt, and the consul Q. Fulvius Nobilior made an unsuccessful campaign against them. (*Liv. Epit. lib. xlvii*; Appian, *Hisp.* 44—47.) The consul of the next year, the celebrated M. Claudius Marcellus, concluded an armistice with them on very fair terms, and turned his arms against the Lusitanians. But his moderation was alike distasteful to the Senate, who demanded an unconditional submission, and to his successor in the consulship, L. Licinius Lucullus (B.C. 151), who renewed the war with much cruelty and avarice, but with little success, against a part of the Celtiberians; but he gained some advantages against the VACCANI and CANTABRI, and other peoples as yet unknown to the Romans. (*Polyb. xxxv. 3, 4*; *Liv. Epit. xlviii*; Appian, *Hisp.* 51—53.) After the war had lasted for four years, B.C. 153—149 (a period which is therefore sometimes called "the First Celtiberian War," to distinguish it from the war of NUMANTIA, which was, in fact, but its continuation), it appears to have been suspended, partly because the attention of Rome was now occupied with the Third Punic War (B.C. 149), but still more on account of the more serious occupation which the cruelty and treachery of Lucullus and the praetor Galba had made for the two armies of Spain in the great war against the Lusitanians and Viriathus, which was only finished by the consul D. Junius Brutus, in B.C. 138. [LUSITANIA.] Brutus, remaining in his province of Further Spain as proconsul, devoted the next year to the completion of the conquest of Lusitania, and then marched across the river Durus (*Douro*) into the country of the Callaici Bracarii, into which no Roman army had ever before penetrated, and advanced as far as the Minus (*Minho*), though his conquests can hardly have been permanent. [GALLAECIA.]

Meanwhile the state of affairs in the other province, Hither Spain, had become critical; and the Celtiberians, long known as the bravest and most noble-minded of the Spaniards, were engaged in that final struggle which was only quelled by the skill and the stern resolution of the younger Scipio Africanus. In B.C. 143 Q. Caecilius Metellus Macedonicus had entered his province of Hither Spain with the resolution to confirm, by its final conquest, the fame he had already acquired in Macedonia; and he gained great successes against the Celtiberians. (*Liv. Epit. liii.*; *Val. Max. ix. 3. § 7*, *vii. 4. § 5*, *lii. 2. § 21*; Appian, *Hisp.* 76; *Europ. iv. 16*.) The reverses of his successor Q. Pompeius, the varied fortunes of the war, and its conclusion by Scipio, belong to the history of NUMANTIA, whose fall and destruction

established the Roman dominion in Central Spain B.C. 133; and left nothing to be done except the subjection of the CANTABRI and ARVACI, which was effected by Augustus in B.C. 8. (See the articles: the Wars of Sertorius and the *l. c.* Censor belong to the internal history of Rome, and only deserve notice here on account of their effect in further consolidating the Roman power in the peninsula.)

The Romans had thus been long quietly settled in the south and east; and in the centre the presence of Roman armies, and the settlement of Roman veterans, had necessarily exerted a strong influence on the language and manners of the natives, besides infusing into the population so much of Roman blood. And, during the whole of the two centuries, no other foreign influence had been brought to bear upon the people: we hear of one invasion by barbarians, that of the CINI, who, after their great victory over Marcus Caepio (B.C. 105), turned off into Spain; but they ravaged in the most fearful manner for greater part of two years (B.C. 104, 103), until desperate resistance of the Celtiberians obliged them to give up the hope of a permanent conquest, and retire from the peninsula. (Niebuhr, *Less. ant. Hist. vol. ii. p. 330.*)

Under Augustus the Romanizing process was carried on by the foundation of many and very considerable colonies, as, for example, CAESAR AUGUSTA (*Zaragoza*), EMERITA AUGUSTA (*Merida*), JULIA (*Beja*), PAX AUGUSTA (*Badajoz*), &c. &c. JULIA GEMINA (*León*), and others. These cities were adorned with some of the finest productions of Roman architecture, of many of which magnificent remains still remain.

The system of internal communication which had been commenced as early as B.C. 184 (see *l. c.* iii. 39; *Freinsheim, Suppl. Lib. lxi. 79*), and developed by Pompey's military roads over the Pyrenees (Sallust, *Frag. Hist. iii. p. 380*, Celtiberians made tolerably complete by Augustus. The peninsula, with all its natural advantages, was open to travellers and settlers, who flocked from Pyrenees to all quarters of the land; so that, at the time of Strabo, the Tartessians in the S. and the people about the Baetis in general, had been converted to Roman manners (*religio et mores paucis peregrinorum copiam*), and they had forgotten their own language. Most of the natives obtained the civitas Latina, and had received Roman settlers; so that little was wanting of their being Romans. The Iberians who were in the centre were called Togati; and among these were included even the Celtiberians, who had been regarded as the wildest (*Synanthrope*) of all (Strabo, *l. c.*); that is, of all the tribes in the S. and central peninsula, for them only in Strabo has space. The tribes of the northern mountains long retained those fierce rugged manners which led them to write (*Sat. viii. 119*) "Hocida viandantes Hispani."

Having thus become more thoroughly Roman than any other province out of Italy, Spain furnished many names distinguished in the history and literature of Rome, such as the poet Lucan, the Seneca, Columella, Pomponius Mela, Quintus Martial, and many others.

IV. POLITICAL DIVISIONS AND CONSTITUTION UNDER THE ROMANS.

1. *The two provinces of Hither and Further Spain.*—The provincial constitution was the

the year after the expulsion of the Carthaginians, B. C. 205; and at the same time the division of the peninsula into two parts, which appears already to have been used as a geographical distinction, was made a part of the political constitution; so that the peninsula formed, from the first down to the time of Augustus, two provinces, the eastern, called HISPANIA CITERIOR (*ἡ ἐκτὸς Ἰσπανία* or *Ἰσπλία*), and the western called HISPANIA ULTERIOR (*ἡ ἐκτὸς ἢ ἑξω Ἰ.*), the words *ἐκτὸς* and *ἐξω* having reference to the river IBERUS (*Ebro*) which was at first adopted as the natural boundary. (Strab. iii. p. 166; Cæsa. B. C. iii. 73; Cic. *pro Leg. Manil.* 12; *pro Font.* 56. 3; Liv. xxviii. 18, xxx. 30, xxxii. 27, 28, xlv. 16; Plin. iii. 1. s. 2; Tac. *Ann.* iv. 13; Flor. iv. 2.) The boundary, however, was drawn differently at different times; so that we find, in Caesar (B. C. i. 38), Hispania Citerior extending as far as the SALUTUS CASTULONENSIS, on the NE. margin of the valley of the BARTIS (*Guadaluquivir*); and afterwards the boundary was drawn from this range, or from the sources of the Baetis to New Carthage, and later still to the town of URICI (*Almería*), a little W. of the SE. point of the peninsula (CHARIDEMI PR.; *C. de Gata*), or even to MURGIS, a little further to the W. (Artemid. *ap. Steph.* B. s. v. *Ἰσπλία*; Strab. l. c.; Plin. iii. 3. s. 4; Const. Porph. *de Admin. Imp.* ii. 23.) Polybius, having probably in his mind the old Greek distinction between the country of the Celts and that of the Iberians, calls the eastern province Celtiberia and the western Iberia, and makes the boundary near Saguntum; but by this he probably refers to the *Ebro* as the boundary, for he fell into the common mistake about the position of Saguntum (Polyb. iii. 17; comp. SAGUNTUM; see also Artemid. *ap. Steph.* B. s. v. *Ἰσπανία*; Strab. iii. p. 148; Plut. *Sertor.* 3). Other writers use Celtiberia as a synonym for Hither Spain (Plin. iv. 36; Solin. 23). Lastly, some late writers used the terms *Great and Little Spain* (*Ἰσπανία μεγάλη and μικρά*) as equivalent respectively to Hither and Further Spain (Charax, ad Const. Porph. *de Admin. Imp.* ii. 23; comp. Steph. B. s. v. *Ἰσπανία*). Even after the division into three provinces, we still find the phrases Hispania Citerior and Ulterior, the latter including Baetica and Lusitania.

2. *Administration before Augustus.*—The two provinces were governed, at first, by proconsuls elected *extra ordinem* (Liv. xxviii. 38; xxix. 13, xxxi. 20), and afterwards by two praetors, who were usually invested with the power of proconsuls and the insignia of the 12 fasces. (Liv. xxxii. 28, xxxiii. 26; Duker. *ad Liv.* xxxvii. 46, xxxix. 29; Drakenborch. *ad Liv.* xl. 39.) At the time of the Macedonian war, the provinces were united under one governor; but only as a temporary arrangement, and the double government was restored in B. C. 167 (Liv. xlv. 17, xlv. 16). As already observed, there were two armies stationary in Spain; two legions in each province (comp. Cæsa. B. C. i. 38). The seat of government for Hither Spain was at first TARRACO, and afterwards also CARTHAGO NOVA; that of the Further Province seems generally to have been at CORDUBA, and sometimes at GADES.

3. *The Three Provinces of Tarraconensis, Bae-*

tica, and Lusitania.—Already in the time of Julius Caesar we find a distinction made between the part of Further Spain which lay SE. of the Anas (*Guadiana*), and the country of the Lusitani and Vettones to the W. and N. of that river. He represents the country as divided between the three legati of Pompeius, of whom Afranius held Hispania Citerior, with three legions; Petreius, the country from the Saltus Castulonensis to the Anas, with two legions; and Varro, the territory of the Vetttones and Lusitani, on from the Anas, with two legions. (B. C. i. 38.) This distinction was adopted in the settlement of the provinces by Augustus; Hispania Ulterior being divided into the two provinces of BAETICA and LUSITANIA, while Hispania Citerior* was called by the new name of HISPANIA TARRACONENSIS, after its old capital TARRACO. (Appian, *Hisp.* 3, 102; Strab. iii. p. 166; Mela, ii. 6; Plin. iii. 2; Dion Cass. liii. 12; Const. Porph. *de Admin. Imp.* ii. 23: the phrase *tres Hispanias* is found in an inscription, *ap. Marini*, ii. p. 785: respecting the boundaries of the three provinces, see the several articles.)

4. *Imperial Administration.*—Baetica was a senatorial province; the other two were *provinciae Caesaris* (Strab. xvii. p. 840; Suet. *Aug.* 27; Dion Cass. liii. 12); all three were governed by praetors, of whom the praetor of Tarraconensis had consular power; and under him were three legati and three legiones. His residence was generally at Tarraco, but sometimes also at New Carthage: that of the praetor of Baetica at Corduba; that of the praetor of Lusitania usually at Augusta Emerita. The finances were administered, in Baetica, by a quaestor, in the two other provinces by *procuratores Caesaris*.

5. *Conventus Juridici.*—For judicial purposes, the whole country was divided into districts, called *conventus juridici*, in each of which the courts were held at a chief city, to which the *conventus* was considered to belong. There were, according to Pliny, who makes this division the basis of his description, 14 *conventus* in all; of which Tarraconensis had 7, Baetica 4, and Lusitania 3; as follows (Plin. iii. 3. s. 4, iv. 20. s. 24, 21. s. 35):—

(1). The 7 *conventus* of TARRACONENSIS were those of CARTHAGO NOVA, TARRACO, CAESAR-AUGUSTA, CLUNIA, LUCUS AUGUSTI, BRACARA AUGUSTA, and probably ASTURICA AUGUSTA; besides the Balearic islands. [BALEARES INSULAE.] These 7 *conventus* contained 472 towns and villages, of which 293 were reckoned as belonging to the other (*contributus aliis*) 179, which were made up as follows: 12 *coloniae*, 13 *oppida civium Romanorum* (i. e. with the full Roman citizenship), 18 *Latinorum veterum* (i. e. with the *jus Latii*), 1 *foederatorum* (allied, but without the *civitas*), and 135 *stipendiaria* (i. e. tributary, Plin. iii. 3. s. 4).

(2). The 4 *conventus* of BAETICA had their seats at GADES, CORDUBA, ASTIGI, and HISPALIS, and contained 175 towns; namely, 9 *coloniae*, 8 *muni-*

* The name *H. Citerior* still continued to be used; and so, though less commonly, was that of *H. Ulterior*, sometimes in its old sense (Plin. iii. 3. s. 4), and sometimes for Baetica alone. (Plin. iii. 1. s. 2, where both senses occur at once: "Ulterior appellata, eadem Baetica.... Ulterior in duas, per longitudinem, provincias dividitur." Perhaps, however, the first words only mean that the first land of Europe begins with H. Ulterior or H. Baetica, without positively implying the full equivalence of the names.)

* Hence, as already observed, the names *Hispanias* and *Ἰσπλίας*; and also *duas Hispanias*, Cic. *ll. sup. cit.*

to the PR. SACRUM*, and the fourth side by the W. coast, extending N. and S., between the two headlands named, parallel to the Pyrenees. (Strab. iii. p. 137; comp. Justin. xlv. 1.) When others call it triangular they probably reckon the whole N. side, along the Pyrenees and N. coast, as one, which is more accurate. (Oron. i. 2; Aeth. Later. Cosmog. p. 43, ed. Simler.) Its true form may be regarded, by a rough process of estimation, as a trapezium contained by lines drawn from the C. Orons to C. Finisterre, on the N.; from C. Finisterre to C. S. Vincent, on the W.; from C. S. Vincent to C. de Gata, on the S.; and from C. de Gata to C. Orons, on the E.; but, by drawing intermediate lines from headland to headland, the number of sides might be considerably varied.

2. *Boundaries.*—No country which is not insular has its boundaries so well defined as Spain: namely, on the E. and part of the S. side (the E. side of Strabo and other ancient writers), the *Mediterraneum* [MARE INTERNUM]; on the rest of the S., the W., and part of the N. sides, the *Atlantic* [ATLANTICUM MARE]; and on the remainder of the N. side (the E. side of Strabo and other ancient writers), the *Pyrenees* [PYRENAEI M.]. Different names were applied to the seas which washed the coasts (the bays will be mentioned presently), as follows: the part of the Mediterranean on the S. coast was called *BALEARICUM MARE* and *IBERICUM MARE*; the part along the S. coast, *INTERNUM MARE* specifically; then came the Straits of Gades or Hercules [GADITANUM FRETUM]; the part of the ocean along the E. side was called *GADITANUS OCEANUS*, and that along the N. coast *CANTABRICUM MARE*.

3. *Size.*—The Spanish peninsula lies between 36° 1' and 43° 45' N. lat., and between long. 3° 20' E. and 9° 21' W. Its greatest length from N. to S. is about 460 miles, and its greatest breadth from E. to W. about 570 miles; its surface, including the Balearic isles, about 171,300 square miles. As might naturally be expected, the numbers given by the ancients vary greatly from these figures and from one another.† Eratosthenes made the distance from the Gades to the Sacred Cape 5 days' sail (Strab. iii. p. 148), and otherwise, from the Sacred Cape to the Pillars, 3000, and thence to the Pyrenees 3000 stadia; and therefore the greatest length 9000 stadia (Strab. i. p. 64, ii. p. 106). Artemidorus reckoned 1700 stadia from the Sacred Cape to the Pillars. (Strab. iii. p. 148.) Polybius gives the distance from the Pillars to the Pyrenees as somewhat less than 8000 stadia, as follows: from the Pillars to New Carthage, 3000 stadia; thence to the Iberus, 2600 stadia; thence to Emporium, 1600 stadia (Polyb. iii. 39; Strab. ii. p. 106); the remaining distance, to the Pyrenees, he does not specify, but it is manifestly so much too great that, for this and other reasons, Ukert proposes to change the last-mentioned number from 1600 to 2000, or 2200, which would make the total from the Pillars to Emporium 7800 stadia (Ukert, vol. ii. pt. 1. p. 256 b. If this emendation be sound, we may account for the error as made by a copyist to agree with the 1600 stadia given by Strabo from the Ebro to the Pyrenees). Strabo makes the length from the Pyrenees to the W. coast, in a straight line, 6000 stadia, and he also calls this expressly the greatest length: else-

where he assigns the same length to that part of the S. coast which lay within the Straits of Gades: from Calpe to New Carthage, 2200 stadia; thence to the Iberus, about the same; thence to the Pyrenees, 1600; the greatest breadth, namely, along the W. coast, makes 5000 stadia; the least, namely along the Pyrenees, 3000 stadia. (Strab. ii. pp. 106, 112, 113, iii. pp. 137, 156.)

Pliny quotes various statements, stating which the length varied from 1500 to 1500 M.P., the breadth from 900 to 1100, and the whole circuit of the coast from 2600 to 3000 M.P. (Strab. iii. 1. a. 2, 3. a. 4; iv. 21. a. 35). Pliny gives Hispania between 3° and 9° long. and 36° and 43° lat. (ii. 4). In all these statements, it is important to observe that the geographers founded their estimates of the distances almost entirely on the ordinary measurements.

4. *Outline of the Coast, Proconteries, and Bay.*

—A glance at the map of Spain will show a few salient points in the outline of the coast, besides some others of secondary importance. First, beginning at the N. end of the E. coast, that formed by the E. extremity of the PYRENEAN PROM. (τὸ τῆς Πυρηναίων ὄρος τὸ ΠΥΡΗΝΑΙΟΝ ΠΡΟΜ. of PYRENAEA VENTUS (τὸ Ἀσθόριον, ἵερὰ τῆς Πυρηναίων Ἀπολλίτης), a certain headland, projecting far into the sea, dividing the gulf of CEREVARIA (Cereva) or PONTUS VENEKIS on the N. from that of ROMEA. EMPORIUM (Bay of Roses) on the S.; its name being obtained from a temple of Venus which stood upon it. (Liv. xxvi. 19; Strab. iv. pp. 178, 179; Mela, ii. 5. § 8; Plin. iii. 3. a. 4.) From this side of the Bay of Roses the coast preserves a general even direction, about SW. to a little S. of BAETICA (Barcelona), whence it forms a very large bay, which is terminated on the S. by the headland DIANUM (C. S. Martín), running far out to sea. In the upper part of this large bay, the TARRACO and the delta of the IBERUS; in the lower part, from about 40° N. lat., forms the SCRAENUS SINUS (G. of Valencia), facing the east. In the SSW. of the Dianium Pr. and E. of CAEREA Nova lies the almost equally conspicuous headland SATURNI PR. (C. de Palos); and the bay between them was called ILLICITANUS SINUS (B. of Sagunto). Proceeding SW. from the Saturni Pr. come to the CHERIDANI PR. (C. de Gata), running out far to the S. and forming the western point from the E. to the S. coast; between it and the former lay the MASSIENSIS SINUS, which has no specific modern name. These are the great headlands and the three large bays of the coast.

Doubling the Chiridani Pr. and passing to the comparatively small URCEITANUS SINUS (G. of Almeria), upon which the boundary between IBERONENSIS and Baetica comes down to the coast, the coast pursues almost a straight line to MALAGA (Malaga), which forms the E. extremity (as the N. of the Baetica forms the western) of the base of the great triangular projection of the S. coast which runs out to meet a similar projection of the African coast, leaving between them only the narrow passage called the GADITANUM or HERCULEAN FRETUM (Straits of Gibraltar). The E. end of the Strait is guarded by the two rocky headlands called the Pillars of Hercules [HERCULEA COLUMNAE], of which the one on the European side, so celebrated under the names of CALPE and Gibraltar, lies

* Elsewhere, however (ii. p. 128), he makes the S. coast end at CALPE, Gibraltar.

† N. B. 10 stadia = 1 geog. mile.

the termination of the Mediterranean coast of Spain.* The W. entrance of the Straits is formed by a headland, named, like most of those which have been mentioned, after a temple which stood upon it, JUNONIS PR., doubtless an object of deep reverence from the time of the Phœnicians downwards; its ancient sanctity has been long forgotten, but, even in a work like this, a tribute must be paid to the glories of *Cape Trafalgar*. Proceeding NW. past the island and city of Gades, we come to one of the minor headlands, that which lies outside of the mouth of the BÆTIS (*Guadalquivir*), marked by the CAMPIONIS TURRIS (*Chipiona*). Hence the coast sweeps round a bay which has no name, NW. and W. to the mouth of the ANAS (*Guadiana*), where the coast of BÆTICA terminates, and that of LUSITANIA begins. The first object on the S. coast of Lusitania is the projection called CUNEOS (*C. de S. Maria*); and about 1½° W. of this, the S. side of the peninsula terminates at the frequently mentioned SACRUM PR. (*C. S. Vincent*), where, as at *Trafalgar*, ancient sanctity is eclipsed by modern glory.

The W. coast of LUSITANIA is so straight as to form no large bays, and it has only three headlands worth mentioning; namely, the long and sharp promontory S. of the estuary of the TAGUS, named BARBARIUM PR.† of Strabo (*C. Espichel*); then the W. point both of the estuary of the Tagus and of the whole coast, the MAGNUM PR.‡ of Mela and Pliny (*C. da Roca*); and lastly, about 40' N. of this, the LUNAR or LUNARIUM PR. of Ptolemy (*C. Carvoeiro*; but see note just above).

At the mouth of the DURIUS (*Douro*) the coast of Lusitania ends, and that of GALLÆCIA begins. It preserves the same character of straightness as far N. as the MINUS (*Minho*), beyond which it is broken into a series of estuaries of river (enumerated under GALLÆCIA), the points of land between which require no specific notice, till we come to the extreme NW. corner of the peninsula. Here the W. coast terminates at the headland called CELTICUM or NERIUM (*C. de Finisterre*), which lies almost at the intersection of two lines, each of which may be taken as a "datum line" for the W. and N. sides of the peninsula. These lines are the meridian of 9° W. long. and the parallel of 43° N. lat. The former runs through the W. side of the Sacred Cape (*C. S. Vincent*), just outside of the W. coast, except for the portion which projects westward about the mouth of the Tagus; while the latter keeps from about 50 to about 20 miles within (i. e. S. of) the N. coast, and coincides very nearly with the chain of mountains which form the W. continuation of the Pyrenees.‡ The greatest rise of the N. coast

above the datum line of 43° N. lat. is made at once from the PR. NERIUM, whence the coast runs NE. up to the CORU or TRILEUCUM PR. (*C. Ortegal*), which forms the extreme N. point of the whole peninsula. Hence the N. coast proceeds nearly straight to the E., but with a gradual declination to the S., having no large bays, and no promontories worth naming till we reach that of ORCASO (*C. del Higuer*), at its E. extremity, which is formed by a spur of the Pyrenees.

In this outline, the statements of Strabo, Mela, Pliny, Ptolemy, and other ancient writers have been arranged in their several places, according to the true figure of the coast: further details are given under the respective articles. One matter which requires especial notice, namely, Pliny's great error in making the W. coast end, and the N. coast begin, immediately above the estuary of the Tagus, is more fully referred to under ATABRI.

Before proceeding to the interior, it should be mentioned that, besides the lesser islands near the coast, the great group now known as the Balearic Islands, E. of *C. S. Marti* (PR. Dianium), were always considered to belong to Hispania. [BALEARIC, PITY-USAÆ.]

5. The Interior, with its Mountains and Rivers.

—Few maps present to the eye a more striking picture than that of Spain; and yet, clearly as the physical features stand forth, an unpractised eye may easily misunderstand them. A single glance suffices to show that the country is intersected, through the greatest portion of its breadth, by five great chains of mountains, the two outermost of which fall off at once, on the N. and S. respectively, to the bay of Biscay and the Mediterranean, while between them and the other three there are inclosed four great valleys, forming the river-basins of the Douro, Tagus, Guadiana, and Guadalquivir; and that another chain, though less regular, running across, and, to some extent uniting, the E. extremities of these five, divides the sources of the rivers just named from another great river-basin, that of the *Ebro*; and, lastly, that, on the E. side of this basin, a great branch of the Pyrenees, running to the S., forms on its E. declivity another maritime border along the entire NE. coast of the peninsula. All this is very obvious; but it is quite insufficient for a clear outline of the structure of the peninsula. There is another element: one not quite so obvious on the map; but one which makes Spain so entirely unlike every other country of Europe, and which has so materially influenced its climate, its population, the foreign settlements in its several parts, the commerce of other nations with it the campaigns carried on within its boundaries by contending empires, and its own intestine struggles, both in ancient and in modern times, that a right knowledge of it is of the first consequence to the whole study of the history of the country. This peculiar feature of the peninsula is well described by Arnold:—"Spain rises from the Atlantic on one side, and the Mediterranean on the other, not into one or two thin lines of mountains divided by vast tracts of valleys or low plains, but into a huge tower of table-land, from which the mountains themselves rise again, like the battlements on the summit. The plains of Castile are mountain plains, raised nearly 2000 feet above the level of the sea, and the elevation of the city of Madrid is nearly double that of

breadths of which along the axes (though not their areas) are nearly equal.

* The Cape of Tarifa, in the middle of the Straits, deserves notice as the southernmost point of the peninsula, though it has no specific name in ancient geography.

† Possibly these two names may be meant to denote one and the same headland, viz. the *C. Espichel*; and the next, PR. LUNAR, may be the *C. da Roca*.

‡ For the sake of those who find such modes of reference useful, another pair of co-ordinate axes may be given for the peninsula in general. Taking TOLETUM (*Toledo*), as a centre, it will be found that the meridian of 1° W. long. and the parallel of 40° N. lat. intersect a very little N. of it, dividing the peninsula into four quarters, the lengths and

the top of Arthur's Seat, the hill or mountain which overhangs Edinburgh." (*History of Rome*, vol. iii. p. 391.) The elevation of this central table-land is, in fact, higher than that of any other table-land in Europe, while its extent is so great as to comprehend nearly one-half of the area of the peninsula. Its limits correspond pretty nearly to that of the quadrangle formed by the parallels of 38° and 43° N. lat. and the meridians of 1° and 6° W. long. Its boundaries on the N. and S. are strikingly defined by the continuous and lofty chains of mountains called respectively the *Montañas de Asturias* [VASCONUM SALTUS, and VINDIUS M.] and the *Sierra Morana*. On the E. its separation from the basin of the *Ebro* and the E. maritime district is effected by a less perfectly continuous series of high lands and mountain ridges, called by the ancients *Idonea* in the N. part, and *Oncofrida* in the S.; and on the W. it subsides to the Atlantic by means of the extreme portions of the mountains which traverse it from E. to W., with a declination more or less to the S., becoming more decided towards the extremities, till at last their W. slopes fall down to the Atlantic, forming the valleys and terraces of Portugal. [Comp. LUSITANIA.] Of the ranges which thus traverse the table-land the most important is that which runs SW. almost through its centre, and terminates in *C. de Rocas* (Magnum Pt.), W. of the mouth of the *Tagus* (where it was called *HEMISTRUS M.*; no specific names are given to the other portions of the chain), dividing the region into two nearly equal parts. Of these divisions the northern contains the river basin of the *Douro* [DURIUS], and is now known as the table-land of *Old Castile* and *León*; the southern, or table-land of *New Castile* and *Extremadura*, is much more mountainous, and is subdivided by another range, which has no specific ancient name, into the river-basins of the *Tagus* [TAGUS] and the *Gualquivir* [ANAS].

Of the lower districts by which this table-land is inclosed on all sides, like a platform surrounded by ascents of various slopes, that on the W. coast is so closely connected with the valleys of the table-land itself, that (however distinct from it in modern geography and history) the former may be considered by the student of ancient history as an appendage to the latter. The N. maritime district forms the narrow strip along the bay of *Biscay*, which was peopled by tribes as rugged as itself. [ASTURUM, CANTABRI, GALLÆCIA.] The districts E. and S. of the central table-land are of the utmost importance in history. Lying open to the Mediterranean, with a vast sea-board, and abounding in valuable productions, they early came to be more closely connected with the civilized states around the Inner Sea than with the wild regions in the interior of the peninsula. The E. portion consists properly of two parts; the river basin of the *Ebro* [IBERUS], which lies much lower than the central table-land, but still considerably higher than the sea; and the E. maritime region, extending from the Pyrenees to New Carthage: but the two parts are so closely connected in ancient history that they may be regarded as one division. Thus viewed, the E. district is of a triangular form, having the Pyrenees for its base, and its vertex at

New Carthage and the *C. de Palos*, its E. side formed by the Mediterranean shore, and its W. side by the ranges which divide it from the central table-land; and answering to the provinces of *Catalonia*, *Arago*, with the S. part of *Narbonne*, *Valencia*, and parts of *New Castile* and *Murcia*.

The S. district is of still far greater importance, and may be regarded as forming, to a great degree, a country by itself, distinct from all the rest of the peninsula; as, indeed, it has been politically and historically a separate country during some of the most important periods of Spanish history. The country—the *TARTESSUS* and *BÆTICA* of the ancients, the *Andalucía* of modern geography—is severed from the rest of Spain by the great chain of the *Sierra Morana* [MARIANUS MONTES], on the S. of which lies the valley of the *Gualquivir* [BÆTIS], open entirely to the W. shore, but inclosed on the S. by another chain of lofty mountains, named from their snowy summits, the *Sierra Nevada* [NEVADA], which sink down to the S. coast by the intermediate chain of the *Alpujarras*, and form on the N. the plain of *Granada*. On the E. side, the valley of the *Bætis* is entirely shut in by ranges which run NE. and SW., linking the *Sierra Nevada* and the *Sierra Morana* to one another and to the chain of *Oncofrida* on the W. border of the eastern district. Of these cross chains, the chief are those called the *CATULOMERUS SALTUS* and the *ARGENTARIUS MONTES*.

While thus separated by mountains from the rest of Spain, *Andalucía* lies perfectly open to Africa: the Mediterranean, — a fact of the utmost importance in relation to its ancient ethnography as well as in modern history. No one who rightly appreciates this fact will wonder that it was a Phœnician dependency while all the rest of Spain was still barbarous, or that it was united to *Morocco* under the later Roman empire, under the Vandals, and under the Arabs, so that the kingdom of *Granada* should have so long survived the expulsion of the Moors from the rest of Spain.

To sum up this description. For the purposes of ancient history and geography the peninsula of Spain is divisible into four main parts: — (1.) The central table-land, with the W. coast, containing the river-basins of the *Douro*, *Tagus*, and *Gualquivir* [ANAS]. (2.) The mountainous N. coast, comprising the ancient *GALLÆCIA*, *ASTURIA*, and *CANTABRIA*. (3.) The valley of the *IBERUS*, and the E. coast. (4.) *BÆTICA*, or *Andalucía*.

The details respecting the mountains and rivers which have been mentioned, as well as the like many others, not important enough to be included in this general outline, are given under the several articles bearing their names, and under those describing the three provinces and the smaller districts of the peninsula.

VI. CLIMATE AND PRODUCTIONS.

The diversities in the surface of the peninsula are attended with a corresponding variety of climate: — that Spain, though the southernmost country of Europe, has, in different parts, the climates of nearly the rest of the continent. This is well set forth by Niebuhr: — "*Andalucía*, the southernmost part, almost identical with ancient *Bætica*, and, as observed even by Strabo, is a country quite different from the rest of Spain. . . . While *Valencia* is hot and well watered, but wanting in energy, *Andalucía* and *Granada* are countries matured by the sun to the highest degree; they are scarcely European, almost like tropical countries. The eastern district

* The northernmost range does not come exactly under this description; its course is almost due W. until it throws off a number of branches, by which it subsides to the Atlantic, forming the mountain region of *Gallicia*.

or the country of the Iberus, if we examine its northern parts, Aragon and Catalonia, already greatly resembles a northern country. Valencia stands in the middle between them. The whole country of the Tagus is throughout a table-land, very high at its commencement, piercingly cold and unhealthy as far as the frontier of Portugal. . . . Between the Sierra Morena and the Douro we have the large plain of Estremadura, which is fertile but unhealthy, and extremely flat. The plain of Leon is scarcely inhabitable on account of its drought and barrenness. The southern parts of Castile are productive, and the continuation of the valley into Portugal changes its character so much as to become extremely rich: it still contains large plains, but the greater part is a beautiful hilly country." (*Lectures on Ancient Ethnography and Geography*, vol. ii. pp. 282, 283.) Arnold also has a brief passage on the subject, well worth quoting:—"The centre of Spain, notwithstanding its genial latitude, only partially enjoys the temperature of a southern climate; while some of the valleys of Andalusia, which lie near the sea, present the vegetation of the tropics, the palm-tree, the banana, and the sugar-cane. Thus, the southern coast seemed to invite an early civilisation; while the interior, with its bleak and arid plains, was fitted to remain for centuries the stronghold of barbarism." (*History of Rome*, vol. iii. pp. 391, 392.)

With these descriptions the statements of the ancient writers agree tolerably well. It would be tedious to refer at length to the passages of Polybius, Strabo, Pliny, Justin, and other writers, which are collected by Ukert (vol. i. pt. 1. pp. 323, 324).

Its fertility is generally celebrated by the ancients, who mention among its products, corn, wine, oil, fruits, pasturage, metals of all kinds, and precious stones. Baetica was famed for its abundant harvests; Lusitania, for its numerous flocks; Turdetania, for its timber; the fields of Carthago Nova and other plains, for the *apertura*, from which cordage was made. But the great attraction of the peninsula to civilised nations, from the earliest times, was found in its mines of the precious metals, especially the silver mines in the mountains of the south. It also yielded gold, iron, quicksilver, cinabar, rock-salt, and other valuable minerals. (See the authorities *op. Ukert*, l. c.: comp. BAETICA, CARTHAGO, CARTHAGO NOVA.)

VII. POPULATION.

The ethnography of the Spanish peninsula is a very difficult subject. It is certain that, in the historical period, the chief stock of the population was the race called Iberian, with a considerable intermixture of Celts, and, in the S., of Phœnicians also. But as to the precise position of the Iberians in the human family, and as to the questions, whence they came into the peninsula, in what exact relation they stood to the Celtic population, and what has become of them in the subsequent movements of races, which are swept like mighty tide-waves backwards and forwards over the face of the peninsula:—these are problems of which we cannot yet be said to have obtained a very satisfactory solution.

The prevailing opinion among the ancients, and is one most in favour with modern scholars, represents the Iberians as an aboriginal people, in addition to whom the peninsula received an immigration of Celts from beyond the Pyrenees, who overpowered the Iberians. The two peoples coalesced to great extent, forming the great nation of the

CELTIHERI; but pure Iberian and pure Celtic tribes were still to be found in various parts of the peninsula. (Herod. ii. 33; Diod. Sic. v. 33, 35; Strab. i. p. 33, iii. pp. 148, 151, 153, 157, 158, 162; Polyb. ii. 31; Appian, *Hisp.* 2; Plin. iii. l. a. 3; Lucan, iv. 9; Sil. iii. 140.) The Celtiberians occupied chiefly the centre of the country, as well as parts of Lusitania and of the N. coast. [CELTIHERI.] The pure Iberians dwelt chiefly in the Pyrenees and on all round the coast, and the pure Celts on both sides of the river Anas, and in the extreme NW. of the peninsula, about the promontory Narium. [CELTICA.] Lastly, there was a large admixture of Phœnicians in Baetica; and on other points of the S. and E. coasts colonies were established by the Phœnicians and Carthaginians, and by various Greek states, as the Phœacæans, Rhodians, Zacynthians, Samians, and Massaliots (Herod. i. 163; Strab. iii. pp. 151, 157, 159; Mela, iii. 6; Plin. v. 19. s. 17); besides the great influx of Romans at a later period.

But, as regards the first inhabitants, a directly opposite opinion has been held by not a few eminent scholars, and is supported by the high authority of Niebuhr, who expounds it as follows:—"Spain is destined by nature almost more than Italy, to form one compact state: no one can have a doubt about this, when looking at the three seas by which it is surrounded. Nevertheless, however, it did not become united as one whole till a late period, though this happened before the time of which we have written records; for there can be no doubt that previously it was divided into two distinct countries. On the one side, the Pyrenees formed its natural boundary towards Gaul (in the course of time, however, they were crossed, and the Iberians ruled over the country from the *Garonne* to the Rhone); but at an earlier period another natural boundary line was formed by the Sierra Morena, an extensive range of mountains, which, for a couple of centuries, formed the boundary between the Christian and Mahomedan parts of Spain. These same mountains, no doubt, also separated the Iberians from the Celts. The heights in the north of Spain, whence the Tagus, Durius, and Minus flow towards the sea, and whence, on the other side, smaller rivers carry their waters towards the *Ebro*, were inhabited by Celts, who were also called Celtiberians. Other Celts bearing the name Celtici dwelt in *Algarbia* and the Portuguese *Estremadura*, and others again inhabited the provinces *Entre Douro e Minho* in the north of Portugal. These three Celtic nations were quite isolated in Spain. The Celtiberians were not pure Celts, but, as even their name indicates, a mixture of Celts and Iberians; but the Celts in Portugal are expressly stated to have been pure Celts. The latter attracted the attention even of the ancients, especially of the excellent Pausanias, who made so many correct observations, but allowed himself in this instance to be misled. He is of opinion that the Celts had immigrated into Spain, for he reasoned thus: as the Celts could migrate into Italy and across the *Daube* as far as the *Dnieper* it was far less difficult for them to enter the neighbouring country of Spain. But such isolated parts of a nation cannot have arrived in a country by immigration; on the contrary, the Iberians appear extending themselves and in possession of *Aquitania* and *Languedoc* at a very early period; how then could the Celts, not being able to maintain the Pyrenees, have spread over the whole peninsula?

It is probable, nay almost evident, that it was the Iberians that migrated and extended themselves; and this opinion agrees with the most ancient traditions of the Celts in Ammianus Marcellinus, according to which they were once masters of all the west of Europe, but were expelled from many parts. If we suppose that the Celts dwelt as far as the Sierra Morena, and that the Iberians, perhaps reinforced by their kinsmen from Africa, pressed them forward, this supposition would account for some Celtic ruins which are still extant; and the Celts may have capitulated in a similar manner to that described in the book of Joshua. As one part of England was occupied by Germans so completely as to destroy every trace of the ancient inhabitants, while elsewhere, as e. g. in *Devonshire*, the Britons, in large numbers, lived among the Germans and became mixed with them, so the Iberians expelled the ancient Celtic population, wherever the nature of the country did not protect it; but the Celts maintained themselves in the mountains between the *Tagus* and the *Iberus*, and the Iberians only subdued them, and then settled among them. In course of time the two nations became amalgamated, and thus formed the Celtiberians, whose character, however, is essentially Iberian." (*Lectures on Ancient Ethnography and Geography*, vol. ii. pp. 280, 281.)

In further support of these views, we have the fact already mentioned, that Spain lies quite open to immigration from the East by way of the Mediterranean and the Straits; the now established fact that N. Africa, with which Spain is thus connected, was peopled from the East; and traditions of settlements from that side, of no great value certainly by themselves, but of some interest as agreeing with the results of other investigations. (Sall. *Jug.* 18; Strab. xv. p. 687; Joseph. *Ant.* x. 11. § 1.) The decision of the question, if it is to be decided at all, requires a more profound examination than has yet been made of the remnants of the old Iberian language as preserved in inscriptions, in geographical names, and in the dialects of the Basques, who are now admitted on all hands to be the lineal descendants of the old Iberians. The foundations of such an investigation have been laid by the late W. von Humboldt, in his work already mentioned. (*Prüfung der Untersuchungen über die Urbewohner Hispaniens vermittelt der Baschischen Sprache*, Berlin, 1821; comp. Freret, *Mém. de l'Acad. des Ins.* vol. xviii. p. 78; Hoffmann, *die Iberer im Westen und Osten*, Leips. 1838.)

Thus much is certain that, in the whole period of ancient history, the great bulk of the population was Iberian; and, through all subsequent infusions, large as they have been, of Roman, Gothic, and Arab blood, the great mass of the nation still retains the leading characteristics which are ascribed to the Iberians in general and to the Celtiberians in particular, by Strabo and other ancient writers, and which are summed up by Arnold in the following words:—"The grave dress (Strab. iii. p. 145), the temperance and sobriety, the unyielding spirit, the extreme indolence, the perseverance in guerilla warfare, and the remarkable absence of the highest military qualities, ascribed by the Greek and Roman writers to the ancient Iberians, are all more or less characteristic of the Spaniards of modern times. The courtesy and gallantry of the Spaniard to women has also come down to him from his Iberian ancestors: in the eyes of the Greeks, it was an argu-

ment of an imperfect civilisation, that among the Iberians the bridegroom gave, instead of a dowry; that daughters sometimes inherited, to the exclusion of sons, and, thus becoming the head of the family, gave portions to their brothers, who might be provided with suitable wives (Strab. iii. p. 165.) In another point, the great likeness between the people of the south of Europe and those of the Teutonic stock, was remarked in Iberia: the Iberians were ignorant, but not unkind-hearted; on the contrary, they were cunning and mischievous, with habits of robbery almost inevitable—fond of brigandage, though incapable of the great combinations of war. (Strab. iii. p. 164.) These, in some degree, are qualities common to almost all barbarians; but they offer a strong contrast to the character of the Germans, who have spoken what was in their hearts, and of whose powerful tribe it is recorded that their morality was maintained by no other arms than the sword of justice." (*Hist. of Rome*, vol. iii. pp. 356, 357.)

The different tribes, however, were distinguished by very different degrees of character. The Celtiberians, and the peoples of the N. coast in general, were the wildest and rudest: the Celtæ, though scarcely more civilised, were of a more favourable disposition: the Vaccæi were (under the Roman name) highly civilised, and only inferior to the Iberians of Baetica, who cultivated science and the literature of their own. [TURDETANIA.]

There remain two very striking points in which the ancient Iberians and the modern Spaniards bear the closest resemblance to each other. The one is not merely the disunion, but the almost insupportable exasperation, which the several nations have displayed towards each other, and which has made them the almost helpless victims, or the almost helpless dependents, of foreign foes or friends, and they have afterwards requited with ingratitude hatred or bitter ingratitude. The other point referred to is the obstinate endurance with which they have fought behind walls, as attested in other instances, by the sieges of Saguntum and Numantia, Geronas and Zorogon; a quality, both cases, strangely contrasted with their inability to stand the shock of armies on the open field of battle. "In Condé's History of the Arabs, a general in his despatch to the Caliph, says of the Spaniards: On horseback they are eagles; in the defence of their towns, lions; but in the field they are sheep." (Niebuhr, *Lectures on Anc. Eth.* 4th vol. ii. p. 117.) The whole Lecture, as well as the passage in Strabo, in Arnold's History, to both of which such reference has been made in this article, deserve most attentive perusal; the half-volume devoted to Hispania in Ukert's *Geographie der Griechen und Römer* is a masterly production, and contains a collection of references to nearly all the sources required for the study; but the reader of this must be constantly on his guard against false references. Forbiger, *Handbuch der alten Geographie*, vol. iii. pp. 4—109, follows close in Ukert's steps, correcting many of his false references, but introducing others of his own; he adds, however, some valuable notices of the modern literature of the subject. Among the works of the ancient writers Strabo's third book stands pre-eminent for its fidelity and general accuracy. The conquest of the peninsula by the barbarians, and the transition to the medieval history, form too large a subject to be entered on here: all that is necessary for the pre-

pose of this work will be found in the articles on the Alans, Goths, and Vandals.)

The annexed coin, with the Roman legend **HISPANORUM**, is generally considered as belonging to the Hispanians in general: but there is much reason to believe that it does not really belong to Spain at all, but was struck in Sicily by a colony of Spanish auxiliaries settled in that country. [P. S.]

COIN ASCRIBED TO HISPANIA.

HISPANUM MARE or **HISPANUS OCEANUS**, also called **MARE IBERICUM** and **BALEARICUM** (πόντος Ἰβηρικός, τὸ Ἰβηρικὸν πέρατος, τὸ βαλλαρικὸν πέρατος), the specific name of the W. part of the **MARE INTERNUM** (*Mediterranean*), about the Balearic islands, and along the E. coast, and also, according to some of the ancients, the S. coast of Hispania. Thus Agathemerus makes it extend from the Pillars of Hercules to the Pyrenees. (Strab. ii. p. 122; Dion. Per. 69; Agathem. i. 3, ii. 14; Flor. iii. 6, 9; Plin. iii. 5. a. 10; Solin 23; Priscian. Perieg. 75; Claudian. xliii. 8.) [P. S.]

HISPELLUM (Ἡσπέλλιον, Strab.; Ἰσπελλών, Ptol.; *Ἑθ. Hispellas*, -*ἡtis*: *Spello*), a town of Umbria, at the foot of the Apennines, and on the left of the Flaminian Way, about 4 miles from Fulginium (*Foligno*) and 6 from Mevania (*Bevagna*). It is noticed by several writers among the more considerable towns of this part of Umbria. (Strab. v. p. 227; Ptol. iii. 1. § 54; Sil. Ital. viii. 458; Orell. *Inscr.* 98.) Pliny terms it a colony, and we find it bearing in inscriptions the titles of "Colonia Julia Hispellis" and "Colonia Urbana Flavia," whence it appears that it must have received two successive colonies, the one under Augustus, the other under Vespasian. (Plin. iii. 14. s. 19; Orell. *Inscr.* 2170, 3885; Hygin. *de Limit.* p. 179.) Augustus, indeed, seems to have shown it especial favour, and bestowed on Hispellum the grove and temple of Clitumnus, though these were more than 12 miles distant from the town, and separated by the intervening territories of Mevania and Fulginium. (Plin. *Ep.* viii. 8.) We learn from the Liber Coloniarum that it received a fresh accession of colonists under Hadrian. (*Lib. Colon.* p. 224; Zumpt, *de Col.* p. 409.) Inscriptions, as well as extant remains, testify to its flourishing condition under the Roman empire: besides considerable ruins of its amphitheatre in the plain below the modern town, there exists one of the Roman gates, called *Porta Veneris*, in good preservation, some remains of a triumphal arch in a street thence called the *Via dell'Arco*, and considerable portions of the ancient walls. The inhabitants profess to show the house and tomb of the poet Propertius, for which there is certainly no authority: but many critics consider Hispellum as having a better claim than Mevania to be regarded as his birthplace. [*MEVANIA*.] Hispellum was an episcopal see till the sixth century, when it was taken and destroyed by the Lombards, and the see transferred to *Foligno*; but the modern town of *Spello* is still a consider-

able place. (Rampoldi, *Corogr. d'Italia*, vol. iv. p. 1066.) [E. H. B.]

HISTIAEA (Ἱστία). 1. A town in the north of Euboea, better known under its later name *Oreus*. [*OREUS*.]

2. In Attica. [*ATHENAE*, p. 294.]

HISTIAEOTIS (Ἱστιαῖα, also Ἰστιαῖα).

1. A district in the north-west of Thessaly. [*THESSALIA*.]

2. A district in the north of Euboea, of which the chief town was Histiaea, afterwards called *Oreus*. [*OREUS*.]

HISTONIUM (Ἱστώνιον; *Ἑθ. Histoniensis*: *Il Vasto* or *Vasto d'Ammonio*), one of the chief towns of the *Frentani*, situated on the coast of the Adriatic, about five miles S. of the promontory called *Punta della Penna*. No mention of it is found in history, but the name is noticed by all the geographers among the towns of the *Frentani*, and we learn from the Liber Coloniarum that it received a colony, apparently under Caesar. (Mel. ii. 4. § 9; Plin. iii. 12. s. 17; Ptol. iii. 1. § 18; *Lib. Colon.* p. 260; Zumpt, *de Colon.* p. 307.) It did not, however, obtain the rank of a colonia, but continued to bear the title of a municipium, as we learn from inscriptions. (Orell. *Inscr.* 2603, 4059; Zumpt, *l. c.*) The same authorities prove that it must have been under the Roman empire a flourishing and opulent municipal town; and this is further attested by existing remains, which include the vestiges of a theatre, baths, and other public edifices, besides numerous mosaics, statues, and columns of granite or marble. Hence there seems no doubt that it was at this period the chief city of the *Frentani*. (Ramanelli, vol. iii. p. 32.) Among the numerous inscriptions which have been found there, one of the most curious records the fact of a youth named L. Valerius Padens having at thirteen years of age borne away the prize of Latin poetry in the contests held at Rome in the temple of Jupiter Capitolinus. (Ramanelli, *l. c.* p. 34; Orell. *Inscr.* 2603; Mommsen, *J. R. N.* 5252.) The name of Histonium is still found in the itineraries of the fourth century (*Itin. Ant.* p. 314; *Tab. Peut.*), and it probably never ceased to exist on its present site, though ravaged successively by the Goths, the Lombards, and the Arabs. Some local writers have referred to Histonium the strange passage of Strabo (vi. p. 242), in which he speaks of a place called *Ortonium* (as the name stands in the MSS.) as the resort of pirates of a very wild and uncivilised character. The passage is equally inapplicable to Histonium and to Ortona, both of which names naturally suggest themselves; and Kramer is disposed to reject it altogether as spurious. (Kramer, *ad loc.*)

Histonium has no natural port, but a mere roadstead; and it is not improbable that in the days of its prosperity it had a dependent port at the *Punta della Penna*, where there is good anchorage, and where Roman remains have also been found, which have been regarded, but probably erroneously, as those of Buca. [*BUCA*.] The inscriptions published by a local antiquarian, as found on the same spot, are in all probability spurious. (See Mommsen, *Inscr. Regn. Neap.* p. 274, *App.* p. 30; who has collected and published all the genuine inscriptions found at Histonium.) [E. H. B.]

HISTRIA. [*HISTRIA*.]

HITTITES (Ἰτταῖοι, LXX.), one of the tribes of the Canaanites, whom the Israelites found in Palestine. (*Gen.* xv. 20; *Exod.* iii. 8, xliii. 23.) They

dwelt in the district of Hebron, and in the neighbourhood of the Amorites. (*Gen.* xiii. 7, seq.; *Numb.* xiii. 29.) Solomon compelled them to pay tribute along with the other Canaanitish tribes (*1 Kings*, ix. 30, seq.); but we find them at a later period (in the time of Joram, king of Israel) governed by kings of their own (*2 Kings*, vii. 6). The Hittites are also mentioned after the return of the Jews from captivity (*Ezra*, ix. 1); but after this time their name does not occur again.

HIVITES (*Ἰβυταί*, LXX.), one of the tribes of the Canaanites, whom the Israelites found in Palestine. (*Gen.* x. 17; *Ezra*, iii. 8, 17, xlii. 23; *Josh.* iii. 10.) They dwelt in the north of the country, at the foot of Mount Hermon (*Judg.* iii. 3), and appear to have been driven by the Israelites to the north-west, as we find them mentioned in the time of David together with Tyre and Sidon. (*2 Sam.* xxiv. 7.) The remnant of the nation was reduced to subjection by Solomon (*1 Kings*, ix. 30), after which they disappear from history.

HOLMI (*Ὅλμοι*; *Ἑθ.* *Ὀλμοῦς*), a town on the coast of Cilicia Tracheia, a little to the south-west of Seleucia; during the period after Alexander its inhabitants were transferred to form the population of the neighbouring Seleucia. (*Strab.* xiv. p. 670; *Scylax*, p. 40; *Steph. B. s. v.*; *Plin.* v. 22, who calls the place *Holmia*.) Leake (*Asia Minor*, p. 205) thinks the modern town of *Aghakman* occupies the site of the ancient Holmi, which Scylax describes as deserted even in his time.

Another town of the same name existed in Phrygia, on the road from Apamea to Iomium, at the entrance into a pass of Mount Taurus. (*Strab.* xiv. p. 663.) It is probable that it may have been the same place as the fort Myriocephalon, by which the emperor Manuel Comnenus passed in A. D. 1172, before the battle of Iomium. (*Nicet. Chron.* p. 115.) [L. S.]

HOLMONES. [*Ὀλμώνες*.]

HOLOPHYXUS. [*Ὀλοφύξυς*.]

HOMANA, mentioned by Pliny (v. 23) as a town in Pisidia, is no doubt the same as *Ὀμωναία* in Hierocles (p. 673). It was, probably, situated at the southern extremity of lake Carallia, and was the capital of the Homanae on the frontier of Isauria, who, besides Homana, are said to have possessed 44 forts (*comp. Tac. Ann.* iii. 48), a statement opposed to the remarks of Strabo (xii. pp. 569, 668, 679), according to which the Homanae (*Ὀμωναῖοι*), the most barbarous of all Pisidian tribes, dwelt on the northern slope of the highest mountains without any towns or villages, living only in caves. In the reign of Augustus, the consul Quirinus compelled this little tribe, by famine, to surrender, and distributed 4000 of them as colonists among the neighbouring towns. [L. S.]

HOMANADES. [*Ὀμωναῖοι*.]

HOMERITAE (*Ὀμωρίται*, *Periopl.* p. 13; *Marcian.* p. 13; *Plin.* vi. 28; *Ptol.* vi. 7), a people of Arabia Felix who occupied its S. promontory (*Yé-mem*). The Arabs of *Yémen*, who are well known in Oriental history under the name of *Himyar*, and to the Greeks by the name of *Homeritae*, were a civilised people in very remote ages. They possessed a rich and fertile territory, very advantageously situated for commerce. The Himyaritic dynasty of the *Tobdî* (from the Arabic *Tobdâk*, which had a general signification like that of *Kamperer*, *Khân*, *Pharaoh*, *Caesar*, &c.; *D'Herbelot, Bibliothèque Orientale s. v. Tobdî*) is referred to a

very early period, and their power appears to have been very extended, as monumental traces of the *Himyar* have been found not only in *Yémen*, but in distant countries both to the E. and W. There is a considerable affinity between the *Himyar* character and the well-known and most ancient *Demari* *Sancrit*. The earliest writing was probably in Himyaritic, even anterior to the Coptic characters.

The independence of the *Homeritae* was first violated by an Aethiopian conqueror. (*Procop.* B. P. i. 19, 20.) Those who wish to study the very accurate question of the Jewish and Abyssinian kingdoms in Homeritis will find much valuable information in Dean Milman's notes upon the 42nd chapter of *Gibbon*, and the authorities there quoted, especially the very able notes of Saint Martin upon *Le Ban* (*Bas Empire*, vol. viii. pp. 46-67, 132-158), to which may be added Ritter, *Erkenntnis*, vol. xiv. p. 38; Ewald, *Gesch. des Volkes Israel*, vol. i. p. 383, 2nd edit. 1851; Humboldt, *Cosmos*, vol. ii. p. 206, trans.; and the 2nd volume of *Clém. Chénier's Expédition to the Empire*. It may be sufficient here to quote the words of Gibbon:—

"If a Christian power had been maintained in Arabia, Mahomet must have been crushed; it is credible, and Abyssinia would have prevented a revolution which has changed the civil and religious state of the world." [E. R. L.]

HOMOLE or **HOMOLIJUM** (*Ὀμόλιον*, *Strab.* x. p. 443; *Ὀμόλιον*, *Strab. l. c.*, *Liv.* xli. 38; *Plin.* v. 9. s. 16), a town of Thessaly, situated at the foot of Mt. Homole, and near the edge of the vale of Tempe. Mt. Homole was the part of the chain of *Ossa* between Tempe and the modern village of *Karion*. Mt. Homole is sometimes used as synonymous with *Ossa*. It was celebrated as a favourite haunt of Pan, and as the abode of the Centaurs and the Lapithae. Pausanias describes it as the most fertile mountain in Thessaly, and well supplied with fountains. (*Paus.* ix. 8. § 6; *Eurip. Hec. Fur.* 571; *Theocrit. Idyll.* vii. 104; *Virg. Aen.* vii. 675; *Strab.* B. s. v. *Ὀμόλιον*.) The exact site of the town is uncertain. Both Scylax and Strabo seem to place it on the right bank of the *Peneius* near the exit of the vale of Tempe, and consequently at some distance from the sea (*Scylax*, p. 12; *Strab.* ix. p. 443); as in Apollonius Rhodius and in the *Orphic poems* Homole is described as situated near the sea-shore, and in Apollonius even another town, *Euryene*, is placed between Homole and Tempe. (*Apoll. Rhod.* i. 594; *Orpheus, Argos.* 460.) *Euryene*, however, stood upon the coast near to the sea. [EURYENAE.] Leake conjectures that the celebrated convent of St. Demetrius, situated upon the lower part of Mt. *Kissavo*, stands on the site of Homolium. (*Leake, Northern Greece*, vol. ii. p. 602, vol. iv. p. 415.)

HONORIAS (*Ὀνοῦριος*), the name given by Theodosius II., in honour of his uncle Honorius, to the town of *Claudiopolis* in Bithynia, which at an earlier time had been called *Hieracina*. (*Notit. Claron.* ii. 14; *Hierocl.* p. 694.) [L. S.]

HOPLITES. [*Βοηῶτα*, p. 413, a.]

HOR. [*Ἰδυμακ.*]

HORCA. [*Ὀνκα.*]

HOREB. [*Σιναι.*]

HORESTI, in North Britain, mentioned by Tacitus (*Agrie.* 38). After the battle of the Marston, Agricola moved into their country—*Shiring*, or north part of *Lothian*. [R. G. L.]

HORITES. [IDUMAEA.]

HORMA. [ALMOPIA.]

HORMANUS. [OMANTIA.]

HORREA, AD, a place in Gallia Narbonensis, which signifies a depot for corn and perhaps other merchandise. Such names of places occur occasionally. Beaufort (*Koromannia*, p. 27) describes one of these Horrea, or Roman granaries, near the ruins of Myra, which bears a perfect inscription beginning *HORREA IMP.*, &c. The Antonine Itinerary places Ad Horrea on the road from the *For* to Forum Julii (*Frigeus*), and between Antipolis (*Antibes*) and *Frigeus*. From Antipolis to Ad Horrea is 12 M.P.; and from Ad Horrea to Forum Julii it is 17 M.P. The Table gives the same distances. The geographers differ wonderfully about the site of Ad Horrea. Some place it at *Grasse*, NW. of *Antibes*, according to which the road must have made a great bend between Antipolis and Forum Julii. Others would have it to be *Naposa*, which is much too near *Frigeus* to agree with the distance. D'Anville places it at *Cannes*, in favour of which there are two things:—*Cannes* is on the coast, where grain might be landed, for in the days of the Romans the Provincia imported corn, as it does now, from Africa; and it is probably on the old road. But it is too near to Antipolis; which difficulty D'Anville removes by a common device of his,—he reads *vii.* for *xii.* Others fix Ad Horrea at a place called *Hiribel* or *Arribes*, at the mouth of the stream of *Viviers*. [G. L.]

HORREA COELIA. [HADRUMETUM.]

HORREUM, a town of Moesia in Epirus, of uncertain site. (Liv. xiv. 26.)

HORREUM MARGI (*Moresia Hissar*), a town in Moesia, on the river Margus, where, according to the Ant. Itinerary (219), the *Legio XIV Gemina*, and according to the Not. Imperii (30) the *Legio XIII Gemina*, was stationed. (Comp. *Itin. Ant.* 134; Geogr. Rav. iv. 7; *It. Hieros.* 565, where the name is *Oromagus*; Hierocl. p. 657, *Ὀρμαρχος*; and Ptol. iii. 9. § 5, *Ὀρμα*. [L. S.]

HORTA or **HORTANUM** (*Orte*), an ancient town of Etruria, situated on the right bank of the Tiber, nearly opposite to its confluence with the Nar (*Nern*). Its name is mentioned only by Pliny, who calls it *Hortanam* (probably an adjective form), and by P. Diaconus, who writes it *Horta*, and mentions it with Sutrium, Polimartium, Ameria, and other towns on the two sides of the Tiber. (Plin. iii. i. s. 8; P. Diacon. iv. 8.) There can, therefore, be no doubt that it is the place still called *Orte*, where, besides some relics of Roman times, numerous Etruscan sepulchres have been discovered, and objects of considerable interest brought to light. (Dennis, *Etruria*, vol. i. pp. 162—167.) It probably derived its name from the Etruscan goddess *Horta*, who is mentioned by Plutarch. (*Quaest. Rom.* 46; Müller, *Trusker.* vol. ii. p. 62.) The celebrated *Lacus Vemonis*, the scene of two of the most decisive defeats the Etruscans by the Romans, was situated about miles above *Horta*, close to the banks of the Iber. [*VADIMONIS LACUS*.] The Via Amerina, which led from Falerii to Ameria [*AMERLA*], crossed the Tiber just below *Horta*, where the remains of a stone bridge are still visible. (Dennis, *l.c.* p. 167.) The "*Hortinae classes*" mentioned by Virgil (*Æn.* vii. 715) must probably be connected with this *y*, though he places them on the left bank of the river, among the Sabines, and the adjective formed in *Horta* would naturally be *Hortanus*, and not *stinus*. [E. H. B.]

HORTONA. [ORTONA.]

HORTII, **O'SSII** (*Ossioi*, Ptol. iii. 5. § 22), a people of Sarmatia Europaea, who occupied the E. coasts of the Baltic—*Esthonia* and the island of *Oesel*, and belonged to the Finnish stock. (Schafarik. *Slav. Ant.* vol. i. pp. 298, 302.) [E. B. J.]

HORTILIA, a small town of Cisalpine Gaul, situated on the N. bank of the Padus, about 10 miles below the confluence of the Mincius: it is still called *Ostiglia*. PEny (xxi. 12. s. 43) calls it only a village (*vicus*); and we learn from Tacitus that it was dependant on Verona ("*vicus Veronensium*," *Hist.* iii. 9). But in the civil war between Vitellius and Vespasian it was occupied by Caecina, the lieutenant of the former, as a military post of importance, commanding the passage of the Padus, and secured on its flank by the extensive marshes of the Tartarus. (*Id. Hist.* ii. 100, iii. 9, 14, 21, 40.) It is again mentioned by Cassiodorus in the 6th century (*Var.* ii. 31), and was probably a considerable place in ancient as well as modern times, though it did not enjoy municipal privileges. The Itinerary correctly places it 30 M. P. from Verona on the road to Bononia (*Itin. Ant.* p. 282), while the Table gives 33 (*Tab. Peut.*). [E. H. B.]

HOSUERBAS, a Mutatio, or place, in the Jerusalem Itinerary, on the road from *Bordeaux* to *Narbonne*. It is the next place to *Narbonne*, and 15 Roman miles from it. The Table has it *Usurna* or *Usurna*, and 16 M. P. from *Narbonne*. It is supposed to be a place at the ford of the torrent *Juerre* or *Jourra*. [G. L.]

HUNGUNUERO, one of the places called Mutations in the Jerusalem Itinerary, on the road from *Bordeaux* to *Narbonne*. From *Civitas Auscius* (*Auch*) to Mutatio ad Sextum is 6 Gallic leagues; and from Mutatio ad Sextum to Hungunero is 7 Gallic leagues. The road is direct from *Auch* as far as *Toulouse*; and if anybody can get a good map of that part, he will be able to guess where the place is, for it is on the straight road between *Auch* and *Toulouse*. D'Anville guesses *Gircaro*; Walkemier guesses "*Hunds de devant et Menjoulet*." [G. L.]

HUNNI or **CHUNI** (*Odnro*, *Xoivro*). Observe the absence of the aspirate in *Odnro*.

So early a writer as Ptolemy has the following passage:—*μεταξὺ Βασσινῶν καὶ Ρωσάλων Χοῖροι* (iii. 5. § 25). The full value of the notice will appear in the sequel.

AUTHORITIES.—The two best authorities are Ammianus Marcellinus and Priscus, each contemporary with the actions he describes, but Priscus the better of the two. Sidonius Apollinaris notices their invasion of Gaul; and that as a contemporary. The other authorities are all of later date, i. e. referable to the sixth century or later, e. g. Jornandes, Procopius, Agathias, Gregory of Tours. Cassiodorus, the best authority of Jornandes, wrote under the reign of Theodoric, 40 years after Attila's death. The whole history of Jornandes is written in a spirit eminently hostile to the Huns; the spirit of a *Got* as opposed to his conqueror, the *Hun*.

HUNS OF AMMIANUS.—The earliest of the two really trustworthy writers who speak with authority concerning the Huns is Ammianus Marcellinus (xxi. 1, et seq.). But his evidence is by no means of equal value throughout. He describes their appearance, partly after what he may have read in older authors respecting the *Scythians*, and partly after what he may have learned from those who had seen him. At any rate he draws

a distinction between them and the closely allied *Alani*. The *Alani* were tall and good-looking ("proceri, palcri") with yellow hair—"Hunnique per omnia suppare, verum victu minores et cultu" (§ 21). The Huns were "imberbes"—"spadonibus similes—pandi ut bipedes existimes bestias" (§ 2). When Ammianus wrote, the geographical relations of the Huns to the populations around them seem to have been as follows. The Alans occupied the present government of Caucasus, and the frontier of Circassia. Due north and west of the Alans came the Huns themselves, concerning whom Ammianus tells us that "monumentis veteribus leviter nota, ultra paludes Maoticas Glaciale Oceanum accolens, omnem modum feritatis excedit." He tells us this; but we must remark the loose character of his geography in respect to the *Icy Ocean*, and also the likelihood of his views concerning their original migrations being mere inferences from the phenomena of their sudden appearance. The western part of the government of Caucasus, Taurida, and Cherson formed the area of the Huns of Ammianus at the time before us, viz. A. D. 375, in the joint reigns of Valens, Gratian, and Valentinian II.

It is just in the midst of these notions that the necessity for criticism upon the text of Ammianus is so necessary. Between his notice of the Huns and his notice of the Alans, in each of which he speaks in his own proper person, as a contemporary inquirer with sufficient means of information, he brings in the account from Herodotus of the Neuri, Geloni, Agathyrai, Melanchlaeni, Anthropophagi, and Amazones. This archaic and semi-fabulous part must be separated from the rest.

However, next come the *Grutungi*, contemporaneous with the *Alani* of the Don. How near the *Grutungi* came to the Tanais is uncertain. They spread, at least, to the valley of the Dniester. Here was the "vallis Gruthungorum." The *Thervings* lay between the Dniester and the Danube; and besides the *Thervings*, the *Thaifalm* on the R. *Gerasus* (the *Sereb*). The ethnological connection seems to have been between the Huns and Alans on the one side, and the *Thervings* and *Grutungi* on the other—the *Thaifalm* being uncertain. The political alliances generally coincided with the ethnological.

The Huns drove the *Grutungi* and *Thervings* (the *Goths*, as they are mostly called) across the Danube—from *Dacia* into *Moesia* and *Thrace*, from the modern *Moldavia* or *Bessarabia* into *Bulgaria* and *Rumelia*. This is the first great event in their usual history; for the conquests and migrations previous to their appearance on the Dniester are unauthenticated. The quarrels between the *Goths* of *Moesia* and the *Romans* begin, and the Huns and Alans—no longer enemies but allies—side with the former. So at least it appears from the loose and unsatisfactory notices which apply to the period between the history of the Huns of Ammianus and that of the

HUNS OF PRISCUS.—A clear light is thrown over the reign of Attila, the son of Mundzak. He began to reign A. D. 433, and, over and above the notices of his battles, we find in *Priscus* references to as many as five embassies, viz. in A. D. 433 (just after *Ruas'* death), 441, 448, 449, 450,—this last being abortive and incomplete. In the one A. D. 448 *Priscus* took a part. *Gibbon* has abridged the account of it. A. D. 448 was the time, and the royal camp or court of Attila, between the *Theiss* and the *Danube*, the place. In A. D. 453 Attila died.

What were his acts, and what his power? Both have been much exaggerated,—by *Gibbon* as much as by any one. He overran Italy, Greece, Thrace, the countries on the Lower Danube, and penetrated as far into Gaul as *Châlons*. He claimed either a subsidy or a tribute from the *Romans* of the Eastern Empire. He seems to have entertained the plan of an incursion into *Persia*,—at least, the practicability of making one was one of the topics which *Priscus* heard discussed during the embassy. He spread his negotiations as far as Africa; and so got the co-operation of *Gemerice*.

In these we have the measure of his operations. They were undoubtedly great; though not greater than those of *Alaric*, and *Gemerice*, and other conquerors of the time.

His method was that of a politician quite as much as that of a soldier. We hear of more embassies than campaigns during the reign of Attila.

The nations that fought under his banner were numerous; but some (if not several) fought as allies, not as subjects. These allies and subjects—collectively—fall into 2 divisions.

1st. The particular population to which *Hun* was given as a generic name, i. e. the *Huns* themselves in detail.

2nd. The populations other than *Hun*, i. e. *Goths*, *Alans*, &c.

The latter will be noticed first; the former will find a place hereafter.

Sidonius Apollinarius writes:—

Barbaries toties in transfunditur Arctos
Gallia, pugnasque Bugum, comitante Gelomo;
Gepida trux sequitur, Socvum Burgundio cogit:
Chunnus, Bellonotus, Neurus, Basterna, Toringus,
Bructerus ulvros vel quem Nicer abluist unda
Prorumpit Francus."—vii. 320.

This applies to the invasion of Gaul.

From *Jornandes* we get the additional names of *Sarmatae*, "Cemadri, Marcomanni, Suevi, Quadi, Heruli, Turcilingi."

These lists give Attila an inordinately large, or a moderate-sized kingdom, according to the interpretation we give to each name, and according to the character of the dominion over the populations which bore them, which we attribute to the invader of Gaul. He might have ruled them as an absolute master; he might have availed himself of their arms as simple confederates; he might have taken up some portion of some of them in passing through their country.

Another point may be collected in its full details from *Gibbon*,—viz. the relations between the *Roman* general *Aëtius* and Attila. *Aëtius* was by blood a *Scythian*, and it is possible that the language of his childhood was a dialect of the *Hun*. Until the last year of his life, he was the friend and guest of the *Hun* kings—*Engelas* (*Ruas*), *Bleda*, and Attila. In the affair of the usurper *John*, he intrigued with the Huns. He settled a colony of Alans in Gaul, and the Alans and Huns only differed in their politics, not in their language and ethnological affinities. The chief mercenaries of *Aëtius* were Huns. With these he effected some of his chief conquests, and to these he made over several considerable districts. Hence, when we hear of certain *Hun* conquests, we hear of the conquests of *Aëtius* as well; and when we read of such or such areas being occupied, and such or such enemies being reduced, by *Aëtius* and the Huns, we are in doubt

as to the true sovereignty. Was it Roman, or Hun? due to the arms of Aëtius, or due to the arms of Attila? If everything be Hun that was conquered by Aëtius and his Huns, the empire of Attila enlarges: if everything be Roman, it decreases.

Pannonia was Hun—probably in the very widest sense that can be given to the term.

Dacia was Hun; but not altogether. This we learn from Priscus. When he visited the royal village of Attila, one of the Hun magnates, by name Onegesius, was absent, and had to be waited for. This was because he was settling the affairs of the Acatziri, who had just come under the dominion of Attila.

Now, if the Acatziri be placed (see below) in the more mountainous parts of Transylvania, a certain portion of that province must be subtracted from even the Dacia of Huns. Be it observed, that neither of the authors just quoted mentions these *Acatziri*.

The Neuri.—If these were Hun subjects, rather than confederates, and if, as is probable [NEURI], they lay around the marshes at the head-waters of the *Dniester*, we must make the northern extension of the Hun area very irregular in outline, since it was narrow in the direction of the Acatziri, but broad in that of the Neuri. Perhaps the boundary of the Hun territory in the present parts of Southern Russia followed the line of the rivers. If so, it comprised Bessarabia, Cherson, Taurida, and something more.

The Alani who fought under their king Sangiban at Châlons were the Alani of the Aëtian settlements in Gaul, rather than those of the Circassian frontier.

Turning westwards, and changing the direction, we come to some important areas, which must not be too lightly and gratuitously given over to the Huns; viz. the lands of the Thuringians, Burgundians, Suevi, Alemanni, with parts of Rhaetia and Vindelicia. The districts are large, the occupants powerful, the reign of Attila short.

For this period we cannot expect to find absolute evidence of the independence of these several countries. We find them, however, generally speaking, independent and powerful, both before and afterwards. When Attila died his kingdom broke up; and one of the measures of the magnitude of Attila's dominion, is the magnitude of the kingdoms that grew out of it. Three of these were more important than the rest; *a.* that of Theodoric the Ostrogoth; *b.* that of the Gepidae; *c.* the Lombards. Suppose these to have been carved out of the Hun monarchy in all their integrity, and we suppose a vast Hun area. But this was not the case. Theodoric's kingdom was large, because Italy was added to it. At Attila's death it was limited to a portion of Pannonia, and that a moderate-sized portion. The Italian addition was subsequent. The Gepidae are the obscurest of all the populations of Daco-Pannonia; the exact ethnological relations being unknown, though the evidence of Procopius and Jordanes makes them Gothic. It is more important to remember that their empire was by no accounts a large one. In the reign of Justinian it was destroyed by the Lombards. The Lombard power, although generally spoken of as if it grew out of the wreck of Huns, really arose out of that of the Gepidae, and was later in date than the immediate dissolution of Attila's dominion. It only became formidable in the reign of Justinian. Odoacer, like Theodoric, was remarkable for what he effected against Rome, rather than for the magnitude of his kingdom.

But whatever may have been the importance of these kingdoms, it is a matter of history that the area out of which they grew was limited to Pannonia, Western Dacia, Eastern Rhaetia, and Northern Moesia. Hence no inordinate magnitude need be given to the dominion of Attila in order to account for the kingdoms that grew out of its decay.

On the south of the Danube, a belt of country, five days' journey across, from the Save to Novi in Thrace, was ceded by the Romans to the Huns.

It is submitted that the sovereign sway of Attila was bounded by the eastern frontier of Bohemia on the west, and by the Masctie (there or thereabouts) on the east. There was also the strip of land to the south of the Danube. The northern boundary was uncertain. It probably reached to Minak in one part, and no further than the northern part of Transylvania on the other. This is by no means a small area. It is less, however, than the one usually suggested by the name of Attila.

TRADITIONAL VIEW OF ATTILA'S POWER AND CHARACTER.—In thus curtailing the historical dimensions of Attila, the writer has not forgotten his subsequent reputation, and the space he has filled in the minds of his after-comers. He has not forgotten the terrible term, *Scourge of God*. He has recognised the place that *Eisel* takes in the fictions of Germany, and *Atha* in those of Scandinavia—sharing the Nibelungen-lied and the Edda with Sigfrid and Theodoric; not less in mythic reputation than Arthur or Charlemagne. And not in prose and verse only. The *sagas* of Northern Germany are called the *Hünengröße* (= *Graves of the Huns*); and the *Hunderock* Mountain has, erroneously, been looked upon as the *Hill of the Huns*. More than this—it is admitted that the subsequent reputation is, to some degree, *prima facie* evidence of a real historical basis. Why should the Attila of men's imagination be so much greater than the corresponding Alarics and Genserics, if there was not some difference in their original magnitudes? Such a remark is legitimate as criticism. *Valeat quantum*. There are reasons why Attila and the Huns should become exaggerated—reasons which influenced our early, reasons which have influenced our modern, authorities.

The halo of fiction around Attila is not of Italian origin, nor yet of Greek. It is German, and Germano-Gallic; German, essentially and originally. It has already been stated, that the chief source is Jordanes; in many respects the Geoffrey of Monmouth to Germany and Scandinavia.

Tradition (it is believed), tradition and error have engendered exaggerated notions of Attila's power, and distorted ideas of his personal character and actions. Whence come the overstatements? The size of a king's dominions may be magnified without the king being made a monster; and, *vice versa*, a hideous picture may be drawn of a king without magnifying the size of his dominions. Whence come the overstatements? The historian is a Goth. The more nations the Huns conquered, the less the shame to the Goths. Here lay a bounty upon exaggeration—exaggeration which was easy for two reasons: 1. The joint conquests of Aëtius might be credited to the Huns exclusively; 2. Any kingdom of which the king was worsted might be dealt with as absolutely conquered, and reduced in its full integrity. Let us apply this to one man's dominion only—Hermanric's, according to Jordanes. The Huns conquer Hermanric. What had Hermanric conquered? First comes a list of names difficult to make out—

"habebat" (Hermanric) "aquidem quos domuerat Goltres, Etta, Thividos, Inaxungia, Vasinus, Brovones, Merusa, Mordena, Berniscana, Rogana, Taddanus, Athaul, Navego, Bubegenas, Goidas" (c. 23). The little that can be made out of this may be seen in Zeuss (*v. Ostfassen*). *Mordena* is the most satisfactory identification, and then *Merusa* = the *Mordwa* (*Mordina*) of Nestor, and the *Miri* of Adam of Bremen (*Merja* of Nestor). The *Mordina* country is in the governments of Simbirsk and Saratov.

The sequel in Jordanes tells us something more, viz. that the Heruli, Veneti, Antes, Sclavi, and Hæsti were reduced; a list that gives Hermanric all the country between the Vistula and the Sea of Azov; since the Hæsti are the Aestii of Tacitus, or the occupants of amber country, East Prussia.

Now, allow all this to Hermanric, and then transfer it to the Huns, and any amount of area will be the result. But was it so transferred? The Huns that conquered the Goths of Hermanric are said to have moved from the Maecotis to the Danube as quickly as they could. Who believes that they consolidated such dependencies as Courland, Livonia, East Prussia, Poland, &c. en route? But our reasonable doubts go further still. The magnitude of Hermanric's empire is problematical. Ammianus (his contemporary), besides giving an account of his death different from that of Jordanes, merely writes that when the Alans and Huns had coalesced, "confidentius Ermenric, late patentes at ubera pagos repentinis impetibus pererrantur, bellicosissimi regis, et per multa varique fortiter facta vicinus nationibus formidati" (xxi. 3. § 1). It is submitted that the words *late patentes* by no means denote vast dominions. Take the geography of the countries into consideration, and they mean the wide open plains of the Ukraine. Gibbon clearly saw this discrepancy; but, nevertheless, he preferred Jordanes, whose "concise account of the reign and conquest of Hermanric seems to be one of the valuable fragments which Jordanes borrowed from the Gothic histories of Cassiodorus and Ablavius" (Chap. xxv. §. note j). The text of Jordanes indicates the contrary of this. Ablavius is quoted specially and by name for one particular fact, viz. the origin of the Heruli; the inference from which is, that the other parts are not from him. We have seen how they differ from Ammianus.

The indefinitude of the term Scythia gave other exaggeration; and the king of the Huns was often called the king of Scythia. So he was—but only of *European* Scythia.

For further elements of confusion, see SCYTHIA. One, in addition, however, still stands over. When the *Danes* of *Denmark* took their place in history, they had not long been known under that name, before they were attributed to Attila; and Scandinavia became a part of Hunsdom. Why? Because the *Daci* were more or less Hun; and because, as early as the time of Procopius, we find them called *Daci*, the *Dani* (in after-times) being called *Daci*. The Heruli were undoubtedly Hun, in politics if not in blood. Now, both Jordanes and Procopius bring the Heruli and Dani (not *Daci*) in contact. There was a confusion here. How it arose is a complex question. Its effect was to carry Attila's power beyond all reasonable limits northwards.

Jordanes and Procopius give us the chief elements of those errors in ethnology and geography, which carry the Hun power unduly northwards.

How they got carried unduly eastwards may be seen in Gibbon (chap. 26). Gibbon (chap. 26) has been tempted to connect an invasion of those wild movements in the north of China, the lack of which with the history of the Sienpi; De Gorges having suggested and worked out the connection. Thus—

Many centuries before our era there were Huns on the north-western frontier of China—*comp. note*. About a. c. 100 one of the more warlike Chinese emperors subdued them. They fled westward. A tribe of Siberia or Central Asia, named Sienpi, raised them. They divided into 3 parties, one amalgamated with the Sienpi; one settled in Turissia, and became the White Huns (see below); the Persian frontier; the third, pressed forward by the Sienpi, pressed forward the Goths. "Italy rejoiced in her deliverance from the Goths, a furious tempest was excited amongst the nations of Germany, who yielded to the irresistible impulse that appears to have been gradually communicated from the eastern extremity of Asia. The Chinese annals, as they have been copied by the learned industry of the present age, may be usefully applied to reveal the secret and remote causes of the fall of the Roman empire" (chap. 30). The details are, that the Sienpi grew in strength, called themselves *Togha* (name of the earth), conquered China, and threw off a Sienpi called Geoguen, who were robbers; and the descendants of Moko, a slave of Toulun, one of the Sienpi, achieved the independence of these Goths, and effected conquests from the Corea to the East, and beyond. To the north of the Caspian he conquered the Huns. These, of course, moved westward, but the Huns, who conquered the Alans, and the Thervingi, and who are mentioned by Ammianus, had already occupied the parts between the Danube and the Danube,—"the countries towards the East were already" (A. D. 405 is the date for this migration) "occupied by these kindred tribes; and their flight, which they soon converted into a bold attack, would more naturally be directed towards the high and level plains through which the Vistula flows into the Baltic Sea. The north must soon have been alarmed and agitated by the invasion of the Huns,—the inhabitants might embrace the resolution of discharging their superfluous numbers into the provinces of the Roman empire. About 400, after the victorious Toulun had assumed the title of Khan of the Geoguen, the haughty Rhodigast, Radagaisus, marched from the northern extremity of Germany almost to the gates of Rome." &c. &c. A note it is remarked that "Procopius (de bell. Vand. i. 3) has observed an emigration from the Palus Maecotis to the north of Germany, which he ascribes to famine. But his views of ancient history are strangely darkened by ignorance and error. The criticism of this extension of the Hun power to the direction of China, will be found in the notes on the *Citadel* Huns, towards the end of this article.

It is on the authority of Jordanes that the order of his brother is attributed to Attila: Gibbon follows it; the Comte de Buat denies it. Probably it must stand as we find it, subject to being invalidated by the slightest amount of opposing evidence, in case the care and criticism of future inquirers elicit any.

As a conqueror, Attila seems to have been struck as the head of a confederation than as a warrior. He acted, too, more as a politician than a war-

Bloody as is his memory, history gives us but three campaigns,—one in Thrace, Illyricum, and Greece; one in Gaul; one (during which he died) in Italy. With Attila he intrigued long and steadily; so he did with Genseric (in Africa); so he did with Theodoric, king of the Franks. Add to this, the five embassies from Constantinople, and the one (probably more) from Rome, and we know the so-called *Scoones of God* better in the council than in the field. The steady object of his enmity was the Gothic name. Rome was only an ordinary and occasional foe. His alliances and intrigues coincide remarkably with the diffusion of the Alani, who, either as allies or mercenaries, had penetrated the western parts of Europe before him. Spain was conquered by Alani (the proposed correction, *Alemanni*, is gratuitous), Sævi, and Vandali; and when Genseric led his Vandals into Africa, some of the Alani accompanied him. Now Genseric and Attila were mutual coadjutors. There were Alani in France, and the Frank king intrigued with Attila. The Scythian (*Alan* or *Hun*) extraction of Attila has been mentioned.

POPULATIONS AKIN TO THE HUNS UNDER OTHER NAMES.—When Attila died, his kingdom broke up; but as we are not so much writing the history of a name, but that of a people, we may ask whether the Hun history be not continued under other denominations? The answer is in the affirmative. The erudition and comprehensiveness of the closest investigator of the widest field in all history—the unrivalled historian of the decline and fall of the Roman empire—makes any exception that may be taken to his great work distasteful. Nevertheless, it may truly be said that few pages of Gibbon are more objectionable than those which deal with the ethnology of the Bulgarians. (See chap. lv.) After remarking that “Theodoric, the Ostrogoth, had trampled on the arms of the Bulgarians;” that “after this defeat the name was lost during a century and a half;”—he suggests that “the same or a similar appellation was revived by strange colonies from the Borysthenes, the Tanaïs, or the Volga.” He further adds, that “the unquestionable evidence of language attests the descent of the Bulgarians from the original stock of the Slavonian race.” He also speaks of “the Servians, Bosnians, Rascians, Croatsians, Wallachians, &c.,” being “kindred bands.” The italics are the present writer’s, who remarks that, in the case before us the evidence of language, always exceptionable (though strong *prima facie*) evidence, is eminently exceptionable here, and also that it is inconstantly applied. The language of the Wallachians is not Slavonic, but Romano, i. e. Roman, ven as French and Spanish are Roman. In respect to the Bulgarians, the present language is Slavonic, —but Slavonic of a very exceptional character.

But to return to Gibbon. His note states that Chalcondyles, a competent judge, affirms the identity of the language of the Dalmatians, Bosnians, Servians, *Bulgarians* (the italics are Gibbon’s), Poles, and—Bohemians.” Now, granting Chalcondyles to be a competent judge, he is so only for a own times, the 13th century. Between, however, his time and that of the Bulgarian predominance, the Slavonian king Sviatoslav (A.D. 955–973) conquered Bulgaria. This accounts for the change of language. It should be added, that neither on Tanaïs nor the Volga, in the 7th century, could apply a Slavonic population; and that the evidence favour of the more distant river of the two having in the home of the Bulgarians is unexceptionable,

—unexceptionable, and scarcely excepted to by Gibbon himself. “Theophanes places the old Bulgaria on the banks of the Atal, or Volga; but he deprives himself of all geographical credit by discharging that river into the Euxine” (note).

On the other hand, one of the most valuable articles in *Zeuss* (*Deutsche und seine Nachbarstämme*) is the one on *Bulgari*: wherein he proves, as clearly as matters of the kind can be proved, that the Bulgarians were Huns under another name (or vice versa); or, at least, that the Bulgarians were part of the Hun confederation. Ennodius is the first author who mentions them, and he does so in his Panegyric on Theodoric, their conqueror—their conqueror already alluded to. Ennodius writes: “Stat ante oculos meos *Bulgarum* duxor—dextera tua—prostratus.—Hæc est natio cujus ante tu fuit omne quod voluit.—His ante mundus pervius esse credebatur.” *Zeuss* rightly remarks that, though this is the first mention of the *Bulgarians*, it is not the first mention of a nation very like them, if not the same. They eat horse-flesh, like the Huns and other Scythians.—“Credunt esse ante ad delicias equini pectoris lac potare. Quis ferat adversarium, qui perniciis jumentis beneficio currit et pascitur?”

Again—Procopius mentions no Bulgarians; only Huns: but certain deeds that Jornandes and others attribute to the former he gives to the latter.

A third passage, that, admitting some distinction to have existed between the Huns and Bulgarians suggests the likelihood of its having been but slight, is from Fredegarus (c. 72): “Eo anno, in Avarrum, cognomento Chunarum, regno in Pannonia surrexit vehemens intentio, eo quod de regno certarent, cui deberetur ad succedendum, unus ex *Avaris* et alius ex *Bulgariis*.”

Fourthly. We must remember that both *Huns* and *Bulgarians* are collective names. Having done this, we have two divisions. The exact names are difficult to ascertain; but names sufficiently like to pass for denominations of the same tribe are found in one author amongst the Huns, in another amongst the Bulgarians.—In τὸν τῆ χρόνῳ τὸ τῶν Βουλγάρων ἔθνος ἐνήλθεν τῇ Θράκῃ ἀναγκάσιον δὲ εἰσεῖν καὶ περὶ τῆς ἀρχαιοτάτης τῶν Ὀστρογότθων Βουλγάρων καὶ Κοτρίγγων. (Theophan. ed. Par. p. 296.) The place, however, the Huns is more usual; and here the names are *Ὀστρογότθοι* (*Hunigari*) and *Κοτρίγγοι* (*Kutzingiri*.)

Such is the evidence of *Zeuss* as opposed to that of the passage of Gibbon that preceded it. B. N. Gibbon himself, in another part of his great work (ch. xlii.), identifies the Bulgarians with the Huns. “I adopt the appellation of Bulgarians from Ennodius, Jornandes, Theophanes, and the Chronicles of Cassiodorus and Marcellinus. The name of Huns is too vague: the tribes of the Cutturgians and Uturgians are too minute and harsh.” Again: “the same year... was marked by an invasion of the Huns or Bulgarians.” The Cutturgians are the *Κοτρίγγοι*, or Kutzingiri, of the last extract. Their name will recur.

The next population akin to the Huns (the proofs of this will be seen in the sequel and in *AVARS*) is that of the Avars. The reign of Justinian gives the first, that of Charlemagne the last, of this name. For further details, see *AVARS*.

The fourth great name is that of the Khazars, who are unequivocally mentioned under that designation as early as A.D. 626, though not by a contemporary historian. The evidence, however, of

their power is sufficient. The emperor Leo IV., son of Constantine Copronymus, was the son of the Irene, daughter of the Khan of the Khazars. He reigned from A. D. 775 to A. D. 780. Their *dominions* range from the seventh century to the tenth; the power being at its maximum about A. D. 850. In space they spread from the Caspian to the Dnieper: from the Caspian, inasmuch as the Arab name of that lake was the *Sea of the Khazars*; to Dnieper, because they are mentioned under the name *Chazari* by the earliest Russian historian—Nestor.

Much in the same way as the name Hun is succeeded by that of Bulgarian, the name Khazar is succeeded by that of *Patzinaki*, *Petchiniques* (*Pincane*, *Pecentici*, *Pincenates*, *Pecinos*, *Petinos*, *Postinape*, *Harjuzaites*, *Pecarengesi* (Russian name), *Hazeni*, *Beasi* (Hungarian names). The *Kanghar* are a section of the *Petchiniques*. Time from A. D. 948 (there or thereabouts) to A. D. 1050. Place—the parts between the Lower Danube and the Lower Don—Bessarabia, Cherson, and part of Taurida. Like the Khazars, they attack Russia; pressing northwards and westwards.

The *Uzi* (*Guz*, Arabic name) replace—or appear to replace—the *Petchenegi*; time, the 11th century.

Lastly, come the Cumani, scarcely distinguishable from the *Uzi*. Of all the tribes akin to the Huns, the Cumani seem to have pressed furthest westwards. Probably, they occupied Volhynia—certainly a part of Hungary. The last individual who spoke a language allied to that of the Huns—a language of Asiatic origin—the last of the Cumanians—Varro, an old man of Kariang—died A. D. 1770. With him closes the history of the populations allied to Hun, who at one and the same time dwelt north of the Balkan, and retained their language. The blood of the population is still abundant—in some cases predominant; in Bulgaria, Hungary, the Danubian Principalities, Volhynia, Podolia, Cherson, Taurida, and the Crimea.

It may be said that the evidence of the *Hun succession* is deficient; that the *Catena Attilianorum* (so to say) is broken. Upon this, the writer remarks that the absolute identity of the preceding populations with the Hun is not predicated. They are only said to belong to the same family with the Huns to Attila, and to illustrate the same general historical phenomenon; viz. the intrusion into Eastern Europe of certain frontier populations from Western Asia, a phenomenon which is seen in its true light when seen as a whole, than when seen in fragments.

But what are the proofs that these nations are all in reality, though not all in name, Hun? And in what sense are they so? They are not so politically at any rate. They are so ethnologically, and they are so geographically. They are so geographically; inasmuch as they can all be deduced from some portion of the area which lay between the most western occupancies of the Pannonian Huns, and the most northern occupancies of the Avar Huns.

THE HUNS ETHNOLOGICALLY MEMBERS OF THE TURK FAMILY.—They are so ethnologically, as can be shown by the following train of reasoning:—

a. That the Cumani and *Petchinengi* spoke the same language is expressly stated by Anna Comnena, a contemporary testimony.

b. There is the evidence of the early Arab geographers, that the Khazars and Bulgarians spoke the same language.

c. There are the *rumours* already given for connecting

a. The Bulgarians and Huns;

β. The Avars and Huns.

d. There is a specimen of the Cumani, and there are glosses from the Khazar, Avar, Bulgarian, all referable to one and the same language.

e. That language is the Turk of Independent Tartary.

It is submitted that this evidence is sufficient; sufficient when we consider that no material fact traverses it, and that the *a priori* probabilities are in its favour. What country so likely to have discharged a population upon South-eastern Russia, the Danubian Principalities, Bulgaria, and Hungary, as Independent Tartary and Caucasus (i. e. the government so called)? At the same time, the fact of the evidence of the *Huns* of Attila being of a more indirect kind than we might *a priori* expect, is by no means kept back. We only find what they are by what the Avars were.

EARLY EUROPEAN HISTORY OF THE POPULATIONS AKIN TO THE HUNS.—1. *Details of its name*.—Hiberto, the history of the populations akin to the Hun has been the history of certain populations connected with the decline of the Roman empire; indeed, it has been treated as if it began during the reign of Valens, with the attack upon the Goths and the subsequent passage of the Danube. This has been the first fact recognised—the first fact supported by competent testimony. At the same time, a great deal of the Asiatic history has been objected to; a small part only admitted. Now, this leaves the early history of the Hun name untouched. If they did not come from the wall of China, whence came they? The name *Hun* is new, but we have seen that there is a long and late history of the Hun population under other names. May there not also be a long early one as well? May not the line run backwards as well as forwards? This question is best treated after a preliminary notice of what may be called the details of the Hun name. If the name *Hun* (and indeed the names *Bulgarian*, *Khazari*) are general and collective, what are the specific designations? That such details exist has already been suggested by the remark of Gibbon, that the names *Kutriguri*, &c. were too specific and limited. We have, then, the following names:—

1. *Amisuri* of Priscus; *Alpisuri* of Jordanes. 2. *Itimari*, Priscus and Jordanes. 3. *Akaduri*, Jordanes. 4. *Tonosures* of Priscus; *Tonosuri* of Jordanes. 5. *Boisici*, Priscus and Jordanes. 6. *Soroogi*, Priscus. 7. *Kutriguri* (*Kotriguri* in Agathias), Procopius. 8. *Cutriguri*, Jordanes. 9. *Ulmiguri* of Agathias. 10. *Ulmiguri* of Jordanes. 11. *Asigicuri*, Jordanes. 12. *Sataguri*, Jordanes; probably same as *Sataguri*. 13. *Savri*, Procopius. 14. *Urgi*. 15. *Onoguri*, belonging to the country called Onoguria, Geogr. Ravenn. 16. *Zati*, Menander. 17. *Saraguri*. The list can probably be increased. It is considered, however, sufficient to show that the statement that the term *Hun* was a generic and collective name, was based upon a sufficient list of species. The evidence as to the Hun affinities of the preceding tribes is not uniform. It is stronger in some cases than in others. In all, however, it seems sufficient. For further information see Zenas, *vv. Hunni, Alani, Bulgari, Avari*.

THE ACATHELI.—One name of greater importance

than the rest has been reserved, *Acatsiri*. What Priscus found, on his visit to Attila's court or camp, respecting these *Acatsiri*, has been already noticed. We must remember where they lay, viz. in the mountain districts of the parts about Hungary, (say) in Transylvania. Contrast this locality with that of the Avars, who, in their original locality, seem to have been the most northern of Huns; and who (we must remember) are distinctly designated by that name. So are the *Acatsiri*. Now, between these limits lay the Scythia of Herodotus. That the Scythians of Herodotus belonged to the great Turk family is, in the present article, a postulate; but evidence will be given of this fact in the articles SCYTHAE, SCYTHIA. And the Huns, with their allied populations, were Turk also. Neither, however, were indigenous to Europe: but, on the contrary, each intrusive, each originally Asiatic; each, under an *a priori* view of their probable origin, from the north-western parts of Independent Tartary. Now, whatever may be the actual facts of the Hun history, there is no need of any migrations later than that of the Scythae (Skoloti) to bring them into Europe, and there is no evidence of such. And, whatever may have been the actual facts in the history of the Scythae, there is no evidence of their having either been ejected from their European occupancies, or distinguished as populations. The only definite fact is a change of the names by which the populations of a certain portion of Europe are known. It is suggested, then, that the history of the populations akin to the Hun, from the 5th century forwards, is, in the main, a continuance of the history of the Scythae of the 4th century B.C. But is there any evidence of such continuity? It is submitted that there is some. The *Kariapoi* of Herodotus are, probably, the *Cutriguri* of later writers. The Huns of Attila are not only called Scythae, but more specifically *Royal Scythae*. (Priscus, *de Legat.* 8. 1.) Lastly, comes the notice of the *Xoivoi* (*vid. sup.*) by Ptolemy.

But what if the *Acatsiri* = *Agathyrsi*? Mr. Newman, in a paper on the *Scythia of Herodotus*, places them in Transylvania. So much for the coincidence of place and place. What as to name and name? There is a certain amount of difference we must expect *a priori*. The two words have come to us through different routes, and at different times. *Agathyrsi* in Greek—early, classical Greek; as (as Greek) Roman also. It was taken by our early Greek authorities at second-hand; perhaps even less directly than that. This means, that it was not taken from the *Agathyrsi* themselves, but that it passed through an intermediate language, becoming thereby liable to change.

But the Greeks of the time of Priscus got it either first-hand, or through the Goths, and their forms are, *Acatsiri* and *Acatsiri*, *Acatsiri* (in certain MSS., *Acatsiri*). It would be strange if the words were keener than they are. There has been a difference of redium, and a difference of form is the natural result. The present writer makes no secret of laying great stress on these words, *Acatsiri* and *Agathyrsi*, even to the risk of being accused of indulging in etymologies. He will, ere long, strengthen it by another; admitting that the two combined are more than vice as strong as one standing alone: they confirm each other. At present he sums up with the inference, that if the *Acatsiri* were Huns, and the *Agathyrsi* Scythae, and each occupied the same locality at times distant as the ages of Herodotus and Priscus, some member of the Hun name, at least, was in *situ*

in Transylvania six centuries before Attila's time,—some Scythians coincided with some Huns.

It is now suggested that the history of these parts be read backwards. For the parts between the Aluta and the Dniester, it was the Romans of Trajan who displaced the descendants of the Scythae of Herodotus, fragments of whom remained in Transylvania as *Acatsiri* in the time of Attila. And why not the Huns of Attila be what the *Acatsiri* were? No evidence brings them from any point east of the Aluta. All that evidence does is to say that certain Huns fought against certain Alans on the Maeotis; that certain Huns ejected certain Thervings from Bessarabia; that certain Huns occupied the country between the Aluta and Theiss. All beyond is inference; and the inference of the present writer is, that the Huns of Attila were no new comers in Hungary. Where was Attila's court or camp? Not in Roman Dacia, nor yet in Roman Pannonia; but just in that part between the two that was never Romanised; a likely spot for the remains of such independence as the Scythian portion of Dacia might preserve, but not a likely spot for a new invader from the Don or Volga. Part, then, of Dacia was Scythian or Turk? Certainly. No man can say how much. And the subjects of Decebalus may have been Scythian or Turk, descendants of the Agathyrsi, ancestors of the *Acatsiri*, close kinsmen of the Huns of Attila. Such is the inference. If soldiers, why not captains? why not Decebalus himself? There are those who may think that the notion of Decebalus being a Turk supplies a *reductio ad absurdum*. Yet it is only our preconceived notions that are shocked. No facts are against it. Why should not the Agathyrsi of Dacia have supplied a leader as well as any other? Decebalus is a word strange to Gothic, strange to Slavonic, not strange to Turk history. When the proper and specific Turks first appear in the field of history, as they do in the reign of Justinian, the name of the first Turk khan is that of the last Dacian king—Diabul, in Gibbon; *Διαβούλος*, in Menander (p. 301).

The true historical character of Attila will, perhaps, never be recognised; but, if we must have extremes, the doctrine that he was the reconstructor of an impaired nationality, and the analogue of Pelagius in Spain rather than of Tamerlane in Asia, is as little removed from the probable truth as the notion that he was the Scourge of God and the symbol of barbarism. The ejection of the Goths seems to have a simple detail in the history of Dacia,—possibly the first great event in the reconstruction of a Scythic (or Scytho-Sarmatian) kingdom as opposed to a Romano-Germanic one. At any rate, it is much more certain that the Goths were the intruders than it is that the Huns were.

WHITE HUNS (*Οἱ λευκοὶ Ὄρκοι*), CIDARTAE, NEPTHALITAE, EPHTHALITAE.—Cidriate is the name in Priscus; *white*, the epithet of Procopius. Their locality was the south-western part of Turkestan: their affinities, probably Turk; the present Turcomans being their likeliest descendants. They appear in history as being engaged in a war against Piroos, king of Persia, in the sixth century. (Procop. *B. P.* i. 3.) They are distinctly stated by Procopius to have agreed with the Huns chiefly in name; to have been designated by the epithet *white*, because their complexion was fair, to have been comparatively civilised, settled, and agricultural.

CHIONITAE.—Neumann considered that a popu-

lation named by Ammianus Marcellinus *Chionides*, are Huns—name for name. Their king Grumbates, along with the king of the Caucasian Albania, was an ally of Sapor in the war against Julian (xviii. 6. § 23). Populations akin to the Huns in Northern Armenia, or along the Georgian frontier, are by no means improbable.

RELATIONS OF THE HUNN TO THE HUN-JO OF CHINESE HISTORY.—The criticism upon the connection (real or supposed) of the Huns with a population that came in contact with the Chinese, has been deferred until the present occasion. It comes best after a notice of the White Huns. Gibbon's account is that of De Guignes. Neumann has adopted, and in some degree sanctioned, the views of the French and English historians. As Neumann is well versed in Chinese literature, his opinion is important. The criticism of the present writer is based upon no pretence of anything of the sort. He only takes the evidence as he finds it. Let us see what is stated, and then compare it with what is proved. A writer (Ssu-ma-tsun) whose date is fixed about B.C. 100, but whose writings have not come down to us, and who is only known from being quoted by Ma-tu-an-lin (a writer of the eighth century A.D.), is said to have stated that, between B.C. 2357 and B.C. 2305, there lived on the Upper Hoangho a tribe called by the Chinese Shan-jang (armed nomadism). Between B.C. 2305 and B.C. 1766, the name for the population of these localities is Hun-jo. That the Shan-jang are the Hun-jo under a Chinese, and the Hun-jo the Shan-jang under a native name, is stated by Neumann; but it is an inference of his own, unsupported (so far as his text goes) by anything Chinese. Hence, admitting the Hun-jo to be Huns, the evidence of their being Shan-jang is incomplete. This subtracts something from their antiquity. The history proceeds with the statement that—about B.C. 300 there was a great Tanjou (sovereign) of the Hun-jo named Todman, and that he came 1000 years after an individual named Shun-wei; nothing being known for the interval. This subtracts again from the historical antiquity of the Hun-jo. About B.C. 207 Maotun conquers great part of China, and about A.D. 90 his descendants are themselves conquered and ejected. This we get from the Chinese. We also get the statement that these broken and ejected Hun-jo moved westwards. They are now getting towards a time and place where European history takes cognisance of them. The Hun-jo are pressed by the Chinese, press upon the Alans, and come out as the Huns of the time of Valens.

It may narrow the question if we criticise this last fact in the history of the Hun-jo only; leaving out the earlier ones, as being but remotely connected with that of the Huns. Can the fugitive from China, A.D. 90, be connected with the invaders of South Russia in the time of Valens? The best attention which the writer of this article has been able to give to the modern writers on this subject, has left him with the conviction that the connection is one of their own making. No western writer carries the Huns east of the Volga; no Chinese one, west of the latitude of Lake Baikal. Neumann's references lead us to believe that the Alans are mentioned by the Chinese historians. The context shows that they are not. The link, then, is hypothetical and unsatisfactory.

It may have struck some that the whole of the

Chinese evidence for these early times is unsatisfactory,—unsatisfactory even as a puzzle. But there are suspicious details as well. Thus, the first Tanjou of the Huns, happens one century later as the first Khan of the Tsin. Neumann himself argues that the word *Gao* (= *Antei*) in the Chinese books means *Asia*, *western* word; and that it was a name taken from the western world. If this, why not *name*? Why not the name Hun-jo? The facts that so many writers who have dealt with the Hun-jo have taken from the Chinese, are suspiciously in facts of the Byzantine historians. The name *o-pai* is given as being a Chinese form for *Aspalas*, a king certainly connected with Byzantium, so certainly with Chinese history. It is by no means certain that the whole history of the Hun-jo is older than the influence of these Sien Chai in China and Mongolia, who gave the Huns their alphabet, and with it (perhaps) the syllabing of the history of Western Asia belongs to the antiquities of their own country.

But, granting this view to be untenable, the Chinese history is authentic, we must see that the Huns of Attila were one thing, the Huns of Turkestan another; and it may be that, if some Huns or other went to touch contact with China, the case is the same as those of Turkestan. At the present moment, Turk populations of Yarkand and Khotan bear what is called *Chinese Tartary*; whereas, over the Northern Turkestan (Tartary) and China, the tract of Mongolia intervenes.

Such is a sketch of the reasons for discounting the Huns of Attila and the Hun-jo of Chinese authors. (Gibbon, *Decline and Fall*, &c.; *Decisive Battles of the World* (Chalmers); *Histoire des Huns*; Neumann, *Die Völker der Russischen Geschichte*.) [R.G.L.]

HUNNUM, in Britain, the fifth station along the line of the Vallum, beginning at Segedunum (Wallsend), where the Notitia places the *Ala Sabiniana*—a body of troops probably named after Hadrian's empress, Sabina. It coincides with the present locality of *Hawton*, where Roman remains are abundant, and where, in A.D. 1600, Camden found a monumental slab erected to the memory of a *mile* of the *Ala Sabiniana*. For a notice of the excavations made at Hunnum and its results, as well as of the Roman road, and a bridge made out of it, see Bruce's *Roman Wall*, p. 141. [R.G.L.]

HYAKA. [HYLE, No. 2.]

HYAMPEIA. [DELPHI, p. 764, a.]

HYAMPOLIS (Ἰάμπολις; *Ἰάμπος*), an ancient town of Phocia, mentioned by Herodotus (ii. 521), and said to have been founded by Hyantes after they had been expelled from Ionia by the Cadmeians. (Paus. ix. 35. § 5; Strab. p. 424.) It was situated on the road leading from Orchomenus to Opus (Paus. l. c.), and, as it was at the entrance of a valley which forced a convenient passage from Locria into Phocia and Boeotia, its name frequently occurs in history. It was the entrance of this pass that the Phocians won a victory over the Thebans. (Herod. viii. 123.) Hyampolis was afterwards destroyed, along with other Phocian towns, by the army of Xerxes (Herod. viii. 33.) In B.C. 371 Jason, in his march from Phocia, when he was returning from Boeotia after the battle of Leuctra, is said to have taken Tapes

Ἰαυὶς τὴν ὑποδορυεὶον (Xen. *Hell.* vi. 4. § 27), which is supposed by some to be the same place as Clonae, a village belonging to Hyampolis. (Plut. *de Virt. Mul.* p. 244; Valcken. *ad Herod.* viii. 28.) In B. C. 347 a battle was fought near Hyampolis between the Boeotians and Phocians. (Diod. xvi. 56.) The city is said to have been destroyed by Philip; but, as Pausanias states that the ancient agora, senate-house, and theatre were still remaining in his time, it must have been chiefly the fortifications which were destroyed by Philip. At all events it continued to be an inhabited city, and is mentioned in the Roman wars in Greece. (Liv. xxxii. 18.) It was embellished by Hadrian with a Stoa. Pausanias mentions also a temple of Artemis, who was the deity chiefly worshipped in the city. (Paus. x. 35. §§ 6, 7.) Pliny (i. 7. s. 12) and Ptolemy (iii. 15. § 20) erroneously describe Hyampolis as a city of Boeotia.

The ruins of Hyampolis may be seen upon a height about five minutes northward of the village of *Voghdáni*. "The entire circuit of the fortifications is traceable, but they are most complete on the western side. The masonry is of the third order, nearly approaching to the most regular kind. The circumference is about three-quarters of a mile. The direct distance to this ruin from the summit of Abae is not more than a mile and a half in a north-west direction. Below *Voghdáni*, on the side of a steep bank which falls to the valley of *Khúbevo*, a fountain issuing from the rock is discharged through two spouts into a stone reservoir of ancient construction, which stands probably in its original place." (Leake, *Northern Greece*, vol. ii. pp. 167, seq.)

Strabo relates (*l. c.*) that there was another town, named Hyampolis, in Phocia, situated on Parnassus.

HYANTES (Ἰάντες), are mentioned among the aboriginal inhabitants of Boeotia, who were driven out of this country by the Cadmeians, whereupon they founded the town of Hyampolis in Phocia. (Paus. ix. 5. § 1, ix. 35. § 5; Strab. vii. p. 321, ix. pp. 401, 424, x. p. 464.)

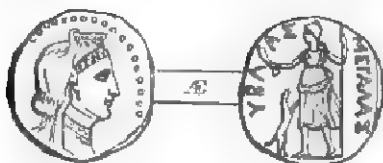

HYBLA (Ἰβλά: *Ἑθ. Ἰβλαῖος*, Hyblensis, but the adjective form is Hyblaicus), is the name of no less than three cities of Sicily, which are often confounded with each other, and which it is sometimes very difficult to distinguish.

1. The largest and most considerable of the three, thence called for distinction's sake *Hybla Major* or *Magna* (Ἰβλά ἡ μεγάλη, Steph. B.; Paus. v. 23 § 6: on coins Ἰβλά Μεγάλη; Eckhel, vol. i. p. 216), was situated on the southern slope of Mount Aetna, not far from the river Symaethus. Hence it is described by Pausanias (in whose time it had ceased to be an independent city) as situated in the territory of Catana (*ἐν τῇ Καταναίᾳ, l. c.*). In like manner, we find it noticed by Thucydides as a place between Catana and Centuripe, so that the Athenians, on their return from an expedition to the latter city, ravaged the corn fields of the Inesaeans and Hyblaean. (Thuc. vi. 96.) It was early a Sicilian city; and hence, at an earlier period, it is mentioned among the other towns of the people in the interior of the island which Aetna sought to unite into a common league, a measure to which the Hyblaean alone refused to cede. (Diod. xi. 88.) It is quite clear that, in the above passages, the *Aetnaean* Hybla is the one meant: and it seems probable that the city of *Hybla*, which was attacked by the Athenians soon

after their landing in Sicily (Thuc. vi. 62), but without success, was no other, though Thucydides calls it *Hybla Geleatis* (Ἰβλά ἡ Γελεαίτις), an epithet which has been generally supposed to belong to the second city of the name. (See No. 2.)

During the Second Punic War, Livy mentions *Hybla* as one of the towns that were induced to revolt to the Carthaginians in B. C. 211, but were quickly recovered by the Roman praetor M. Cornelius. (Liv. xxvi. 21.) In the time of Cicero the *Hyblaean* (evidently the people of the *Aetnaean* city) appear as a considerable municipal community, with a territory fertile in corn (Cic. *Verr.* iii. 43): and *Hybla* is one of the few places in the interior of Sicily which Pomponius Mela thinks worthy of mention. Its name is also found both in Pliny, who reckons it among the "populi stipendiarii" of the island, and in Ptolemy. Hence it is strange that Pausanias appears to speak of it as in his time utterly desolate. The passage, however, is altogether so confused that it is very difficult to say of which *Hybla* he is there speaking. (Mel. ii. 7. § 16; Plin. iii. 8. s. 14; Ptol. iii. 4. § 14; Paus. v. 23 § 6.) We find no later notice of it, though an inscription of Christian times found at Catana appears to refer to *Hybla* as still existing under its ancient name. (Castell. *Inscr. Sicil.* p. 253, no. 42.)

The site cannot be fixed with certainty: but the position suggested by Cluverius, at *Palernò* (about 12 miles from *Catania*), is probable enough, and derives strong confirmation from the discovery in that city of an altar dedicated "Veneri Vetrici Hyblensi." (Cluver. *Sicil.* p. 235; Castell. *Nom. Vet. Sicil.* p. 36.) The difficulty of its determination arises from our uncertainty as to the site of the neighbouring city of *Aetna*. [AETNA.]

COIN OF HYBLA MAJOR.

2. *Hybla*, called by Stephanus "the Little" (ἡ μικρά), and by Pausanias *Hybla Geræitis* (ἡ Γεραίτις, Paus. v. 23. § 6), was intimately connected, if not identical, with the Greek colony of *Megara*, which thence derived the name of *Megara Hyblara*. There is considerable discrepancy between the different accounts of the foundation of that colony [*Megara*], but all agree that it was founded in the territory, if not exactly on the site, of the Sicilian town of *Hybla*. (Thuc. vi. 4; Strab. vi. p. 267; Scymn. Ch. 277; Serv. *ad Virg. Ecl.* i. 55.) *Megara* was destroyed by Geion of Syracuse after it had subsisted 245 years, and its inhabitants expelled or removed elsewhere. (Thuc. *l. c.*) Its territory was naturally incorporated with that of Syracuse, and the site of the city itself appears to have remained desolate till the Athenian expedition to Sicily, B. C. 415, when we find Lamachus judiciously proposing to occupy it as the naval station of the Athenian fleet. (Thuc. vi. 49.) But this advice was overruled, and the next spring the Syracusans erected a fort for the protection of the site, which the Athenians repeatedly attacked, but with-

xv. p. 698), and fought the great battle with Porus, founding, after its successful termination, two cities in commemoration of it,—Nicaea (now *Bekut*?) and Bucephala. (Arrian, *Anab.* v. 19.) Arrian remarks that the Hydaspes, on flowing into the Acesines, lost its name; but that the Acesines, after receiving the Hydaspes, preserved its title unchanged (vi. 14; Curt. ix. 4). The river seems to have been considered one of great size by the historians of Alexander's invasion, as it is stated that Alexander saw crocodiles on its banks. (Strab. xv. p. 698.) Many wonderful stories seem to have been related about it by the poets, whence Horace speaks of "fabulous Hydaspes" (*Carm.* i. 22. 8). Virgil calls it "Medus Hydaspes" (*Georg.* iv. 211), using Medus in the general sense of eastern. Ptolemy calls it Bidaspes (Biddows, vii. 1. 26), which is nearer to its native name than the more common Greek appellation. [V.]

HYDATA ("Ἰδάρη, Ptol. iii. 8. § 9), a town in Dacia, which has been identified with *Karte Ard-schick* in *Wallachia*. (Köppen, *Nachr. von einigen in Ungarn, Siebenbürgen, bethändlichen Alt.*, Wien, 1823, p. 19.) [E. B. J.]

HYDE, a town of uncertain site, on the frontier between Cappadocia and Galatia. (Plin. v. 25; Hierocl. p. 675; Council. Chalced. p. 526.) [L. S.]

HYDISSA ("Ἰδύσσα), a small town in Caria, respecting the site of which nothing is known, except that it was situated on the east of Mylasa. (Ptol. v. 2. § 20; Steph. B. a. s. "Ἰδύσσαι; Plin. v. 29.) [L. S.]

HYDREA ("Ἰδρεα), a promontory on the south of the gulf of Elea in Acolla, forming the south-western corner of the bay, and now called *Cape Fokia*. (Strab. xiii. p. 622; Ptol. v. 2. § 6.) [L. S.]

HYDRA. [ASTOLIA, p. 64, a.]

HYDRAMUM ("Ἰδραμ, *Stadium*; "Ἰδραμία, Steph. B.: *Ἰδρᾶμα*), a city of Crete, which the Maritime Itinerary places at 100 stadia to the E. of Amphimatrium. There can be no doubt but that it is represented by the modern Sfakian village of *Dhrámmia*, situated in the fertile little plain running between the mountains and the shore along the bay of Amphimalla. (Pashley, *Trav.* vol. i. p. 72; Hick, *Kreta*, vol. i. pp. 395, 434.) [E. B. J.]

HYDRAOTES ("Ἰδραότης, Arrian, *Anab.* vi. 8, 13, 14, *Ind.* c. 3), a river of the *Pamjáb*, which flows nearly SW. from the lower chain of the western *Himaláya* mountains till it joins the Acesines (*Chenab*). Its Sanscrit name is *Irawati*, which has been slightly modified into its present appellation of the *Ravi*. According to Arrian, the river joined the Acesines in the territory of the Cambistholi, after having already received as tributaries the Hyphasis (now *Vipasa*), the Sarangus, and the Nendrus. (*Ind.* c. 4.) This is not strictly correct, as the Hyphasis falls into the Acesines somewhat below the *Hydraspes*. Strabo calls this river Hyarotis ("Ἰαρότις, xv. pp. 694—697), which is perhaps the nearest to the form of the native name. Curtius, on the other hand, writes Hydaspes (ix. 1. § 13). Ptolemy speaks of a river he calls the Adris or Rudris, which is probably the same stream (vii. 1. §§ 26, 27). [V.]

HYDREA ("Ἰδρεα, *Ἰδρᾶμα*; *Hydra*), a small island off the coast of Hermionis and Troezenia. It originally belonged to the inhabitants of Hermione, who gave the island to the Samian exiles instead of money, and the latter pawned it to the Troezenians. (Hecata. *ap. Steph. B.* a. v.; Herod.

iii. 59; Paus. ii. 34. § 9.) Hydra, which is rarely mentioned in antiquity, became in modern times the head-quarters of Grecian commerce and the cradle of modern Grecian freedom. Although Hydra is only a few miles in circumference, so rocky as scarcely to yield the common vegetables, and with no water except what is collected in cisterns, it attained by its commerce an extraordinary degree of prosperity. Before the Greek revolution it had a wealthy population of more than 25,000 souls, and upwards of 300 trading vessels. But the losses which the Hydriotes experienced gave a blow to their prosperity from which they have never recovered. (Holland, *Travels*, vol. ii. p. 202, 2nd ed.; Bohlays, *Recherches*, &c. p. 63; Leake, *Peloponnesiaca*, p. 284, seq.; Curtius, *Peloponnesos*, vol. ii. p. 456.)

HYDRE'LA ("Ἰδρε'λα), a town in Caria, said to have been founded by Hydrelus, one of three brothers who emigrated from Sparta. (Strab. xiv. p. 650; Steph. B. a. s.; Liv. xxxvii. 56.) The *Hydrelitae*, no doubt the people of Hydra (Plin. v. 29), belonged to the conventus of Cithyra. [L. S.]

HYDRIACUS ("Ἰδριακός), a small stream which ran into the sea along the coast of Gedrosia, which is mentioned by name by Marcan (p. 22) and Ptolemy (vi. 8. § 8). [V.]

HYDRUNTUM, called in Greek and sometimes also in Latin HYDRUS ("Ἰδρυς; *Ἰδρῶν*; *Hydruntinus*, but an inscription has *Hudrentinus*; *Otranto*), a city of Calabria, on the coast of the Adriatic, and a port of considerable importance, for which it was indebted to the circumstances of its being the nearest point of Italy to the coast of Greece, the passage being shorter even than that from Brundisium. (Cic. *ad Att.* xv. 21.) We have very little information as to its early history; but it seems probable that it was a Greek city, or at least had received a Greek colony, though the tradition related by Stephanus of Byzantium (s. v. *Bleeron*), which represented it as founded by Cretans, is probably connected with the legends which ascribed a Cretan origin to the Sallentines and Messapians, rather than to any historical Greek colony. But Scylax distinctly notices "the port of Hydrus," in a passage where he is speaking only of Greek towns (Scyl. p. 5. § 14); and though he there seems to imply that it was not an independent city like Metapontum or Tarentum, he elsewhere (p. 11. § 27) calls it *ἡ πόλις τῆς Ἰαυρυγίας*; hence it seems highly probable that it was at that time merely a dependency of Tarentum. Nor do we hear anything of Hydruntum for some time after it had fallen, with the rest of the Messapian peninsula, under the Roman yoke; the establishment of the Roman colony at Brundisium and the increasing importance of that port having, doubtless, tended to throw Hydruntum into the shade. But as early as A. C. 191 we find that it was a customary place of landing in Italy, for those who came from Greece and crossed over from Coryra (Liv. xxxvi. 21); and this probably continued to be a route much frequented, while Brundisium was the point of communication with Apollonia and the coast of Epirus. Cicero, however, recognises the fact, that the shortest passage from Italy to the opposite coast was from Hydruntum, which for that reason he himself seems to have preferred to Brundisium; though Pliny tells us that the latter route, though longer, was the safer of the two. (Cic. *ad Att.* xv. 21, xvi. 6, *ad Fam.* xvi. 9; Plin. iii. 11. a. 16.) All the ancient geographers mention Hydruntum as situated

at the mouth or entrance of the Adriatic: Ptolemy states the width of the strait which separated it from the opposite coast near Apollonia at 50 M. P., which is just about the truth; and this accords also with Strabo's statement, that it was 400 stadia (50 M. P.) from Hydruntum to the island of Brundisium near the Acronautian Promontory. Ptolemy adds a strange story, that Pyrrhus had at one time formed the project of closing up the passage with a bridge of boats, and that the same idea had been taken up at a later time by M. Varro, in the war against the pirates. (Plin. iii. 11. s. 16; Strab. vi. p. 281; Mel. ii. 4. § 7; Ptol. iii. 1. § 14.) Strabo speaks of Hydruntum as in his time but a small place (*ὡλιγόν, l. a.*); but it seems to have risen into a considerable municipal town under the Roman empire (Orell. *Inscr.* 2570; *Lit. Col.* p. 262), and increased gradually in importance as Brundisium declined. [BRUNDISIUM.] In the fourth century it appears to have become the usual place of passage, not only to Greece, but to Apollonia, Dyrrhachium, and thence to Constantinople; so that the itineraries all give the routes of communication between Italy and the East upon this supposition. (*Itin. Ant.* pp. 115, 323, 329; *Itin. Marit.* p. 489; *Itin. Hier.* p. 609.) The same state of things continued also after the fall of the Western Empire; hence, during the wars of the Goths with Belisarius and Narses, Hydruntum assumes an importance very different from what it possessed in Roman times. (Procop. *B. V.* i. 1, *B. G.* iii. 30, &c., where the name is corruptly written *Apsus*.) It was one of the last cities in the S. of Italy which remained in the hands of the Greek emperors, from whom it was not finally wrested till the 11th century. The modern town of *Otranto* is a poor decayed place, though still the see of a bishop; it was taken and plundered in 1480 by the Turks; a calamity which it has never recovered. Galatée, a local historian, who saw it previous to that event, describes it as then a flourishing and populous place, though, like *Taranto*, occupying only the citadel or *arx* of the ancient city: the circuit of the ancient walls could be distinctly traced, enclosing a space of 11 stadia, and fortified with towers; but, he adds, "all this is now levelled with the ground." Recent travellers have found no vestiges of antiquity but the pavement of the Via Trajana, and some marble columns and mosaic pavements in the present cathedral. A ruined church of St. Nicholas is supposed to occupy the site of an ancient temple. (Galatée, *de Situ Iapygii*, pp. 47—50; Romanelli, vol. ii. pp. 110, 111; Craven, *Travels*, pp. 142—144.) Though in such a decayed condition, *Otranto* still gives name to the province, which is known as the *Terra di Otranto*, and includes the whole of the Iapygian or Calabrian peninsula.

The little river *Iatro*, the sluggish waters of which enter the harbour of *Otranto*, is evidently the stream called in ancient times the *Hydrus*, whose name has been preserved to us in a line of Lucan (v. 375). [E. H. B.]

HYDRUSIA (*Ἰδρύσση*), an island off the western coast of Attica, now called *Præconisi*. (Strab. ix. p. 398; Leake, *Demi of Attica*, p. 86.)

HYLE. [VELIA.]

HYETTUS (*Ἰππύτος*; *Ἑθ. Ἰππύριος*), a village of Boeotia, said to have been founded by the Argive Hyettus, mentioned in the time of Pausanias a temple of Asclepius, frequented by the sick for the cure of

their diseases, where the dairy continued to be worshipped in the form of a rude stone. Pausanias says that Othomeon was situated 12 stadia to the left of Copea, and Hyettus 7 stadia from Othomeon. Forchhammer places Othomeon on the small island of *Trilo-Yani* in the lake Copais, and Hyettus at *Strouti* to the west of this island, where some ancient ruins are found on a small hill jutting out into the lake. (Paus. ix. 24. § 3, ix. 36. § 6; Steph. B. a. s.; Forchhammer, *Hellénika*, p. 178.)

HYGRES (*Ἰππύριος*, Ptol. iii. 5. § 13), a place on the N. coast of the Palus Maeotis between the rivers Lycus and Porus. [E. H. B.]

HYLA, a port at the head of the bay of Schoenae, in Caria. (Pomp. Mela, i. 16; Plin. v. 29, where some read *Hyda*.) [L. S.]

HYLAEA (*Ἰππύριος*, *Ἰππύριος*, Steph. B.), the peninsula which lies to the NW. of Taurica, formed by the lower part of the Borysthenes, the Euxine, the gulf of Carcinitis, and the river Hypacyris, which flows through it. According to Herodotus (iv. 9. 16, 54, 76), it is a woody region lying to the E. of the Borysthenes (*Δνείπερος*), of which Ptolemy makes mention: "Inde silvestris regio. Hylaeum mare, quod alluitur, cognominavit" (iv. 12). It would seem to be indicated by Pomponius Mela: "Hypacyris per Nomadas evolvitur, silvae deinde sunt, quae maxime has terrores ferant" (ii. 1. § 45: comp. Scylax. Fr. 105; Anon. *Periplus* p. 3).

It is uncertain whether there remain any traces of this woodland. Some old maps present the name of the Black Forest in the very same place; and this may have had a much wider extent in earlier times. From the communications of several travellers, however, it appears that there is no wood now, although the fact of its having once existed is preserved in the popular traditions of the country; nor does the woody country occur till the banks of the river *Don* are reached. (Hessén, *Idem*, vol. i. p. 2. p. 272; trans. vol. ii. p. 8.) It has been identified with the great plain of *Jamboukous* in the steppe of the *Nogai*. (Bennett, *Geog. of Herod.* vol. i. p. 63; Potocki, *Voyage dans les Steps d'Asie*, vol. i. p. 179; Klier, *Mém. de l'Acad. de St. Pétersb.* vol. x. p. 655; Kohl, *Süd-Russland*, vol. i. p. 75.) [E. H. B.]

HYLAETHUS or HYLAEUS (*Ἰππύριος* or *Ἰππύριος*), a river in Locris Ozolia, flowing through Locris near the eastern frontier of Astolia into the Corinthian gulf. Leake supposes it to be the modern *Morad*, and to have derived its name from *Hyie*, a town in Phocis mentioned by Stephanus B. (*Geogr. arch.* 67; Steph. B. s. v. *Ἰππύριος*; Leake, *Northern Greece*, vol. ii. p. 619.) [HYLA, No. 2.]

HYLE (*Ἰππύριος*; *Ἑθ. Ἰππύριος*). 1. An ancient town in Boeotia, situated upon the lake *Hyale*, which derived its name from this place. (Hec. ii. 500, v. 708, vii. 221; Strab. ix. pp. 407, 408; Nonn. *Dionys.* xiii. 66; Plin. iv. 7. s. 12; Steph. B. s. v.) Moechnus, who calls the town *Hyale*, speaks of it as if he seemed to believe that it was the native place of Pindar (*Πινδαρος ἐκ Ἰππύριος πόλεως Βοιωτῆς*; *Ἰππύριος*, Mosch. iii. 89); but this is in opposition to all other ancient authorities. The site of *Hyie* is uncertain, and is variously placed by modern authorities. Leake supposes it to be represented by the *Paleodentro* on the height between the northern end of the lake and the foot of Mount *Palea*. Ulrichs places it at the southern end of the lake, near the mouth of the river *Immenus*. (Leake, *Northern Greece*, vol. ii. p. 313; Ulrichs, *Reisen in Griechenland*, p. 257.)

1. A town in Locris Ozolia, mentioned by Steph. B. (s. v. "Υἄς), from which the river Hylaesthus has derived its name. Thucydides (iii. 101) speaks of a Locrian people named HYAKI ("Υἄς), the name Leake supposes to be a corruption of laei; but the objection to this hypothesis is that phanous, who mentions Hyle as a Locrian town, speaks of Hyaea as a Locrian town, giving *aeus* as their ethnic name, whence we may infer it to be distinguished between the two towns. (Steph. s. v. "Υἄς; comp. Leake, *Northern Greece*, vol. i. 615.)

HYLE ("Υἄς), a town of Cyprus whence Apollonius called Hyletes. (Steph. B. s. v.)

HYLLAS ("Υἄλας), a river on the E. coast of Attica, mentioned only by Thucydides (vii. 35), from whom we learn that it was situated between urii and Orotona, and apparently formed the northern boundary of the territory of the latter city. It is supposed by Swinburne to be the *Aganippe*, the Romanelli would identify it with the *Calonata*, more than a mile farther W.: the *Fiumecich*, more considerable stream, about 10 miles nearer town, has perhaps a better claim than either. Swinburne, *Thes.* vol. i. p. 309; Romanelli, vol. i. 221.) [E. H. B.]

HYLICA LACUS. [BOHOTIA, p. 413, b.]

HYLICUS. [TROezen.]

HYLLI, HYLLINI. [ILYRICUM.]

HYLLUS ("Υἄλας), a tributary of the river rmus, in Lydia, flowing into it from the north. om. *Il.* xx. 392; Herod. i. 60; Plin. v. 31.) In time of Strabo (xiii. p. 626) this river was called *rygius*. [L. S.]

HYLOPHAGI ("Υἄλοφῆγοι, Diod. iii. 24; Arrian, *repl. Mar. Eryth.* p. 2), were one of the numerous obscure tribes of Aethiopia who derived their appellations, with the Greeks at least, from their diet of living and diet. The Hylophagi, or eaters of beech-mast, or perhaps dates and fruit generally, yet on either bank of the Aestabura or White Nile. The Shangallas occupy these districts at the present y, and are scarcely less uncivilized. The account the Hylophagi in Diodorus (l. c.) is, however, rdly credible, and seems to be founded upon mours of the orang-outan. According to him, e Hylophagi fed in the summer upon fruits, in nter upon the long rank grasses of the river-adows, sprang from tree to tree like birds or apes, nt perfectly naked, were armed with clubs, and d their females in common. The most curious t in his story is the liability of the Hylophagi to taract (*γλαυκώματα*) on their eyes, which, by venting them from climbing, caused the majority the race to die of hunger. [W. B. D.]

HYMETTUS. [ATTICA, p. 322, b.]

HYPACRYRIS FL. [CARCINIA.]

HYPAEA. [STORCHADES.]

HYPAEA ("Υἄεα), a small town in Ly-a, on the southern slope of Mount Tmolus, according the Tab. Pent., 42 miles from Ephesus. There, as some other towns of Asia Minor, the Persian wor-ship of fire was introduced during the time when the untry was under Persian supremacy. (Strab. xiii. 637; Ptol. v. 2. § 16; Ov. *Met.* vi. 13, xi. 150; lin. v. 31; Paus. v. 27. § 5; Tac. *Ann.* iv. 55.) he town appears to have continued to exist till a to period of the empire, as we possess coins of it late as the time of Gordian. Leake (*Asia Minor*, 256) believes that the remains at *Beriki* belong Hypaea. [L. S.]

HYPANA ("Υἄνα: *Ἑθ.* "Υἄναιος), a town in the interior of Triphylia in Elis, which surrendered to Philip V. in the Social War. Its inhabitants had been transferred to Elis when Strabo wrote. Hypana is mentioned along with Typanaea. Both these towns must have been situated in the mountains of Triphylia, but their site is uncertain. Leake places Hypana at *A. Tarna* in the heights above the maritime plain of Lopreum; but Boblaye more to the north, at *Mendriana*, in the hills above Samicum. (Strab. viii. p. 343; Polyb. iv. 77, 79; Steph. B. s. v.; Ptol. iii. 16. § 18, who calls it "Υἄναιος; Leake, *Morae*, vol. ii. p. 85; Boblaye, *Recherches*, &c. p. 133; Curtius, *Peloponnesos*, vol. ii. p. 89.)

HY'PANIS FL. ("Υἄναιος, Herod. ii. 102, iv. 17, 47, 51, 81, 178, v. 89; Strab. ii. p. 107, vii. p. 306, xi. p. 494; Ptol. iii. 5. § 6; Dion. Chrys. *Or.* xxxi. p. 75; Athen. p. 42; Pomp. Melas, ii. 1. § 6; Plin. iv. 12; Propert. i. 12. 4; Ov. *es Pont.* iv. 10, 47; "Υἄναιος, Arist. *H. A.* v. 19: *Bog*), a river of Sarmatia Europea, which sprang from a large lake (Herod. iv. 42; comp. Potocki, *Voyage*, vol. i. p. 158), though according to Ptolemy (l. c.) it took its rise in the Amadoci Montes. It flowed parallel with the Borysthenes (Strab. pp. 306, 484). The water in the upper part of the course was sweet, but after receiving the bitter waters of EXAMPANUS became brackish (Paus. iv. 35. § 6; Ov. *Met.* xv. 285; Vitruv. viii. 3. § 11; Eustath. *ad Dionys. Per.* 1143), and discharged itself into the Euxine at the town of Olbia. It received its present name in the sixth century; in Jornandes (*de Get.* 5) and the Geographer of Ravenna it appears under the form *Bogossola* = *Bogus* river (*Sola*, in old German, meaning water). Constantine Porphyrogeneta (*de adm. Imp.* 42) called it *Bogu*.

It is difficult to determine the original meaning of the name; but as the Slavonians paid divine honours to their rivers, it may be connected with the Slavonic word *Bog*, "God." The Greek name Hypanis is traceable to the Indo-European name, "water." (Schafarik, *Slav. Alt.* vol. i. p. 505.) (Kohl, *Reisen in Süd-Russland*, vol. i. p. 34; Ktler, *Mém. de l'Acad. de St. Pétersb.* vol. x. p. 126; Eichwald, *Geographie d. Kaspi. Meer*, p. 295.) [E. B. J.]

HYPANIS. [HYPHANUS.]

HYPATA ("Υἄτα, ἡ "Υἄτα: *Ἑθ.* "Υἄταιος, Hypataeus, Liv.; also "Υἄταρος, Steph. B. s. v.), the chief town of the Aesimenes, in the valley of the Spercheus, and at the foot of Mt. Oeta. In the Roman wars in Greece it belonged to the Aetolian league. (Polyb. xx. 9, 11, xxi. 2, 3; Liv. xxvi. 14, 26.) The women of Hypata, as of many other Thessalian towns, were noted for their skill in magic; and it was here that Lucius, in the story of Lucian, was metamorphosed into an ass. (Lucian, *Asia*, 1, seq.; comp. Apul. *Metam.* i. p. 104; Theophr. *H. Plant.* ix. 2.) The town is mentioned by Hierocles in the 6th century. (Hierocles, p. 642, ed. Wess.; comp. Ptol. iii. 13. § 45.) It occupied the site of the modern *Neopatra*, where inscriptions have been discovered containing the name of Hypata. The town appears to have been called *Nese Patrae* in the middle ages, and is mentioned in the 12th century as a strongly fortified place. (Nicoph. Gregor. iv. 9. p. 112, ed. Bonn.) There are still considerable remains of the ancient town. Leake observed many large quadrangular blocks of stones and foundations of ancient walls on the heights of *Neopatra*, as well as in the buildings of the town. In the

metropolitan church he noticed a handsome shaft of white marble, and on the outside of the wall an inscription in small characters of the best times. He also discovered an inscription on a broken block of white marble, lying under a plane-tree near a fountain in the Jewish burying-ground. (Leake, *North-east Greece*, vol. ii. p. 14, seq.)

HYPATUS MONS. [BOBOTIA, p. 414, a; GLISSA.]

HYPELAËUS (Ἵπυλάεω), a fountain in the neighbourhood of Ephesus. (Strab. xiv. pp. 634, 640; Athen. viii. p. 361.) This spring was still seen by Mr. Hamilton during his excursion in Asia Minor. (*Researches*, ii. p. 25.) [L. S.]

HYPERBOREI (Ἵπυρβόρειοι). The legendary race of the Hyperboreans, though mentioned neither in the Iliad nor Odyssey, are spoken of in the poem of the Epigoni and in Hesiod (Herc. iv. 32), and occur in the traditions connected with the temples of Tempe, Delphi, and Delos. (Comp. Müller, *Dor.* vol. i. p. 284, trans.)

The situation assigned to this sacred nation was, as the name indicates, in the remote regions of the North. They were said to dwell beyond Boreas (Boreas), the mountain wind, which came from the Rhipæan mountains, the name of which was derived from hurricanes (ῥίπαι), issuing from a cavern, which they warded off from the Hyperboreans, and sent to more southern nations; so that they never felt the cold north wind, but had their lot fixed in some happy climate, where, like an Alpine summit rising above the storms, they were surrounded by an atmosphere of calm and undisturbed serenity. "Here," says Von Humboldt (*Asie Centrale*, vol. i. p. 403), "are the first views of a natural science which explains the distribution of heat and the difference of climates by local causes,—by the direction of the winds,—the proximity of the sun, and the action of a moist or saline principle." And thus the "meteorological myth," which placed the Hyperboreans in the North at the sources of the Ister, as conceived by Pindar (*Olymp.* iii. 14, viii. 47, *Pyth.* x. 31, *Isthm.* v. 22), and Aeschylus in the Prometheus Unbound (*ap. Schol. ad Apoll. Rhod.* iv. 284), was, when the Ister was supposed to be a river running through all Europe from its western extremity, transferred to the regions of the West. In consequence of this we find, in later writers, a confusion of this happy land with that of Italy and other western countries, as well as of the Rhipæans with the Alps and Pyrenees. But whatever arbitrary licence was assumed by the poets and geographers who wished to mould these creations of the fancy into the form of a real people, as to their local habitation, the religious idea always remained the same. They were represented as a pious nation, abstaining from the flesh of animals, and living in perpetual serenity in the service of their God for a thousand years. (Hesiod. *ap. Clem. Alex. Strom.* vol. i. p. 305; Simonides, Pindar. *ap. Strab.* xv. p. 711.) "The muse is no stranger to their manners. The dances of girls, and the sweet melody of the lyre and pipe, resound on every side, and twining their hair with the glittering bay they feast joyously. There is no doom of sickness or disease for this sacred race; but they live apart from toil and battle, undisturbed by exacting Nemesis." (Pind. *Pyth.* x. 56.) But at length, tired out with this easy life, betwixt the sun and shade, they leapt, crowned with garlands, from a rock into the sea. (Plin. iv. 26; Pomp. Mel. iii. l. § 5.) We are conducted almost involuntarily to the

ARGIPPÆI, ISEEDONES, and the "sacred kingdom of the Griffin," to which Aristæus of Proconnesus, two hundred years after him, Herodotus, are given such celebrity.

East of the Kazmaek Argippæi were the Iseedones, but to the N. of both, nothing was known (Herc. iv. 25), since high mountains presented an impassable barrier. In descending the coast of Ural to the E., towards the steppes of the Volga, another lofty range of mountains, across the W. extremity of the Altai, does in fact occur. The commercial route crossed the first chain from W. to E., which indicates a "meridian" line, with its main axis running from S. to N. In passing off the second chain, Herodotus clearly distinguishes that which is to the E. of the Argippæi (the country of the Iseedones) from that which is beyond the huge mountains towards the N.,—where the men sleep half the year, and the air filled with feathers,—where the Arimæsi live and steal the gold from the "Griffins." This doctrine seems to establish the existence of a chain running from W. to E. The region of the "Griffin" which the Hyperboreans commenced beyond the Alps is the "chain of the Argippæi" (the Altai). The relation of the Iseedones to the N. of the Argippæi (Araxes) appears justified by the account of the campaign of Cyrus against the Mægastæ, who occupied the plain to the S. of the Iseedones.

The most precious mineral riches are stored in the extremities of the earth, and it is in the N. of Europe that the greatest abundance of gold is found. (Herc. iii. 116.) Now the N. of Europe in the geography of Herodotus, comprehends the N. of Asia, and we are irresistibly reminded of the gold-washings to the S. of the Ural, among the mountains of Kossak, and the rivers of the Lowlands of S. Siberia. The locality of the "Griffin" of NW. Asia may be placed between the 50th and 55th degrees of latitude.

An ingenious hypothesis has been started (Linn. *Reise*, vol. i. p. 712), which refers the myth of the "Griffins," guardians of the gold of the Arimæsi, to the phenomenon of the frequent discovery of the fossil bones of the great pachydermated animals found in the alluvium of N. Siberia,—bones which to this day the native tribes of wild hunters believe to be the claws, beak, and head of some gigantic bird. Von Humboldt (*Asie Centrale*, vol. i. pp. 389—411), to whose interesting discussion on this subject reference has been made, justly condemns this confusion between ancient and modern fable; and shows that the symbolic image of the "Griffin," as a poetic fiction and representation in the arts, did precede, among the Greeks, those when relations were formed among the islands of Pontus and the Arimæsi. The "Griffin" was known to the Samians, who figured it upon the coin which commemorated the good fortune of their expedition to Tartessus. (Herc. iv. 122.) This mysterious symbol of an animal acting as guardian over gold, seems to have been the growth of Asia and of Persia (Aelian, *N. A.* iv. 26; Ctesias, iii. § 12; comp. Bähr, *Encyclop. V. ad Herc.* iii. 116) and the commerce of Miletus contributed to spread it in Greece along with the tapestries of Bactria. The region of aridiferous sand, of which the Dardani (Dardari, or Dardari, mentioned in the *Mémoires*, and in the fragments of Megasthenes) gave intelligence to travellers, and with which the repeated fable of the ants became connected, was

to the accidental double meaning of a name, belongs to a more S. latitude, 35° or 37°. (*Cosmos*, vol. ii. p. 142, trans.) [E. B. J.]

HYPERBOREI MONTES. [RHIPARII MONTES.]

HYPERBOREUS OCEANUS. [SEPTENTRIONALIS OCEANUS.]

HYPERBŒLIA. [ÆGÆTIA.]

HYPERIS (Plin. vi. 23. s. 26), a small stream mentioned only by Pliny, which falls, according to him, into the middle of the Persian gulf. Forbiger has conjectured that it may be the same as that now called the *Djagrah*. [V.]

HYPERTELEATUM (*ὑπερτελέατον*), a place in the territory of the Laconian Asopos, at the distance of 50 stadia from the latter town, containing a temple of Asclepius. The French Commission discovered on the coast below the village of *Demónia* some remains of the inclosure of this temple on a rock artificially cut, with many tombs excavated in the rock, and at 500 steps from the temple, nearer *Demónia*, a fine source of water. (Paus. iii. 22. § 10; Boblaye, *Recherches*, &c. p. 98; Leake, *Peloponnesiaca*, p. 168; Curtius, *Peloponnesos*, vol. ii. p. 294.)

HYPHANTEIUM. [ΒΟΚΟΤΙΑ, p. 412, a.]

HYPHASIS (*Ἵψασις*, Arrian, *Anab.* vi. 8, *Ind.* c. 2, 3, 4), the most eastern and the most important of the five rivers which water the *Panjab*. Rising in the western *Himáleh*, it flows in two principal branches in a course nearly SW. (under the names respectively of *Vipāca* and *Sátadru*), till, at their junction, it takes the one name of *Sátadru*, which it retains till it falls into the Indus at *Mithankote*. It is best known, however, by its modern name of *Satlodge*, which is perhaps a corruption of the Sanscrit *Sátadru*. It bore in ancient as in modern times various appellations, probably according to the different parts of its course to which the writers referred. Thus in Arrian (*l. c.*) and Diodorus (xvii. 93) it appears under the form of *Hyphasis*; in Pliny (vii. 17, 21) and Curtius (ix. 1) under that of *Hypasis*; while Ptolemy calls it *Bibasis* (*Bibáris*, vii. 1. §§ 26, 27); all these being evidently derived from the native name of the western of its two principal arms, the *Vipāca*. On the other hand, in Strabo (xv. pp. 686, 691, 701), in Diodorus (ii. 37), in Solinus (c. 52), and in Dion. Perieg. (v. 1145), it bears the title of *Hypania*. There can be no doubt that all these writers refer to one and the same river: for Strabo (xv. p. 700) and Arrian (*Ind.* c. 2) both speak of it as the last of the rivers, that is, in reference to the advance of Alexander the Great into the East; while Pliny directly states that the *Hypasis* was the limit of Alexander's march (vi. 17. s. 21). The Sanscrit name for the main stream after the junction of the two principal feeders, namely, the *Sátadru*, seems not to have been wholly unknown to the ancients; for Ptolemy makes the *Zaradru* one of the tributaries of the *Hyphasis* (*l. c.*), and Pliny notes a river which he calls the *Sydrus* or *Hesidrus*, which is probably the same (*l. c.*). A little way before the *Satlodge* falls into the Indus it receives the *Chendāb*, and with it the waters of all the other rivers of the *Panjab*. [V.]

HYPIUS (*Ἵπιος*; *Ἰάριος*), a river of Bithynia, not far westward from the *Sangarius*. The river itself is very small; but at its mouth it is so broad that the greater part of the fleet of Mithridates was enabled to take up its winter quarters in it. (Apollon. Rhod. ii. 795; Scylax, p. 34; Marcell. Heracl.

p. 70; Steph. B. s. v.; Arrian, *Periplus* p. 13, who calls it *Hyppius*; Memnon, *ap. Phot. Cod.* 44.) According to Scylax, this river formed the boundary between the territories of the Bithyni and the Mariandyni. [L. S.]

HYPSALTAË, one of the tribes of Thrace mentioned by Pliny (iv. 18), but apparently the same as the *ὑψηλάται* spoken of by Steph. B. (s. v. *ὑψηλός*). [L. S.]

HYPSAS (*Ἵψας*), is the name of two rivers in Sicily, both in the southern part of the island. 1. The larger of the two, which may be called the *Selinuntine Hypsas*, from its flowing through the territory of that city, is the river now known as the *Belici*, a large stream which enters the sea about 4 miles E. of the ruins of Selinus. (Cluver. *Sicil.* p. 230; D'Orrville, *Sicula*, p. 78.) It rises near *Corleone*, and has a course of above 30 miles from thence to the sea. No mention occurs of the *Hypsas* in history, but its name is noticed by Silius Italicus, as well as by Ptolemy and Pliny. (Sil. Ital. xiv. 227; Plin. iii. 8. s. 14; Ptol. iii. 4. § 6; Vib. Sequest. p. 12.) The importance of this river to the *Selinuntines* is attested by the coins of Selinus, on some of which the river-god *Hypsas* (*Ἵψας* in Archaic characters) is represented as sacrificing at an altar; apparently referring to the river having been restrained from inundations which proved injurious to the salubrity of the city and its neighbourhood. (Eckhel, vol. i. p. 239; *Mus. Hunt.* pl. 48. fig. 25.)

2. A second river of the same name flowed beneath the walls of Agrigentum on their W flank, and joined the *Acragas* just below the city. [AGRIGENTUM.] It is now called the *Drago*, and is a small stream, though flowing through a deep valley, till immediately below the walls of Agrigentum. Considerable confusion exists among some modern writers with regard to the two rivers of Agrigentum: but the point is fully cleared up by Siefert (*Acragas u. sein Gebiet*, pp. 20—22). [AGRIGENTUM.] Polybius (ix. 27) is the only author who mentions the *Agrigentine Hypsas* by name, and he states distinctly that it was the river flowing at the foot of the hill of Agrigentum on the W and SW. [E. H. B.]

HYPSELA (*ὑψηλή*, Ptol. iv. 5. § 64; *ὑψηλός*, Steph. B. s. v.; *ὑψηλοπολιτῶν πόλις*, Socrat. *H. E.* i. 32; *ἔθ. ὑψηλῆς*), the capital of the Nomos *Hypselites* in Upper Egypt. (Lat. 27° N.) It stood on the western side of the Nile, nearly opposite *Asiutopolis*. [W. B. D.]

HYPSI (*Ἵψι*), a place in Laconia, containing temples of Asclepius and Artemis *Daphnea*, situate 30 stadia from the *Carneium* on Mt. *Cnacadium*. Leake places *Hypsi* at *Vathy*, on the coast, but it was probably in the mountains in the interior. (Leake, *Morea*, vol. i. p. 276; Curtius, *Peloponnesos*, vol. ii. p. 275.)

HYPSUS (*Ἵψους*, -*οὔρος*), a town of Arcadia, in the district *Cynuria*, situated upon a mountain of the same name, said to have been founded by *Hypsus*, a son of *Lycæon*. It is placed by the French Commission at *Stemaita*. (Paus. viii. 3. § 3, 35. § 7; Steph. B. s. v.; Boblaye, *Recherches*, &c. p. 161; Leake, *Peloponnesiaca*, p. 240.)

HYRCANIA (*ἡ Ἵρκανία*; *ἔθ. Ἵρκανός*, *Ἵρκανίος*, *Hyrcanius*), a province of Asia, which was bounded on the north by the Caspian, sometimes called from it the *Hyrcanian sea*; on the east by the *Oxus* (the *Jihon* or *Amu-Darja*), which separates it from *Margiana*; on the S. by the northern spurs of the Montes *Sariphi* (now *Hazar*), which separate

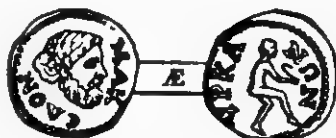

It from Ariana and Parthia; and on the W. by the M. Coronus and the river Charindas, which formed its limits in the direction of Media. Its boundaries at different periods of history were, however, various; and it is probable that in later times it comprehended the greater part of the districts now known by the names of *Masanderan*, *Khorassan*, *Dabistan*, and *Dahistan*. More strictly, it would have included only *Masanderan*. According to Arrian, the district was situated on the left of the road which led to Bactra, and was intersected by high and steep mountains, but with, however, a campaign country extending along the sea (iii. 25). This would correspond with the present state of *Masanderan*. According to Strabo, it extended along the Caspian sea, which was very marshy along its shores, and was watered by both the Ochus and the Oxus on their way into that sea; he states also that it was separated from the desert by the river Sarneius (xi. pp. 508—511). Professor Wilson has remarked that this view would give far too great an extent to this province, the name of which is undoubtedly preserved in the modern *Gurbon* or *Jorjan*, a town to the E. of Asterabad. (*Ariana*, p. 142.) The principal rivers of Hyrcania were the Sarneius (now the *Astrek*), the Socanna, the Syderis, the Maxera, and the Charindas. Its chief city appears to have borne at different times various appellations; but it is most probable that the *Tape* of Strabo (xi. p. 508), the *Zairicarta* of Arrian (iii. 23, 25), and the *Carta* of Strabo (*l.c.*) were, as the chief residence of the rulers of the land, one and the same place. Besides this, was *TALABROCA* (Strab. *l.c.*), probably the same as the *TAMBAX* of Polybius (x. 31); *HYRCANIA* or *HYRCANA*; and *SAMARIANA*. Some part of Hyrcania, especially that near the sea, is stated to have been very fertile, especially in wine and fruits (Strab. xi. p. 508); corn, however, was not sown there (Strab. *l.c.*), and the mountain land was covered with dense woods (Diod. xvii. 75), which were full of wild bees (Strab. *l.c.*). The land also contained many wild beasts, as the tiger. (*Mela*, iii. 5; *Amm. Marc.* xiii. 6.) The people of the land bore the generic name of Hyrcani; but the country itself was divided into several smaller districts, such as *Astabehe*, *Siracene*, and *Anatia*.

Of the Hyrcani, as distinct from the nations in their neighbourhood, the ancient writers say little; but Xenophon states that they were subdued by the *Amyrians* (*Cyrop.* i. 5), and Curtius that 6000 of them were in the army of Darius when he was preparing to resist the invasion of Alexander (iii. 2). They probably partook of the character of the wild tribes adjoining them; and the statement of Strabo, that no corn was sown in Hyrcania, would lead to the inference that the bulk of the population was an unsettled one. On their NE. frontier we know that many Scythian tribes were settled, as the *Dacæ*. [V.]

HYRCANIA (*Ἰρκανία* *μυτρώπολις*, Ptol. vi. 9. § 7, viii. 23. § 3; *Hyrcana*, *Amm. Marc.* xiii. 6), a town placed by Ptolemy to the east of the river Maxera in Hyrcania (probably the modern *Tedjin*). It is most likely represented by the modern *Gurbon* or *Jorjan*, a place to the NE. of Asterabad. [V.]

HYRCANIA (*Ἰρκανία*; *Ἑθ. Ἰρκανός*), the name of a town in Lydia, situated in the Hyrcanian plain (*τὸ Ἰρκανίον πεδίον*), which is said to have derived its name from a colony of Hyrcanians being settled here by the Persians. (Strab. xiii. p. 629; comp. *Steph. B. s. v.*) They were afterwards mingled with some Macedonians, who also settled in this dis-

trict, whence they are called by *Pliny* and *Tacitus* "*Macedones Hyrcani*." (*Plin.* v. 29. s. 31; *Tac. Ann.* ii. 47.) There were two towns in this plain: one called *Hyrcania*, and the other *Montani*. (*Tac. l.c.*; *Ptol.* v. 2. § 16.)

COIN OF HYRCANIA IN LYDIA.

HYRCANIUM MARE. [*CASPIMUM MARE*.]

HYRIA, **HYRIUM**, or **URIA**, is the name of several ancient towns in Italy, which is very variously written, and often corrupted, in our extant MSS.; but all these forms appear to be originally the same.

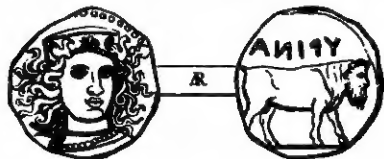

1. (*Tpῆς*, *Herod.*; *Tpῆς*, *App.*; *Οὐρῆς*, *Strab.*; *Ἑθ. Uritanus*; *Oria*), an inland city of Calabria, situated nearly in the heart of that country, on the Appian Way, about midway between *Brundisium* and *Tarentum*. (*Tab. Peut.*) Strabo correctly inscribes it as situated in the midst of the *intima*, as he terms it, between the two seas. (*Strab.* vi. p. 282.) He tells us that a palace of one of the ancient native kings was still shown there; and *Herodotus* represents it as the metropolis of the *Messapians*, founded by a colony of *Cretans* on their return from *Sicily*. According to this statement, it was the most ancient of the *Messapian* cities, from whence all the others were founded. (*Herod.* vii. 170.) But though it thus appears to have been in early times a place of importance, we hear very little of it afterwards, though its name again appears in *Appian* during the civil war between *Octavian* and *Antony*, while the latter was besieging *Brundisium*. (*Appian.* *B. C.* v. 58.) The people of *Hyria* must also be understood by the "*Urites*" of *Livy*, whom he enumerates among the allied cities that furnished ships to the praetor *C. Lucretius* in B.C. 171 (*Liv.* xlii. 48), if the reading be correct; but it is difficult to understand how an inland town like *Hyria* could be one of those bound to furnish a naval contingent. The "*Uritanus ager*" is mentioned in the *Liber Calabrarum* (p. 262) among the "*Civitates Provinciae Calabriae*," and it therefore appears to have held the rank of an ordinary provincial town under the Roman Empire; and there is little doubt that in *Pliny* (iii. 11. s. 16. § 100) we should read *Uria* for *Varia*. In *Ptolemy* also (iii. 1. § 77) we should probably substitute *Οὐρίον* for *Οὐβρίον*, as *Veretum* (*Οὐβρίον*) had been already mentioned just before. The modern town, which still retains the name of *Oria*, is a considerable place situated on a hill of moderate elevation, but commanding an extensive view over all the country round. There are no ancient remains, but inscriptions have been found there in the *Messapian* dialect, and numerous coins, bearing the name of *Oria*, which, though written in Roman characters, was probably the native name of the city. (*Millingen. Numism. de l'Anc. Italie*, p. 281.)

2. (*Uria*, *Plin.*; *Οὐρίον*, *Strab.*; *Οὐρίον*, *Ptol.*; *Ἰρκανία*, *Dionys. P.*; *Ἑθ. Ἰρκανός*, *Uria* or *Urianus*; *Rodi*), a city of *Apulia*, situated on the coast of the *Adriatic* N. of the promontory of *Garganus*. It gave to the extensive bay formed by that projecting headland with the coast of *Apulia* on the N. the name of *URIAS SINUS*. (*Mel.* ii. 4. § 7.) Its name is

mentioned both by Pliny and Ptolemy among the cities of the Daunian or Northern Apulians: the former, indeed, appears to place it S. of the promontory of Garganus, but this is probably only an apparent inaccuracy arising from the order of enumeration. But he afterwards notices the Hyrini (by which it is impossible that he can mean the Hyria in Calabria) in his general list of towns in the interior of the Second Region. There is no mode of explaining this, except by supposing it to be a simple mistake. (Plin. iii. 11. s. 16; Ptol. iii. 1. § 17.) Dionysius Periegetes also mentions Hyrium as a maritime city at the entrance of the Adriatic Sea (which he probably regarded as commencing at the promontory of Garganus), and the limit of Iapygia towards the N. (Dionys. Per. 380); hence, it is clearly of the Apulian city that he is speaking. No mention of it is found in history; and the best clue to its position is derived from Strabo, who tells us it was the first city which occurred on the N side of Mt. Garganus, after doubling the promontory of that name. Hence, we may place it, approximately at least, on the site of *Rodi*, a small town on a projecting point or headland, about 20 miles W. of *Viesti*, and near the entrance of a salt-water lake, or lagoon, called *Lago di Faramo*, a name which is very probably only a corruption of *Lacus Urianus*. (Romanelli, vol. ii. p. 283.)

To this city may probably be ascribed the coins with the legend *TPATINON*, which were assigned by Millingen (*Num. de l'Italie*, p. 119) to Veretum in Calabria.

3. (*Ἑθ. Ὑρῳαῖος*). The existence of a third city of the name in Campania, though resting only on numismatic evidence, may be considered as well established. The coins in question, which are of silver and very numerous, have not only types peculiar to Campania, but are always found in that country, and frequently together with coins of Nola, which they so closely resemble that some numismatists are of opinion that Hyrium or Hyrina was a native name of that city. It is more probable that it was situated in its immediate neighbourhood; perhaps standing in the same relation to it that Palaepolis did to Neapolis: but, in either case, the absence of all notice of the name in any ancient writer is very remarkable. (Millingen, *Num. de l'Ant. Ital.* p. 138; Cavedoni, *Num. Ital. Vet.* p. 31; Friedländer, *Oestliche Münzen*, pp. 37, 38.) The legend *TPINA* is abbreviated from *TPINAIOS* or *TPINAION*: others, however, have (though much more rarely) *TPIANOZ* and *TPIETHZ*. [E. H. B.]

COIN OF HYRIA IN CAMPANIA.

HY'RIA (*Ῥία*: *Ἑθ. Ὑρῳαῖος*), a Boeotian town, mentioned by Homer along with Aulis. (Hom. *Il.* ii. 496.) Hence it was placed near Aulis; but its position was quite uncertain, and some of the ancient critics identified it, though without sufficient reason, with Hysiae. Strabo placed it in the territory of Tanagra. (Strab. ix. pp. 404, 408; Steph. B. s. v.; Plin. iv. 7. s. 12.)

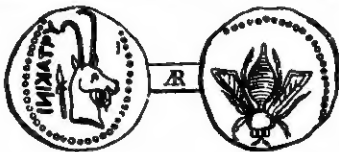

HY'RIE, a lake in Aetolia. [AETOLIA, p. 64, a.] **HYRMI'NE** (*Ὑρμῖνη*), a town of Elis, upon the

coast, mentioned by Homer as one of the towns of the Epeii. It appears to have been regarded as one of the most ancient of the Epeian towns, since it is said to have been founded by Actor, the son of Hyrmia, who was a daughter of Epeius. In the time of Strabo the town had disappeared, but its site was marked by a rocky promontory near Cyllene, called Hormina or Hyrmia. Leake supposes that the town occupied the position of *Kastro Tornée*, on the peninsula of *Klemētai*; but both Boblaye and Curtius, with more probability, place it further north, at the modern harbour of *Kunupiti*, where, on a projecting point of land, are some ancient ruins. (Hom. *Il.* ii. 616; Strab. viii. p. 341; Paus. v. 1. §§ 6, 11; Steph. B. s. v.; Plin. iv. 5. s. 6; Leake, *Morea*, vol. ii. p. 176; Boblaye, *Recherches*, &c. p. 120; Curtius, *Peloponnesos*, vol. ii. p. 33.)

HYRTACINA (*Ὑρτάκινα*: *Ὑρτάκινα*, Scyl. p. 18; *Ἀρτάκινα*, Ptol. iii. 17. § 10: *Ἑθ. Ὑρτάκος*, *Ὑρτάκιος*, Steph. B.), a city of Crete, which, little as we learn of its position from Ptolemy and Stephanus of Byzantium, yet we may safely infer from the former's words that it was situated to the SE. of Polyrrenia, and to the W. of Lappa. Scylax (*l. c.*) teaches us more respecting its site; he places it on the S. of the island, and to the S. of the Dictynnean temple of Artemis and the Pergamian district. These indications agree well with the situation of the ruins discovered by Mr. Pashley (*Trav.* vol. ii. p. 111) on a hill near the village of *Temēnia*.

Numerous vestiges of polygonal masonry on the N. and W. sides, and measuring little more than half a mile in length, are still existing. On the other sides the city was precipitous. It is curious to observe the care taken by the inhabitants in defending the gateways of their city. Not only do walls project without the gate, but flanking walls are executed within, forming passages through which the enemy would have to pass before he could set foot within the city.

The coins of Hyrtacina present types similar to those of Elyros, with the retrograde epigraph *ATTY* and *TPATAKINION*. (Rasche, vol. ii. pt. i. p. 600; Mionnet, *Descr. des Méd.* vol. ii. p. 277; Mionnet, *Supplément*, vol. iv. p. 324.) [E. B. J.]

COIN OF HYRTACINA.

HY'SIAE (*Ῥία*, *Ῥία*, Steph. B. s. v.). 1. (*Ἑθ. Ὑρῳαῖος*), a town of Boeotia, in the Paracopia, at the northern foot of Mt. Cithaeron, and on the high road from Thebes to Athens. It was said to have been a colony from Hyria, and to have been founded by Nycteus, father of Antiops. (Strab. ix. p. 404.) Herodotus says that both Hysiae and Oenoe were Attic demi when they were taken by the Boeotians in B. C. 507. (Herod. v. 74.) It probably, however, belonged to Plataea. (Comp. Herod. vi. 108.) Oenoe was recovered by the Athenians; but, as Mt. Cithaeron was the natural boundary between Attica and Boeotia, Hysiae continued to be a Boeotian town. Hysiae is mentioned in the operations which preceded the battle of Plataea. (Herod. ix. 15, 25.) [PLATAEA.] Hysiae was in ruins in the time of Pau-

sanine, who noticed there an unfinished temple of Apollo and a sacred well. (Paus. ix. 2. § 1.) Leake observed "a little beyond the great road at the foot of the mountain, a great quantity of loose stones in the fields, together with some traces of ancient walls, and the mouth of a well or cistern, of Hellenic construction, now filled up." This we may conclude to be the site of Hysiae. (Leake, *Northern Greece*, vol. ii. p. 337.) Hysiae is mentioned also in the following passages: Eurip. *Bacch.* 751; Thuc. iii. 94, v. 83.

2. (Ἑκ. Ὑδρία), a town in the Argolis, on the road from Argos to Tegea, and at the foot of Mt. Parthenium. (Paus. ii. 24. § 7, viii. 6. § 4, 84. § 7; Strab. viii. p. 376.) It appears to have been destroyed by the Argives, along with Tiryns, Mycenae, and the other towns in the Argolis, after the Persian wars (Paus. viii. 27. § 1); but it was afterwards restored, and was occupied by the Argives in the Peloponnesian War as a frontier-fortress, till it was taken and destroyed a second time by the Lacedaemonians in B. C. 417. (Thuc. v. 83; Diod. xii. 81.) The defeat of the Lacedaemonians by the Argives, near Hysiae, of which Pausanias (ii. 24. § 7) speaks, is placed in B. C. 669.

The ruins of Hysiae stand on an isolated hill above the plain of *Ἀχλαδιόσπηρος* (Ἀχλαδιόσπηρος, from ἀχλὺς, ἀχλὺς, "a wild pear-tree," and σπήρ,

"a plain"). They consist of the remains of the acropolis, which escaped the notice of Leake. (Leake, *Morae*, vol. ii. p. 334; Boblaye, *Beskrivn.* p. 48; Ross, *Reisen im Peloponnes*, p. 16.)

HYSPIRATIS. [CAMELAE.]

HYSSUS (*Ἑσσοί*), a small river in the east of Pontus, 180 stadia to the east of Trapezus. (Arrian, *Periplus* p. 6.) There can be little doubt that the river is the modern *Soussoum*; for the part near its mouth, which bore the name *Hyssus* or *Hyssporius*, was afterwards called *Neosporus*. (Arrian, *Periplus* p. 13), and, according to Ptolemy (*B. G.* iv. 2), *Νεοσπορίων*. This part was mentioned by Arrian (*L. c.*) and by the Anonymous p. 14), is called in the Tab. Peut. *Hyssus*, and seems to have been a place of some importance: for it was fortified, and had the "castra Augusti et Romanorum" for its garrison. (Not. Imp. *Oront.* 27.)

HYSTOE, a town of Crete, which Strabo mentions on Aratus (*Phaen.* vol. ii. p. 40, cf. Bala) came to with the Idaean nymph Cynosura, one of the nymphs of Zena. (Höck, *Kreta*, vol. i. p. 434.)

HYTANIS or HYCTANIS, a river of Carmania mentioned by Pliny (vi. 23. a. 26), and which bore washed down gold. Strabo, on the contrary, Onesicritus, speaks of a similar river, but does not give its name (xv. p. 726).
